

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

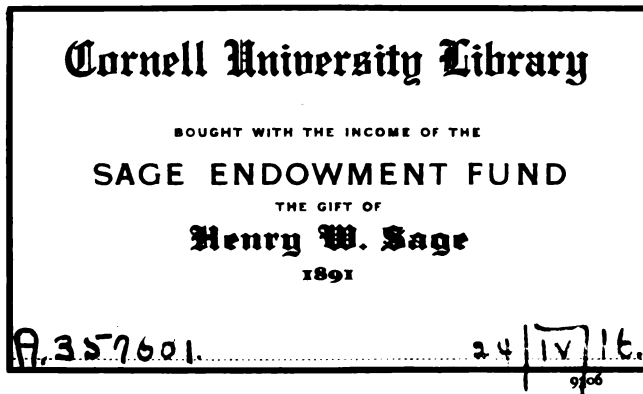

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

THE  
REVIEW OF REVIEWS

Edited by W. T. STEAD

VOLUME XVI.

JULY-DECEMBER, 1897

PRICE FIVE SHILLINGS

*The Review of Reviews*

EDITORIAL OFFICE: MOWBRAY HOUSE, NORFOLK STREET, LONDON, W.C.

PUBLISHED BY HORACE MARSHALL AND SON, 123, FLEET STREET, LONDON, E.C.

A357601

## Annual Index to Periodicals.

---

With the help of the Annual Index, the student or writer can easily ascertain in what Periodicals he can read articles on almost any subject; and, as the more recent Magazines and Reviews are to be found in the newer as well as the old Public Libraries, these mines of current thought need no longer remain unexplored on the shelves with such a handy Key, issued at a price within the means of all.

The Annual Index is universally admitted to be the best work in its line ever published, and "an absolutely indispensable work of reference" for LIBRARIANS, BOOKSELLERS, JOURNALISTS, CLERGYMEN, and all CONTRIBUTORS to the literature of our time.

The second, third, fourth and fifth volumes, which covered the years 1891, 1892, 1893 and 1894, contained many improvements on the first issue. These five volumes are still to be had at 5s.; or 5s. 6d. post free.

The sixth and seventh volumes, being greatly enlarged and elaborated, are issued at 10s. nett.

The eighth volume, covering 1897, is in preparation.

---

VOL. I., covering the year 1890.

VOL. II., covering the year 1891.

VOL. III., covering the year 1892.

VOL. IV., covering the year 1893.

VOL. V., covering the year 1894.

5s. per Volume; or 5s. 6d. post free.

---

Volume VI., covering the year 1895, 10s. post free.

Volume VII., covering the year 1896, 10s. post free.

JUBILEE DAY: THE QUEEN AT TEMPLE BAR.

Photograph by Wetherman and Co., Enfield.

## THE PROGRESS OF THE WORLD.

LONDON, July 2nd, 1897.

### The Jubilee.

The celebration of the great Jubilee of the Record Reign passed off with unprecedented and altogether unexpected success. As an awakening of our national consciousness to our Imperial position, there has been nothing like it in the memory of man. From beginning to end nothing marred its perfect success. The weather was ideal, the behaviour of the enormous crowds was so exemplary that hardly an accident occurred even in the gorged and overcrowded streets, which were converted for the occasion into long festooned arcades of foliage, flowers and flags, in which, after sunset, innumerable electric lights vanquished the darkness of night by more than the brilliance of day. The immense demonstration, which was by no means confined to the British Isles, but could be observed wherever English-speaking men were gathered together, outside the limits of the Republic, proclaimed in a fashion before unexampled "the unity of the British Empire and the affection to the Empire of all those over whom the British flag waves." As the Prime Minister declared last night, "This is a fact which will influence our future history, which will sink deep into the hearts of those who watch us and criticise us from abroad, but which also will impose on us responsibilities and duties from which we must not shrink and over which we must not linger." Lord Salisbury's reference to duties and responsibilities sounds the true Imperial note, which was never obscured but constantly emphasised in the midst of the Great Festival of June.

### Its Lesson.

What those responsibilities and duties may be, each of us is free to interpret in his own way. Already there are many voices urging many counsels, but the first and most obvious reaches us from Canada, where the Senate of the Dominion on June 3rd unanimously adopted a resolution calling upon the Government to take this very question into consideration. The Canadian suggestion is that the present is a favourable time to consider (1) the necessity of drawing more closely together the ties which bind the Colonies to the Mother Country, and (2) whether Canada, as the oldest of the Colonies, should not be the first to make overtures to the other Colonies. There is no Colony in the Empire which Englishmen would more gladly see taking the initiative in such good work. It is not only the oldest and the nearest and the greatest of all our Colonies, but it is one in which has been most brilliantly applied under the most arduous conditions the open secret of the British Empire for converting disaffection into loyalty. When the Queen came to the throne, Canada was almost on the verge of revolt, and now Canada proposes to celebrate this great Jubilee by drawing still more closely together the self-governing English-speaking nations which live in peace and unity under the shadow of the British flag.

### The Canadian Initiative.

Twenty years ago the dyspeptic croakers of the Little England School assured us that the French Canadians offered an insuperable obstacle to the consolidation of the British Empire. It was pointed out grimly they were not English-speaking men, and they were even more devoted Catholics than the Irish. But what do we see to-day? Sir Wilfrid Laurier,

the elect of the French Canadians, speaking at the Lord Mayor's banquet, and replying to a statement made by the Lord Mayor that the Colonials were as much Englishmen to the core as if they were born in Great Britain, thanked the Lord Mayor for the observation. Sir Wilfrid then went on to say :—

Whilst he could not claim the privilege of being of English

**Sir Wilfrid  
Laurier's  
Declaration.**

At the banquet held to celebrate Dominion Day, Sir Wilfrid Laurier referred as frankly to the choice which Canadians have made between the Empire and the Republic. He said :—

She might be independent, but she did not choose to be so. Already she was practically independent. (Cheers.) All

*Photograph by Elliott and Fry.]*

#### THE RULERS OF THE EMPIRE.

THE COLONIAL PREMIERS AT THE COLONIAL OFFICE.

descent, he did claim the privilege of having descended from that great nation which for so many years, centuries and ages had been a rival of Great Britain. He was proud of that origin, but he was British to the core. He and his fellow countrymen had learnt to appreciate British rule because there was not that day a man in Canada of French origin who did not realise that he had found under the flag of England far more freedom than he could have enjoyed under the flag of France, and, after all, freedom was the greatest of human blessings.

thinking men among her inhabitants had come to the conclusion that there was as much freedom, more power, more wealth, and more happiness in union with England than in separation. (Cheers.) She gave an example of unity to sister colonies in other parts of the world. Canada might perhaps do something more. She shared the North American Continent with a great nation of kindred race with England, but with which England's relations had not always been satisfactory. But these enmities had to a large extent been removed by the conduct of the Queen of England herself.

(Cheers.) Sorry as he was to hear of many causes of friction, he must say that in most the causes in later years had not been on the side of England, but rather on the side of the United States. Let them pray God that they might never see the wings of war spread between England and the United States. (Hear, hear.) The colony of Canada stood true to the flag which protected the liberty of her people. (Cheers.) They had the greatest hope and confidence in that flag to which they belonged. He trusted that on every occasion she would boldly strike out in advancing the cause of freedom and civilisation. And let him say, that when the time came that his eyes must close for ever to the light of this world, if in his day he had done anything for the cause of freedom, if through his efforts racial feuds had disappeared from the land of Canada, if he had stepped forward to assist in uniting this great empire, he would die happy in the belief that his life had not been lived in vain. (Loud cheers.)

Could anything be more satisfactory or more reassuring than such a declaration from such a man?

The clear, unmistakable and unanimous decision which Canada has made between the two great sections of the English-speaking race is significant of much. Geographically and commercially,

they are so closely connected with the United States that even now many Americans can hardly realise the fact that the Canadians really prefer to be represented in London rather than in Washington. At one time there was reason enough for their scepticism. In the fifties, and in the first part of the sixties, it was an open question whether the Canadians would not elect to throw in their lot with the United States. But the last thirty years have taught them much. The attempt to coerce them by hostile tariffs has developed a sentiment of self-respect which has been fatal to the ideal of continental union. Canada stood for a time like a fair maiden between rival suitors, and after a period of hesitation she has now definitely thrown her handkerchief at John Bull, which that worthy is proud to wear in his cap as the proudest of all his Jubilee favours. For we may fairly take it as proving that if a British Colony, which of all others has the greatest temptation to look to Washington rather than to London as its capital, and which has also had by far the best opportunities of seeing how Republican institutions actually work in practice, decides in favour of the Empire as against the Republic, other Colonies will come to the same conclusion. If so, that settles the question of the leadership of the race. It is ours, no doubt, by right of prior claim, but it is always well to have an ancient title affirmed by a clear and unmistakable decision.

QUEEN VICTORIA.

Portrait dedicated to the Queen by *Le Rire*, Paris.

**The  
Rediscovery  
of  
the Crown.**

If the affirmation of the unity of the Empire is the first great feature of the Jubilee, the second has undoubtedly been the revival of the Monarchy. It is hardly too much to say that our people have rediscovered the Crown, and that as a consequence personal loyalty to the Sovereign, no longer a more or less impalpable sentiment, has come to be a political force of the first magnitude. It is difficult to appreciate exactly the result of this extraordinary renaissance of one of the primitive sentiments of the human race. But there is no doubt that it has been effected by bringing the oldest institution in the country into living contact with what Lord Salisbury called "the youngest fruit" of those institutions, viz., "the splendid organisation of Colonial liberty and order." Mr. Reid, the Prime Minister of New South Wales, paid public homage at the Imperial Institute to the illustrious, but often most unobtrusive, part that had been played in the Union of the Empire by the Queen. "We indeed owe her," he declared, "a great debt of duty and loyalty." Sir Wilfrid Laurier, in the speech quoted above, directly attributed to Her Majesty's personal action the removal of the old-time bitterness that prevailed between Britain and the United States.

**The  
Powers  
of  
the Sovereign.**

The Jubilee may be said to mark the disappearance of the superstition of the figure-head which has so long prevailed in this country. Lord Salisbury, in proposing the address to Her Majesty in the House of Lords, publicly affirmed in very emphatic terms the truth, which in my recent "Studies of the Sovereign and the Reign" I have endeavoured to impress upon a somewhat incredulous public:—

When I was young it was the fashion to treat the sovereignty of the Queen as nominal and the share which she took in public business as unreal. I hear less of that language now, and I speak in an assembly where many could join with me in saying that no one could so describe the working of our institutions without an entire ignorance of the real method of their operation. The powers of the Sovereign are great; the responsibilities are enormous. That we have passed through a period of so much trial, and arrived at the height of so much greatness, is largely due to the moderating, the self-controlling influence of the Queen, from whom, legally, all power flows.

Nor can this be dismissed as the courtly compliment of a Tory Prime Minister. Lord Kimberley, who leads the Liberal remnant in the House of Lords, confirmed what Lord Salisbury said in terms not less emphatic. He said:—

We have never had a Sovereign—at all events in times that any of us can well remember—so capable of aiding her Ministers with wise and prudent counsel. As the noble Marquis has justly said, no mistake could be greater than to suppose that the Sovereign of this country does not exercise a constant, a wise, and a most important influence upon all the political events of the reign. If I simply make one remark, you will see at once how true that must be. Ministers go and change. They are not perpetual. The one person who remains at the head of affairs, cognizant of everything that takes place, is the Sovereign, and that Sovereign obtains an experience of the highest public affairs unequalled by any Minister, however powerful. You will see, then, how great is the influence and how great is the power, though it may be an unseen power, of our Sovereign.

**After the  
Queen?**

This of course, it will be said, is all very well as long as the Queen lives, but what about her successors? There is no guarantee for a constant succession of wise and good monarchs. That no doubt is true, but as the power of the Sovereign depends not upon her prerogatives so much as upon her influence, not upon the practically obsolete royal assent required to legislation, but upon the personal influence of the permanent editor of the realm over his fluctuating staff, we need not perturb ourselves greatly about what will happen when the Queen goes. We are inclined to claim that the institution of a constitutional monarchy, as it has received its latest development at the hands of Her Majesty, secures a maximum of control for good with a minimum of power for evil. It superadds to what is practically a republican form of government, an unseen adviser who has been carefully trained from childhood for the

duties of his post; who inherits the traditions and the temperament of a long line of rulers, and who is bound over by the heaviest possible recognisances to do what mortal can to secure the smooth working of our institutions. Free from all personal ambitions, he is placed at the elbow of all the Ministers by whose decisions he must abide when they clearly express the will of the nation, but whom he may always advise and occasionally check if they propose to make reckless plunges in any direction not sanctioned by the people. The Crown indeed is now recognised as an invaluable, moderating, and peacemaking force to the immense advantages of which we marvel we have for so long been so blind.

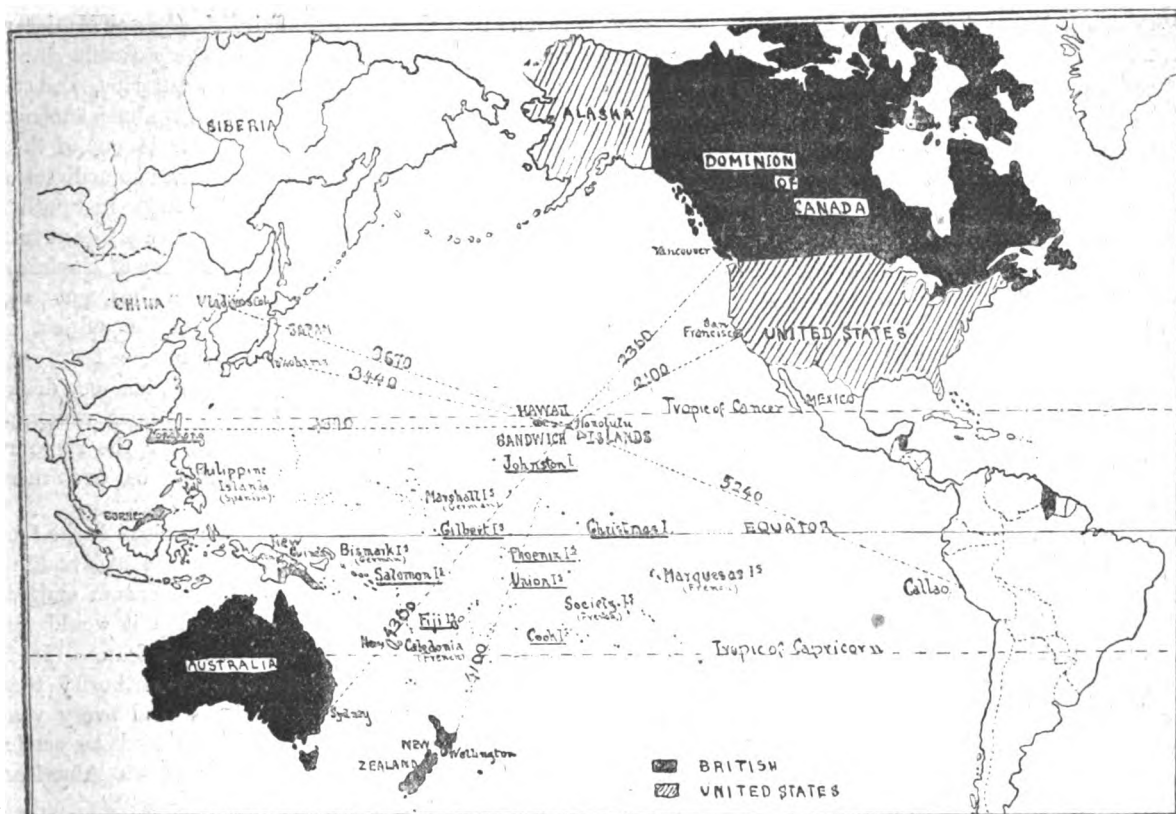

**The  
Annexation  
of  
Hawaii.**

The decision taken by President McKinley to annex the Sandwich Islands is one to which no Englishman can possibly object. We should have done it ourselves if we were in the place of the Americans, and the only wonder is that it was not done long ago. But, at the same time, while cordially wishing them all success in the new experiment of governing a Dependency peopled by an alien race—for there are only a handful of Americans in the midst of 107,000 people, of which 20,000 are whites—our own experience renders it impossible for us to ignore the fact that the beginnings of Colonial enterprise are usually costly, troublesome and disappointing. The Sandwich Islands are nothing in themselves. The significance of their annexation lies in the fact that the United States for the first time in their history have now become a Colonial Power, and that they now own something which any Power with a superior navy can snap up the moment war is declared. All Colonial possessions are so many hostages which nations give to every rival Power which is stronger than themselves in the vital element of sea power.

**The First Step  
that  
Counts.**

The annexation of Hawaii, therefore, means either that the United States will form that firm fighting alliance with the British Empire, for which we have always contended in these pages, or they will of necessity be driven to build more and more ironclads in order to feel that their Colonial possessions are not held on sufferance. As the first result of a quarrel with the United States, Japan, Spain, France, or Russia would seize Hawaii, not because it was worth seizing, but because it is the only place in which any of these Powers that have fleets on the Pacific could get at their enemy. As

THE HAWAIIAN ISLANDS.

American opinion is not as yet ripe for a British alliance, we may expect to hear that President McKinley intends enormously to strengthen the American navy.

#### Cuba.

But it is possible that he may be driven to take this course for even more pressing reasons. The events of last month seem to point in the direction of a more active policy in support of the Cuban insurgents, the adoption of which would almost certainly involve the United States in war with Spain. The state of things in Cuba is undoubtedly deplorable, and judging from the reported utterances of Mr. McKinley, the resolutions of the Senate, and the declarations of the American press, there is every probability that the United States will try to give effect to Mr. McKinley's declaration that "this bloody war must cease." On the other hand, the Spaniards are as proud and as tenacious as they were in the days of Ferdinand and Isabella, and they will certainly not surrender Cuba without a fight. Such a war would necessarily be largely fought at sea, and the first intimation that Mr. McKinley meant business would fill the ship-yards with orders. Nor

would it be surprising if the American Government were to find itself under the necessity to buy up any ready-made ironclads that it could find for sale in Europe.

#### The Pan-Anglican Conference.

Patriotic Americans may well feel towards the English Monarchy, whose apotheosis has been celebrated with such heartiness all round the world, as Nonconformists feel in relation to the Pan-Anglican Conference which is holding its Decennial Meeting in England this month. The 199 Bishops who are now in session at Lambeth belong to a Christian denomination in which the majority of English-speaking Christians have neither part nor lot, but we recognise in these 199 Heads of Episcopal Dioceses from the United States and all other parts of the world an element that makes for the union of the race, and, therefore, commands our sympathy, and evokes our gratitude. The Pan-Anglican Conference has grown from an assemblage of 76 Bishops in 1867 to the 199 who are meeting to-day. Every one of these men is a leader of men, clerical no doubt, and many of them deeply immersed in the superstitions of ecclesiasticism, but nevertheless

they are a living force in the world to-day. They represent the English-speaking race in so far as its geographical disposition is concerned, more than even the Monarchy, for among all the English-speaking peoples of the world, those who live under the Stars and Stripes alone were represented at the Jubilee as if they were a foreign people. But at Lambeth, the American bishops meet their Anglican prelates on a footing of common equality. They are on common ground, and thus the memory of Augustine is in one way more potent an influence making for reunion than the throne of Alfred.

Why not  
a  
Religious  
Revival?

The Church may thus be about to renew in the wider sphere of the English-speaking world the unifying mission which it fulfilled so nobly in this small island, which was once distracted by far bitterer feuds than those which exist between the Empire and the Republic. A suggestion has been made by one of our correspondents, which it is sincerely to be hoped will commend itself to the bishops at the Conference, and to all religious men everywhere. It is that this year of Jubilee should be marked by a combined effort on the part of all the churches to celebrate the sixtieth year of the Queen's reign by a sustained and well-directed effort to revive the spiritual life of their own people, and to make some impact upon the dense mass of heathenism, ignorance and vice that surrounds us. In other words, why should the Jubilee year, which has witnessed so notable a national and imperial revival, not be followed by a religious revival which would make its cleansing and inspiring influence felt in every city and every village throughout the land? The Bishops in Conference might well take the lead in commending such an object to the attention of our people. Nor would the Free Church Congress be slow to support so noble an initiative.

The German  
Emperor

The German Emperor, although the grandson of the Queen, has made himself somewhat conspicuous by restraining from any personal manifestations of his sympathy or admiration for his illustrious grandmother. He sent his brother, Prince Henry, whose splendid helmet of the Garde du Corps was much admired in the procession, and an ironclad of thirty years old to represent Germany at Portsmouth, but personally he has somewhat cold-shouldered the Jubilee, in marked contrast to the significant demonstration made on the other side by Francis Joseph, the Emperor-King of Austria-Hungary. It

is true that the internal affairs, changes of Ministers, resignation of Baron Marschall, the probable change in the Prussian Ministry of the Interior, and the Imperial Postmaster Generalship, have been sufficient to keep him busy. But the Kaiser is one of those men who never allow the press of work in one direction to interfere with the display of energy in another. There is reason to fear that his attitude was meant to be unfriendly, and to be due to his jealousy of England's Colonial expansion. Whether he has got any definite ideas in his head or not on this subject we shall probably see after his visit to the Tsar. At present, so far as we are concerned, his one desire seems to be to increase his navy, without which, of course, he can do nothing serious, for the rumours of Continental coalition against us are mere wind.

Germany  
in  
Brazil.

What is much more serious is the fact that the German Government is making a new effort to deflect German emigration to countries where it would not be lost in the English-speaking Ocean. It is said to be the opinion of those in authority that if the 70,000 or 80,000 Germans who every year leave the Fatherland could be induced to settle, say, in Brazil or in some other South American State, they would preserve their nationality, and a Great Germany would arise beyond the sea. Already there are thriving German communities in various parts of America, and they do not appear to learn Spanish or Portuguese with anything like the ease that they learn English in the United States or Australia. Says the Berlin correspondent of the *Standard* :—

There are places, like Joinville, which are almost as German as Berlin, Dresden, or Hanover. The native Brazilians there have a quarter of their own. The shops, schools, and churches, and the Municipal Government are German. The newspapers are German, and it is curious to see how characteristically German their advertisement columns are. By the new law any Navigation Company that proposes to carry German emigrants to South Brazil will find a willing ear in the Wilhelm Street.

But as soon as these German communities grow strong, they will make short work of the revolutionary groups of half-breeds who constitute the South American equivalent for a government. They will probably not annex themselves to the Fatherland, but hoist the flag of a German Republic, to which of course no objection could be taken; but if they were to be hard pressed, they might appeal to Germany, and the German Emperor would be only too willing to show that the German Fatherland extended across the Atlantic.

**Grasping  
the  
Trident.**

The Kaiser last month visited the Rhine Province, and spoke at Cologne and at Bielefeld. A statue which he saw at Cologne supplied him with a text for a discourse, which certainly seems to justify the belief that those who are committed to the Monroe Doctrine will do well to watch his movements with interest. Referring to the statue at Cologne, which is supported on one side by Neptune with a trident in his hand, the Emperor said that he regarded this as a token that, since his grandfather had welded the German Empire into one, Germans had their tasks set them in the world :—

There are Germans all over the world for whom we have to take thought, German honour which we have to maintain abroad as well as at home. The place of the trident is in our clenched fist, and I think that the citizens of Cologne are among those who understand this. May God grant me to follow in the steps of my grandfather, to maintain the peace of the world which has only existed since the German Empire has been restored! But may I also be enabled to uphold the honour of the Empire in every way in its foreign relations, and to secure and maintain those markets which we require for our national labour, and for the industry of the producing classes!

Of course, this would concern England possibly even more than America were it not that the extension of the British Empire is not accompanied by preferential tariffs which would prejudice German trade, whereas in the Sandwich Islands one of the first effects of its annexation will be to give America preference over all other competitors.

**Social  
Democracy  
in the  
United States.**

The prosperity which was so confidently promised by the Republicans as the natural consequence of the election of Mr. McKinley seems somewhat to tarry on the way. The Tariff Bill, which is passing through the Senate practically unaltered, is hardly likely to mend matters, and in the meantime there is to be noted that the agitation of the unemployed is cropping up again. Hundreds of thousands of tramps are said to be wandering about the country, which is no doubt true, although that in no wise proves the existence of great distress. But the most extraordinary and interesting development in this connection is to be noted in the new movement which has just been launched at Chicago. Mr. Debs, one of the heroes of the great railway strike, and a leader of the American Railway Union, has been the central figure in the great Conference held at Chicago, which launched what he calls the new party "The Social Democracy of America," the declared object of which is to undertake the conversion of the present existing social system into a co-operative commonwealth.

Mr. Debs, in short, is to realise what Mr. Bellamy predicted would be done in his "Looking Backward." The *modus operandi* by which Mr. Debs hopes to be able to achieve at last what reformers and utopians for many generations have desired is summarised as follows :—

1. Organise 100,000 working-men into lodges of 500, each man paying a monthly per capita tax.
2. Select a Western State.
3. Send into it a pioneer band of unmarried or childless men to open agricultural lands and build co-operative factories.
4. When these have been followed by enough men elect the Legislature.
5. Call a Constitutional Convention and make the constitution conform to co-operative ideas.
6. Call the Legislature together to enact laws under the new constitution.
7. Make labour exchange certificates substitutes for legal tender money.

**Troubles  
in  
India.**

While all the self-governed portions of the British Empire were celebrating the Jubilee with enthusiasm, there was no abatement of ill news from India. Indeed, the gloom rather intensified. The number on the famine relief works has risen to 4,000,000. The attempt to enforce sanitary measures of precaution against the plague has led to much angry discontent among the natives, who regard sanitation as a craze of the white man, and who bitterly resent the interference with their domestic privacies which it involves. This discontent suddenly crystallised itself in the assassination of Lieutenant Ayerst and Mr. Rand at Poona. So intense and deep-seated has been the dissatisfaction, of which these murders were the visible sign, that the district has been occupied by an effective police force, and the magistrate has taken occasion to publicly warn the natives that severe measures will be taken should there be any further overt expression of discontent. A mistake may have been made in employing British soldiers instead of natives in enforcing laws which are distasteful to the prejudices and customs of the native population; but it is probable that the Indian Government will have to decide, and that right soon, whether or not it is worth while risking a rebellion in order to save the lives of people who would much rather die than be kept alive by European methods of sanitation. If the natives have made up their minds, as they appear to have done, that life is not worth living if sanitary inspectors are to be free to poke their noses into their domestic arrangements, we had much better let them die and be done with it. There is a zeal for sanitation which leads men to sanction a kind of persecution that is every whit as indefensible as the Inquisition.

### A Frontier Episode.

The murders at Poona were by no means the only bad news from our Indian Empire. Mr. Gee, the political officer in the Tochi Valley, on the 10th of June was moving through the Waziri country, in order to establish a new outpost at a place called Sherani, twelve miles farther up the valley than the last advance post of Datta Khel. There was nothing to indicate that the tribes meditated any act of hostility, although one part of Mr. Gee's duty was to recover a fine which had been imposed upon a local tribe for misconduct. He was escorted by three hundred native infantry, two mounted guns, and twelve cavalry. The tribesmen had provided food for the troops, and the officers were just finishing their meal in the shade of the trees, when suddenly a heavy fire was opened upon them at such short range that all the six military officers were shot down at once. Mr. Gee, curiously enough, was not hit. The troops took to arms, only to find themselves enclosed in a circle of fire from a native force three times their number, who for the most part were invisible, being concealed by walls and other cover. There was nothing to do but retreat as best they could, and for nine hours the little British force fought its way down the valley to Datta Khel. Three British and one native officer were killed, and three British officers severely wounded. Twenty-one of the rank and file were killed and twenty-four wounded. The immediate result is that two brigades, numbering 6,000 men, have been ordered to move at once into Tochi Valley, in order to teach the

hillmen that British officers cannot be treacherously shot down with impunity. It is one of the ordinary episodes in our police work on the frontier, but it is seldom an Imperial force catches it so hot.

### Earthquake in Assam.

As if this were not sufficient, Eastern Bengal and Assam have been visited by an earthquake. It is said to have swept off 6000 persons at a stroke, while Assam is said to have been overwhelmed with an almost incredible destruction. Large towns have been levelled, and the soil itself has slipped so much that

the people will have to be maintained as if they were in a province visited by famine. Among other incidental items, a railway fifty miles long has been wiped out of existence, a fact which will not facilitate the work of relief

### The Anglo-Chinese Treaty.

After the usual protracted period of negotiation which is inevitable when anything is to be done with the Chinese, the Anglo-Chinese Treaty has been signed, the prac-

MAP OF THE ANGLO-CHINESE FRONTIER.

tical effect of which, so far as it involves any change in boundaries, is shown in the accompanying map. This treaty is on the face of it nothing but compensation for the march stolen upon us by France, when she induced the Chinese, contrary to their undertakings, to cede to her territory in the south-west. As we could not induce the Chinese to cancel the French concession, we have at last succeeded in making them concede to us as much as they ceded to France. It is a case of levelling up, levelling down being impossible.

Taken from a collection made by J. Grand-Carteret.]

EUROPE AS SHE IS REPRESENTED BY FOREIGN CARICATURISTS.

**The Dutch General Elections.** One of the most interesting General Elections that have been held for some time came off last month in Holland. The Dutch have just remodelled their electoral system by extending the franchise so as to double the electorate, limiting each elector to one vote for one candidate, and introducing the ballot. The result showed the parties were hotly divided, chiefly on religious questions. The old Calvinists joined hands with the Roman Catholics against the Liberals, with a result that at the first ballot what we should call the Denominational Party carried thirty-five seats as against fifteen held by the Liberals. The Minister of Justice was defeated; and it was clear that as the immediate result of extending the Franchise, the Denominationalists had beaten the Liberals hip and thigh. Now, as the Denominationalists are also Protectionists, this result bodes ill for Free Trade in one of the few countries which has hitherto held its ground.

**The Turks in Thessaly.** In the East of Europe matters are still dawdling on, but there is the usual kind of haggling between the Powers and the Turks as to how much or how little is to be ceded to the conquerors on the frontier of Thessaly; how much the indemnity shall be, and how it is to be secured. In the meantime, the Turks remain where they are, and as one of them told a Greek the other day, "Here we are, and here we shall stop, at least, until you pay the indemnity, and as you have no money, you will never pay it, and even if you do, we shall find some other pretext for staying where we are." Besides, they declare that the Turkish army would revolt if it were ordered to evacuate the province, if it was reconquered. That is all nonsense. Turkish troops do not revolt under such circumstances. They do as they are told. The Greeks seem to be utterly cowed and demoralised, but they seem to possess great recuperative powers, and in a month or two they will be once more as vain as if they had fought at Salamis instead of at Domokos. The one important question is whether or not the Government of Greece is to be put under a financial commission in order to guarantee the indemnity. A definite period of financial control might possibly not be a bad thing for the Hellenes. What Greece needs is honest common-sense business administration much more than new provinces.

**The New Governor of Crete.** The one satisfactory item of news from the East is that the Powers have agreed upon the new Governor for Crete, and they appear to have made a thoroughly good choice. M. Droz, ex-President of the Swiss Republic, and first director of the International Railway Union, began life as a village schoolmaster at Neuchatel. He is a first-class business man, an experienced diplomatist, and he loathes the perpetrators of the massacres of the Armenians as much as Mr. Gladstone. Before accepting the post, it is said he has declared that he must have the loan of £200,000 in order to start his government. The island must be speedily cleared of Turkish troops, and garrisoned partly by foreigners and partly by natives, while the police force shall consist of Belgians and Swiss. This is excellent news, and seems to show that M. Droz knows his business, and means to put it through. The administration of such a man would be a thousand times better than the best that could be hoped for by an annexation with Greece.

**The Suicide of Mr. Barnato.** One of the sensational incidents which most impressed the public imagination last month was the suicide of Mr. Barney Barnato. Mr. Barnato was returning from South Africa upon board the *Scot*. He had thrice attempted to commit suicide before leaving Cape Town, but on board the boat, although suffering from occasional mental depression, he had shown no symptoms of a suicidal mania. On the 14th of June, as the *Scot* was steaming through heavy seas off Funchal at the rate of seventeen knots an hour, he jumped overboard. All efforts to save him were in vain. Barnato was a millionaire among the millionaires, who on one occasion received a cheque for £5,500,000 from the De Beers Diamond Company, when they bought up his interest in the Kimberley Diamond Mines. He was a remarkable product of the times, and his sudden death produced more than the usual crop of more or less uncharitable moralising. He was a little Jew, very domestic in his habits, full of a childish vanity, enthusiastic in his declarations of patriotic devotion to the empire in which he had made his fortune; but he lived under too great a strain of financial excitement, and it did not mend matters that he began drinking champagne immediately after breakfast. Millionaires, especially those who are making their millions, should never drink anything excepting water. Barnato was never a drunkard, but the habit of keeping yourself up to your work by stimulants usually results in disaster.

# DIARY FOR JUNE.

## EVENTS OF THE MONTH.

- June 1.** The Porte agreed to the Armistice suggested by the Ambassadors.  
South African Committee examined Mr. Maguire and Mr. Chamberlain.  
Inquest held respecting the Suicide of a Haileybury College Boy.  
Dervishes routed near Dongola.
- 2.** Mr. Gladstone opened the Victoria Jubilee Dee Bridge at Queensferry.  
Bimetallic League in Annual Convention at Manchester passed resolutions favouring the Remonetization of Silver.  
President McKinley opened the International Commercial Congress at Philadelphia.  
British Women's Temperance Association passed Resolutions against the re-establishment of the C. D. Acts.  
Spanish Cabinet resigned.  
British Mission to Abyssinia reported to have completed its work May 15th.
- 3.** British attacked at Gamasiep by Bechuanaland Rebels.  
Peace negotiations opened between the Ambassadors and the Porte.  
Greeks and Turks signed an Armistice to be in force until Peace is concluded.  
Canadian Senate sent an Address to the Governor-General calling attention to the present opportunity for strengthening the bonds between Canada and the Mother Country.  
The Cape Assembly agreed that arrangements should be made to contribute to the support of the Imperial Navy.  
Transvaal Exhibition opened in Berlin.
- 4.** Lord Selborne examined by the South African Committee.  
German Political Detective, von Tausch, acquitted in Berlin.
- 5.** Annual Conference of the Irish National League held in Manchester.  
Opening of the British Co-operative Congress at Belfast.  
M. Gerault Richard, a Socialist, suspended from the French Chamber.  
Anglo-Chinese Agreement signed at Peking.
- 6.** The Spanish Queen-Regent refused to accept the Resignation of the Ministry.
- 7.** Opening at St. Martin's Town Hall of the Miners' International Congress.
- 8.** Resolutions in favour of an eight-hours' day passed by the Miners' International Congress at St. Martin's Town Hall.  
Army Re-organisation Bill passed by the Italian Chamber.  
Memorial to Joseph Thomson, African Explorer, unveiled by Sir Clements Markham, at Thornhill.  
Constantinople Conference decided to refer the question of Indemnity and Capitulations to a Commission.
- 9.** Funds for Statue of Ferdinand de Lesseps, to be placed at Port Said, voted by the Suez Canal Company.
- 10.** Exhibition of Book-plates and Heraldry opened at Westminster Palace Hotel by the Ex Libris Society.  
Daughter born to the Empress of Russia.  
Bechuanaland Natives Reserves Bill passed by the Cape Assembly.  
Mr. Gee and Indian escort attacked at Maizar in the Tocht Valley.

Transvaal Volksraad agreed to adjourn and close all Public Offices on June 22.

- 11.** The Report of the Royal German Scientific Commission for Medical Affairs on Vaccination and Tuberculosis published.  
The Wesleyan Conference Special Committee met at the Centenary Hall to discuss the term of Ministerial ApPOINTMENT.  
Colonial and other Troops inspected at Chelsea

- 12.** Lord Brownlow, Mr. Henry Tate, and Mr. John Murray Scott appointed Trustees of the National Gallery.  
Calcutta seriously damaged by Earthquake.  
Duke of York's School for Children of Soldiers of the Regular Army presented with New Colours by the Duchess of York.
- 13.** Explosion occurred near President Faure's carriage.

SIR ALEXANDER R. BINNIE.

Chief Engineer of the London County Council.

(Photograph by Elliott and Fry.)

- The King of Belgium received a Deputation praying for the Reorganisation of the Army.  
Cairo Native Editor sentenced to a year's imprisonment for casting a reflection upon the German Emperor.
- 14.** Colonial Premiers visited Edinburgh.  
Statue of Mrs. Siddons unveiled on Paddington Green by Sir Henry Irving.  
The Prince of Wales presided at Albert Hall over a National Meeting of Freemasons called to formulate an Address to the Queen.  
Opening of the Handel Festival took place at the Crystal Palace.  
The Provisional Contract for a Fast Steamship Service discussed in the Dominion Parliament.  
Anglo-American Venezuelan Boundary Treaty ratified at Washington.
- 15.** Mining Association of Great Britain resolved to obtain various Amendments to the Workmen's Compensation Bill.  
International Congress on Technical Education opened at the Society of Arts.  
The Colonial Premiers visited Glasgow.  
Resolutions declaring the need of a Naval and Military Station at the Cape of Good Hope passed at Melbourne.  
Mr. Justice Holmes appointed Lord Justice of Appeal.  
Treaty signed at Guatemala by the Ministers of Honduras, Nicaragua, San Salvador, Costa Rica and Guatemala by which these States constitute one Republic in all Foreign Affairs.  
Publication of the first British Consular Report from Hang-chau.
- 16.** Treaty for the annexation of Hawaii signed by President McKinley.  
Memorial buildings at Winchester opened.  
Arrival of the British Mission to Abyssinia at Aden.  
Rear-Admiral Tirpitz appointed Secretary of State at Berlin.  
Financial assistance granted to the landed nobility by the Russian Government.
- 17.** Cambridge Honorary Degrees bestowed upon the Premiers of Canada, Natal, Victoria, Western Australia, New Zealand and Tasmania.  
Most Rev. Dr. J. F. Peacock enthroned Archbishop of Dublin.  
Dominion Parliament passed the agreement between the Government and the Grand Trunk and Drummond County Railways.  
Cardinal Vaughan issued a Pastoral Letter on the Jubilee.
- 18.** Official Jubilee celebrations began at Windsor with a Military Tattoo.  
Prince of Wales presided at a Dinner given to the Colonial Premiers at the Imperial Institute.  
Tariff Resolutions passed by the Dominion House.  
Political Treaty with the Transvaal ratified by the Orange Free State Volksraad.

THE LATE MR. "BARNEY" BARNATO.

(Photograph by Elliott and Fry.)

20. Thanksgiving Services held throughout Great Britain.
21. Six thousand lives reported lost through the Earthquake in Assam.  
Programme for the Diamond Jubilee Week published.  
Publication of the Post Laureate's poem, "Victoria."  
The Colonial Premiers entertained at Birmingham.  
Jubilee Celebrations inaugurated in all the Colonies, the United States, and on the Continent.
22. Splendid Jubilee Procession accompanied the Queen through London.  
Two British Officials shot in Bombay.  
Rioters gave trouble in Dublin.  
Mr. and Mrs. Gladstone, at Hwarden, distributed Jubilee Medals to the School Children.
23. Sir Julian Pauncefote left New York for London.  
The Washington Foreign Relations Committee referred the Hawaiian Treaty to a Sub-Committee.  
Victorian Parliament opened.  
Opening of the Royal Agricultural Society Exhibition in Manchester.  
Dublin Riot continued.  
Foundation Stone of Cabot Memorial laid in Bristol.
24. Concession for establishment of an Electric Tramway in Johannesburg refused by the Road.  
Dock Works of Buenos Ayres inaugurated by the President.  
Programme of the Olympic Congress published in Paris.  
Colonial Premiers received by Mr. Chamberlain at the Colonial Office.  
Agreement between the Government and the Grand Trunk and Drummond County Railways rejected by the Canadian Senate.  
Sefior Sagasta issued a Manifesto censuring the Government Cuban policy.
25. Her Majesty ordered Clasp or Medals to be issued to the Police Force, and four days' pay to each officer.  
Russian Ironclad *Gangout* sank in the Baltic.  
The Colonial and Indian Troops, numbering 1000, upon invitation of Sir Henry Irving, witnessed a performance at the Lyceum Theatre.  
Society for the Propagation of the Gospel met in St. James's Hall.
26. The Jubilee Naval Review took place at Spithead.  
Mr. Sherman's reply to the Protest of the Japanese Government to the conditions of the Annexation of Hawaii cabled to Tokio.  
Mohammedans attacked a village near Candia.
27. Army Organisation Bill passed by the Italian Senate.  
Skirmishes in Crete continued.
28. Persons on Indian Relief Work numbered 3,927,000.  
Announced that Herr von Billow will take charge of the German Foreign Office.  
Colonial Premiers conferred with Mr. Chamberlain at the Colonial Office.  
The P. and O. steamship *Aden* reported wrecked off Sokotra, June 9.  
President Faure received the Tsar's invitation to visit Russia.
29. Serious Riots occurred in Chitpur.  
Lord Salisbury received several special Ambassadors.  
Deputation asking for Government aid for the Irish Channel Tunnel Scheme waited upon Mr. Ritchie.  
South African Committee in private Session decided to recall Miss Shaw and Dr. Harris for further evidence.  
Dominion Day celebrated at a Banquet at Hotel Cecil.  
Canadian Government and Senate settled their difficulty about the Railway Agreement, and Parliament was prorogued.
30. Portsmouth Dockyard visited by the Colonial Troops.  
Oxford conferred Honorary degrees on six Colonial Premiers, Sir George Goldie, and Mr. Godkin, of the *Nation*, New York.  
The Pan-Anglican Conference opened at Lambeth.  
Punitive force ordered to take possession of Poona.  
Over 16,000 miners struck in Belgium.

### PARLIAMENTARY. HOUSE OF LORDS.

1. Lord Morris stated he would not proceed with his Motion for Relief for Ireland.
3. Royal Assent given to the Elementary Education Act (1870) Amendment Bill and several other Bills.  
Second Reading of the Excise Licences Bill and the Fisheries Act Amendment Bill.
18. The House agreed to attend Service in Westminster Abbey, June 20th.
21. Congratulatory Address to the Queen moved by Lord Salisbury, and seconded by Lord Kimberley, agreed to with cheers.
23. The House met and proceeded to Buckingham Palace to present a congratulatory address to the Queen.
29. Her Majesty's reply to Congratulatory Address read.  
Second Reading of the Sunday Bill moved by Lord Hobhouse.  
Discussion by Lord Louper, Lord Farrer, the Archbishops of Canterbury and York, the Bishop of Winchester, and several others. Motion rejected by 50 to 33 votes.

### HOUSE OF COMMONS.

1. Workmen Compensation Bill further discussed in Committee.
2. Workmen Compensation for Accidents Bill; Scale of Compensation discussed.
3. Sir C. Dilke asked for information regarding Crete.  
Mr. Dillon suggested the present a good opportunity for granting amnesty to political prisoners in the country.  
Mr. Balfour denied the convicts referred to were political prisoners

After some further discussion Mr. Balfour's motion for the adjournment of the House to June 17th agreed to.

In Committee, First Schedule as amended ordered to stand part of the Workmen Bill.

17. The House moved to attend the Church of St. Margaret, Westminster, on June 20th in Commemoration of the Sixtieth Year of Her Majesty's Reign.

Civil Service Estimates discussed in Committee.  
Votes for Education, the National and National Portrait Galleries, and London University agreed to.

Report relating to relief for Congested Districts in Scotland agreed to.

18. Various Votes agreed to in Committee of Supply.

21. Mr. Balfour moved and Sir W. Harcourt seconded an Address of Congratulation to the Queen. Mr. Dillon opposed, as he argued the blessings brought to England by the Reign had not been felt in Ireland. Mr. J. Redmond proposed an Amendment setting forth the grievances of Ireland. On division, negatived by 436 to 7. Address carried by 459 to 44. Another division showed 411 to 41.

Second Reading of the Congested Districts (Scotland) Bill, the Police (Property) Bill, the Weights and Measures (Metric System) Bill, and the Post Office Sites Bill.

23. Letters of sympathy and rejoicing received from the Italian Chamber and from the Argentine Republic.

The House then proceeded to Buckingham Palace to present their address. Upon their return the Queen's reply was read.

24. Mr. Curzon, in reply to Mr. Beckett, said the Government did not care to express any opinion on the question of the Annexation of Hawaii to the United States.

In Committee of Supply on the Vote for the Diplomatic and Consular Services Sir Charles Dilke called attention to the Fugitive Slave Law in the British East Africa Protectorate.

After discussion by Mr. Parker Smith, Mr. Pease, and Mr. Curzon, Mr. Dillon moved a reduction of the Vote. Motion rejected. Mr. Pease moved a small reduction, which was negatived also. This and other Votes agreed to.

25. Mr. Balfour spoke of the delay in forming the New Financial Relations Commission.  
Civil Service Estimates for Scotland considered in Committee.

On the Vote for the Local Government Board, Mr. Dally complained of the transferring of Scotch Paupers to Ireland.

Mr. Dillon's motion for Reduction vetoed by 97 to 49, and Vote agreed to.

MAP OF THE FIGHT AT MAIZIR.

- Mr. Curzon asked for copies of the papers referring to Slaves in East Africa, and said instructions were being sent to the Representative at Mombasa that there should be no restitution of Slaves.
28. Sir C. Dilke questioned Mr. Curzon as to the Fugitive Slave question in East Africa. After considerable discussion the Metropolitan Water Companies' Bill read a second time. Motion for the Second Reading of the Isle of Man (Church Building Acts) Bill negatived by 65 to 52.
- Mr. Balfour's Motion for the Adjournment of the House negatived by 64 to 58 votes.
- In Committee on the Educational Endowments (Ireland) Act (1845) Amendment Bill, Motion to report progress defeated by 70 to 69. Mr. Balfour again moved the Adjournment of the House. Carried by 133 to 76.
29. Mr. Dillon moved a new clause to the Finance Bill, to reduce the Customs Duties on all kinds of manufactured Tobacco by 2s. per pound. The Chancellor of the Exchequer resisted the clause, as it would reduce the taxation by £7,000,000. Clause negatived by 289 to 89.
- Third Reading of the Berriew School Bill carried.
- In Committee on Congested Districts (Scotland) Bill, Clauses 1, 2 and 3 agreed upon.
- Mr. Balfour announced that the Queen was distressed to hear all the Members of the Commons were not able to see Her Majesty on the 23rd. Her Majesty would be pleased to receive all the Members and their wives at Windsor on July 3rd.
30. Amendment to the Plumbers' Registration Bill vetoed by 200 to 77.

## ELECTION.

8. Petersfield Division of Hampshire:  
Mr. H. G. Nicholson (C.) .. 3,748  
Mr. Bonham Carter (L.) .. 3,328
- Conservative Majority .. 420  
1892: C. Maj., 904; 1895: C. Unopposed.

## JUBILEE CELEBRATIONS.

12. A Military Tattoo at Windsor opened the Jubilee Celebrations.
20. Her Majesty attended a Thanksgiving Service in St. George's Chapel, Windsor.
21. The Queen arrived at Buckingham Palace, where she held a reception in the evening.
22. The Queen drove through London for the "purpose of seeing her people and receiving their congratulations." Her Majesty was attended by the Royal Family and guests. They united in a Thanksgiving Service on the steps of St. Paul's Cathedral.
- The Queen sent this Message to the Empire: "From my heart I thank my beloved people. May God Bless them."
- London magnificently decorated and illuminated.
- Jubilee Honours announced.
23. The Queen received Addresses from the Peers and the Commons.
- 10,000 School Children reviewed on Constitution Hill by the Queen.
- The Queen accepted addresses at Eton, Slough and Windsor.
- A special Diamond Jubilee Medal for all Lord Mayors, Mayors, Lord Provosts and Provosts ordered to be issued by Her Majesty.
- Prince and Princess of Wales and many distinguished visitors attended a State Performance at Covent Garden.
24. The Queen received at Windsor the Lords of the Admiralty and the Admirals of Foreign Warships lying at Spithead.
- Prince and Princess of Wales gave an Evening Party at Buckingham Palace.
- The Princess of Wales visited three of the Dinners given to the Poor—310,000 persons were given dinner under the Princess of Wales' Fund.
25. The Queen inspected many school children from Windsor and vicinity, and then reviewed the Fire Brigades from all parts of the Country.
- The Lord and Lady Mayoress entertained the Prince and Princess of Wales and other guests at lunch.
26. The Prince of Wales reviewed the Jubilee Fleet at Spithead.

28. Her Majesty gave a Garden Party at Buckingham Palace to the Royal Family and Royal and Representative Guests.
- Citizens of Kensington presented Her Majesty with an Address.
29. The Queen reviewed in Windsor Great Park about 3,600 Public Schools Volunteers.
30. The Queen acknowledged addresses at Windsor from the Corporation and Military Knights of Windsor and the Corporation of Reading.

## SPEECHES.

2. Rt. Hon. W. E. Gladstone, at Hawarden, on the Development of Means of Communication.
- Rt. Hon. John Morley, at Oxford, on Machiavelli.
- Lord Kelvin, at the Victoria Institute, on the Age of the Earth when fitted for Life.
- Mr. G. Jamieson, at Manchester, on Eastern Trade and the Silver Question.
- Lady Henry Somerset, Canon Wilberforce and others before the British Women's Temperance Association.
3. Lindsay Wood, before the Federated Institution of Mining Engineers, on the Increase in Cost of Mining.
4. W. H. Preece, at the Royal Institution, on Signalling through Space.
- The Bishop of London, at St. Mary-at-Hill, on How to Help the Unemployed.
5. Professor Courthope, in the Taylor Institution, on the Decadence of Poetry.
- J. Dillon, M.P., at Manchester, on the Condition of the Irish Party.
- Lord Dufferin, at Belfast, on the Present Lord-Lieutenant.
7. Mr. James Bryce, at Aberdeen, criticised the Action of the British Government in the East.
9. Sir Richard Webster, the Attorney-General, at Ventnor, on England's Policy in the East.
10. Lord Dufferin, at St. Martin's Town Hall, on Richard Brinsley Sheridan.
- Lord Londonderry, in Westmoreland, on the Conservative Party and the Compensation for Accidents Bill.
10. Professor Behring, before the Medical Congress in Berlin, on His Recent Experiments with Tuberculous Serum.
- Hon. R. J. Seddon, New Zealand Premier, at St. Helena, on their Success with the Eight Hours' Bill and the Women's Franchise Bill.
11. Lord Dufferin, at Hotel Cecil, on the Loyalty of the Civil Service Men.
- Professor William Crookes, at the Royal Institution, on Diamonds.
- President McKinley, at the Opening of the Tennessee Centennial Exhibition, on the "Anglo-American" Love of Liberty.
- Lord Russell of Killowen, at Hackney Town Hall, on a Polytechnic for Hackney.
12. Duke of Devonshire, at Liverpool, on the Objects of the British Empire League.
- Mr. Laurier, at Liverpool, on the Building of the Colonies.
- Mr. Labouchere, at Twickenham, on the Care of the State for the People.
- Mr. J. A. F. Maitland, at the Royal Institution, on English Composers and Conductors of To-day.
- Mr. J. E. Redmond, M.P., at Cork, on the Local Government Scheme for Ireland.
14. Prof. G. V. Poore, at University College, on the History of the Institution.

## OBITUARY.

3. Lieut.-General E. O. Hewett, C.M.G., Governor and Commandant Royal Military Academy, Woolwich, 61.
4. Major-General Chas. Hodgkinson Smith, C.B., 71.
- George Chester, painter, 83.
- Lady Hamilton, wife of Admiral Sir B. Vecey Hamilton, 58.
5. Baron Oscar Dickson, supporter Arctic Expeditions, 73.
- William Morton, water-colour painter.
6. William Martin Wilkinson, leader in the Charity Organisation Society, 84.
- Dr. Ethelbert H. Blake, A.M.D., 78.
7. Captain Charles W. Earle, 68.
8. Lady Bessemer, 83.
10. General Augustus H. Ferryman, C.B., 81.
- Colonel Arthur C. Bunney.
- Joseph Ruston, ex-Mayor, Lincoln.
- Prof. Carl R. Fresenius, scientist, 79.
11. Sir Henry Ayers, G.C.M.G., ex-Premier, South Australia, 76.
12. Rev. Alexander Freeman, M.A., F.R.A.S., 58.
- Major-General Henry Beville, C.B.
- Major George Avery Godfrey, Chief Constable, Derbyshire, 50.
13. General Robt. W. M'L. Fraser, 81.
14. General von Albedyll, Prussian officer, 73.
- Countess O'Sullivan, "Frau Charlotte Molteo," actress, 63.
- Barnett I. Barnato, 44.
15. Colonel Sir James Godfray, 81.
- Major George D. Churchill Raitt, 42.
16. Dr. William Spark, Leeds organist, 72.
17. Father Kneipp, Founder water cure system, 78.
- Charles Clay, a Founder Central Chamber of Agriculture.
19. Colonel Archibald Impey-Lovibond, 74.
- General Augustus Turner, 81.
- Surgeon-Major Wm. F. Blyth Dalzel, 74.
20. General Sir F. F. Maudslayi, V.C., 76.
22. Henry Stanley Monck Crocker, 51.
- General William R. Houghton, 72.
23. Surgeon-Captain Cassidy, wounded at Tochi.
- Rt. Hon. Sir Walter F. Crofton, many years Chairman of Prisons Board in Ireland, 82.
24. Sir John Simon, Sergeant-at-Law, 79.
- Surgeon-General Herbert Taylor-Road, C.B., V.C., Hon. Surgeon to the Queen, 69.
25. Mrs. Margaret Oliphant, novelist, 69.
- Miss Alice Lingard, actress.
28. Admiral Sir W. R. Meads, 85.
27. William Philip Sefton, Earl of Sefton, 62.
- Lieut.-General Chas. E. P. Gordon, C.B., 81.
28. M. J. G. Kist, Member Council of Guardians of Queen Wilhelmina.
29. Rev. J. Frederic H. Kingwood, many years Headmaster Dugganston School, 83.
30. General Sir Robt. Cadell, K.C.B., 72.
- DEATHS ANNOUNCED.
- Henry H. Priest, Commissioner of Jabalpur.
- M. Paul Casimir Perrier, Senator, 84.
- Chas. L. St. John, British Consul at New Orleans.
- M. Carnescasse, Senator, 58.
- Miss Fanny Metcalfe, Member Executive Committee of Girton College.
- David Lyell, Inner Temple.
- Hofrath J. Falke, formerly Director Austrian Museum of Art and Industry, 72.
- Peter von Tunner, metallurgist, 89.
- Bai Motilal Wadia, Bombay philanthropist, 86.
- M. Ranchot, French Minister to Siam.
- Captain Boycott.
- Dr. Japetus Steenstrup, Professor of Zoology, University of Copenhagen, 84.
- Von. Hugh Jones, Archdeacon and Canon of St. Asaph, 81.
- Victor Franconi, equestrian, 85.

**EUROPE.**

**THE EUROPEAN GROUP AT THE ALBERT MEMORIAL.**

# CHARACTER SKETCH.

## THE UNITED STATES OF EUROPE.

*Question:* "What is England's mission abroad?"

*Answer:* "To maintain the European Concert—that germ of the United States of Europe—against isolated action; to establish a Roman peace among the dark-skinned races of Asia, Polynesia and Africa; to unite all branches of the English-speaking race in an Anglo-Saxon Bund, and to spread Liberty, Civilisation and Christianity throughout the world."—*The Elector's Catechism. General Election of 1880.*

THE above extract from the most widely circulated of all unofficial electoral broad-sheets at the General Election of 1880 is not without a certain value to-day. It is a reminder to all and sundry that the

greatest Liberal victory ever achieved at the polls in the United Kingdom was won on no Little England programme of isolation, but was definitely based upon an intelligent and all round participation in the ordered evolution of the affairs of all the races on all the continents. It is especially important just at present to note the first clause in this concise definition of England's mission abroad.

"To maintain the European Concert—that germ of the United States of Europe—against isolated action" was the avowed policy of the whole Gladstonian party in the hour of its greatest triumph. It is now the adopted programme of the Unionist administration, which, relying upon a majority even larger than Mr. Gladstone's in 1880, has declared its devotion in no qualified terms to what Lord Salisbury has felicitously described as "the Federation of Europe."

If it is England's mission, as declared by both her great historic parties, to treat the European Concert as the germ of the United States of Europe, and to develop the concerted action of six Powers in relation to the question of the East into a Federated Union of all the European States, it may not be amiss to devote some time and space in attempting to form some idea of this new organic entity which it is the first object of our foreign policy to create. Are we repeating the crime of Frankenstein, or are we fashioning, like Pygmalion, a beautiful creature into which at the appointed time the gods will breathe the breath of life? In other words, what is this Europe whose United States we are seeking to federate? That is the question which I seek to answer in this character sketch.

### I.—THE PERSONALITY OF A FEDERATION.

Europe is a continent. It is hardly as yet a realised personality. There was a fair Europa in the mythology of the Ancients, whom Jove loved and whose story once suggested to Tennyson the idea that John Bull might aspire successfully to play the part of the Father of gods and men. But outside mythology there is little personification of Europe. The symbolical group at the base of the Albert Memorial, representing Europe as one of the four continents, is almost the only effort with which we are familiar in England.

But such personification of a Federation of States is

possible enough. The United States of America form a federation which has its recognised symbolical embodiment in Columbia, and its humorous personification in Uncle Sam. The British Empire is a conglomerate far more heterogeneous and wide-scattered than the United States of Europe, but we have our symbol in the heroic figure of Britannia and our familiar personification in John Bull. The German Empire, to take another illustration, is also a conglomerate of kingdoms and duchies and cities, but the first great effort of German art to express in permanent form the triumph of German arms in the attainment of German unity was the erection of the colossal statue of Germania upon the wooded heights of the Niederwald, where she still keeps watch and ward over the German Rhine. But in all these cases it must be admitted there is a certain unity of national type which facilitates the task of personifying the federal combination. A closer parallel to the difficulty of personifying Europe is the task of personifying Austria-Hungary. Vienna has many great artists who have essayed most things, but if they have embodied the Empire-Kingdom with all its heterogeneous compost of races and nations into some Trans- and Cis-Leithan counterpart of Columbia, Britannia, and Germania, their achievement has not travelled westward so far as London.

Nevertheless, the very absence of an embodied conception in marble or on canvas of Austria-Hungary, encourages us to hope that the United States of Europe will not postpone their coming into being until their personification in some heroic or familiar figure is the common possession of the Continent.

The example of Austria-Hungary is indeed full of encouragement in more ways than one. It is unlike the three other great composite bodies, in that it has no common language, no dominant nationality, no common history. It is made up of separate nations, rival races, each with traditions and aspirations of its own. No one is proud of being an Austrian-Hungarian, although few men in Europe are prouder of their own nationality than the Austrian Hapsburgs or the Hungarian Magyars. Yet Austria-Hungary has come into being. It exists, and it not only exists but it thrives, and extends its borders. It is a distinct military entity. Its navy was represented at the Review at Portsmouth. If Austria-Hungary can be all this, so can Europe.

It is a significant fact that the only artist who has of recent years endeavoured to portray Austria-Hungary as a personalised entity is the Kaiser William II., who more than any other ruler on the Continent is saturated with the spirit and genius of our time. His delineation of the various European States in his famous picture has already appeared in our pages, but it is worth while reproducing it once more.

Here it will be seen Austria-Hungary is personified not inaptly; but even Kaiser William has not yet ventured to portray the form and lineaments of the heroic figure which would fitly represent the United States of Europe. He may do it yet, for his brain is active and

his fingers are never still. And it may be that as the artist whose pencil first portrays the symbolic figure of the Federated Continent, William the Second may render better service to the United States of Europe than by anything which he may do as German Emperor.

The moment is propitious for the appearance of such an artistic conception, for it is in this way that Art becomes at once the inspiration of Politics.

The caricaturist, who often precedes the more serious artist in the selection and illustration of themes of national and international importance, has not been slow to seize the opening offered by the first crude tentative

efforts towards international action in Crete to portray the European soldier as a fantastic conglomerate, a thing of shreds and patches, made up of fragments of all uniforms. Not so will the artist proceed who endeavours to present before the world the heroic proportions of her who, although the least among the Continents, is now, as she has been for two thousand years, greatest amongst them all. The Star of Empire which shone in the remote past over the valley of the Nile and the plains watered by the Euphrates has since the great day of Salamis been faithful to Europe.

It may be that the new Continent of the West may yet challenge successfully the primacy of the older world. But except in alliance with Britain, no such challenge can be dreamed of for a century, and Britain is European as well as American, Asiatic as well as African. For as the Tsar is Emperor of All the Russias, so Her Majesty is Empress on All the Continents and of All the Seas.

## II.—VAGINA GENTIUM.

Ancient Scythia was described by the Romans as *Vagina Gentium*, the teeming womb of races, whose progeny overflowed the world. What Scythia was then Europe is to-day. The overflow of the European gentes

is being spilled round the whole planet. Hence whatever other emblem, symbol, instrument or weapon the artist may introduce into his picture of Europe, he must take care to put the cradle at her foot. In the sixty years of the Queen's reign this small Continent has thrown off, as hives throw off swarms in spring, no fewer than 30 millions of surplus persons, with which it has peopled the waste and colonised the world. Thirty millions of human beings, although a host many times vaster than the myriads whom Xerxes led across the Hellespont, represent a mere fraction of the increase which Europe has made to the population of the planet

in the same period. After throwing off these 30 millions, she has still raised her home population from 230 millions to 370 millions in the same period. The total net increase therefore which Europe (always including the United Kingdom) has made to the number of the world's inhabitants in the last sixty years is 170 millions, of whom 140 millions continue to live in Europe, and 30 millions have found homes abroad. Such an increase in an original stock of 230 millions would seem to show that Dame Europe has indeed a fruitful womb.

Here between the Ural Mountains and the Atlantic

is the seed farm of the world. Other continents may rear the harvest, but the seed came from Europe. And it is because the greatest proportion of the seed was ripened in the United Kingdom that the English-speaking race is now in a position to contemplate itself as an entity capable of being compared with all the other nations put together. Between the year of Waterloo and the present time there have emigrated in round numbers to America and the British Colonies alone, from—

|                |   |   |   |   |            |
|----------------|---|---|---|---|------------|
| United Kingdom | . | . | . | . | 11,000,000 |
| Germany        | . | . | . | . | 7,000,000  |
| Italy          | . | . | . | . | 5,000,000  |

EUROPE: BY KAISER WILLIAM II.

|                             |            |
|-----------------------------|------------|
| Austria-Hungary . . . . .   | 2,000,000  |
| Sweden and Norway . . . . . | 1,500,000  |
| Russia . . . . .            | 500,000    |
| Other Countries . . . . .   | 5,000,000  |
|                             | <hr/>      |
|                             | 32,000,000 |

As the immense majority of these emigrants went to lands already settled by English-speaking men, the settlers have in most cases become English-speaking in the next generation. Europe, indeed, fills the cradle with millions who learn to lisp in German, Italian, Swedish, and its many other dialects, but who will all teach their children to speak English.

What the precise annual overflow of the *Vagina Gentium* may be it is somewhat difficult precisely to ascertain. In the last decade of this century the average net annual output—deducting returning immigrants—of emigrants from Europe may be set down very roughly as follows:—

|                                       |         |
|---------------------------------------|---------|
| United Kingdom . . . . .              | 75,000  |
| Austria-Hungary . . . . .             | 70,000  |
| Denmark . . . . .                     | 10,000  |
| France . . . . .                      | 50,000  |
| Germany . . . . .                     | 80,000  |
| Italy . . . . .                       | 250,000 |
| Netherlands . . . . .                 | 3,000   |
| Portugal . . . . .                    | 10,000  |
| Russia (chiefly to Siberia) . . . . . | 100,000 |
| Spain . . . . .                       | 10,000  |
| Sweden and Norway . . . . .           | 55,000  |
| Switzerland . . . . .                 | 5,000   |
|                                       | <hr/>   |
|                                       | 718,000 |

Or say, roughly, nearly three-quarters of a million every year, or almost exactly two thousand every day, year in year out, who leave Europe for homes on other continents. The year 1893 witnessed a sudden decrease of emigration, owing to the hard times in the United States. Germany, which in 1881 poured 220,000 of her children from her ports, in 1895 only sent out 37,000. The same cause affects other nations with the exception of Italy, whose predominance in the emigration statistics is very marked. The stream of Italian emigration to the States did indeed fall from 49,000 in 1893 to 31,000 in 1894, but the total for 1895 was 293,000—close upon the maximum yet reached. Of these, 100,000 went to Brazil.

The birth-rate of Europe, the fruitful mother of large families, differs immensely in different zones. The following table of relative fecundity is based by Mr. Mulhall on the birth-rates for the five years 1888-92:—

|                    | Births per<br>1,000 inhabitants. |
|--------------------|----------------------------------|
| Russia . . . . .   | 45.0                             |
| Austria . . . . .  | 39.4                             |
| Germany . . . . .  | 37.8                             |
| Italy . . . . .    | 37.3                             |
| Holland . . . . .  | 33.0                             |
| Scotland . . . . . | 30.9                             |
| England . . . . .  | 30.7                             |
| Belgium . . . . .  | 30.3                             |
| Spain . . . . .    | 29.6                             |
| Sweden . . . . .   | 27.7                             |
| Ireland . . . . .  | 22.7                             |
| France . . . . .   | 22.5                             |

The multiplication of the relative nationalities is, however, not in proportion to the rapidity with which the cradle is refilled. It must be corrected by the death-rate, and stands as follows:—

|                    | Deaths<br>per 1,000. | Net<br>Increase. |
|--------------------|----------------------|------------------|
| Russia . . . . .   | 31.0                 | 14.0             |
| Holland . . . . .  | 20.2                 | 12.8             |
| Germany . . . . .  | 25.2                 | 12.6             |
| England . . . . .  | 19.5                 | 11.2             |
| Scotland . . . . . | 19.7                 | 11.2             |
| Sweden . . . . .   | 16.7                 | 11.0             |
| Italy . . . . .    | 26.5                 | 10.8             |
| Austria . . . . .  | 29.7                 | 9.7              |
| Belgium . . . . .  | 21.2                 | 8.8              |
| Spain . . . . .    | 25.4                 | 4.2              |
| Ireland . . . . .  | 19.0                 | 3.6              |
| France . . . . .   | 22.2                 | 0.3              |

If the birth-rate rules the future, then the future is Russia's, hands down. Not even a death-rate nearly double that of Sweden can deprive her of that pride of place which enables her to distance even prolific Germany and the large-familied English. Fortunately she has all Siberia to people, and that immense expanse will for a century to come be capable of absorbing all the overflow of European Russia.

### III.—A BIRD'S EYE VIEW OF EUROPE.

There is a charming little poem by Russell Lowell entitled "The Beggar." The poet describes himself as a beggar wandering through the world, asking from all things that he meets something of their distinguishing characteristics. From the old oak he craves its steadfastness, from the granite grey its stern unyielding might, from the sweetly mournful pine he asks its pensiveness serene, from the violet its modesty, and from the cheerful brook its sparkling light content.

The idea is a pretty conceit, but it may help us to consider the distinctive qualities which the world may crave not in vain from the various component parts of this new composite entity, the United States of Europe.

It is indeed good to regard our sister nations with grateful heart, to contemplate the gifts which they bring with them to the fraternal banquet of the peoples, and to realise, if only in imagination, what we should lose if any one of the European States were to drop out of the world.

#### RUSSIA.

First among the States in area and in power stands Russia, the sword of Europe against the Infidel, for centuries, the only hope and shelter of the Christian East. Upon the threshold of the Russian home burst the full horrors of Asiatic conquest. Time was when every wandering Tartar from the steppes rode as master and owner over prostrate Muscovy. But the storm of nomad savagery spent itself upon the Russian land which, though submerged for a time, nevertheless saved Europe.

After a time the Russians threw off the yoke of the oppressor and entered upon their secular mission as liberators and champions of the Christian East. To their self-sacrificing valour the world owes the freedom of Roumania, the emancipation of Serbia, the independence of Greece, and the liberation of Bulgaria. Not a freeman breathes to-day between the Pruth and the Adriatic but owes his liberty to Russia. Liberty in these Eastern lands was baptised in Russian blood freely spent in the Holy War against the Moslem oppressor. Nor is it only liberty in Eastern lands which owes a heavy debt to Russian sacrifices. As Russia in the Middle Ages received upon her ample breast the shock of the Tartar spears, and made for Europe a rampart with her bleeding form against the Asiatic horde, so Russia at the dawn of this century received and arrested, even though overpowered, the devastating wave of

Napoleonic conquest. The flames of her burning capital were as the Star of the Dawn to the liberties of Europe. Moscow delivered the death-blow to which Leipsic and Waterloo were but the *coup de grâce*. In later years Russia has done yeoman's service to the cause of humanity by bridling the savages of the Asiatic steppes and destroying slavery in the heart of Asia. She is now bridging the Continent with a road of steel, and from Archangel to Odessa, from Varsaw to Saghalien is maintaining with somewhat heavy hand the Roman peace. Russia has preserved in the midst of her dense forests and illimitable steppes the principle of co-operative husbandry, of a commune based

RUSSIA.

on brotherly love, and has realised the dream of village republics locally autonomous under the ægis of the Tsar. In the face of Asia fanatically Moslem and Europe fanatically Papal, Russia has maintained alike against Turkish scimitar and Polish lance her steadfast allegiance to the Christian Creed. Her travellers penetrate the remotest fastnesses of Asia, her men of science are in the foremost rank of modern discovery, the stubborn

valour of her soldiers has taught the world new lessons as to the might of self-sacrificing obedience, her poorest peasant preserves unimpaired the splendid loyalty and devotion of the Middle Ages; her writers of genius, like Turgenieff, delight the civilised world with their romances; her painters, Gay and Verestchagin, display a genius as great on canvas as her Rubinstein and Paderewski in music, while in all the world to-day no voice sounds out over sea and land with such prophetic note as that of Count Tolstoi. There is in Russia, as in every other land, much that even the most patriotic Russians would wish absent; but who is there who can deny that, take her all in all, the disappearance of Russia as she is from the European galaxy would leave us poor indeed?

## THE SWITZERS.

From the largest to the smallest, from the Empire of the plain to the Republic of the Alps, is but a step. Both are European. Who is there among free men whose pulse does not beat faster at the thought of all that Switzers have dared and Switzers have done? Here in the heart of surrounding despotism these hardy peasants and mountaineers tended the undying flame of Liberty, and century after century furnished an envious world with the spectacle of a frugal Republic, whose more than Roman virtue remained proof against the blandishments of royal ambition or the menaces of Imperial power. William Tell may be a myth, but the

legend that is associated with his name is more of a living reality than all the deeds of all the Hapsburgs duly certified by the official Dry-as-dusts. And Arnold von Winkelried, he at least was real both in history and in song, and for all time the story of his dying cry: "Make way for Liberty!" as he gathered the Austrian spears into his breast, will lift the soul of man above the level of selfish commonplace and inspire even the least imaginative of mortals

ITALY.

with some gleam of the vision—the beatific vision—of the heroism of sacrifice. To-day, when the day of storm and stress has given place to more tranquil times, Switzerland has become at once the political and social laboratory of the world, and the playground and health resort of Europe. Here at the base of her snowclad hills Europe cherishes as the *élite* of the Continent the intelligent and energetic democracy which defends its frontier without the aid of a standing army; and while lacking alike rivers, seaport, coal and iron, has nevertheless proved itself able to hold its own in the competition of the world.

## ITALY.

"Italia, oh! Italia, thou who hast the fatal gift of beauty," has the not less priceless gift of associations of history and romance, before which those of all other

nations but Greece simply disappear. The nation which boasts as its capital the city of the Cæsars can never yield to any other the primacy of fame Europe once centred in the Eternal City. The unity of the Continent, as far as the Rhine and the Danube, was for centuries a realised fact, when the sceptre had not departed from Rome nor the lawgiver from the banks of the Tiber. Nor is the Italian claim to primacy solely traditional. For whatever may be the political power of the Quirinal as a world power, Italy makes herself felt through the Vatican. At this moment, in Chicago, public life is more or less demoralised because an Italian old man in Rome made a mistake in the selection of the Irishman who rules the great Catholic City of the West as the Pope's archbishop. And as it is in Chicago, so it is to a greater or lesser extent in every vast centre of population throughout the world. But the Papacy, although more than European, is, nevertheless, a constant factor which must be reckoned with in discussing the evolution of

Dante was hers, and Raphael, Michael Angelo and Savonarola—four names, the power and the glory of which are felt even where they are not understood, in the remote backwoods of America, or in the depths of the Australian bush. In modern times the revolutionary energy of the mid-century was cradled in Italy. Garibaldi restored to politics of the present day somewhat of the fascination which charms in the pages of Ariosto, while Mazzini restored to our latter day the primitive type of prophet-seer.

Nor must we forget in paying our homage to Italy as Queen of the Arts, and custodian of the great sites from which Pope and Cæsar in former times swayed the sceptre, secular and spiritual, over mankind, that Italy of the present day is peopling the New World more rapidly than any of her sister nations. While emigration from almost every other country has fallen off in the last decade of this century, that from Italy has increased until it amounts to well nigh half of the European over-

STOCKHOLM, SWEDEN.

Europe. The instinct of Leo is entirely in favour of peace and unity, but a firebrand in Peter's chair could easily perpetuate for another generation the armed anarchy of the Continent. Apart alike from politics and religion, Italy has always been a potent influence in promoting the growth of a wider than national culture, developing European rather than provincial interest. For centuries before Cook arose and a trip to the Continent became a thing of course, Italy alone possessed in her treasures of art sufficient attraction to induce men of every nation to brave the discomforts and perils of a Continental journey. From being the Mistress, Italy became the Loadstone of the Continent, and that distinction she has still preserved. To those treasure cities of mediæval art which shine like stars in the firmament, reverent pilgrims every year bend their way as to most sacred shrines. But in every age, Italy, whether poor, distracted, and overrun by barbarian conquerors, or queening it as mistress over a Continent, has ever possessed a strange and magic charm.

flow. If this be kept up, we may see a new Italy in South America which may be for the Italian language and the Italian race what New England has been for Britain in the northern hemisphere.

#### SWEDEN AND NORWAY.

From Italy, which on the extreme south approaches almost to the torrid heat of Africa, I would turn to another land at the opposite extremity of the Continent, whose northern frontier lies within the Arctic circle. Sweden and Norway, at present far removed from the troubled vortex of European politics, cannot vie with Italy in art, or with Russia in political power, but none the less the sister States represent much which Europe could ill spare. We of the north land at least, and all the teeming progeny that have sprung from our loins, can never forget the Scandinavian home from whence the sea kings came; and although our culture is largely Hebraic on one side and Hellenic on the other, the warp and woof upon which the Hebrew and

the Greek have embroidered their ideas is essentially Norse. Nor can we of the Reformed faith, at least, ever forget the heroic stand made on behalf of the Protestant religion by Gustavus Adolphus and the brave men whom he led to victory on so many a hard fought field. Charles XII., too, that meteor of conquest and of war, supplies one of those heroic and chivalrous figures of the European drama whose romantic career still inspires those who live under widely different circumstances and under remoter skies. Norway is the only country in Europe which vies with Switzerland in enabling the dwellers in our great plains and crowded cities easy access to the sublimest mountain scenery. In the social and political realm, we owe to Gothenburg, a Swedish town, the most helpful of all the experiments that have been tried for the solution of the liquor traffic; while in the world of books there are to-day no three names more constantly on the lips of the librarians of the world than the three great Scandinavians whose fame is the common heritage of our race: Björnson in fiction, Ibsen in the drama, and Nansen in Arctic exploration.

## SPAIN.

Again turning southward, we find in Spain another of the nations which, in the flush of its Imperial prime, endeavoured to realise the dream of United Europe. Spain at one time seemed destined by Providence to the over-lordship of the Old World and the New. Between Spain and Portugal the Pope divided the whole world which was discovered by the Genoese sailor who was financed by Isabella of Spain. It is but three hundred years ago since Spain loomed as large before the eyes of Europe as Germany *plus* England would do to-day. Alike on land and sea there was none to challenge her supremacy. To-day Spain is the mere shadow of her former self, but even if the shadow itself vanished from the earth, the memory of the great days of Spanish chivalry when, like Russia on the east, she stood warden of Europe on the south, can never be forgotten. The chivalrous Moors, who have left the imperishable monuments of their presence in the fairy-like ruins of the Alhambra, were very different from the Tartar horde which nearly extinguished Russia; but the secular struggle waged against them equally called out the heroic qualities of the race. As the Moor was the anvil on which the Spanish sword was beaten until it became a veritable Toledo blade, so in turn Spain became the anvil on which our malleable English metal was beaten into the broadsword and trident by which we rule the sea to-day. Of all her possessions in the Indies, Spain to-day retains but the Antilles in the West, and the Philippines in the East. Both convulsed by insurrection constitute a heavy charge on her imperial power. But Spanish pride is as great to-day in the hour of national decline as when Spain was at the zenith of imperial prosperity. To European literature she has contributed two great names—Cervantes and Calderon—one of whom is to-day to the majority of us but a name and nothing more; while the other, Cervantes, contributed to the literature of the world one of the dozen books which are read everywhere by everybody in every language and in every land. To Europe of to-day Spain contributes little but an imposing tradition and somewhat of the stately dignity of the Hidalgo, which the modern world, with the rush and tumble of these democratic days, is in danger of forgetting. Her authors are read but little beyond the Pyrenees, her statesmen exercise little weight in European affairs, but in Castelar she can contribute to the Parliament of Europe the most eloquent orator of the Continent.

## AUSTRIA-HUNGARY.

How incredible it would have seemed in the sixteenth century had any one predicted that in the centuries to come Spain would be a power of the third magnitude, while the Austrian Emperor, shorn of all influence in Germany, would nevertheless rank among the half-dozen great Powers of Europe! But the incredible thing has come to pass, and Austria-Hungary, torn by domestic dissensions and threatened by powerful foes, continues to exhibit a marvellous vitality and indestructible youth. The land of the Danube with a dual throne, broad based upon a dozen races speaking as many languages—the Empire-kingdom is the political miracle

of the nineteenth century. Mr. Gladstone once scornfully asked, "On what spot of the map of the world could we place our finger and say, here Austria has done good?" But the answer is obvious. Outside her frontiers she may have done as little good as England has done in eastern Europe, but within the limits of the Empire-kingdom Austria has rendered invaluable service to the cause of peace and civilisation of the semi-savage races

AUSTRIA.

whom she has tamed and kept in line. To act as school-master, not on despotic but on constitutional principles, to Ruthenians and Slovaks, Poles and Czechs; to organise a State which is indispensable for European stability, out of such discordant elements as those which compose the conglomerate of Austria-Hungary, these are achievements indeed for which Europe is not ungrateful. The dual kingdom not only bears testimony to the possibility of creating an organic entity out of the most heterogeneous conglomerate of nationalities, it further affords the most signal illustration in contemporary history of the fact that States, like individuals, can find salvation by conversion when they truly repent and bring forth fruits meet for repentance. Fifty years ago Austria was a by-word to every Liberal. To-day there is hardly any State in Central Europe which has worked out so many problems

of decentralisation on constitutional lines, as the Empire of the Hapsburgs.

#### DENMARK.

Turning from the composite dual kingdom, we come to a State which in all things is the antithesis of Austria-Hungary. Austria-Hungary, although extremely diverse in its nationalities, is nevertheless, territorially, within the ring fence. The Danish nation, on the other hand, compact, homogeneous to an extent almost without parallel in Europe, a unity both in race, religion, and in language, is nevertheless scattered over a peninsula and half-a-dozen islands. In the State system of Europe, Denmark, with its handful of population, can throw no sword of Brennus into the scale which decides the destinies of nations; but the nation marches in the van of European progress. Our farmers have learnt by sore experience the energy and initiative which have enabled the Danish peasant to distance all competitors in the

among the sons of Denmark, which is enshrined within the heart of every child in every land, is Hans Christian Andersen, whose fairy tales are the classics of every nursery, and whose "Ugly Duckling" is one of the Birds of Paradise of the World.

#### FRANCE.

We may not agree with Victor Hugo in describing Paris as the Capital of Civilisation, the City of Light, but Europe is unthinkable without France. The nation which for centuries was the eldest son of the Church, and which in 1789 became the standard bearer of the Revolution, has ever played the foremost rôle in European history. If in the last thirty years she has fallen from her pride of place and no longer lords it in the Council Chamber, she is none the less an invaluable element in the comity of nations. The French novel has made the tour of the world, the French stage is the despair of all its rivals, and

COPENHAGEN, DENMARK.

markets of Europe. The nation, simple, honest, hardy, and industrious, free from the vices of caste, is one of the most conspicuous examples extant of monarchical democracy. The days have long gone by since Denmark held the keys of the Sound and levied tax and toll on the shipping of the world as it passed through the Baltic to the North Sea. But it is worth while remembering that the freeing of the Sound was an international act, which, as far back as 1857, foreshadowed the collective action of Europe. The Royal House of Denmark, which has given a King to Greece, an Empress to Russia, and the future Queen to the British Empire, may fairly claim to be one of the nerve centres of the Continent. Nor can it be forgotten that in Thorwaldsen, Denmark has the supreme distinction of producing a sculptor whose work recalls the sculpture of ancient Greece. But there are hundreds of millions who have no opportunity of visiting Copenhagen, and to whom the genius of Thorwaldsen is but a thing they have heard of but do not understand. The one name which is above every name

in painting and sculpture the French artists reign supreme. There is a charm about the French character, a lucidity about French writing, a grace about France generally, to which other nations aspire in vain. France is the interpreter to the continent of ideas conceived in Germany or worked out in practical fashion in English-speaking lands. In all the arts and graces of life, especially in everything that tends to make the most of the body, whether in the food of it, the clothing of it, or in the ministering to the universal instincts of the creature man, they leave the rest of the world hopelessly behind. We English—a slow witted race, who did not even know how to build a decent man-of-war until we captured one from the French and used it as a model in our dockyards—can never adequately acknowledge the debt which we owe to our neighbours. They preceded us in conquest round the world; they were the pioneers of Empire both in Asia and America. But the supreme distinction of France in the commonwealth of nations to-day is seldom or never appreciated at its full significance. France is the one nation in

the world which, fearlessly confronting with remorseless logic the root problems of the world, has decided apparently with irrevocable determination that there are not more than thirty-nine millions of Frenchmen needed as a necessary ingredient in the population of this planet. Other nations may increase and multiply and replenish the earth, but France has made up her mind that, having reached her appointed maximum, therewith she will be content. No temptation, not even the continual multiplication of the surplus millions of German fighting-men on her Eastern frontier, nor the envy occasioned by the immense expansion of the English race over sea, is able to tempt her to forsake her

appointed course. What is more remarkable is that this determination can only be executed by asserting the right of will and reason to control in a realm that the Church, to which all French women belong, declares must be left absolutely to the chance of instinct on pain of everlasting damnation. France may or may not have chosen the better part; but the self-denying ordinance by which she deliberately excludes herself from competition

FRANCE.

with the multiplying races of the world has an aspect capable of being represented in the noblest light.

France! heroic France! France of St. Louis and of Jeanne d'Arc, is also France of Voltaire and of Diana of Poitiers, of Molière and Dumas, of Louis Pasteur and Sarah Bernhardt! What other nation has produced so many of the highest realised ideals of human capacity on so many different lines? Even now, when the nation that built Notre Dame and Chartres Cathedral has taken to riveting together the girders which make the Eiffel Tower, France is still France, the glory and the despair of the human race.

#### THE LOW COUNTRIES.

Space fails me to do more than cast a rapid glance at the smallest States, each of which, nevertheless, cou-

tributes elements of vital worth to the great European whole. Much indeed might be said of Holland, that land won by spadefuls from the sea, protected by dykes and drained by wind-mills, in order to provide a level spot of verdure on which the most phlegmatic and industrious of mortal men can rear a sober commonwealth under a regal shade, and which, before it became a kingdom, had bidden high for the Empire of the Indies. Sea-power, now the sceptre of our sovereignty, was grasped by the Dutch before it was seized by the English. It was only in the last two hundred years that the Netherlands fell behind us in the race for Empire.

Belgium, once the cock-pit of Europe, is now the most crowded hive of human industry. In no State are more men reared per acre, nowhere does patient husbandry win larger crops from indifferent soil; while in forge and factory and in mine the Belgian workmen challenge comparison with the world. Belgian competition is pressing us hard in Russia, in Persia, and in many lands where Belgian goods were recently unknown.

#### GREECE.

At the other end of Europe there is Greece—a name, which, if nothing more than a name, is in itself an inspiration. The modern Greek, only too faithful an inheritor of many of the failings of his famous ancestors, has at least succeeded to the heritage of Olympus. No matter what may be his political feelings or his misfortune in war, the Greek is still the Greek, and behind the rabble rout of office-seekers which renders government impossible at Athens, there still looms the majestic shades of those “lost gods and godlike men” which have kindled the imagination of our race since the days when Homer sang the tale of Troy divine. As Acropolis is the crown of Athens, so Hellas was the crown of the world, and that crown, neither Turk, barbarian, nor the place-hunting politician of modern Greece can ever take away. The myths, the traditions, and the history of Hellenes form the brightest diamonds in the tiara of Europe.

Earth proudly wears the Parthenon  
As the best gem upon her zone.

#### GERMANY.

There remain to be noticed but two of all the band of nations whose States will form the European Union—England and Germany. These two Empires, which are at present sundered by a certain jarring dissonance that is all the more keenly felt because their temperaments and ambitions are so much alike, are the Powers naturally marked out for promoting the complete realisation of the ideal of the United States of Europe. Some months ago I took the liberty of describing the German Emperor as the Lord Chief Justice of Europe. It is a rôle which he alone is competent to fill. No other potentate on the Continent has either the energy, the ambition, or the idealism capable of playing so great a rôle. Germany, which, after the travail of ages, has achieved her own unity, is of all the Powers the best fitted to undertake the leadership in the great work of completing the federation of Europe. Germany, also, from her central situation, is better placed than any other Power for undertaking the task. The traditions also of the Holy Roman Empire still linger around the eagles of Germany, and the Empire is already the nucleus of a combination which places the forces of Central Europe, from Kiel to Brindisi, at the disposal of the Alliance. The Kaiser quite recently informed us that it is not his fault that more cordial relations have not been established between the Triple Alliance and France.

Next month he will visit St. Petersburg, when he will undoubtedly endeavour to draw closer the ties which unite Germany to Russia. Should he succeed in his endeavours, the attainment of a practical federation of Europe without England would lie within his reach.

#### BRITAIN.

But if Europe without France would be unthinkable, and if Europe without Germany would be Europe without the reflective brain and the mailed hand, what could we think of Europe without England? It does not become me as an Englishman to say much in praise of my own people. But this I may say, that Europe without England would be Europe without the one Power the expansive force of whose colonising and maritime genius

#### IV.—IN TRAVAIL.

The Federation of Europe at the present moment is like an embryo in the later stages of gestation. It is not yet ready to be born. But it has quickened with conscious life, and already the Continent feels the approaching travail.

It has been a slow process. The great births of Time need great preparations. Under the foundations of the Cathedral of St. Isaacs at St. Petersburg a whole forest of timber was sunk in piles before a basis strong enough for the mighty dome could be secured. The Federation of Europe is a temple far vaster than any pile of masonry put together by the hands of man. In the morass of the past its foundations have been reared,

GERMANIA.

BRITANNIA.

has converted Asia and Africa into European vassals and has secured the American and Australian continents as receptacles for the overflow of Europe's population. And this also may be added, that Europe without England would be Europe without the one Power whose sovereignty of the seas is nowhere exerted for the purpose of securing privilege or favour for English flag or English trade. Nor must it be forgotten that Europe without England would be Europe without the one country which for centuries has been the inviolable asylum alike of fugitive kings and of proscribed revolutionists, the sea-girt citadel of civil and religious liberty, whose Parliamentary institutions have been imitated more or less closely by almost every civilised land. Europe without England would be Europe without her wings, a Europe without the sacred shrine where in every age the genius of Human Liberty has guarded the undying flame of freedom.

not upon the spoils of the forest, but upon generation after generation of living men who have gone down into the void from red battlefield and pest-smitten camp and leaguered city in order that upon their bones the Destinies might lay the first courses of the new State. Carlyle's famous illustration of the Russian regiment at the siege of Zeidnitz, which was deliberately marched into the fosse in order that those who followed after might march to victory over a pavement of human heads, represents only too faithfully the material on which these great world fabrics are reared.

Nor is it only the individuals, who have perished by the millions, in blind struggling towards they knew not what, which have supplied the substratum upon which the United States of Europe were slowly to be built. Political systems, laboriously constructed by the wisdom of statesmen and minutely elaborated to meet the ever-

varying exigencies of their day, royal dynasties and great empires have all equally been flung into the abyss like rubble, after having served their turn to make foundation material for that which is to come. In preparing great political events Nature works with the same almost inconceivable patience and inexhaustible profusion that may be witnessed in the formation of the crust of the earth or in the evolution of a highly organised species. For, as Ibsen has said, Nature is not economical. And in the preparation of the foundation of Europe she has hurled into the deep trench so much of the finished workmanship of preceding ages as to provoke a comparison with the work of the barbarians, who made hearthstones of the statues chiselled by the pupils of Praxiteles, and who utilised the matchless sculpture of the temples of the gods in the construction of their stytes.

This is not the only century in which the idealist has dreamed of a Continental State, and sovereigns have laboured for the realisation of the sublime conception of a federated Europe. The ideas associated with the Amphictyonic Council have haunted as will-o'-the-wisps the imagination of all successive generations of mankind. Under the Cæsars western, southern and central Europe was rough hewn into an effective Imperial unity. All the greater Popes had the vision of united Europe, and most of them, seeing that no one else grasped the great conception, sought sedulously to confer upon the chair of St. Peter the hegemony of the Continent. Henri Quatre of France, acting on secular lines, was full of the same idea. Even the Napoleons, the first as well as the third, saw the coming of Europe afar off, and each in his own way laboured to bring it to birth. The first, a Mars who had clutched the thunderbolt of Jove, stormed across the Continent, crumbling beneath his mail-clad feet whole acres of feudal masonry which cumbered the ground. The offspring and the Nemesis of the Revolution, he was the greatest leveller the Continent had ever seen. The third Napoleon, whose favourite occupation he himself defined as devising solutions for insoluble problems, dreamed much of the possibility of reconstituting some kind of federation of Europe. It was this cloudy notion that prompted those continual proposings of conferences with which he used to trouble his hand-to-mouth contemporaries. Nor was it only in kings' Courts or in Imperial or Papal Councils that the great idea brooded over the minds of men. It was the theme of the poet's song, of the saint's devotions. It inspired much of the swelling rhetoric of Victor Hugo. It was the burden of the prophetic vision of Mazzini.

And now this far-off, unseen event, toward which the whole Continent has been moving with slow but resistless march, has come within the pale of practical politics, and on the threshold of the twentieth century we await this latest and greatest new birth of Time.

I had the good fortune to be in Berlin last month. A great capital is always a great inspiration. And Berlin with its heroic associations of past wars is more inspiring than most of the younger cities of the world. But that which impressed me most on this visit was the new building of the Reichstag, which had not been completed the last time I was in Germany. It was not the building itself—although that is imposing, if rather squat, with noble equestrian statues standing boldly against the sky—but the political fact which it represented. Here under one roof, around the same tribune, gather in peaceful debate the representatives of as

many States as those which now make up the anarchy of Europe. It is the fashion nowadays to speak of language as if it were a tie closer than all others. But the belief in the unity of the Fatherland because of its common speech is hardly a century old, and long after Arndt had embodied it in verse, German fought German with the utmost indifference to the German tongue. The intense individuality of the German, his tendency to construct a special theory of the universe entirely for his own use out of his own consciousness, made the German races the most intractable material for empire-building in the Continent. They fought each other for the love of God; they fought for the pride of place; they were capable of fighting for a theory of irregular verbs. They were divided, and sub-divided and redivided again into kingdoms, principalities, duchies, and all manner of smaller States. Every ruler was as touchy as a Spanish hidalgo about his precedence, and no miser ever clutched his gold with more savage determination to keep and to hold than every German princelet maintained to the uttermost the princely prerogative of making war and peace. Not even the constant pressure of foreign peril sufficed to overcome the centrifugal tendency of the German genius. Again and again the wiser heads amongst them had devised more or less elaborate plans for securing German unity. After the fall of Napoleon, the best that could be done was the Bund, which was almost as provoking in its deliberative inaction as the European Concert is to-day. But the Bund perished at the sword's point, to be succeeded by the North and South German Confederations, which in turn disappeared when the victories over France rendered it possible for the Prussian King to be proclaimed German Emperor in the Palace at Versailles. Since then unified Germany has been at peace. Germany has become a unit, and the Reichstag, although sorely distracted by the fissiparous tendency of the German parliamentary man, has been the parliament of the United Empire.

How long will it be, I wondered as I wandered through the building of the Reichstag, before unified Europe has its Parliament House, and the Federation of Europe finds for itself a headquarters and a local habitation for a permanent representative assembly? What Germany has done, Europe may do.

The union of Germany has not resulted in the disarmament of Germans, neither would the Constitution of the United States of Europe lead to the disarmament of the Continent. But no German now buckles on the sword with any dread lest he may have to unsheathe it against a brother German. The area within which peace reigns, and the law court is supreme, is now widened so as to include all German lands between Russia and France. That is an enormous gain. If we could achieve anything like it for Europe we might be well content.

The progress of mankind to a higher civilisation has been marked at every stage by the continuous widening of the area within which no sword shall be drawn and no shot fired save by command of the central authority. In pure savagery every individual is a sovereign unit. The mateless tiger in the jungle is the most perfect type of the first stage of human individualism. Whom he will or can he slays, and whom he will or must he spares alive. His appetite or his caprice is his only law. He has power of life and death, and the sole right of levying war or making peace without reference to any other sovereignty than his own. From that starting-point man has gradually progressed by irregular stages across the centuries, until the right to kill, instead of being the universal prerogative of every man, is practically vested in about twenty

hands—so far as white-skinned races are concerned. The first step was the substitution of the family for the individual as the unit of sovereignty. War might prevail *ad libitum* outside, but there must be peace at home. After the family came the tribe. After the tribe the federation of tribes for purposes of self-defence or of effective aggression. Then came the cities, with the civic unit. From time to time a despot or conqueror, driven by sheer ambition, established an empire, which, however imperfect it might be, maintained peace within its boundaries. Then nations were formed, each with their own organism and each allowing at first a very wide latitude for private and local war to their component parts. In our own history, not even our insular position prevented our forefathers, long after they had achieved some kind of nominal unity, preserving with jealous eye the right of private and provincial war. By slow degrees, however, the right to kill has been confined to even fewer and fewer hands. The mills of God have ground as usual very slowly, but those who took the sword perished by the sword, and the pertinacious asserters of the ancient inalienable right of private war were converted from the error of their ways by the effective process of extermination at the hands of a stronger power, determined that no one should wield the power of the sword but itself. In Germany to-day in place of a hundred potentates, each enjoying the right to kill, William II. is the sole War Lord.

And as it is in Germany so it is elsewhere. The right to suspend the Decalogue so far as the command "Thou shalt not kill" is now confined in Europe to William II., Nicholas II., Francis Joseph, Humbert, Victoria, and President Faure. These are the lords of the first degree, whose right to kill is practically absolute. After them come the lords of the second degree, who are allowed a certain latitude of killing provided they can secure the neutrality of one or more of the War Lords of the First Degree. There is a nominal right to kill enjoyed by all the kings of all the States. But as a matter of fact it cannot be exercised except in alliance with one or other of the greater Powers. Greece thought that it was possible to exercise this nominal prerogative of independent sovereignty. Her experience is not such as to encourage other small States to follow her example.

But in reality the persons who have the unrestricted right to kill in Europe are even fewer than the six absolute war lords. Europe is now practically divided into two camps. There is the Russo-French alliance, entered into for the purpose of restraining France from precipitating war, which practically gives Nicholas II. a veto upon the right of levying war enjoyed by the French Republic. On the other hand, there is the Triple Alliance of Germany, Austria, and Italy, which practically renders it impossible for Austria or Italy to go to war without the permission of William II. Between these two Alliances there is the British Empire. In Europe, therefore, the right of levying war is vested almost solely in the Queen, her grandson, and her granddaughter's husband. Nicholas II., William II., and Victoria—these three are the Triumvirate of Europe. And as the late Tzar said to me at Gatschina, "If these three, Russia, Germany and England, hold together there will be no war." So far, therefore, we have come in our pilgrimage to the United States of Europe, that the power of the sword, which last century was a practical reality in the hands of a hundred potentates, is now practically limited to three persons, without whose permission no gun may be fired in wrath in the whole Continent.

## V.—WHAT THE KAISER MIGHT DO

Will Europe ever be federated, really federated? And if so, when?

The answer is probably that Europe will be federated, but no one can fix the date, neither can any one state in what way the United States of Europe will find itself formally ushered into the world. All that we can say at present is that in the European Concert we have a virtual federation which, although not based on any well-defined or logical foundation, is nevertheless a much closer approximation to the federation of Europe than anything we have seen of late years. It has its defects no doubt, but it does at least recognise the solidarity of Europe and the necessity for concerted action in dealing with the one question which more than any other threatens European peace. It is no doubt illogical that six Powers should arrogate to themselves the right to speak in the name of all Europe, ignoring as absolutely non-existent such Powers as Spain and Sweden, to say nothing of such minor States as Denmark, Holland, Belgium and Switzerland; but the minor States do not complain, and the great Powers are left practically unchallenged to wield the executive authority of the Continent.

In the old myth, when Jupiter bore Europa across the sea, he landed her at the Island of Crete, where she bore three sons—Minos, Sarpedon and Rhadamanthus. It is a curious coincidence that a European fleet and a European army commissioned by the six Great Powers, and acting under the collective orders of Europe, should for the first time in history have made their appearance on the Island of Crete. Let us hope that the coincidence may be of happy omen, and that the new Europa may bring forth, if not Minos the lawgiver, and Rhadamanthus the inexorable judge, at least a system of international law which will be interpreted by an international tribunal. Europe politically will tend more and more to become a unity because of the steady progress in the same direction in matters political and social. The railway, the steamship, the telegraph wire, are the great agents in effacing frontiers, and converting all neighbouring States into what are practically provinces of one great organism. The Post Office, with its mail trains and postal unions, is another great agency which operates painlessly in the same direction. The international railway unions every year enter into closer and closer arrangements for co-operation, until it is now possible to arrange for round trips in almost any part of modern Europe over lines passing through different countries without more trouble than the taking of a season ticket on a London suburban line. The great rivers, such as the Danube and the Rhine, have long ago compelled the riverine powers to unite for the purpose of regulating navigation and providing for the improvement of the waterway in these great arteries of Continental trade. Newspapers also, with the network of the telegraphic agency by which the news of every capital is collected and transmitted for publication in every other, tend to create a sense of unity, if not of fraternity, which acts as a powerful although slow solvent of what may be described as national parochialism.

When Europe was built, so to speak, in water-tight compartments, and communications between the nations were rare and far between, when each country was a self-sufficing entity, raising all the food and raiment which its own people required, all talk of the United States of Europe must have seemed the wildest of all wild dreams. But nowadays, when no nation can satisfy

its wants, within its own frontiers, and when ceaselessly, day and night, trains laden with passengers and merchandise are hurtling across frontiers which mark the political divisions of Europe, it needs but a very few more changes for national boundaries to become practically non-existent. The through booking of luggage, for instance, which will enable passengers to travel from Calais or Ostend to Petersburg or Brindisi, without any trouble from the Customs, would very soon render it as difficult for the ordinary traveller to realise the frontiers of countries as it is for a passenger by the Scotch Express to know anything of the frontiers of the counties through which the line passes. The Custom House is one of the last relics of barbarism, almost the only reminder that is left to remind the traveller of the existence of Governments organised for war.

There is a steady approximation to unity throughout the Continent. We have not yet an European coinage, but through the Latin countries there is an international currency, and sooner or later Europe will have one money, a common currency, while all the laws regulating international intercourse will tend to assimilation.

The armed peace which weighs down the industry of Europe for the maintenance of millions of men, armed and drilled against a day of possible future slaughter, is of course one of the worst evils of the present system under which we labour, from which we should be relieved by the Federation of Europe; but it is probable that any attempt prematurely to lessen the burden of the armed peace would be the shortest cut to war. At present the force which operates most potently in the direction of the maintenance of peace is a consciousness of the enormous force which would be put in motion by any outbreak of war. If war could be waged on limited liability principles as it used to be, when each State kept a kind of gladiatorial army of professional fighting men, Central Europe would never have enjoyed twenty-five years of almost unbroken peace. It is the fact that war would compel the arming of whole nations that operates as the most potent argument in favour of maintaining the peace. It is a curious new adaptation of the old saying, If you wish for peace prepare for war, for the preparations for war have now to be made on so vast a scale, that there is not a sovereign or a statesman in Europe who does not tremble at the very thought of having to make war, which would impose so intolerable a strain upon the entire people.

In the future, after Europe has built her Reichstag at Berne or some other central place, and after the Federated Powers have shown that they can both draw up reforms on paper and enforce them, if need be, at the cannon's mouth upon recalcitrant Sultans or word-intoxicated Greeks, it is possible that some scheme of mutual partial disarmament may be agreed upon. But until then the force making the evolution of the United States of Europe inevitable would lose much of its power if the armaments were disbanded.

To secure the federation of Europe, if we follow the analogy of other federations, two indispensable elements are lacking. The first and the most necessary is the existence of some extraordinary force sufficiently powerful to necessitate the union of those whose existence it threatens. In other words, in order to found a Kingdom of Heaven it is necessary that you must have an effective working devil. John Bull in the eighteenth century was the incarnation of evil, in protest against which the American Union came into existence.

In our own century it was the menace of French aggression which alone possessed sufficient force to over-

come the centripetal tendencies of the German peoples. Where are we to find an adequate devil to overcome the force of inertia as well as the more active elements of national rivalry and race antipathies, so as to bring about the federation of Europe? The other element which is lacking is a central power sufficiently strong to compel the recalcitrant States to come into the alliance. Of course it is a nobler ideal that free and equal States should voluntarily of their own good will unite on a basis of absolute independence. But human nature is not made that way. There is usually a recalcitrant minority which needs to be compelled to volunteer. Nearly every European State, England not excepted, represents the result of a process in which a strong central power has gradually crushed all rivals and established authority, which is now recognised by consent, by the summary process of beheading or slaughtering those whose devotion to their private and local interests led them to refuse to co-operate in the larger unity. The most helpful analogies are to be found in the United States of America and the Republic of Switzerland. There the federation was established by the co-operation of the sovereign States without the need for the intervention of any predominant central power; but alike in Switzerland and the United States, the federation which began in good will had to be enforced by the armed hand, and we need not be surprised if the United States of Europe only gets itself into material existence after considerable bloodshed. That, however, is a detail, and it is a thousand times better that men should be killed, in order that their corpses should pave the way to the reign of law, rather than that they should be slaughtered merely to perpetuate the existing anarchy. In looking round for the necessary devil whose evil influence is strong enough to compel the European States to federate, we fail to find any excepting our old friend the Assassin at Constantinople. It may be objected that he is hardly big enough to play the great rôle, but to this it may be replied, that while he himself is inadequate enough to fill the part of European Satan, he nevertheless possesses sufficient importance because of his position as the keeper of the gates of hell. In other words, while Turkey, or the fate of all the populations over whom the Sultan reigns, is too small a matter to justify any hope that to achieve their deliverance Europe will make so radical an alteration in her policy as to federate her forces, the Eastern Question contains within itself elements which may kindle a universal war which looms before the imagination of the sovereigns and peoples of Europe with the same haunting horror engendered by the thought of hell in the Middle Ages. Hence it is possible that in the Turk, by virtue of his office as custodian of the keys which open the gates of a general war, we have precisely that element of evil which will tend to develop the European Concert into a practical working federation on the Continent.

Such a federation no doubt requires a leader, although it may not brook a master. The leadership of Europe in this matter might well be conceded to the German Emperor, supported on his right hand by England, and on his left by Russia. But if Germany has to play the premier rôle, there will have to be none of that reluctance to employ German forces, whether by sea or land, in making executive the mandate of Europe.

Even without a leader, Europe at present is advancing slowly to the consideration and solution of the great questions underlying federation. In dealing with the Turkish Empire the Powers seem to have adopted something approaching to the *liberum veto* of

the old Polish kingdom, when any one member of the Assembly could defeat any proposition by simply uttering his protest. The six Powers must all keep step or they do nothing at all. That is the rule at present adopted, and the necessary consequence is that the Powers are often reduced to impotence. But this is a passing phase. Sooner or later, probably sooner than later, it will be discovered that the *liberum veto* will be as fatal to Europe as it proved to Poland. In the European Areopagus decisions will have to be taken without absolute unanimity, and in this and in other things the minority will have to yield to the majority. Of course, each of the great Powers will always have a sovereign right to go to war to enforce its protest if it should feel so disposed, but there is a very great difference between going to war to enforce your veto and securing the rejection of any proposal by simply recording your dissent.

In this respect, Mr. Gladstone took a very significant initiative in the year 1880. No one had insisted more strongly upon the maintenance of the European Concert as the one weapon with which it was possible to extort anything from the Sultan, but when Mr. Gladstone took in hand the task of enforcing the provisions of the Berlin Treaty, he found that one or more of the Powers were disposed to hang back. He succeeded with great difficulty in securing the mustering of an international fleet in the Adriatic for the purpose of inducing the Turk to make the necessary cession of territory to Montenegro, but when the question arose as to what further measures should be adopted to enforce submission to the demands which Europe had formulated, France and Germany drew back. Russia and Italy supported Mr. Gladstone's generous initiative. Mr. Gladstone had then to decide what should be done. If he had adopted the *liberum veto* theory of the Concert, and had meekly acquiesced in the doctrine that nothing should be done unless all the Powers were agreed as to what that something should be, the Turk would have snapped his fingers at the Powers, and vital clauses of the Berlin Treaty would never have been executed. But Mr. Gladstone fortunately was made of different material. All the Powers had agreed as to what ought to be done. The Turk himself had signed the Treaty which ceded territory to Montenegro and Greece. There was therefore unanimity of opinion as to what should be done, but there was only difference of opinion as to how to carry it into effect. France, Germany,

and Austria hung back, but Mr. Gladstone with Russia and Italy at his back decided to seize the Turkish Custom House at Smyrna, in order to enforce the Sultan's submission to the mandate of Europe. The three Powers which abstained did not, although they murmured and held aloof, absolutely veto any such action on the part of their allies. Had they done so, it would have been difficult for Mr. Gladstone to proceed, for Europe would then have been equally divided, three against three. As the matter stood, the three who were bent on action did not allow the refusal of the support of the others to paralyse their action. If Lord Salisbury could have secured the support of two other Powers, it is possible that he would have dealt as drastically with the Turk as Mr. Gladstone. Unfortunately, in the recent crisis we had not even a single Power at our back, and the other Powers were prepared to oppose our isolated action even by force of arms.

Under these circumstances, with a strong majority in the European Council Chamber against action, the minority can only submit until such time as it has converted itself into a majority. It is probable that for some time to come the European Concert will continue to insist upon unanimity in defining the proposals which are to be made to the Turk, but that the method of securing compliance therewith will be decided by a majority vote. For instance, if the Powers agree that the Turks shall evacuate Crete, it would be possible for the majority of their number to use their fleets and armies for the purpose of expelling the Turk, even if the two dissentients protested against the direct use of force. Beyond that at present it is doubtful if we shall be able to go. Everything, however, points in the direction of Europe having so much to do in providing for the liquidation of the Ottoman Empire that the six foreign ministers of the great Powers will become more and more an European Cabinet, who will learn the habit of working together by the daily pressure of events. If so, it would seem as if the Turk was going to make amends in the final years of his reign for the innumerable atrocities which have been his chief resource in government since the time he entered Europe. For if Europe can be practically accustomed to act as an unity, it will in time bring about the United States of Europe, which will be none the less welcome, because it will be born of mutual fear and distrust rather than of brotherly love and neighbourly confidence.

# THE TOPIC OF THE MONTH.

## THE COLONIAL PRIME MINISTERS IN BRITAIN.

CANADA is a nation. Canada is free, and freedom is its nationality. Although Canada acknowledges the suzerainty of a sovereign Power, I am here to say that independence can give us no more rights than we have at the present day. Lord Lansdowne has spoken of a day when perhaps our Empire might be in danger. England has proved at all times that she can fight her own battles, but if a day were ever to come when England was in danger, let the bugle sound, let the fires be lit on the hills, and in all parts of the Colonies, though we might not be able to do much, whatever we can do shall be done by the Colonies to help her.—*The Hon. Wilfrid Laurier at the Imperial Institute, June 18, 1897.*

**A**FTER the Queen, the most prominent figures in the Jubilee procession were undoubtedly the Colonial Prime Ministers, viz., Sir Wilfrid Laurier, Mr. G. H. Reid, Mr. R. J. Seddon, Sir J. Gordon Sprigg, Sir G. Turner, Sir J. Forrest, Sir H. M. Nelson, Mr. C. C. Kingston, Sir E. N. C. Braddon, Sir W. Whiteway, Mr. H. Escombe.

From the popular point of view, these eleven plain Colonists, all of whom have been added *en bloc* to the Privy Council, threw the Princes entirely into the shade. There were some thirty royalties and representatives of Emperors and Kings, who formed a gorgeous cavalcade in front of the Queen's carriage as she went to St. Paul's. But not all the brilliancy of the uniforms, or the power and majesty of the regular and Imperial representatives, enabled them to hold their own as objects of public interest with the Colonial Premiers. The nation was pleased to note the splendour of the Queen's retinue. A general sense of complacent satisfaction was felt at the fact that Her Majesty had so many princely relatives as guests to her Jubilee that she was unable to put them in her own palace, and had to farm them out to the

THE RT. HON. SIR WILFRID LAURIER,

Premier of Canada.

hotels in the neighbourhood. But the Princes were but the gilding of the ginger-bread, the Colonial Prime Ministers were the ginger-bread itself, and the public thought much more of the ginger-bread than of the gilt. From the time that these Premiers landed in England down to the present day they have been fêted and lionised more than any other persons in the Three Kingdoms. Both publicly and privately they have been treated as the heroes of the Jubilee; and among all the Premiers Sir W. Laurier, who rode first in the Colonial procession on Jubilee day, has been easily first in popular estimation. Canada after all is nearer to this country than either Australia or South Africa, and Canada has far advanced in the evolution of independent self-government. In all Australasia there are fewer residents than in the Dominion of Canada; but Australasia, with New Zealand and Tasmania, were represented by no fewer than seven Prime Ministers,

while Sir W. Laurier represented the whole federated Dominion. Nor was that the only secret of the honour which was everywhere paid to him. Sir W. Laurier was not only fresh from a great victory at the polls,

but, he was the first Prime Minister ever to make the home country a practical offer of fiscal co-operation. Even without that, his personality would have commanded attention and respect. Sir W. Laurier is of commanding presence and a born orator.

The Colonial Premiers have had ample opportunity of sampling the old country. They have visited the great manufacturing centres of the Empire. They have been entertained by the Queen, they have taken part in all the festivities of the Jubilee, they have seen reviews, demonstrations, thanksgiving services, naval demonstrations, and everything else that there was to see. They have been entertained as the most coveted guests in the country houses of our nobles, and they have received as hearty and enthusiastic a welcome from the democratic tables of Liberal Clubs. And everywhere that they have gone, they have found only one note vibrating everywhere, distinctly audible above all other notes—the note of intense satisfaction at the presence of the Premiers from the Colonies at the Jubilee of the Queen.

It is too early to attempt to appraise the political and Imperial significance of this reception. Certainly no one who has passed through such experiences can henceforth ever doubt the sincerity and universality of the popular sentiment on the subject of our Colonial Empire. It is after the Navy—if even it is after the Navy—the one thing that we are proudest of in the world. It is the greatest achievement that has been accomplished by men of our own race in our time, and the fact that it was accomplished without much help from us, and indeed sometimes in spite of us, made the welcome all the warmer.

As the Premiers were summoned to London to discuss “many subjects of the greatest interest to the Empire, such as the commercial union, Colonial defence, representation of the Colonies, legislation with regard to immigrants from Asia and elsewhere, and other similar subjects,” it may be as well briefly to summarise their views on the subjects in question.

#### SIR W. LAURIER.

Sir Wilfrid Laurier, Premier of Canada, speaking at Liverpool, said:—

There was no grievance in Canada, but an aspiration for a closer connection with the Mother Country. Without any desire to disturb the ancient Constitution of these realms, the time might come—probably would come—when pressing questions must be solved, and personally he looked to their solution, without doing any violence to the Constitution of these realms, to the old British principle of representation.

Again, speaking at the Colonial Institute, he said:—

Satisfactory as the relations with the colonies now were, he did not consider the climax reached. One of the goals to which he aspired was to see Canadians of French descent sitting in the halls of Westminster Palace. Perhaps that was an ambitious dream, but if he were a younger man he should hope to live to see it. A step in that direction would be the abrogation of certain treaties which were a blot upon our relations, and which he hoped to see speedily removed.

Sir Wilfrid expressed himself strongly against any tampering with Free Trade. He said, “A Zollverein must mean Protection, and Protection is the greatest of all mistakes. What we have done in the way of tariff preferences to England we have, as I said, done out of gratitude to England, and not because we want her to enter upon the path of Protection.”

#### MR. REID.

The Right Hon. G. H. Reid, Premier of New South Wales, in an interview published in the *Daily News*, said:—

“Strong as the feeling of loyalty to the Mother Country is, and it was never stronger throughout Australia than it is now,

I attribute the strength of that loyalty very much to the fact that we have been left practically to ourselves. There is nothing to gull us, nothing to chafe. The Governors are well selected and become popular, and altogether I very much fear that if the formal ties were made stronger and more numerous, occasions for misunderstanding would be multiplied too. The Australian is a very difficult person to have any relations with except on the condition that he is left to do just as he likes. And let me add to that, that when he is left to do as he likes, he always ‘likes’ the Old Country.” As to the proposed changes in the relations of Britain and the Colonies, Mr. Reid did not think much of the scheme of direct Colonial representation at Westminster which Sir W. Laurier favours. He said, “Talking through the Agent-General or the Governor, Australia is far more powerful, and is heard better than if Australia were one of a number of countries represented in the Chamber, which would be dominated by the old country—naturally and properly enough.” As to the various proposals for an Imperial Zollverein, and preferential duties in favour of British goods, Mr. Reid condemned them outright. Canada might do as she pleased, but “in my opinion the British Empire is better maintained by its present policy of Free Trade, even with enemies, than it could be in any other way. The British Empire would have been an intolerable aggression upon the rights of other nations but for her marvellously magnanimous trading policy, which has given the world an equal share in the benefits of the British Empire, and which has especially tended to create enormous business interests in favour of peace with Great Britain, whatever other country is fought. I feel that any attempt on the part of England to change her policy, instead of strengthening the Empire, will supply many new motives to jealous hostile nations for hostilities.”

#### MR. SEDDON.

Mr. Seddon, Premier of New Zealand, said:—

The Colonies should be treated with confidence. Already they contribute to the cost and maintenance of the Australian squadron, and they must in lesser degree have some voice in Imperial matters. At present, without the slightest warning to us, the nation might at any time be plunged into a conflict. While we should not hesitate to stand by the Mother Country, still it would be better if counsel were taken. What we are aiming at, and what is daily approaching nearer, is to retain complete self-government in the respective Colonies, the Home Government retaining its connection as at present, but with an Imperial Council in which the Colonies should be represented, and be heard in respect to matters vitally affecting them and the Empire.

#### SIR E. BRADDON.

Sir E. Braddon, Premier of Tasmania, said:—

Imperial federation to be complete must include the creation of a Federal Parliament at Westminster in which the Colonies shall be fully represented. It is obvious that this cannot be done at once. But, step by step—by an Imperial Council or other means—this end may be attained when the United Kingdom and the Colonies come to feel the necessity for it. Speaking for Tasmania, I believe if put to the test it would be found that the majority are in favour of Imperial federation.

#### SIR G. TURNER.

Sir George Turner, Premier of Victoria, said that although Victoria felt that it was absolutely necessary in the interests of the struggling manufacturers that it should have Protection, “if proposals be made to us which will show that the whole of our trade, the whole of our dealings can be on fair, just and equitable terms conducted with Great Britain, we will be only too willing to enter into that bargain.” He believed the Colonies would be very glad indeed to give some preference to British goods, but he thought the proposition should come from Great Britain.

## M.P.'S FOR THE COLONIES AT WESTMINSTER.

It is inevitable, after this signal demonstration of the spirit that makes for union in the Colonies of the Empire, that the projects for giving practical effect to this sentiment should come to the front with a rush. Sir W. Laurier's formula, that the Colonies must be a part of the Empire, or that they will depart from it, is a very significant warning that further delay may be dangerous. Sir Wilfrid's idea, so far as it can be gathered from the necessarily vague and indefinite statements which he has made in various speeches throughout the country, seems to point towards the direct representation of the Colonies in the British House of Commons. Such at least is a fair inference from the remark attributed to him by an interviewer, to the effect that if he had been a younger man he would have expected some day to sit in Westminster as the representative of a Canadian constituency. There is a good deal to be said in favour of such a system of direct representation at the centre of the Empire. The world has shrunk so much of late years, that there is no longer any geographical difficulty in the way of Australia and British Columbia being represented by members at Westminster. Communication indeed is easier between London and Melbourne than it was sixty years ago between London and Edinburgh.

## REPRESENTATION WITHOUT TAXATION.

But until the Colonies are willing to submit to a central taxing authority at Westminster, it is impossible for them to be directly represented in the Assembly which holds the purse-strings. Otherwise there would be representation without taxation, a state of things only one degree less objectionable, and considerably more ridiculous, than the anomaly of taxation without representation. The experience that has been gained in the federation of the Dominion of Canada, and that which will shortly be obtained in the federation of Australasia, will stand us in good stead when the time comes for discussing the wider question of the federation of the Empire.

Meanwhile I am glad to have an opportunity of calling attention to a pamphlet entitled "The Lines of Imperial Union," which has been written by Mr. F. J. Stevenson, assistant editor of the *Pioneer*, of Allahabad, India. The pamphlet is published in London at one shilling at the office of the *Pioneer*, 13A, Cockspur Street, S.W., and it will well repay careful perusal.

## "THE LINES OF IMPERIAL UNION"

The central idea of Mr. Stevenson is that the line on which Imperial union will be secured is exactly the

opposite to that in which it is usually sought. In place of increasing the direct authority of the Westminster Assembly over all outlying parts of the Empire by making that assembly more directly representative of all the Colonies, Mr. Stevenson would proceed upon exactly an opposite method, and one which has at least this to be said in its favour. It proceeds on the lines which have already been adopted with singular success in relation to the domestic policy of the Colonies, and it carries to its logical conclusion the tentative steps which have already been taken by Canada, for instance, in the assertion of a right to manage colonial affairs in regions hitherto reserved for the Imperial Government. Mr. Stevenson defines his scheme as a plan to give gradually to each of the four colonial States, viz., Canada, South Africa, Australia, and New Zealand, increasing and ultimately entire control of its own external relations just as it has the absolute direction of its local or home policy.

## COLONIAL COMMERCIAL INDEPENDENCE.

If Mr. Stevenson's ideal were carried out, Canada, Australia, South Africa and New Zealand would each have its own foreign policy which it would carry out on limited liability principles. It would be perfectly possible for Australia, for instance, to declare war against France in order to clear the French flag out of the New Hebrides without Australia thereby involving the rest of the Empire in a war with the French Republic. In like manner it would be perfectly possible for Canada to make its own commercial treaties on the basis of the new tariff without any regard to existing treaty obligations concluded by Great Britain with Belgium and Germany. Mr. Stevenson points out that all the Colonies which were represented at the Inter-colonial Conference held at Ottawa in 1894, declared

THE RT. HON. R. J. SEDDON,

Premier of New Zealand.

(Photograph by Talma, Melbourne.)

themselves in favour of such an extension of their liberty of action outside their own dominions as would empower them to make preferential commercial agreements among themselves and with the Mother Country. This would be a comparatively small but vital extension of the principle of Home Rule; for the Colonies would then not only have Home Rule within their dominions but would be empowered to make special colonial commercial treaties with which the Imperial Government would have no right to interfere. This, it will be argued, and is indeed being argued in Canada at the present moment, is the legitimate and logical corollary of the right already ceded to each self-governing Colony to fix its own tariff. Hitherto the only limitation upon that liberty has been the veto which the Imperial Government places upon

any preferential duties being levied even in favour of Great Britain, and the obligation to which each Colony is subjected of recognising the most favoured nation clause in the Imperial treaties with foreign powers.

#### COLONIAL INDEPENDENCE IN FOREIGN AFFAIRS.

Mr. Stevenson argues, and argues with much force, that the new Canadian move which has been received with such enthusiasm as a step towards the union of the Empire, has another side, and points directly towards the repeal of one of the few remaining ties which compel Canada to keep step with the Mother Country. If once the Colonial Governments are permitted to have a foreign commercial treaty of their own, concluding commercial treaties at their own sweet will and pleasure, without reference to the general fiscal policy of the Empire, it is obvious from this there is but a short step to the proposal that they should also be allowed to have complete liberty of action in all other departments of external policy within their own sphere of action. Take for instance South Africa as a case in point. If Mr. Stevenson's idea were carried out, Mr. Cecil Rhodes, when next Prime Minister of the Cape, might decide that British interests in South Africa justified him in clearing the Portuguese out of Delagoa Bay. Federated South Africa, under Mr. Stevenson's plan, would be at liberty to declare war against Portugal and seize Delagoa Bay for British South Africa, without in any way involving the parent country in hostilities with Portugal.

#### HOW IT WOULD WORK.

But it will be said the Portuguese would then have a perfect right to attack Cape Colony, and would we stand by and see Portuguese ironclads bombarding Cape Town? Mr. Stevenson replies that each of the four great self-governing Colonies, and the Mother Country as the fifth unit in the Imperial Union, would under his arrangement have an absolute right to declare their neutrality whenever any one member of the Union was involved in hostilities with another Power. If, therefore, Portugal refused to recognise war on this limited liability principle, and were to attack any other member of the Union in order to avenge her wrongs in South Africa, then all the members of the Union would be compelled by the terms of their alliance to make common cause against the aggressor. We had better take an illustration from the Pacific. Suppose that federated Australia adopted a kind of Australian Monroe doctrine and declared that no European flags could be permitted in the Southern seas excepting its own. In pursuance of this doctrine, Australia proceeds to clear Germany out of Northern New Guinea. Germany replies by representations to London addressed to the Imperial Government. That Government protests its irresponsibility for the action of Australia. The Australians, it would represent, had acted on their own initiative in a matter that lay entirely within their own range. Australia, indeed, had acted as an independent power, and it was the intention of Great Britain and the other allied Colonies to preserve strict neutrality during the war which Australia would wage with the German Empire. If in reply to this the German Empire were to attack England, then Canada, New Zealand, and South Africa would be bound by the terms of their engagement to make common cause against the aggressor who refused to recognise their right to neutrality.

#### THE RIGHT TO NEUTRALITY.

The idea, it must be admitted, is highly ingenious, and it is one which will commend itself to those who have been very anxious as to the future of our Empire in those

regions where it would be fatal to apply the strict legalism of Downing Street as the sole rule for regulating the actions of frontiersmen. I remember raising the question with Mr. Rhodes when he was in this country as to whether he might not find it necessary in the interests of the Empire itself for South Africa to become an independent Republic in alliance with Great Britain, but with a liberty of action which at present is impossible owing to Imperial obligations and liabilities. Mr. Rhodes did not like the idea, and said so, but there is more in it than most people think. Mr. Rhodes' loyalty rose in revolt against the conception of any apparent disintegration of the Empire, even though such a departure might be dictated solely in order to give the British race a freer hand in the development of its destinies. Mr. Stevenson points out with great force that the self-governing Colonies rightly or wrongly are fully convinced that they know more about what their interests dictate in dealing with their neighbours than can possibly be perceived by Downing Street. He says:—

The truth must be recognised that the Colonial States are better fitted to manage their own local interests in those regions than is Britain, burdened with the cares of an immense empire and the complications attaching to her position among the nations, and unable to fully appreciate either the importance of those local interests or the depth of feeling about them in the Colonial States affected. This development, indeed, is more than natural; it is inevitable, and that consideration may reconcile many to it.

#### COLONIAL ZONES OF INDEPENDENT ACTION.

If we admit this, let us now see how Mr. Stevenson would carry out the proposal. He would divide the world into zones, allotting a certain zone to each colony, within which it would have all the rights of an independent State. After a time, even the Crown Colonies within those zones might be made over to the self-governing Colonies within whose beat they lay. Mr. Stevenson does not illustrate his pamphlet with a map, and there are obvious difficulties in the way of the overlapping of zones. South Africa, of course, is a unit which is manageable; but even if he did not transfer to the Cape Government the Mauritius and Nyassaland, New Zealand would be natural over-lord of the greater portion of the Pacific, while there might be some difficulty in delimiting the respective zones of Australia and New Zealand.

#### BUT WHAT IS ENGLAND'S ZONE?

The chief difficulty will not lie, however, in the overlapping of Colonial zones, so much as in the fact that the English zone is everywhere that the sea water rolls, and while it would be possible to give each Colony a certain limited jurisdiction within a clearly defined radius from its own shores, the Imperial British zone would necessarily encompass, overlap, and often interpenetrate all Colonial zones that might be suggested. Take for instance the crucial question of the Cape. The Cape is important, no doubt, as the capital of the chief Colony of South Africa, but it is far more important as the keystone of the Imperial arch, the half-way house between England and Australia, the very pivot and hub of our Imperial universe. How could England allow the South African Federal Government to adopt a policy which might, for instance, lead to the conversion of Simon's Bay into a German coaling station? Colonies that are only colonies do not present this difficulty, but colonies that have sprung up round vital points in the Imperial system can hardly be allowed to jeopardise those Imperial nerve centres by being permitted to wage war on this system of limited liability.

## CAN WE GUARANTEE WHEN WE DO NOT CONTROL?

Mr. Stevenson admits that the progress towards Imperial union on his basis must be slow and tentative, and he says that before any steps can be taken towards the transferring military and naval autonomy to the Colonial States, it is obvious that as against foreign Powers their independence and integrity must be guaranteed. Their right of neutrality must be acknowledged and their safety from aggression must be secured. The answer to this is that all guarantees of security entail as a necessary corollary an obligation to see that the guaranteed Power does not abuse its position of privilege. In other words, we could not guarantee the independence and integrity of any State unless we were at the same time prepared to make ourselves responsible for its good behaviour. A guarantee against wanton aggression is possible enough; but to revert to our other illustration, how could we guarantee Cape Town against occupation by a German fleet if the Cape Government is to be absolutely free to declare war for the purpose of turning the Germans out of Namaqualand? The States that go to war must bear the penalties of war; and as one of the most obvious penalties of war is loss of independence and integrity, Mr. Stevenson would find it difficult, not to say impossible, to explain how he would secure independence and integrity while leaving the protected Power full liberty of warlike action against its neighbours.

## WHAT ABOUT OUR COALING STATIONS?

Mr. Stevenson, to do him justice, does not flinch from recognising the difficulty which I have thus indicated. He indeed takes the bull by the horns and says frankly, under his scheme England will have to clear out of Simon's Bay and Halifax, and endeavour to find her coaling stations and Imperial outposts elsewhere than on the mainland of four great self-governing colonies. This is much easier said than done. Where in the wide world are we to find a substitute for Simon's Bay? A policy of Imperial union which calmly contemplates stripping the Empire of the most important naval stations on the great ocean routes is hardly one that is calculated to commend itself to British Imperialists.

## HOW TO KILL TWO BIRDS WITH ONE STONE.

I have no intention, however, of following Mr. Stevenson through all the details of an extremely interesting pamphlet, but I must make at least a passing mention of his proposed Imperial trade policy. He suggests that it might be possible in return for the British Imperial guarantee of Colonial debts to secure concessions to British trade in the way of reduced customs duties. In favour of this proposal also there is much to be said. To each of the self-governing Colonies Mr. Stevenson would address an offer on behalf of the Imperial Government somewhat on the following terms: We will help you to get cheap money if you will as a *quid pro quo* reduce duties on British goods. You say you need high customs duties because it is necessary to pay the high interest on loans. Our Imperial guarantee will enable you to reduce the annual interest charged; you shall have it if at the same time you reduce your customs duties on British exports.

## WHAT MIGHT BE DONE NOW.

Mr. Stevenson concludes his interesting pamphlet by suggesting certain steps which he thinks could be taken at once. He would emancipate the self-governing Colonies from the control of the Colonial Office, and entrust the management of their affairs to the Lord President of the Council. These Colonies should then unite to build a joint office for their Agents-General on a site which could be granted by the Imperial Government. This scheme of the Agents-General follows the line of a suggestion I made long ago in the *Pall Mall Gazette* and submitted to all the Colonial Governors and Premiers. In that scheme the Agents-General were to form a Council, and to them all papers, documents, despatches, etc., should be submitted that related to their interests. Mr. Stevenson suggests that an Imperial naval reserve could be created, and that steps should be taken to strengthen the Colonial elements on the Judicial Committee of the Privy Council, and at the same time to secure the recognition of this Council as the supreme judicial authority throughout all self-governing Colonies.

## THE QUEEN AS BRETWALDA OF ALL BRITAIN.

Mr. Stevenson also makes a somewhat original suggestion that it should be the duty of the Colonial judges attached to the Judicial Committee to recommend for legislation by their several States such commercial and general enactments of the Imperial Parliament as could be usefully extended to other parts of the Empire. With the other suggestions we need not concern ourselves, such as that the Sovereign's style and title should be altered so as to run, "Victoria, by the grace of God, of the United Selected Kingdoms of England, Ireland and Scotland, Queen, Empress of India, Bretwalda of all Britain." Bretwalda, or wide ruler, has the advantage of being a stately old Saxon title borne by many of the Queen's ancestors, but it is doubtful whether that would be sufficient to secure its resurrection.

## A RACE ALLIANCE OPEN TO THE UNITED STATES.

Mr. Stevenson concludes his proposals as follows:—

Lastly, not the least of its advantages is that it opens the possibility of a reunion of the divided Anglo-Saxon race, for the League and Covenant would be a sort of amplified and modified Monroe doctrine, and there is nothing to prevent the United States from giving and accepting the mutual guarantee. The two kindred nations, in spite of many temporary dividing incidents, have drawn very close together and will draw still closer, and it is not altogether a visionary hope to trust that George Washington's task may be crowned at last by the reconciliation, and by the union of all the English-speaking States on noble terms of liberty in their self-rule, equality in their civic rights, and fraternity in their alliance.

That no doubt is an object very dear to our heart, nay, that is the object with which the *Review of Reviews* was published in London and New York. But a bird in the hand is worth two in the bush, and while gladly welcoming any and every proposal that may tend to reunite the Monarchical and Republican sections of the English-speaking race, we must take care that we sanction nothing that might relax the ties which at present keep all English-speaking lands save one in the Family of which Her Majesty is both Queen and Mother.

# LEADING ARTICLES IN THE REVIEWS.

## The Queen, the Reign, and the Jubilee.

THE Jubilee is still with us in the shape of many articles in the magazines on themes which it suggested. I string together in a few pages brief notices of the most interesting of these essays.

### THE QUEEN AND HER MINISTERS.

MRS. EMILY CRAWFORD gossips pleasantly concerning Her Majesty and her relations to her Ministers of high and low degree in the *Contemporary Review* for July. Mrs. Crawford says:—

May we not call the Queen's household servants her humble ministers? Brown was Minister of the Queen's safety. These servants are the objects of her motherly care and friendship. She enters into their joys and sorrows, and is a kind disciplinarian. On long railway journeys she arranges for the stokers, engine-drivers, and guards to have comfortable meals and refreshments, and not to be kept a moment waiting. One of the reasons why the Queen has dismissed so few servants and had so few quarrels is her quiet firmness. She does not like to remind twice any one about her of slackness. A second reproof is a serious affair, and may have for its consequence that the Queen will never again speak to the person who deserved it. She is sincere with her servants, and they are expected to be sincere with her. The Queen is careful to keep them out of bad company. At Balmoral no Minister, were he even Prime Minister, is privileged to bring his valet; a servant of the Queen attends at his toilet. This ill suits elderly noblemen whose domestics have grown grey in their service. Being used to their masters' growing infirmities, they do not mind them. Nor do the masters mind the old servants, to whom their little tricks of the toilet have become a matter of course. The old valet knows what shoulder has a gouty ache, what shoes pinch, and how to hide greyness. A Parliamentary leader does not like to confess to a strange servant to what a degree he is indebted to his dentist for his excellent articulation. The Queen can have no direct knowledge of servants' halls, but what she has heard of them makes her anxious to keep her own servants' hall free from black sheep. She is also afraid, were Ministers allowed to have their valets at Balmoral, that there would be no more real privacy there.

The Queen's Ministers have, with the course of time and the rise of the middle class to wealth and power, improved in morals. A Melbourne would now be scarcely possible, or perhaps a Palmerston, or for that matter a Duke of Wellington. The private lives of the Queen's later Ministers, aristocratic or other, would bear being looked into. Whatever Mr. Chamberlain's foes at Birmingham may say of his politics, they speak of his private life as almost puritanical. Lord Salisbury is almost too domestic. He is as an *homme d'intérieur* in his home life, the admiration of his French bourgeois neighbours at Puy and Beaulieu. The middle class has been omnipotent through the greater part of the present reign. The Queen herself, in her virtues and her tastes, is more middle class; as she cannot be higher, she has a quietude that is wanting in a class where individual members are often feverishly eager to advance themselves in life. The throne is above competition, and should not compete with any class or representative man. This is one of the reasons why it remains and is likely to remain long popular.

### HOW IT FEELS TO BE KNIGHTED.

BY SIR EDWIN ARNOLD.

THE title of Sir Edwin's contribution to the July—and Jubilee—number of the *Woman at Home* is "The Womanhood of Her Majesty the Queen," but the reader will probably remember the glimpses it gives of the writer more than the discursive eulogy it pronounces on the Monarch. This is how, in a dialect which "the largest circulation in the world" has made familiar, he tells the story of his being knighted:—

Those Royal inscriptions in my copies of the "Leaves," graciously adding such value to the volumes, are all the more interesting because they were made shortly after that great event of the proclamation at Delhi of the Queen as Empress of India, on which occasion Her Majesty was pleased to bestow on me the greatly-prized distinction of the Companionship of the Star of India. To this high favour she deigned afterwards to add the Knight Commandership of the Indian Empire, which I mention here only because no Englishman upon whom such good fortune has fallen can ever forget the moment when he knelt before the Queen of England to receive from Her Majesty's august hand that light and pleasant accolade of the naked sword-blade which leaves its touch for ever on his heart and spirit. Among all the many times when my eyes have been so happy as to gaze on that kind face and well-beloved form, in crowded courts, amid clamorous processions, on the decks of her ships of war, in quiet halls of our seats of learning, under the green trees of Buckingham Palace, in the gardens of Marlborough House, or elsewhere, that one particular moment lives naturally most of all in my recollection, when at her feet I kissed the small and gentle hand which holds so vast an orb of sovereignty, and felt upon my neck, fastening there the badge of her Indian Empire, the touch of those queenly fingers which have swayed so long and so gloriously the sceptre of the proudest Realm of Earth. It is thus and always that I shall chiefly remember Her Majesty, to the last breath of my life, seated amid her brilliant Court at Windsor Castle, amiably relieving a solemn and formal ceremony by her kindly smile and easy dignity, with graceful words for each of those whom it pleased her then and there to honour, and yet with such an air of imperial personality about her, that no social habitude, no long worldly experience or habitual self-confidence, could keep the glance from sinking before those quiet eyes, that state-worn face, those sweet-voiced and tender and puissant lips, which of themselves "would give the knee, Desire to kneel." I felt then, as I have before now written, how impossible it would be to convey to those who have never stood face to face with Her Majesty any sufficient sense of this individual influence in the Sovereign. The heart of gold, the deepfulness as of steel, the pride, the patriotism and the deep piety of Victoria; the Royal high temper of mingled softness and resolve, have all been enshrined in a small but vigorous frame. But though this be so, no one who has been honoured by near approach to Her Majesty, or has ever tarried in her presence, will fail to testify to the extreme majesty of her bearing, mingled always with the most perfect gentleness and amiability. Her voice has always been pleasant and musical to hear, and is so now. The hand which holds the Trident of the seas is the softest that can be touched; the eyes which have grown dim with labours of State for

THE *Woman at Home* for July is a Diamond Jubilee number, the principal articles being Mrs. Tooley's "Portraits of Queen Victoria," Annie S. Swan's "Victoria, Queen and Empress," and Sir Edwin Arnold's autobiographic panegyric upon Her Majesty. The early portraits of the Queen are excellently reproduced.

England, and with too frequent tears, are the kindest that can be seen.

For a plain matter-of-fact account of the same kind of ceremony the reader may turn to *Cassell's Family Magazine* for July, where in the unsigned article, "Knighted at Windsor," are given all the details.

### The Queen Not a Figure-Head.

THE MARQUIS OF LORNE contributes to the *North American Review* for June an article on the Record Reign, in which he ventures to touch lightly upon the extent to which the Queen had made the influence of the Sovereign an efficient substitute for the lack of direct power. The Marquis says:—

The weaker, or the less tangible, the public part taken in affairs by the reigning Sovereign, the more easy does it become for him, not only to place his views on all important occasions before Ministers, but to see that they are listened to and weighed by his councillors. But there is little doubt that the checks provided against the Sovereign's arbitrary power are complete, and even if he have less experience and wisdom than the rashest of the deputies in the House of Commons, he can do but little harm. On the other hand, if he be wise and tactful and persuasive, and if he have the power to make men believe in his disinterestedness, impartiality and honesty, he may have a great part in public affairs.

The following passage, in which Lord Lorne disposes of the "figure-head" argument, is a very effective bit of writing:—

The Crown has been compared to the figure-head of a ship. It is sometimes said that it is only preserved to give a fictitious dignity to the vessel of State. They who speak thus know little, and probably care less, how monarchy works. If figure-heads can walk the deck and have conference with the captain, arrange for the command in case he falls overboard, and even have influence for the keeping of discipline in the fore-castle, the comparison may be good. In public affairs we deem chairmen necessary at meetings, and we do not condemn them as useless if they cannot eject all whom they cannot persuade.

### The Queen's Special Reporters.

MR. LUCY, in the first paper of his series on the "Queen's Parliaments," which appears in the *North American Review* for June, tells anew the familiar story of how the Queen has the Parliamentary history summarised for her every night by the Leader of the House of Commons. Mr. Lucy says:—

The Queen has a special reporter, who with his own hand draws "Pictures in Parliament" for her Majesty's special information. He is no less a person than the Leader of the House. It was George the Third who instituted this parliamentary practice. In his time there were no long reports of parliamentary proceedings in the newspapers, and his Majesty commanded Lord North to despatch to him nightly a letter descriptive of the proceedings, cataloguing the results of the sitting. Lord North was the first parliamentary summary writer. The continuous story has been abundantly supplemented during the Queen's reign, the bookshelves in the private library at Windsor bulging with the record of three score years. The work is written by a rare series of eminent hands—Sir Robert Peel, Lord John Russell, Lord Palmerston, Mr. Disraeli, Mr. Gladstone, Lord Randolph Churchill, to-day Mr. Balfour, yesterday Sir William Harcourt. It would be delightful and instructive reading, and is much too good to be wasted on the desert air of Windsor Palace library.

The only peep the public have been permitted to gain of this rare treasure-trove is possible in Sir Theodore Martin's "Life of the Prince Consort." There will be found a few

passages from Disraeli's letters, written from the Treasury Bench in the House of Commons during Lord Derby's second administration.

It is a peculiarity connected with this important ministerial function that the letter to the Queen shall, with the assistance of a blotting pad spread on the knee, be written from the Treasury Bench in full view of the House. It would appear more convenient that the Leader of the House should repair to his own room, and with the convenience of a writing desk, compose his letter. More than sixty years ago Sir Robert Peel, coming in with his first Ministry, and being as much hurried as was possible with one of his temperaments, began to write the letter on his knee, seated on the Treasury Bench. His successor imitated him. Sir Robert, coming back again in 1841, returned to his early habit. Thus it became established.

Mr. Gladstone introduced a characteristic variety into the practice. In the stormy sittings of the Parliament of 1880-5 he adroitly availed himself of the opportunity of successive divisions to get his letter to the Queen written. Commencing it on the Treasury Bench while the question was being put and the House cleared for a division, he, as soon as the tellers were named, with youthful alacrity headed the procession for the door. Planting himself at one of the writing tables in the division lobby he went on with his work while his followers trooped past. The division over, he returned, bringing up the rear, happy in the consciousness that he had utilised ten precious minutes that would otherwise have been lost on a busy day.

### The Queen's Jewry.

*Young Israel* publishes a double Jubilee number which is very copiously illustrated with portraits of the leading Jews who have come to the front during the reign. The editor says:—

What we wish here to accentuate is that for his equal rights, his equal opportunities, his equal privileges with his fellow-Englishmen, Young Israel has to thank in no small measure the gracious Lady whom all the world is to-day delighting and uniting to honour. For in the social emancipation of Jews the Queen has not followed; she and her family have led public opinion.

It would seem that the Queen's bias in favour of according equal rights and social privileges to the Jews was manifested very early, and was in remarkable contrast to the attitude of her immediate predecessor, who used to charge the Bishops when they came to do him homage, that they should always support him in opposing the emancipation of the Jews. The result of the Jewish emancipation which took place in the twenty-first year of her reign, has certainly not justified the lugubrious forebodings of William IV. Says Mr. Lucian Wolf, who writes the article on the Queen's Jewry:—

Every Parliament since 1858 has been served by a group of Jewish Members falling in no way short of the average ability, industry, and public spirit of their Gentile colleagues. Sir George Jessel served as Solicitor-General under Mr. Gladstone, and Baron Henry de Worms, now Lord Pirbright, held successively two under-secretariats in the Government of Lord Salisbury. Sir Julian Goldsmid was Deputy-Chairman of Committees, and had his health not failed him would probably have been nominated for the Speakership. Among the rank and file of the Jewish Members have been eminent lawyers, such as Sir Francis Goldsmid, Sir John Simon, now the last of the Serjeants-at-law, and Mr. Arthur Cohen, Q.C.; and distinguished financial authorities, such as Mr. Lionel L. Cohen and Sir Samuel Montagu, Bart. The House of Lords, only opened to the Jews twelve years ago, contains already no fewer than three Hebrew Peers—Lord Rothschild, Lord Pirbright, and Lord Wantage. Assuredly Emancipation is justified of its children.

### Prince Albert's Practical Genius.

In an interesting gossip article on "Personal Relics of the Queen," published in the *Strand* for June, there is an account given of the pains taken by Prince Albert to introduce Continental conveniences in this country. One of such was the carriage, a picture of which is shown in the accompanying illustration. The writer says:—

This carriage was practically designed by the Prince Consort on the lines of a vehicle he and the Queen had used while on the visit to Louis Philippe, at the Château-D'Eu. The late Mr. Hooper, of the firm of Adams and Hooper, was invited to confer with Her Majesty and the Prince as to carrying their ideas into practice. There was some difficulty, however, because while the French carriage was of great size and weight, the Queen's ideal was a light, low-hung carriage,

CHAR-À-BANCS IN WHICH THE PRINCE CONSORT USED TO DRIVE THE QUEEN AND CHILDREN.

(Designed by the Prince Consort.)

to be used with a pair of small horses, and driven by the Prince himself; Her Majesty sitting by his side. His Royal Highness next proceeded to design this char-à-bancs. Each of the three seats was to carry three persons, and each had its own separate folding steps. Screw brakes had long been in use on the Continent, and so the Prince Consort designed one for this carriage. He adopted a screw with a very rapid pitch, so that one turn of the handle immediately put pressure on the two hind wheels. This was the first brake of the kind ever used in England. A light movable roof was required, and the fastenings of the canopy rods were copied from the Prince Consort's umbrella, he being a man of most admirable resource and ingenuity. Then came the question of the material for the curtains. The Prince had in his mind the exact material he wanted, but he could not explain it to Mr. Hooper. At last his eye fell upon the Queen's dress (she was standing by in the court-yard), and he said:—

"Why, that is the material; what is the name of it?"

The Queen replied, "This is a waterproof Irish poplin cloak."

Immediately afterwards, Her Majesty sent into the Castle for a pair of scissors, and she requested Mr. Hooper to cut off a

button-hole tab, which was to serve as a pattern. The char-à-bancs is now in the possession of Messrs. Hooper and Co. (Ltd.), of St. James's Street.

The Prince Consort never forgot those who worked with him towards the success of any venture in which he was interested.

It is almost inconceivable that it should have been left to the Prince Consort to introduce the screw brake into England.

### Relics of the Queen.

This long, copiously illustrated article in the *Strand Magazine* for June occupies nearly forty pages. The author is W. G. FitzGerald, and the contents of the article have been carefully collected from many sources. There is a picture of the pony carriage in which the Queen used to drive about as a child. Another picture reproduces the cover of the Queen's favourite toy-book, which was "Ellen, or the Naughty Girl Reclaimed," with a series of figures that dress and undress. It is a book of the kind not unfamiliar in many nurseries even now, in which the lay figure of Ellen has a movable head, with cloak and dress. It was published in 1811, and consisted of a series of stanzas describing how the stubborn, naughty child was reclaimed into a good child by judicious firmness and kindness, but not before she had run away and joined the gipsies, who stripped her of her pretty dress and clothed her in rags. Then we have an illustration of twenty-two dolls' cushions made by the Queen when she was ten years of age. They are now in the possession of Miss L. Maaser of Germany. The article also contains pictures of the piano on which the Queen learned to play; of dolls from the Queen's doll's house; and a photograph of the sprig of orange-blossom from the Queen's bridal pocket, and a photograph of a lock of the Queen's hair, and a Bible-marker woven out of her hair, which was insured for £450. Personal particu-

lar details are given as to the measurements taken by Sir George Hayter, and the Court painter, who were employed in producing the various pictures of the Coronation, etc. There is even a photograph of a pin-cushion used by the Queen on Coronation Day, and another photograph of an arm-sling worked by the Queen for a wounded officer. The article is brought to a close by the reproduction of several sketches by Empress Frederick, Princess Alice, and the Marchioness of Lorne. There is one sketch of Faust by the Prince of Wales which he made in the year 1858.

### The Victorian Theatre.

The "Theatre in the Victorian Era" is dealt with by Mr. Clement Scott in the *English Illustrated Magazine* for June, and by Mr. Frederick Whyte in the *Pall Mall Magazine* for July. Mr. Frederick Whyte says:—

The history of the English Stage during this century might be divided conveniently into six eras, sufficiently distinct, although in some cases overlapping: the era of Mrs. Siddons,

who retired in 1812, and of her brother, John Philip Kemble, who had long enjoyed indisputable pre-eminence over all the other actors of his time when, in 1813, his stately splendour paled and died away before the lightning flashes of Edmund Kean; the era of Kean, who flared and flickered for nearly twenty years and then went out; the era of Macready, whose star, already in the ascendant, though clouded over, at Kean's death, shone more and more brightly until '51; the era of Phelps, a lesser luminary (though Macready had begun to fear him as a rival in '47), burning steadily until '62—when his management at Sadler's Wells came to an end; the era of the Bancrofts, twin constellations twinkling merrily at the old "Prince of Wales's" from '65 to '70; and finally, the era of Irving, by whose lustre, displayed in all its brilliancy for the first time in '71, these last (though twinkling on as merrily as ever) were suddenly outshone.

### Canadian Progress under the Reign.

It is a jubilant review which the Editor of the *Canadian Magazine*, Mr. John A. Cooper, contributes to his June number, of Canada's progress in the Victorian era. He begins with a summary of achievement, which his later pages only expand and verify:—

Canada stands an easy first among the Colonies of Great Britain . . . The record of her progress during the present century, and especially during the Victorian era, shows that her wealth has increased a hundredfold. New provinces have been built where, in 1837, there were only trees and wild animals and the unprogressive redman. Towns and cities have sprung up all over the best portion of this British part of North America. Many miles of canals, thousands of miles of railways, and tens of thousands of miles of good waggon roads, have been built, and the land is full of the hum of commerce. Ships have been built and rebuilt, and Canada's commercial navy ranks fifth in the vessel tonnage of the world. Where in 1831 there were a million of people, there are now over five million. In 1837 her total trade was less than thirty million per year; now it is over two hundred million. In 1837 there were fifteen miles of railroad, and now there are over fifteen thousand, with yearly earnings of about fifty million of dollars. In 1837 British North America consisted of a half-dozen isolated colonies with no connection or sympathy. Now all these, with several new and important communities (but excepting Newfoundland) are numbered under one government, with a growing unity of sympathy, aim and national feeling, and blessed with a system of government—federal, provincial and municipal—which is unequalled anywhere.

The writer shows how the disaffection and insurrection with which the Queen's reign opened in Canada were steadily transformed into devoted loyalty by successive bestowments of Home Rule, which has been practically complete since 1847.

But freedom wisely and fully bestowed led, not to division, but to unity. Canadian Confederation was the spontaneous desire and attainment of the self-governed provinces; and the thirty years during which it has existed have seen the growth of a common patriotism and the extinction of sectional prejudices:—

The greatest work in British North America during the Victorian era has been the creating of this new and broad national feeling, and as no such work has been accomplished in any other group of the British Colonies, Canada has the right to claim that, among her peers, she has accomplished most in this great era which is marked out by the rule of the world's most illustrious Sovereign.

Passing to consider the expansion of Canadian trade, the writer remarks significantly on one feature which strikes the student of recent Canadian history, viz., "the fact that the Canadian 'upper ten' are to a great extent railroad people."

He repeats Canada's claim that "she has the grandest

educational system in the world." Of the Canadian newspapers he avers that they reach a standard above that of most countries, "are beautifully printed and ably edited."

They have one grave fault, and that is they are content to look at foreign events through United States spectacles; they receive all their foreign news *via* New York instead of setting up a cable service of their own.

Stress is laid on one curious fact that "no country on the face of the globe has produced, proportionately, so many volumes of verse as Canada." The quantity, without too narrowly scanning the quality, shows the literary ambition of the people. The writer concludes:—

Canada has not been behind the rest of the world in taking advantage of the opportunities which the Victorian era have offered. Though handicapped by difficulties peculiarly native, her people have been conservatively progressive. They have not become demented in their desire to possess wealth, nor have they ever evidenced a tendency to fold their hands and say "It is enough." They have evinced a faith in their ability to build up on the northern part of this continent, a nation which shall some day stand second to none among the nations of the earth.

### The Kaiser and his Grandmother.

A CONTRIBUTOR writing under the name of "Austriacus" in the *Contemporary Review* for July, calls attention to the contrast in attitude of the Austrian and the German Emperors to the Queen at the time of the Jubilee:—

The great demonstration made by the Emperor Francis-Joseph, in paying a long visit to the English Ambassador in Vienna on the occasion of the Jubilee, is a step unprecedented in Austria, where the rigid Spanish Court etiquette of the Middle Ages still holds good. In contrast to this friendly behaviour is that of the German Emperor, the eldest grandchild of the Queen, who—incredible as it may appear—neither held a review in her honour, nor attended a church service, nor paid a visit to the British Ambassador, nor even sent a telegram to his grandmother. During the last few days it has appeared as if Berlin had been wiped out by an earthquake from the face of this planet. From all parts of the world messages of goodwill and of congratulation were published by the newspapers, but none came from the capital of the German Emperor. That the reptile press organs of the old Ijenghis Khan in Frederichsruhe have only words of vituperation or of railery concerning England and her Queen is quite natural. The sight of a great free people has the same effect upon Prince Bismarck as the cross or holy water has upon the prince of darkness. For the serious politician the conduct of the two Emperors shows to some extent which way the wind blows, and will blow in the future.

### The Notables of Jubilee Year.

THE *Windsor* commemorates the Queen's Jubilee by printing the portraits of the Queen's eminent subjects. It is interesting to note that the list is made up on the principle of selecting the most famous living representatives of British politics, religion, science, literature, art, philanthropy. The following is the *Windsor* list:—Lord Salisbury, Mr. Gladstone, Archbishop Temple, Mr. Watts, the Lord Chief Justice, Dr. Alexander MacLaren, Sir James Paget, Sir William Harcourt, Sir E. J. Poynter, Mr. Herbert Spencer, Lord Armstrong, Sir George Grey, Lord Kelvin, Mr. Frederick Greenwood, Sir Arthur Sullivan, Lord Roberts, Mr. Justin McCarthy, and Mr. Charles Santley.

In the *Pall Mall Magazine*, Mr. J. Holt Schooling describes "Some Contrasts between 1837 and 1897," illustrating his points by more or less ingenious diagrams.

### The Record Reign of the Microbe.

THE reign of the microbe over the scientific imagination is coeval with the reign of her Majesty. So it appears from a paper by Mrs. Percy Frankland in July *Longman's* on "Bacteriology in the Queen's Reign." In 1837 Latour startled the world of science by declaring yeast to be composed of living spherules. Now the micro-organism is a very familiar conception, entering into the practical conduct of even brewery and dairy:—

In order to compete on modern lines with foreign dairy produce, it will be necessary to establish dairy schools where bacteriology may be taught, and where instruction may be given in the principles of scientific butter and cheese-making.

There are greater wonders wrought by applied bacteriology:—

Wine and tobacco manufacturers, on application, may respectively obtain the bacterial means of transforming the crudest must into the costliest claret, and the coarsest tobacco into the most fragrant Havana.

Agriculture has also benefited:—

Bacterial fertilisers are amongst the latest achievements which bacteriology has accomplished in this wonderful half-century, and the purchase of special varieties of bacteria to suit the requirements of particular kinds of leguminous plants is now fast becoming a mere everyday commercial transaction.

Bacterial poisons have also rid farmers of the plague of field mice, and may yet deliver Australia from the plague of rabbits:—

Museums of bacteria exist, and bacteria can be bought or exchanged by collectors with as much facility as postage-stamps! . . . From these bacterial *depôts* carefully bred and nurtured varieties may be despatched to all parts of the world in response to orders in the same way as we now select and write for a special brand of tea or coffee from our grocer!

Coming to preventive medicine, the writer remarks:—

Anthrax, tuberculosis, cholera, typhoid, tetanus, erysipelas, are only a few of the diseases the active agents of which bacteriology has revealed to us. Bacteriology has, however, not been content to merely identify particular micro-organisms with particular diseases—it has striven to devise means by which such diseases may be mastered, and one of the most glorious achievements of the past sixty years is the progress which has been made in the domain of preventive medicine.

Serumtherapy, much used for the cure of diphtheria, tetanus, and other maladies, seems "destined to revolutionise the treatment of disease":—

The astounding fact that the blood of animals which have been trained to artificially withstand a particular disease becomes endowed with the power of protecting other animals from that disease is only in the earliest stages of its application. . . . The latest use which has been made of this method of combating disease is the employment of plague-serum for the cure of bubonic plague in India.

Next comes the revolution wrought in surgery:—

Foremost, however, among the beneficent reforms which have followed in the wake of bacteriology must be placed the antiseptic treatment of wounds, or Listerism, as it is now universally designated, in recognition of its renowned champion, the President of the Royal Society.

Not least of the benefits conferred on society has been the immensely greater care taken in supervising our water and our milk supplies. The principal names mentioned by Mrs. Frankland are Latour, Schwann, Kützing, pre-eminently Pasteur, Hansen, Koch and Lister.

### The Slave in the Triumph.

MR. WILSON, in the *Investors' Review*, subdues his growl for a moment in writing "About Nothing In Particular," and contents himself with a passing warning against believing that our Empire is a military power modelled on the empire of Spain rather than that of Rome, for which it is astonishing to learn that Mr. Wilson has an unexpected fund of reverence. The reason for this is that it had no custom houses and endowed its subjects with citizenship. No objection can be taken to the following words of warning, which, however, we are not much in danger of forgetting, even although a few regiments of artillery and of dragoons did tramp through the streets of London:—

To deal fairly with the subdued races and nations, to help them up towards self-government and self-reliance, to spend our strength in making them strong rather than to drain their strength for our own exclusive and immediate profit, these are the ways by which an enduring dominion may be created. The gold which flows into the country in a steady stream comes in return for the labour of millions among us, a goodly proportion of whom are hardly sure of to-morrow's bread; and the true greatness of England is still in her looms and foundries, in the willing hands and steady industry of her working population. We have conquered the dominant place among commercial peoples by hard labour, by skill and devotion to duty, not by swagger and blood-letting. To bury this side of our greatness in a rare-show of courtiers is to give our whole modern history the lie; and, we fear, it indicates a disposition in the guides of public opinion to lean upon brute force rather than on righteousness for the maintenance of our imperial supremacy.

### Miscellanea in the Magazines.

THE *English Illustrated Magazine* for July publishes a double Jubilee number, which from first to last is entirely devoted to the Queen and the Reign. There are articles upon the Queen's home, the Queen's children, the Queen's reign, and literature, journalism, railways, navy, etc. There is a brief article upon Mr. Justin McCarthy, which describes him as the Historian of the Queen's reign, a title which more properly belongs to Sir Theodore Martin. The number is simply full of gossip about the Queen. Among other things it mentions that in Her Majesty's own rooms at Windsor gas is not tolerated, the purest wax candles being burned. She has the greatest objection to idleness, and whenever she is not busy in State affairs, she is either knitting or crocheting. Her Majesty uses the telephone constantly, and is still in the habit of playing on the piano and of sketching.

THE progress of geographical knowledge during the record reign is the subject of a paper by Sir Clements Markham in the *Geographical Journal* for June. He describes the trigonometrical survey of India as "the grandest monument of the Queen's reign on the Asiatic continent." African discovery is fittingly emphasised and eulogised. Oceanography is a science which has only risen to importance in the Queen's reign. The progress of the Royal Geographical Society is illustrated by the facts that evening meetings which in 1837 cost £9, cost now £542; and the *Journal* cost £400 in 1837, but £3,415 now.

A VERY warm appreciation of the personal character of the late Duc d'Aumale appears in *Longman's* for July from the pen of Mrs. Reeves.

# "THE SCANDAL AT WESTMINSTER."

## A COMMITTEE THAT SACRIFICES THE HONOUR OF ENGLAND.

**T**HE Scandal at Westminster grows ever more scandalous. According to one of the organs of the German Government, we are now approaching the bankruptcy of Palimentarism. Palimentarism as an instrument of public investigation is not "approaching" bankruptcy. It is already stone broke. The South Africa Committee has not only covered itself with contempt, it has discredited the reputation of Parliament, and has exposed the good name of the country to an odious and intolerable imputation.

In its treatment of the Flora Shaw telegrams, and the astounding fashion in which it allowed the most palpable evasion of the most obvious questions, the Committee has confirmed the universal opinion expressed without reserve by all who have followed its proceedings: that its so-called inquiry is nothing better than a fraudulent make-belief of no-inquiry, which is carried on for the purpose of deceiving the House of Commons, the public, and the world at large with a semblance of investigation, the more effectually to prevent the discovery of the very insignificant skeleton which is concealed in Mr. Chamberlain's cupboard. The result is that the world at large has come to the conclusion that the skeleton is infinitely worse than it ever was pretended to be, and, what is much worse, that the scandal attaches not merely to the Colonial Office and its Chief, but to all Her Majesty's Ministers.

That this is no exaggeration is sufficiently proved by the article in the *Temps* of July 1st, in which this moderate and intelligent organ of French opinion expresses the natural and inevitable conclusion which every one must draw from the extraordinary conduct of the South Africa Committee. It says that the Committee has refused to see the telegrams collected by the Colonial Office, because it knows these messages would prove Mr. Chamberlain's complicity in the raid. It proceeds:—

The Committee sacrifices everything, including the honour of England, to its desire to preserve the reputation of that meddlesome and imperious statesman. The evil is wrought, and is irreparable. It is now proved that the Queen's Government has plotted in time of peace the invasion of a friendly country, and that there is no majority in Great Britain to condemn this crime. It is the apotheosis of the Birmingham statesman; it is also the abdication of British conscience.

What worse result than this could have followed the publication of the truth, the whole truth, and nothing but the truth from the first?

It has now been asserted by Mr. Tatton Egerton, M.P., that Mr. Rhodes told him plainly that he had secured the support of Mr. Chamberlain. It is admitted in evidence that he sent Dr. Harris to secure that support, and that, after a preliminary refusal, after pressure was brought to bear upon Mr. Chamberlain from Mr. Rhodes, Mr. Chamberlain, at the High Commissioner's suggestion, made, it is admitted, at Mr. Rhodes's instance, conceded the strip and the police necessary for the execution of the first part of the plan. It is further admitted that many communications passed between Mr. Rhodes's representatives in this country and Mr. Rhodes, which the latter accepted in good faith as embodying impressions resulting from conversations with Mr. Chamberlain or his representatives in the Colonial Office. When matters came to the critical point, telegrams were sent to Cape Town urging Mr. Rhodes to precipitate the insurrection in the interest of the Colonial Office. These messages were admittedly based upon statements made by Mr.

Fairfield at the Colonial Office to persons who went there for the purpose of obtaining information for the guidance of Mr. Rhodes and the *Times*.

Mr. Rhodes may have been deceived, but his telegram to Miss Shaw claiming Mr. Chamberlain's support, and his instruction to his solicitor to proceed at once to the Colonial Office to inform Mr. Chamberlain that he had relied upon these telegrams to support his action in South Africa, prove beyond all doubt that Mr. Rhodes honestly believed that he had the support of Mr. Chamberlain.

Every cablegram that has been inadvertently or reluctantly forced upon this unwilling Committee has tended to confirm this theory. But think for a moment how the case stands.

There is a series of letters which passed between Mr. Hawksley and the Colonial Office in 1896 which are in the possession of Mr. Chamberlain.

Mr. Chamberlain does not produce them, and is not asked to produce them.

There is Mr. Hawksley, Mr. Rhodes's solicitor, who holds the cables, and who was the confidential intermediary between Mr. Rhodes and the Colonial Office. He is the one man who knows everything. They first refused to call him; then, when their hands were forced by Mr. Labouchere, and they found that they had before them a witness of candour who could tell them the exact truth, they at once interrupted him in the middle of his examination, and refused to allow him to continue to give evidence or to be cross-examined upon that which he had given.

There are the missing cablegrams, which would be produced to-morrow if Mr. Chamberlain, whom they are alleged to compromise, would demand their publication. But when publicly challenged to do so he refuses, preferring rather to sit down under the imputation of guilt than ask for the production of the evidence. What can any one think of such a damning array of facts as these? See how the case stands:—

Mr. Rhodes, Privy Councillor, Cape Premier, and Managing Director, *was* the conspiracy. He is not pressed for information on the vital subject, and he is now in Bulawayo.

Lord Rosmead, Imperial High Commissioner, is in the country, but he is too ill to be examined.

Sir B. Meade, Mr. Fairfield's colleague at the Colonial Office, to whom Miss Shaw and Dr. Harris talked freely, is in the country, but he also is too ill to be examined.

Sir Graham Bower, Imperial Secretary, has been examined and has admitted he was in it.

Mr. Newton, British Magistrate on the frontier, has been examined and has admitted that he was in it.

Mr. Fairfield, on whose authority telegrams were sent urging that the rising should be hurried on, is dead.

Dr. Harris, who sent telegrams both to and from Africa, whose evidence is of vital importance, is amusing himself on the Continent, and is left there.

Mr. Maguire and Mr. Beit are subjected to a farcical semblance of examination, which carefully ignores the vital issue. Then this astonishing Committee closes the inquiry, and proceeds to draw up its Report. It may report what it pleases about Mr. Rhodes; the only reputation it has irretrievably damned has not been that of Mr. Rhodes, but its own.

**"THE SCANDAL AT WESTMINSTER."**

AN APPEAL TO PARLIAMENT FROM THE S. A. COMMITTEE.

It is satisfactory to know that the protest published in the last number of the REVIEW under the heading "The Scandal at Westminster," has had a somewhat salutary effect on public opinion. Of this the most striking illustration is to be found in a very powerful article contributed by a writer signing himself "Quæstor," in the *Contemporary Review* for July. This article, which covers twenty pages, opens with a review of the whole of the circumstances of the Jameson raid. With this, however, we need not concern ourselves.

## WAS MR. CHAMBERLAIN "IN IT"?

The important part of the article begins when he discusses the question whether or not Mr. Chamberlain was "in it." "Quæstor" says Mr. Chamberlain spoke bravely of the innocence of the Colonial Office. But so he did also of the innocence of Mr. Rhodes. Was it with equal reason? This is undoubtedly the next question which the Committee exists to solve, and it is strangely enough the one question which the Committee shirks. "Quæstor" points out that the statements as to the complicity of Mr. Chamberlain were undoubtedly believed by all those who were in the confidence of the Rhodesians.

## A SAMPLE STORY.

He then tells the following story as a sample of the statements which were circulated in London society and the smoking-room of the House of Commons:—

A Conservative of the highest honour and standing, the Hon. Alan de Tatton Egerton, whose word no one would dream of disputing, was travelling at the Cape and saw Mr. Rhodes. They discussed the matter freely, and Mr. Rhodes told him plainly that Mr. Chamberlain was in it up to the hilt. On that authority, the member saw Lord Salisbury and was ultimately confronted with the Colonial Secretary. "Who told you I was in it?" said the Minister. "Rhodes himself," said the critic. We omit the reply.

"Quæstor" omits the reply, but the story goes that Mr. Chamberlain's response was to exclaim, "The traitor!" and further comment made he none.

## THE CRY OF BLACKMAIL.

Dealing with the accusation that the Rhodesians were trying to blackmail Mr. Chamberlain, "Quæstor" remarks that if so, this makes the question as it concerns Mr. Chamberlain's complicity not better, but worse. Unless the Rhodesians had something to reveal, they would hardly be so innocent as to use threats of revelation which could have no other effect than to make Mr. Chamberlain angry. "Quæstor" says if the Rhodesians' account be true, or anything like the truth, Mr. Chamberlain's original statement to the country was a piece of scandalous mendacity. One party or the other is lying.

## WHAT THE COMMITTEE HAD TO DECIDE.

Which is it in whom the truth is not? That was the question for the Committee to decide; but the South Africa Committee has doggedly refused to inquire into this vital question. "Quæstor" says:—

If the Government, who must be presumed to have known what Mr. Chamberlain knew, desired that this investigation should reveal to Parliament the truth which Parliament had a right to know, they would have themselves called for and compelled the production of all the cablegrams which have been produced, and also all those which are not yet produced, before Mr. Rhodes or any other of the principal actors were allowed to leave the witness-box. If they had been so minded they would have required Mr. Chamberlain, at an early stage,

to put, at least, the Committee in possession of what he knew as to the communications between Dr. Harris and the Colonial Office in 1895, and to produce the communications which the Colonial Office had had with South Africa during the period in question. Not one of these things was done. The Government and Mr. Chamberlain preferred a policy of silence. Their majority on the Committee and, above all, their chief law officer, Sir Richard Webster, have, in fact, done everything in their power to hinder or, at least, to delay the production of this vital documentary evidence, with the result that the most important part of it is not to be produced at all; and that what was produced did not reach the hands of the Committee until practically everybody who could be usefully examined upon it had passed out of the witness-box and been released. From a constitutional point of view, apart from the question of Imperial honour, it may be doubted whether such a scandal ever happened in the history of Parliament before.

## DR. HARRIS'S EVIDENCE.

"Quæstor" then passes in review the evidence so far as it has been obtained, not by the aid, but despite the efforts of the Hushing Up Committee at Westminster. There is Dr. Harris's evidence, for instance. When Dr. Harris telegraphed to Mr. Rhodes that he had spoken openly to Mr. Fairfield, he was either deceiving his chief and calmly manufacturing a deliberate lie, or stating the simple truth that he had caused Mr. Fairfield to understand the main outline of the Jameson plan. The cablegrams which might have thrown light upon the subject are not forthcoming. Such scraps of them as have been obtained "certainly appear," says Quæstor, "to support the statement of Dr. Harris. They do not read like an attempt to manufacture evidence against the Colonial Office. They read naturally enough as the rough reports made by an agent to his chief from day to day." The rest of the cables have not been produced, and the Committee refused to press for the production.

## THE SUPPRESSED CABLES.

The proper course for the Committee to have taken when the production of the cables was refused was to have reported to the House, in order that compulsory measures might have been taken to see that the commands of the highest Court of the Empire were not defied.

Let it be said at once that the person upon whom pressure was required was not Mr. Hawkesley. He was willing enough—it might seem even anxious—that the documents should be disclosed. All the world knows that he believes and says that Mr. Chamberlain was "in it," and that he considers, that in the public interest and that of all parties concerned, it is better that the truth should be known. It is more than probable that he so advised Mr. Rhodes from the beginning, and that he has had much to do with the partial disclosures which have taken place. The person, therefore, upon whom Parliament has to exercise its power, and who is, in fact, defying it, is Mr. Rhodes himself, who, though he chances to be at a distance, remains not merely a subject of the Queen, but a Privy Councillor. There are many sufficient ways of compelling his obedience.

## THE VOLTE FACE OF THE OFFICIAL LIBERAL.

For their refusal to insist upon the production of this vital evidence, Sir William Harcourt and Sir Henry Campbell Bannerman are as responsible as any members of the Government. "Quæstor" says: "At a meeting of the Opposition members of the Committee held in Sir William Harcourt's room, they declared loudly, and none more loudly than Sir William Harcourt himself, that the attempt on the Government side to keep back the cables was scandalous and intolerable, and their production must be enforced." To the amazement, however, of Mr. Labouchere and Mr. Blake, when the Committee met it was found that Sir William Harcourt had been nobbled,

and the official Liberals sided with the Conservatives in voting against taking any steps to secure the production of the cables.

#### A SUPPRESSED WITNESS.

"Then came," says "Quæstor," "a still more audacious coup. Mr. Hawkesley's examination was not concluded. Everybody admitted that a witness who had been examined in chief must be submitted to cross-examination before he left the witness-box. The Government, however, with the astounding support of the Opposition Front Bench, resolved that this was inexpedient, and Mr. Hawkesley was not permitted to complete his evidence." "Quæstor" then examines what Mr. Hawkesley had said in the short time that he was on the stand. There is not the slightest indication in his evidence that he is concealing anything from the Committee, and no one appears to allege that he is anything but an honourable and truthful person. The vital point of his evidence, "Quæstor" indicates, was his account of what Mr. Rhodes told him had been done with the cables, and the advice which he gave to Mr. Rhodes, that the fact that such a use had been made of them should be communicated to the Colonial Office. "It is not probable," says "Quæstor" drily, "that Mr. Rhodes was lying to his solicitor." "Quæstor" exonerates Mr. Hawkesley from the charge of having used the cables as an attempt to blackmail Mr. Chamberlain, and points out that "Mr. Fairfield's own words show that the Colonial Office had supposed a revolution to be impending, and that Mr. Chamberlain himself had said something about it which might have been communicated in the way Mr. Hawkesley alleged. All that he said was that Mr. Chamberlain would not greatly care if anything he had said in that line were made public." Further light is thrown upon the contents of these cables by the fact that Mr. Hawkesley, who had them in his possession, prepared a statement to the War Office in which it was directly stated, on the honour of Sir John Willoughby, that he and his officers were induced to ride in by being informed that the steps were taken with the knowledge and assent of the Imperial authorities. "We can only presume," says "Quæstor," "that Mr. Hawkesley considered that the cables he had submitted to the Colonial Office at an earlier stage tended in the same direction."

#### THE COMMITTEE OF NO INQUIRY.

"Quæstor" then sums up the position as follows:—

The position, then, stands thus. The Colonial Office conceals its own documents. From none of its officials have we had any detailed or frank statement as to their relations to South African affairs during the critical period. The High Commissioner himself has not been examined. Mr. Rhodes has been allowed to go without any serious inquiry into this branch of the case. The most important cables are refused by Mr. Rhodes's order, and the Committee decline to exercise their power to compel the production of them. The story, in fact, so far as it concerns this question of the truth or falsity of the allegation that Mr. Chamberlain was "in it," is being smothered up, with an audacious disregard of the principles which guide all ordinary tribunals. The last steps in this proceeding have been taken with the direct assent of the leader of the Opposition. Everybody, therefore, is inquiring what reason can have induced Sir William Harcourt to execute this startling change of front.

#### HOW SIR W. HARCOURT WAS NOBBLED.

Answering this question, "Quæstor" refers to the story that is everywhere current to the effect that the Queen had assured the German Emperor that none of her Ministers were "in it," and therefore it was a State necessity that nothing should be allowed to come out

that would prove that Her Majesty had not been correctly informed on that matter. In other words, because Mr. Chamberlain deceived the Queen, therefore Sir William Harcourt is to be a party to the conspiracy to deceive the country and to befool the House of Commons in order that Mr. Chamberlain may profit by his denial of the facts! The concluding words of this powerful article are as follows:—

That documents exist which are supposed to be compromising, and which the very authors of them allege to be compromising, is a fact past denying. Unless it is cleared up, it casts a damning doubt; therefore it would appear to be the duty of all honest men, and, above all, of the Parliament of Great Britain, to see that an immediate end is put to the policy, which may aptly be described as thimble-rigging, and that the truth, whether it suits Mr. Rhodes or Mr. Chamberlain, or neither of them, must be told at last. This is a high question of privilege, and the whole House is concerned in it. It is for the House to act.

#### A GRIM JEST.

Mr. Wilson, in the *Investors' Review* for July, indulges in a few pages of hearty derision over what he calls that glorious South Africa Committee. The fun has indeed, he declares, been fast and furious, and the way in which the Committee is closing its investigation is a fitting round off of the whole chapter of history known as the Jameson Raid. He says:—

A vexatious investigation which was promised in funk, but was well-known to be a nuisance very "high-up" as soon as promised, has been turned into a "jolly muddle," provocative of no end of mirth. Take it in fun and it is all right. As the noble and heroic Jameson remarked, "it would have been all right had I succeeded." Of course it would, and the best thing we can now do, when failure has to be admitted, is to treat the whole incident as a clumsy practical joke, whose proper round off is a comic investigation.

Question is, "Who scuttled the ship?" Investigation devoted to "Who watered the ruin?" "Whether the first-mate was fond of red-currant jam or preferred the jelly?" Of vital interest to know whether John Jones made money by the plot. Tremendous energy expended on ascertaining the exact length of his leg and the colour of his underclothing. That is about the "form" of this Committee, and all we can do is to laugh it out of existence.

But although Mr. Wilson holds his sides, which are splitting with laughter, his hilarity does not blind him to the real gravity of the case against Mr. Chamberlain:—

As for the position of Mr. Chamberlain, of which so much has been made, well, is not that comic enough for a pantomime? Just imagine the Secretary of State solemnly communing every other day with a lady journalist on the great affairs of Empire, and never guessing what her mission was re South Africa, never even so much as suspecting that a plot was afoot, the development of which might throw all South Africa into convulsions. When we read his evidence, and that of Dr. Rutherford Harris, we felt that we owed an apology to Mr. W. T. Stead. His "spook," or, as our more material mind would be disposed to put it, Mr. Rhodes, clearly gave him the true key to the story. They all thought, these stirring conspirators, that they had, through "Flora," who "acted," or through "Harris" or "Grey," fully indoctrinated Mr. Chamberlain in the secrets of their noble designs, and won at least his tacit approval. He, on the other hand, was so rapt in contemplation of his own great mind and high imperial designs, that he never so much as dreamt what they were driving at.

But while grateful for the laughter which the Committee has often enabled a mirth-loving spirit to enjoy, Mr. Wilson remarks significantly that something is due to the dignity of England and the mother of parliaments.

## WHY GREECE HAS GONE TO SMASH.

BY DR. E. J. DILLON.

A MONTH or two ago Dr. Dillon was in the camp of the insurgents in Crete writing eloquently concerning the unalterable resolve of the Cretans to be united to Greece. This month he appears in the *Contemporary Review* as the author of an article, thirty-four pages long, in which he demonstrates with an overwhelming array of facts and arguments that Greece is a country so badly governed that no one but a lunatic could possibly desire to come under the authority of the rulers of Athens. How has this disillusion been brought about? By the incontrovertible nature of the facts learned from first hand on the spot. Dr. Dillon, after leaving Crete, went to Athens, where he has been living on terms of the greatest intimacy with the new Prime Minister, M. Ralli. His article on "The Fate of Greece" is therefore related as an authentic description by a competent observer of the exact state of the Hellenic kingdom. A more powerful exposition of a hopeless position has seldom appeared in the English language. Those excellent persons in this country who thoughtlessly egged the Greeks on to what Dr. Dillon declares to be a policy of moon-struck madness will read with profound dismay Dr. Dillon's terrible indictment of the Greek Government and the Greek people.

## A PICTURE OF MODERN GREECE.

The entire adult male population of Greece is 500,000. In times of peace they maintain 21,000 soldiers and about 9000 marines. In addition to these, there are no fewer than 17,235 Government officers in the Civil Service, all of whom change office with every change of ministry; i.e., there are at the very least 34,000 office holders and expectant office holders whose one object is to live at the expense of the taxes. Their one object when they get into office is to make the most they can before they are turned out. They do nothing unless they are compelled, and whenever they get a chance they use their opportunity to feather their nest at the expense of their country. Things are pretty bad in Chicago, where an alderman who has got a political pull can practically set the law at defiance, and secure immunity for all his friends; but they are worse in Greece. Corruption is almost universal, and the chief industry of the politician is office-seeking. Even if the Greeks, instead of being very imperfect men and women, had been angels, the *régime* which has hitherto prevailed would infallibly transform them into devils, and their country into a Pandemonium.

## HOW GREECE IS GOVERNED.

That is pretty strong, but Dr. Dillon does not mince his words. The consequence of running a Government upon the principles of an office-seeker, without regard for truth, honesty, justice, or common sense, has had its inevitable result. Dr. Dillon says:—

In most other countries inborn talents, the knowledge that comes of experience, a character which inspires universal confidence and a will that can surmount obstacles, are considered necessary to the formation of a statesman. The Greeks have made several determined attempts practically to prove that these qualities are not indispensable, and the results are writ large in the ruin alike of the governing and the governed.

Intelligent men who have lived long in Greece give this description of its Government:—

The Government of Greece may be described as regal power without legal control; journalistic licence without moderating criticism; electoral corruption without redeeming national aims; Ministerial omnipotence purchased by sacrifices to Jupiter and sops to Cerberus; rewards and honours unrelated

to merits and talents; expenditure disproportionate to income; practical law conflicting with abstract justice; constitutional theories divorced from political practices and power everywhere deprived of the ballast of responsibility.

## WHY GREECE WENT TO WAR.

Dr. Dillon's account of the way in which the Greeks recklessly plunged into national suicide is very edifying reading. Nobody knew better, he says, than M. Deliyannis that the Greeks were absolutely unable to go to war with Turkey single-handed. Why then did they do it? The story goes, as Dr. Dillon repeats it, without vouching for its accuracy, that Greece was secretly encouraged to go ahead. Letters from sympathetic crowned heads were freely spoken of, and at last King George precipitated matters by threatening to put himself at the head of an army of 300,000 men. They were encouraged in their delusion by the plaudits foolishly lavished upon them by their sympathisers in London and Paris, and the marines of the British-Italian ironclads lying at the Piræus cheered Colonel Vassos and his troops when they started for Crete, whereas they ought to have been employed in threatening to bombard Athens rather than allow Greece to cut her own throat in this fatuous fashion.

## MOON-STRUCK MADNESS.

After having made the original mistake of imagining that their enterprise would be supported abroad, they filled up the measure of their iniquity by committing almost every conceivable blunder, both as to time, season, and the method of operation. By declaring their determination to take possession of Crete, they ensured failure in advance, and guaranteed the humiliation which was sure to follow. But the Greek people, says Dr. Dillon, drink in words as wine, and temporarily lose their reason in consequence. When the Powers demanded the evacuation of Crete, the Greeks could have secured a splendid diplomatic victory by first demanding under protest that the retirement of the Greek troops should be simultaneous with the evacuation of Crete by the Turkish garrison. When the Greeks were confronted with the consequence of their own acts, they hesitated, discussed, and finally let things drift, hugging the delusion that all would end in some strange way right at last.

## HOW THEY MADE WAR.

Without a friend in Europe, with empty arsenals, and an undrilled rabble of half-armed men, the Greek Government, at the head of a population which all told is only two and a half millions, of only half the population of London, drifted into war with the Ottoman Empire. They had not 80,000 men to put into the field against 450,000 Turks. If these 80,000 men had been everything which they might and should be, war would still have been national suicide, committed under the influence of moon-struck madness, but the army was anything but what it ought to be. It was utterly untrained for active service. Its salient characteristic was an utter lack of discipline, and the chief command was held by people who were appointed solely because, to use an American phrase, they had a "pull" either with politicians or at court. When war began the Government admitted that they were in want of at least 100,000 rifles, which were hurriedly ordered, and arrived after the war was over. When the war began there was no plan of campaign, nor was any concerted plan of operations agreed upon during the course of the year. The ship of State was steered without compass or pilot, and in accordance with the plan of half-a-dozen equally well-meaning commanders. The Greeks might have taken

Janina and captured 5000 Turkish soldiers without the least difficulty, but they never made a move while the game was in their own hands, and the moment they were threatened they fled in headlong rout from Epirus. The army in Thessaly was unprovided with a sufficient number of horses, either for cavalry or artillery. The best horsed batteries were 100 horses below their proper strength. Worse still, the only cartridges with which the troops were supplied were so defective that at even less than four hundred yards' range the bullets failed to pierce the bodies of the Turks. In all Thessaly not one real battle was fought. There were several chance collisions between armed men, and a goodly number of hasty retreats, but not a single battle. As for the navy, the story of the way in which it was handled is *opéra bouffe* of the first quality. The fleet had no instructions, and at the height of the war the Minister of Marine was casually informed that the warships had exhausted their supplies of coal, and had no stores whatever to fall back upon. He got the coal with great efforts, but it was not delivered until after the war was over.

#### WILL GREECE SURVIVE?

Under those circumstances it was not surprising that Greece was defeated, nor is it to be wondered at that Dr. Dillon takes the gloomiest view of the future:—

Greece, having outlived a world's decay, died and risen Lazarus-like from her tomb, buoyant with life and hope, has managed, within a single generation, to belie the prophecies of poets, to blast the hope of politicians, and to drift within measurable distance of national Nirvāna, to which she may yet be duly consigned.

He has great faith in M. Ralli, the present Prime Minister; but if Dr. Dillon has not exaggerated, the present condition of Greece will require more than one hundred M. Rallis to put things straight.

#### MR. BENNET BURLEIGH'S TESTIMONY.

In the *Fortnightly Review* Mr. Bennet Burleigh, writing upon "The Greek War as I Saw It," gives an account of the campaign, which is not by any means so gloomy as Dr. Dillon describes. Mr. Burleigh says:—

There are four things that stand out beyond all else in connection with the Greek war:—

1. That the king made the war and was not forced into it for dynastic reasons.
2. That the Greeks could have won, and taken Macedonia and Epirus, had things been better managed.
3. That the Turk, nizām or irregular, is but an indifferently good soldier, at any rate in attack.
4. That Greece, under a proper financial administration, could pay her debts and a reasonable war indemnity besides, without the addition of a penny to the existing taxes.

The Greeks, he says, might have had five hundred to one thousand excellent foreign officers for the asking, but that and much more they neglected to do. If they had, the war would have gone differently.

#### A PLEA FOR FOREIGN FINANCIAL CONTROL.

Now that the war is over, and Greece is prostrated, the one thing to be done, according to Mr. Burleigh, is to put the country under foreign financial control. He says:—

The revenue, they say, would be instantly doubled if it were properly and faithfully taken up and paid in. These are not the views of men in the street, but of prominent fellow-countrymen, many of whom have large interests in Greece, and have spent a lifetime in it. To a man they advocate that the only cure is foreign financial control. Distinguished and patriotic Greeks privately say the same. Foreign financial control, they declare, though it would not be openly accept-

able, would save the country and help to recast the temper and habits of the people, to the advantage of Greece and the Greeks.

#### WHAT HAPPENED IN THESSALY.

In *Blackwood* for July, under the title of "What happened in Thessaly," Mr. G. W. Steevens, who was there as newspaper correspondent, attacks certain widely held impressions about the Turk in the recent war. The idea of the Turkish troops being officered by Germans he scouts as utterly false. Grumbkow Pasha, a colonel in the Kaiser's artillery, came on the third day of the war, and "gave advice which as a rule was not followed." "Excepting him there was no single German officer, other than the military attaché and two correspondents, with the Turkish army at any single moment of the campaign." Reports to the contrary were all lies. Lying has its "regal seats" in Athens and Constantinople. "There have been German officers reorganising the Turkish army, but . . . they have been almost heartbroken from first to last because nobody ever took the least notice of their recommendations. They have left the army pretty much as they found it." The explanation of the Turkish triumphs is "simply this: that the Turk is a brave man, while the Greek is otherwise." As to the alleged atrocities of the Turks in Thessaly—

A German correspondent who had been through the Franco-German war told me that the Turks burned beyond comparison less than the Germans. The will to loot—without violence—was present with the Turk, as with all soldiers; it was repressed by the officers, not entirely, but probably with as much success as has ever been seen with any conquering army in the world. Beyond such military peccadilloes as a little burning and loot, the Turks committed no outrage worth mentioning at all. . . . Taking it all together, I am inclined to doubt very much whether any army in an enemy's country ever came nearer to irreproachability of discipline than the Turks in Thessaly.

#### SIR HAMILTON LANG ON TURKEY

Another article in *Blackwood* bears on the Turkish situation. Sir R. Hamilton Lang finds the cause of Turkey's trouble "in the absorption of all the administrative functions of the country into the hands of an unscrupulous palace clique," the committal of the empire to "one man acting through corrupt and irresponsible courtiers." From 1880 Turkey had been advancing under the influence of Said Pasha's administrative reforms. The national bankruptcy was removed by an amicable arrangement with its foreign creditors. The currency was reformed. But since 1885 the evil influences of personal rule have caused retrogression. The Sultan has sought and found German help; and, though disregarding the reports of the German officers sent him, has used the German prestige to promote his absolute sway. To the new despotism are due the horrors of Armenia. To undo these evils Sir Hamilton thinks independent action absurd, and commends the action of the Concert as "in a large measure successful." He sketches a scheme of reform which the Powers may yet enforce, "the substitution for Palace rule of ministerial responsibility," and the creation of a Council of Notables. There are elements in Turkey, he believes, capable of carrying out the reforms. Turkish fanaticism is, he holds, waning under the influence of contact with the West. The financial pinch will precipitate the crisis and give the Powers their chance. What with railway and other concessions to foreigners "the sad truth is that Turkey is at present an orange being sucked dry by European professionals."

## THE PACIFIC BLOCKADE.

## A LIST OF PRECEDENTS.

THE *Fortnightly Review* for July publishes an article on "Pacific Blockade" by Professor T. E. Holland, which contains a useful list of precedents in showing that, however difficult it may be to reconcile a blockade, which is an act of war, with a state of peace, the practice has been so often and so successfully resorted to that it may fairly be regarded as one of the established resources of civilisation.

## REPRISALS.

The cases in which reprisals have taken the form of the closing of access to a coast-line—in other words, of a pacific blockade—have been the following:—

1. In 1831, in order to exact redress for injuries to French subjects by Don Miguel, the French fleet, besides forcing the passage of the Tagus and seizing a number of Portuguese vessels, blockaded several points on the coast of Portugal without any declaration of war. The result was a treaty, signed at Lisbon on July 14th, 1831, under which reparation was made to France for the injuries complained of, and the captured Portuguese vessels were restored.

2. In 1836 the coast of New Grenada was blockaded by Great Britain.

3. In 1838 France blockaded Mexican ports, but the operation resulted in the outbreak of a war between the two countries.

4. From 1838 to 1840 the La Plata was blockaded by France, and again, from 1845 to 1848, by France and Great Britain jointly. Its compatibility with peaceful relations between France and the Argentine Republic was affirmed by the Conseil d'état, in the case of the *Comte de Thomar*, in 1848.

5. In 1850, failing to get redress for insults offered by Greek soldiers to the crew of the British ship *Fantôme*, as also for damage to the property of a British subject, Don Pacifico, caused by Greek troops and rioters, Great Britain, besides laying an embargo on Greek shipping and seizing Greek vessels on the high seas, blockaded the ports of Greece. The controversy was settled, through the mediation of France, on the terms that M. Pacifico was to receive from Greece an indemnity for such losses as he could be shown to have actually sustained. His claim for £21,000 was eventually cut down to £150.

6. A British ship, the *Prince of Wales*, having been wrecked in 1861 on the coast of Brazil, was plundered. No redress being forthcoming, in 1862 a blockade was instituted, and Brazilian merchant vessels were seized and detained till their Government paid between £3,000 and £4,000 by way of compensation to the owner of the plundered vessel. This sum was only paid under protest, and diplomatic relations were suspended for several years between the two countries.

7. In 1879 Chili blockaded the ports of Bolivia, then in alliance with Peru, more than a month before declaring war against the last-named country.

8. In 1884 France, while still at peace with China, proclaimed a blockade of the coast of Formosa, between Cape Noo Shan and the Bay of Soan, having previously bombarded and captured Kelung, and dismantled the Mingan forts. The British Government intimated to France that "the blockade must be taken by neutral Powers as a notification of a state of war," and consequently prohibited the coaling of French ships at British ports. The President of the Council of Ministers, November 26th, 1884, in the Chamber of Deputies, after enumerating a dozen cases of pacific blockade, said:—"Here, gentlemen, are reasons enough for naturalising in the International Code a military operation, which must certainly be reckoned among acts of hostility, yet need not, in order to be regular, and to produce legal effects, be preceded by a formal declaration of war."

He went on to say that a declaration of war would have almost necessarily resulted in a stoppage of all trade with China.

9. In 1893, France proclaimed a blockade of the Menan, without considering herself to be at war with Siam. The King

yielded to the pressure applied to him before much discussion could take place as to the character attributed to it.

## INTERVENTION.

The second series of cases in which pacific blockade has been resorted to by European Governments are those in which it is used as a method of pressure in order to preserve the peace. Of these there are only five instances, of which three were in connection with the Eastern Question:—

1. The first instance was in 1827, when England, France and Russia informed the Turks that neutral vessels were not to be allowed to bring into Greece material of war intended for the Turks. The result of this was the destruction of the Turkish fleet at the battle of Navarino.

2. In 1833, England and France blockaded the coast of the Two Netherlands, to bring about the consent of the King to the separation of Belgium from his dominions.

3. In 1860, Sardinia, without going to war with the King of the Sicilies, blockaded Gaeta and Messina, in aid of the insurgents against his government. The blockade of the following year was an operation of war.

4. In 1880 the Powers would not agree to Mr. Gladstone's proposal to blockade Smyrna, as a means of inducing the Porte to carry out the provisions of the Treaty of Berlin and the subsequent Conventions relating to Montenegro; but the cession of Dulcigno to Montenegro, in November of that year, was brought about by a demonstration on the part of the allied fleets, accompanied by threats of a blockade.

5. In 1886 the mobilisation of the Greek army produced strong remonstrances from the great Powers, which had no wish to see the Eastern Question re-opened. No satisfactory reply to their demand for demobilisation being forthcoming, a blockade of the coasts of Greece was notified on May 8th by all the Powers, except France, against vessels under the Greek flag. The measure was effectual, although fighting had already occurred on the Thessalian frontier, and the blockade was raised on June 7th.

## SUPPRESSION.

The third class of pacific blockades notified by Professor Holland are those that are instituted by the Government of a State whose subjects are in insurrection. The blockade therefore becomes a method of reducing insurgents to order. Of blockades of this kind Professor Holland quotes five instances:—(1) In 1836 Russia instituted an effective blockade of certain ports in her own territory from which the Circassian insurgents were receiving supplies. (2) In 1866 the United States announced a blockade of the ports of the Southern Confederation. (3) From 1866 to 1868 the Turks blockaded the Island of Crete, which was then in insurrection. (4) In 1888 and 1889 the coasts of the Sultanate of Zanzibar were blockaded by the British and German squadrons, with the assistance of the Italians and Portuguese, its object being the prevention of the importation of materials of war and the exportation of slaves. (5) The blockade of Crete by the European Concert this year.

Armed with these precedents, Professor Holland argues strongly in favour of the support of the pacific blockade. So far as experience goes, the use of this instrument has justified our regarding it as one of the least objectionable methods of applying pressure to evil Powers.

THE *Engineering Magazine* for June is chiefly notable by reason of Mr. J. C. Charpentier's emphatic enforcement of the importance of the Paris Exhibition of 1900, and of the need of making early preparations for it in America; and by reason also of Rudolph Hering's endorsement of the British system of garbage disposal by means of the fiery dust destructor.

## RUSSIA, ENGLAND AND THE TURK.

## THE STORY OF A COCK AND BULL?

CAPTAIN GAMBIER, in the *Fortnightly Review* for July, publishes an extraordinary story concerning proposals said to have been made by Russia to England at the beginning of the Græco-Turkish war, of which we now hear for the first time, and in which, not to put too fine a point upon it, I frankly find it impossible to believe. Here is the story as Captain Gambier tells it:—

Before the actual outbreak of hostilities between Turkey and Greece, overtures were made to Lord Salisbury, semi-officially, by Russia, which by the light of accomplished facts it is clear would have not only averted the war between the Greeks and Turks, but would have practically solved the Cretan question.

## RUSSIA'S PROPOSAL.

The plan proposed was very simple; namely, that England and Russia, the two Powers able to enforce their will, were to notify to Turkey and Greece that they would not be permitted to declare war or begin hostilities. To enforce this the British fleet was to go to Salonica; a Russian and British fleet were to threaten the Piræus and Patras with an effective blockade; a strict blockade as regards troops and material of war was to be enforced on Crete until Greece had settled the terms of purchase of the island from Turkey—which has all along been one of the most obvious solutions. The details of this scheme comprised an international guarantee for the loan to Greece for this sum (which was at one time placed as low as £500,000), and the revenues of Crete were to be administered by a mixed Commission.

## LORD SALISBURY'S HESITATION.

Putting aside the natural timidity of his character, what made Lord Salisbury hesitate? It was the old inherited curse of our policy—fear of Russian aggression in the East of Europe.

At Yildiz Kiosk when this scheme became known the Sultan was thrown into a state of mind bordering on insanity.

Then came Lord Salisbury's hurried visits to France—those mysterious interviews with M. Hanotaux, who, it is believed, was willing to drop into the arrangement, especially as it checkmated the German policy.

## IS THIS A LIBEL ON THE QUEEN?

But unfortunately the great courtier's journey extended to Nice, and there the paralyzing influence of the German dynasty made itself felt. For Her Majesty (as is only reasonable at her advanced age) dreaded the risk of a great war. She no longer had Beaconsfield's character to trust to as when her fleet had sailed up the Dardanelles in 1878, facing a tenfold greater danger. Further, she made her firm determination known to hold no Jubilee Commemoration if the peace of Europe was seriously broken. So his Lordship returned to England, and from that moment it is beyond historic contradiction his country ceased to be the paramount Power in the crisis, whilst one after the other—first for an effective blockade; then for a Conference in Paris; then for a Prince of Battenberg to be Governor of Crete—all his proposals were set aside, even if they were discussed.

Then German influence became dominant, with the only natural result that blood has flowed like water and thousands of poor wretches are houseless and ruined who had no concern in the matter.

Now, why should these things be? It is because Lord Salisbury is the exponent of the old policy, and a more feeble but autocratic influence has never been exerted over the Foreign Office.

The reason for disbelieving this is that in the first case nothing was ever breathed about any such proposal at the time. Secondly, it is quite at variance with what is known as to the policy of Russia. Thirdly, it is impossible to credit Lord Salisbury with being dominated by such an antiquated superstition, especially since he made his famous speech about "backing the wrong

horse"; and fourthly, it is difficult to reconcile such a story with the exceedingly good relations which at the present moment prevail between Russia and England. Still, Captain Gambier is one whom I know of old time as a man who did excellent service as *Times* correspondent in Armenia in 1877, and he may have some grounds for the faith that is within him. So I quote his article in the hope that it may lead to prompt confirmation or refutation.

## THE PRINCE OF WALES ON POLITICS.

## AN INTERVIEW. BY LEON GAMBETTA.

MRS. EMILY CRAWFORD contributes to the *Contemporary Review* another instalment of her inexhaustible reminiscences on "The Queen and her Ministers." The plum of her article, which contains many currants, is the following passage, in which she chronicles what Gambetta told her the Prince of Wales said when the two met in Paris nineteen years ago. She says:—

I knew Gambetta intimately, and saw him some hours after the famous lunch with the Prince of Wales at the Hotel Bristol. He was good enough to repeat to me the conversation that took place there. It was prolonged far into the afternoon. It bore a good deal on the subject I am now treating—the Queen and her Ministers. "The Prince," said Gambetta, "shows a decided taste for foreign politics. He knows a lot about them; but I should say that a life free from strain of every sort cannot be a favourable condition for their study. He is well informed and shrewd, but he has not a keen or a subtle mind, and I imagine that he would be no match for sharp Americans or for wily Russians." As it would not be to the purpose to repeat what passed about the Russian war and the Congress of Berlin, I shall pass it over. According to Gambetta, the Prince spoke with discernment about the Queen's Ministers. Lord Salisbury was a highly accomplished and very clever man. His speeches had a higher literary interest than Gladstone's. He spoke to a different class of hearers. The Queen liked him because he was not Utopian. He had no objection to Republicanism as such, but clung to what good things there are, not knowing whether anything as good could be obtained if they were cast away. Gambetta did not know much about the Prime Minister of Queen Elizabeth, Cecil, until the Prince spoke of him as an ancestor of Lord Salisbury, and of Lord Salisbury studying his methods. This conversation took place in the summer of 1878. In order to understand the inner history of the foreign policy of the Queen's reign, and the German views of German unity, the Prince advised Gambetta to read "Stockmar's Memoirs," and then said he would send them to him, which he did a few days after. Reverting to the Queen's Ministers, past and (then) present, Gambetta's royal host talked of Sir Robert Peel. Judging, doubtless, from what the Queen and Prince had said, he gave him the highest place. This surprised Gambetta. As Peel was not an oratorical artist, the French, outside Louis Philippe's Cabinets and diplomatic circle, knew nothing of him. Cobden and Bright, in the final struggle against the Corn Laws, had the effect on him that sunshine has on a fire. Distant observers neither saw nor felt the fire, but only the sunshine that outshone it. Gambetta was also recommended to read Sir Robert Peel's speeches. He got them in old files of newspapers, and thought they wanted "mouvement oratoire," and were not to be compared to Salisbury's exquisite spoken essays or to Gladstone's strong and flowing, though too copious, oratory.

The Prince seemed rather proud of the high character of all his mother's Premiers, and did not, as Gambetta remarked, except Beaconsfield. He praised Gladstone; but Gambetta imagined from what was *not* said that he was not in the highest favour. The Prince had just then taken up the idea of Imperial Federation, to which Lord Beaconsfield at once lent himself. Rather curiously, it originated at the Colonies Department of the British section of the Universal Exhibition.

## ENGLAND AS SEEN BY NEW ENGLAND

## A PLEA FOR AN ANGLO-AMERICAN ALLIANCE.

A most generous appreciation of England and the English is contributed by Mr. E. P. Powell to the June number of the *New England Magazine*. England alone has ever been able to learn the true colonial idea, that which makes her "the mother, and not the mere possessor of provinces." "To-day the vast empire of Great Britain covers one-fifth of the globe, and is loyal to the core. England-love is a passion from New Zealand to New Guinea." The writer proceeds:—

The eagerness and virility of England in the way of colonial expansion, looked at deeply, is the salvation of the world from the burden of either total barbarism or effete civilisation. Her rapacity in crowding the weaker is a defect not without a compensation. Her dragon's teeth, every one, come up men. To-day Old England and New England make up that in the world which is vastly most worth considering. New England no longer means a strip of rocky coast, but half a continent. Old England no longer means the British Isles, but the best parts of Asia and Africa, with Australia and islands that only expert geographers can enumerate. If she does not do all that we could wish in Zanzibar and Beloochistan, we must recognise that what she chiefly destroys is savagery, and that she spreads the highest civilisation the world knows. Our own safety to-day, our commerce, our moral and intellectual progress, are bound up in those of the vast and vastly spreading empire of the English people.

Mr. Powell justifies the last statement by recalling the days of the Holy Alliance, and its intention to summon a conference to consider how to stifle popular freedom in America as in Europe. It was then Canning proposed to Mr. Rush, United States Minister, that the two countries should form a counter-alliance. Then was born the Monroe doctrine, and the drawing together of the two countries thwarted the malevolent schemes of the Holy Alliance. The writer asks:—

Was Canning's idea of good statesmanship prophetic? Is not the destiny and the good policy of the two Englands to draw closer together? From 1823 we have never seriously quarrelled. Our faults have been the same, our virtues the same. We believe in our destiny. We have crowded our neighbours—let us frankly confess it—and not always justly acquired territory. England has not been over sensitive as to the means used to settle boundary lines. But in our prosperity England finds hers; in her prosperity we find our own. Nearly half our trade is with England and her colonies. It would have been impossible for the United States to have entered on her career of stupendous progress from 1823 but for this practical fellowship with England.

Mr. Powell's conclusions are formulated thus:—

The colonies of England are now federated or federating in groups. Why shall not the whole unite in one great brotherhood of progress and enlightenment? . . . Integrally, vitally, commercially, politically, socially, we are steadily growing together. It is not true that we are accepting Anglican ideas; nor that England is being transferred into another republic like our own. The ideal ahead is a new one, a larger and nobler fraternisation on a plane according to the altruism of the age. . . . We are learning to understand the great human need of friendship with our brothers of the same stock. We see, or are beginning to see, that our republic is essentially a new England—enlarged, expanded, younger, full of hope, but having English grit, English independence, English loyalty, and with not much that is dominant which does not find its roots in the mother stock.

With this fact Mr. Powell closes:—"We have lived already for three-quarters of a century as near neighbours of the South American republics; and so far we have found it impossible to enter into any but the most formal relations with them."

## ANGLO-AMERICAN ARBITRATION.

## THE SENATE AND AMERICAN OPINION.

THE editor of the *New England Magazine* in his June number deals very faithfully with the Senate for its rejection of the Arbitration Treaty. "Hatred of England" led to the jubilation over Cleveland's minatory message demanding arbitration: "Hatred of England" led to the rejection of the very treaty he had demanded:—

In this alone has there been any consistency, or any pretence of consistency, among the senators who have now written their names in the blackest roll of shame in the recent records of Congress or of the republic. All else is self-stultification and hollow mockery.

They have struck a blow, he says, most infamous and most unfortunate, at the cause of international peace and reason—struck conspicuously, deliberately, hypocritically—"hypocritically by men who cry peace and want war, and by men who steal the accents and invoke the motives of humanity in the interest of faction and of hell." He deals very sternly with the plea of sympathy with Armenia and Greece: for the action the United States could have taken in favour of Armenia and in protest against coercion of Greece, they have not taken.

The editor lays fitting stress on the fact that it was a minority which vetoed the treaty. It was a minority representing a vastly smaller minority of the population:—

Ten of the twenty-six senators, from the five states of Idaho, Montana, Nevada and North and South Dakota, represent a combined population smaller than that of either of the cities of New York, Chicago, Philadelphia, or Brooklyn. Nevada, with the same power in the Senate as the largest state in the Union, has a population (60,000) less than that of Worcester or Lowell or Fall River or Cambridge in Massachusetts. These were the states which blocked civilisation and covered the republic with shame before the world. Hardly one of the great states was found in the bad column. The state of William Penn alone among these—"by merit raised to that bad eminence"—was found casting both its votes against the principle of which Penn was the first great champion. To the glory of New England be it ever remembered that not one of her twelve senators voted No.

It is well always to remember that the treaty was approved by the representatives of the enormous majority of the American people. The editor is not enamoured of the Second Chamber:—

Only this constitution of the Senate, which makes it a grossly and grotesquely unrepresentative body, made possible even such a minority vote as that which defeated the arbitration treaty, and that the overwhelming majority of the American people and almost all of the country's intellect and conscience are on the side of peace and reason and the proposed advance.

He even dares to put this question:—

We have had an open field in the century; England has had every encumbrance of entail and tradition. Which in the century has advanced the fastest and the farthest? Which has the most to teach to-day, and which the most to learn?

He concludes:—

Never was there a time when the cultivation of community between Americans and Englishmen was so commandingly as now the dictate of patriotism and of humanity.

Mr. W. J. GORDON contributes to the *Leisure Hour* one of his vivid and instructive local sketches, the places chosen being Dudley and Stourbridge. His account of the view from Dudley Castle is particularly graphic.

## THE ALTERED MOOD OF THE UNITED STATES.

"WE ARE NOW A MODEST PEOPLE."

MR. W. D. HOWELLS, the noted novelist, contributes to *Harper's* for July a valuable analysis of "the modern American mood." He finds that a great change has come over the American mind since the "effulgent days" following on the close of the Civil War. Then it was elate with its triumph and its clemency, and posed arrogantly before the world. That was the magnificent moment of boasting and "vainglory"—Mr. Howells does not hesitate to say "vainglory." But a searching self-scrutiny has supervened:—

Whatever Europe may think to the contrary, we are now really a modest people. The national attitude is self-critical, and if the standards by which we try ourselves are not those of Europe, but are largely derived from within ourselves, they are none the less severe and none the less just. They incline us, in the presence of other civilisations, to shame for our own defects rather than triumph in alien shortcomings. The American who now goes exulting and deriding and pitying through Europe, if there is such an American at all, is infinitely outnumbered by his compatriots who are quite silent in making comparisons which may be in our favour, but which cannot flatter us when we consider our advantages. . . . In fact, our present danger is not that we shall praise ourselves too much, but that we shall accuse ourselves too much, and blame ourselves for effects from conditions that are the conditions of the whole world.

Americans, he says, have by no means abandoned their faith in a republic or their love of it. Anything better than a republic must be something more of it and not less of it. "We regard an election, grotesque and vulgar and imperfect though the process often is, as a civic event; and we regard a partition, though surrounded by all the dignity of State, as a domestic event, not logically of political significance." But they recognise "such monarchical republics as England, Italy, Sweden, Belgium, and Holland," although "their way of choosing a ruler is of the quality of comic opera":—

We believe that the republic as we have it is, upon the whole, the best form of government in the world; but we no longer deny that other peoples have the republic because they have hereditary princes. We believe that the republic as we have it, and the yet more fully developed republic as we shall have it, is the destined form of government for all nations, but we are no longer eager to thrust our happiness upon them; and we do not expect them at once to prefer our happiness when it is quite within their reach.

Having got over the danger of overvaluing birth, they have faced a greater peril in the overvaluing of wealth:—

Our ideal of great wealth has been rudely shaken, not only by its enemies, but by the example of its possessors, who have shown at least that humanity does not always better itself by accumulating the means of luxury. . . . Many of us have our doubts whether a very rich American can be a very good American, and we feel that the burden of proof rests heavily with such an American. . . . In fact great wealth expatriates itself whether it goes or whether it stays. If it stays, it stays in a wholly alien circumstance. It surrounds itself with the service of foreign menials, in an ideal of life wholly foreign to the life of America, which is the life of work. It eliminates itself from the fellow-citizenship which regards it askance, in tacit irony, or open sarcasm. . . . The time is past when it could be said that our best young men were tempted away from the arts and the humanities by the greater allurements of money-making.

This is good news indeed. If Americans can recognise republics in States that are called monarchies, and are rising as a people superior to "the allurements of money-making," optimism is indeed justified of her children.

## "A COLONIAL PARADISE:"

MR. POULTNEY BIGELOW'S VERDICT ON NATAL.

THE portion of "White Man's Africa" sketched in the July *Harper* is Natal, which Mr. Bigelow selects as the most attractive of all British colonies. He is charmed with its people and government, especially in contrast with the state of the Transvaal:—

There is on all sides an atmosphere suggestive of law, liberty and progress. . . . I doubt if the most inveterate of Natal Boers would to-day exchange their government for that which Paul Kruger represents at Pretoria. The Boers have regarded the English as the enemies of liberty, yet in reaching Natal by way of the Transvaal, I felt as does the traveller in Europe who enters the Hungary frontier from the direction of Moscow. The citizen has better guarantees for liberty of speech and action in this British colony than in the neighbouring republic, which advertises a quality of freedom more akin to the doctrines of an absolute monarchy than to those of Franklin and Washington.

Mr. Bigelow is very favourably impressed with the treatment and the temper of the Zulu population. The Zulu policeman evokes his special admiration:—

It is very impressive for the black man, fresh from the interior, where the highest law is the capricious order of a savage, to step at once into a crowded and busy community of mixed whites, blacks, and browns, and there for the first time feel that law and justice can reach the highest and the lowest alike, and that a simple Zulu, clothed with a badge of authority, stands for the whole majesty of the British Empire. This is the great missionary lesson that is spreading from the white man's centres throughout the Dark Continent, and is producing healthy results wherever the source of authority is not tainted.

The writer believes in a material Gospel:—

Missionaries have done good in so far as they have taught the blacks to respect their marriage vows and occupy themselves with productive trades. But all that they have accomplished, from the days of Livingstone down to this year of Jubilee, is small indeed compared with the evangelising effect of one locomotive.

A singular fact in the economic evolution of the colony is the presence of the coolie from India, who is coming to be the capitalist, and play the master to the black. This is an order which the Zulus do not relish. Mr. Bigelow predicts, "Some fine day the papers will inform us that these gentle Zulus have massacred a few thousand Hindoos overnight, and I for one shall not be surprised."

Here is a fine story of the way a Western woman's tact can raise the status of her dusky sisters. The lady in question is the wife of the commander of the local military forces, whose house stood on a hill:—

Mrs. Dartnell discovered that the native custom was to let the wives carry the burdens up this hill, while the gentlemen of the party contented themselves with a stick or spear. With fine feminine tact Mrs. Dartnell commenced her missionary career by inviting the heavily burdened women to rest themselves and have refreshments; but the men she ostentatiously ignored, on the ground that, as they had done no work, they could not require any rest or refreshments. Little by little the news of this social revolution permeated the mind of the black neighbourhood, and it was a revolution by no means uncongenial to the advocates of black women's rights. Soon it was learned that one black man had actually carried part of his wife's burden up the hill; and as this was not followed by a convulsion of nature, other Zulus followed the example, until little by little it became the rule, in that neighbourhood at least, for a man to assist his wives in the bearing of burdens.

## THE DISCOVERER OF NORTH AMERICA.

BY LORD DUFFERIN.

LORD DUFFERIN contributes to the *Scribner's Magazine* for July an interesting paper on John Cabot, the Mariner, who four years after Columbus returned from the discovery of the West Indies, sailed across the Northern Atlantic and discovered North America. Some think that he touched upon the coast of Labrador, others at Cape Breton; but Lord Dufferin thinks that the more probable conjecture, which is supported by unbroken local tradition, points to Cape Bonavista in Newfoundland, as the land first seen.

## CABOT'S DISCOVERIES.

He returned with the *Matthew*, the ship in which Cabot made this startling discovery, which sailed on May 2, 1497, on August 6, after an absence of more than three months. His ship, the *Matthew*, was only of about fifty tons, and was manned by a crew of sixteen English sailors. Cabot himself was not an Englishman. The next year Sebastian started from Bristol in May 1498, and, after touching on Newfoundland, cruised along the American coast as far as Virginia, having explored 1300 miles of the American seaboard. John Cabot may therefore justly be called the discoverer of the American Continent. Columbus never touched any part of the Continent excepting Central America.

## AMERIGO VESPUCCI.

Amerigo Vespucci, the Italian, who gave his name both to North and South America did not sail to the Western world until the year 1498, and then he went only in a subordinate capacity. Amerigo seems to have been a somewhat pushing mariner, who was not above claiming for himself more credit than was his due, but he never claimed to christen the continent, of which he did not even claim to be the discoverer. The unconscious criminal, says Lord Dufferin, was a certain Martin Waldseemüller, of Fribourg, an eminent cosmographer, to whom the Duke of Lorraine showed Vespucci's letters. He incorporated it with the treatises which he was issuing under an assumed name, and as they had a wide circulation, the use of the name America became propagated throughout the world.

## THE NEWFOUNDLAND FISHERY.

Writing on the results of Cabot's discovery, Lord Dufferin says that in finding the fisheries of Newfoundland he came upon a mine of wealth, richer and more perennial, and better calculated to stimulate legitimate and remunerative industry, than the El Dorados of Peru or the ingots of Mexico. During all these years it was our sailors, and our sailors alone, who preserved the ascendancy of Britain on the banks of the Newfoundland. In 1600 the Newfoundland trade and fishery employed 250 ships and 10,000 men.

## THE FRENCH AS COLONISTS.

Incidentally, in the course of his paper, Lord Dufferin pays a tribute to the colonising genius of France. He says:—

In our day an impression prevails that the French make bad colonists; but their achievements both as explorers and settlers in North America at this time equalled in daring, energy, and success anything that has been exhibited by ourselves. So true was their *coup d'œil* in the choice of their forts and block-houses that each selection they made, though at that time choked by the bush or lost in the prairie, has since become a centre of trade and the site of a prosperous city; and to this day, thanks to the intelligence, the vigour, and, under its new conditions, the fecundity of the race, they hold their own on equal terms with their British fellow-subjects in Canada, as is signally illustrated at the present moment by

the fact of the office of the First Minister of the Crown in the Dominion being filled by Mr. Laurier, a distinguished French Canadian.

## ENGLAND AND SPAIN AS COLONISTS.

Nevertheless Lord Dufferin yields to no one in his admiration for the Anglo-Saxon race, the only race that possesses a proper conception of the two pillars that support civilisation, Liberty and Justice. Speaking of the result of this discovery, he asks:—

What words would be sufficient to embrace or to anticipate the consequences to mankind, to civilisation, and to religion of the occupation of the temperate zones of North America by what will soon be one hundred millions of the Anglo-Saxon race. It may suffice to say that while in the hold of Columbus's caravel there lurked the Inquisition, slavery, the carnage of Cortez and Pizarro, the devastating policy of successive Spanish viceroys, and a permanent instability of affairs—all the elements which unite in constituting a free, God-fearing state and a mighty nation, in developing the prosperity and ordered government which are born of honest industry, found their way to the New World through the instrumentality of John Cabot and the rough western seamen who accompanied him.

The fourth centenary of John Cabot's discovery of North America in 1497 elicits from Sir Clements Markham in the *Geographical Journal* for June a full statement of all that is known of the explorer and his work. "The dominion of Canada, Newfoundland, as well as the United States of America, all people of English origin on the western continent must look on John Cabot as their Columbus." The question of his precise landfall cannot be unanimously settled. Sir Clements suggests that the best memorial would be a Cabot Lighthouse on Cape Race, which lies between the two rival landfalls.

## GROWTH AND UNITY OF EMPIRE.

An ingenious way of naming certain periods in the history of our race appears in the abstract of Professor Kirkpatrick's lectures on the Unity of the Empire, published in the *Scottish Geographical Magazine* for June. The first stage of national development he labels "Greater Ireland," for then Ireland was the evangeliser and civiliser of Great Britain. The second stage—from William the Conqueror to the Great Charter, including the conquest of Wales and Ireland—he calls the beginning of "Greater England." "Greater Scotland" is the period of Scottish expansion from William Wallace to Keith the Marshal. The new and Greater England appears in the expansion under Tudor and Stuart; and since the Act of Union there has been the one "Greater Britain."

Professor Prothero, in a similar abstract of his lectures on the British Colonial Empire, points out that our foreign policy has now become habitually one of peace, and that our colonial problem is now no longer how to grow, but how to hold together. The professor classifies states as unitary and composite or federal; and distinguishes federal states as they are strong or weak federations. Most of the strong—all excepting Canada—have passed through the weak phase; and the tendency seems to be towards the growth of the central power at the expense of the State Governments:—

The pressing question is, what steps should be taken to ensure against disruption, and to pave the way towards a more perfect union? The first stage must be to give the colonies some share in the control of foreign and naval affairs, provided they consent to bear a share of the burden of national defence. It would appear that such a step might be taken without much disturbance of existing conditions and institutions. On this foundation an advance might subsequently be made to a real Britannic Federation.

## OUR COLONIAL FISCAL POLICY.

## THE BELGIAN-GERMAN TREATIES.

THE *Nineteenth Century* for July publishes two articles discussing the question as to what extent we should reduce our fiscal policy for the purpose of meeting the wishes of the colonies. The first is by Mr. Henry Birchenough, of Macclesfield. It is entitled "England's Opportunity: Germany or Canada." Mr. Birchenough points out the strong probability that Belgium and Germany will be able to maintain that the clauses in their commercial treaties in this country render it legal for them to claim that their goods shall be admitted at the same reduction which Mr. Laurier proposes to make on all goods imported from England. The clauses in question are as follows. In the Belgian treaty, which was the first concluded, the stipulation is contained in the 15th clause:—

Articles the produce or manufacture of Belgium shall not be subject in the British colonies to other or higher duties than those which are or may be imposed upon similar articles of British origin.

The German Treaty, which was drawn up afterwards, contains the following as its 7th clause:—

The stipulations of the preceding Articles shall also be applied to the colonies and foreign possessions of her Britannic Majesty. In those colonies and possessions the produce of the States of the Zollverein shall not be subject to any higher or other import duties than the produce of the United Kingdom of Great Britain and Ireland, or of any other country of the like kind; nor shall the exportation from those colonies or possessions to the Zollverein be subject to any higher or other duties than the exportation to the United Kingdom of Great Britain and Ireland.

These are the only two treaties by which we have tied the hands of such colonies that wish to give a preference to the mother-country in their tariff. Mr. Birchenough takes the bull by the horns, and declares in favour of withdrawing from the treaties. He says:—

I believe there is only one way by which we can free ourselves from the unfortunate entanglement of these German and Belgian treaties, and that is by giving the stipulated notice for their determination, or, in technical language, by "denouncing" them. It is impossible to isolate single clauses and denounce them, therefore we must denounce the treaties in their entirety. There is no technical difficulty in the way, because each of the treaties contains a provision for its termination at twelve months' notice by either party.

It is objected that our trade with Germany and Belgium is too large to be endangered for the sake of the Canadian 12½ per cent. To this Mr. Birchenough replies that he does not believe that, if the treaties were denounced, we should be in any worse position than we are to-day. We have no commercial treaty with France, but France extends to us the most-favoured-nation treatment from the natural desire of the Frenchman to be on good terms with one of his best customers. Mr. Birchenough says:—

With treaties or without treaties, I believe we shall always receive "most-favoured-nation" treatment, first, because we shall always be large buyers, and again because, so long as we maintain anything like our present policy of free imports, our open markets offer of themselves better conditions to other countries than they can obtain from each other after long negotiations.

There is another article in the same Review, dealing with another branch of the same subject. It is written by Mr. M. M. Beeton, and is entitled "The Wrecking of the West Indies." He looks forward with great hope to the report of the Royal Commission that was appointed

by Mr. Chamberlain to look into the question of the effect of the foreign sugar bounties upon our sugar producing colonies. Mr. Beeton is quite enthusiastic in favour of an Imperial subsidy, which he would fix on the following method:—

Let a committee of experts work out the actual direct cash effect of the foreign bounties on prices, and, so long as the bounty system holds, let the British colonial producers be reimbursed in a corresponding amount per ton from the Imperial Exchequer. Let the exporter from Demerara be put on the same footing as the exporter from Havre or Hamburg. I have, of course, only taken the farthing per pound and the 22 per ton as the commonly accepted estimate for the purposes of argument and illustration. The actual amount may be more or less, and will vary from time to time with the rise and fall in the amount of the bounties or other direct or indirect aids given by foreign Governments. But, whatever the amount, the proportional distribution of profits as between Great Britain and her sugar colonies will remain constant.

## "Is Length of Life Increasing?"

MR. HOLT SCHOOLING gives diagrammatic answer to this question in *Pearson's*, for July. His pictorialisation of statistics is not quite so felicitous as in former papers, but will doubtless get the facts into minds that are inaccessible by ordinary numerical avenues. The basis of his statements is given in the three official English life-tables (for 1838-1851, 1871-1880, and 1881-1890). These tables show an increase, in the second period over the first, of 1.44 years expectation of life at birth to every male, and 2.77 to every female; and in the third period over the first, of 3.75 to male and 5.33 to female. In other words, 3½ years of life have been added on the average to every male child and 5½ years to every female child, or an average yearly increase of five weeks for males and seven weeks for females. Thus the children born in any one year in England and Wales will in the mass live more than four million years longer. The last table, compared with the first of the three, "adds nearly two and three-quarter years to the working life of every male born." But while the working life has increased, the expectation of life after forty-five has decreased. "Less life now after middle age" is to be looked for than at the beginning of Victoria's reign. These figures confirm the common impression that life is growing easier for the young and harder for the old. If the present rate of increase in length of life continues, the expectation at birth of 100 years' life will be reached by males in 590 years and by females in 385 years, or in A.D. 2487 and A.D. 2282 respectively.

## How to Dry up African Slavery.

"ENGLAND, of all nations, flies her flag over, or at any rate has under her protection, thousands of square miles in which no attempt has been made to suppress, and where indeed she actually recognises, the legal status of slavery." Such is the indictment brought forward by Major M. A. der-Ferryman in his paper in *Macmillan's* on "Slavery in West Central Africa." The cause of the increase of West African slave-raids is, he argues, the increasing demand for slaves to supply the two great needs of currency and transportation. To put down slavery by force is beyond our power. What the Major recommends is the introduction of a metallic currency and of roads—good highways first, then of railways. Even if the Royal Niger Company's steamers would take passengers and goods at reasonable rates along the great river, a step forward would be taken. If the demand for slaves were thus cut down, the supply would dwindle until it was manageable by force.

## THE WOMEN OF INDIA:

## AND HOW WE ARE MAKING THEM MISERABLE.

MRS. FLORA ANNIE STEEL, who has spent twenty-five years in India and been inspectress of girls' schools in the Punjab, gives her views of the social condition of India in an interview with Mrs. Tooley in the *Humanitarian* for July. She evidently has a very high opinion of Hindu civilisation and a very low opinion of ours.

## DESTROYING THE SIMPLICITY OF LIFE.

She says:—

India has had a civilisation of its own for three thousand years, which has kept the people happy and prosperous and without distinctions of class. Our standard of civilisation is personal comfort—luxury, a thing absolutely unknown in native India. There is scarcely any difference in the mode of living between the rich and the poor. If you go into the house of a Rajah, there is the same bare floor and only a simple platter to eat from such as is seen in the home of the poorest. To put it crudely, there will probably not be even the luxury of a wash basin and towel; for the rich man, like his poor brother, washes in the open and dries himself in the sun. Such is the extreme simplicity of life that wealth is still varied in India; a man may spend it on jewels for his wife, but not on pleasure or personal comfort. This simple life, which fostered no distinctions of class, had been preserved for three thousand years by Indian civilisation, but ours will destroy it in fifty years.

"No distinctions of class" in caste-ridden India was a statement which naturally made her interviewer gasp. Mrs. Steel explained that she was not referring to the religious and social distinctions, but to the common simplicities of diet and dwelling.

"The result of my own personal observation," proceeds Mrs. Steel, "is that marriages in India are singularly happy. There are fewer cases of unkindness and violence than in this country. . . . The Hindu has a finer idea of marriage than we have. He does not make it a personal affair, but enters into it entirely for the sake of having children. It is through his children that he looks for immortality."

## PROSTITUTION AS A HEREDITARY PROFESSION.

Mrs. Steel turns the ladies' petition to Lord Salisbury about the health of our soldiers in India to proper scorn. She laughs at their idea of preventive measures forming "a valuable safeguard of woman's virtue":—

In India the seduction of girls is practically non-existent. Prostitutes are a hereditary class in each generation, of which a proportion of women are set apart and kept strictly virtuous, by the most severe seclusion, in order to carry on the race. Diseased to the core as most are by such ancestry, it is of course sometimes necessary to bring in new blood; but this is done by kidnapping children in infancy, not by seduction. I speak, knowing more of the facts than perhaps any Englishwoman alive. . . . India is no sink of iniquity. The percentage of soldiers who suffer from disease bears no relation whatever to immorality amongst the natives themselves. The prostitute of India is a woman set apart—consecrated, let us say—to the passions of men; men who know, or who should know, the risk they inevitably run. . . . During the twenty-five years I lived in India, though thousands of girls passed through my hands, I never came into personal contact with but one case of a girl going—as the phrase runs—wrong.

Mrs. Steel is opposed to preventive measures in India, and if these evils are unavoidable, declares that no legislation can avail, since the class by hereditary habit can never be healthy. She thinks the existing machinery is sufficient to meet the evil. The cantonment magistrate can already treat these women as infectious centres, "and turn them out." For the rest, Mrs. Steel shrewdly

observes, "anything which makes a soldier unfit for duty should be a military offence."

## THE CURSE OF WESTERN EDUCATION.

The general position of women in India Mrs. Steel thinks to be not a bad one, in fact "rather better than our own." European education brings them trouble:—

Education is spreading amongst the women of the lower classes in India, and I am inclined to say that in the present condition of things it does not conduce to their happiness, for this reason, it places them, so to speak, out of touch with the men whom they marry, and who are not educated. You see we are at present educating the lower class of girls, who have simply no chance to become the wives of men of the educated kind. Having had the supervision of girls' schools, I speak from actual observation, and I have known cases where great unhappiness has been caused to girls through being educated. . . . At present it is the higher class of women who are not educated.

Mrs. Steel concludes with the remark that education is increasing the seclusion of Indian women, by bringing them medical aid and instruction to their own homes. Formerly suffering drove them to our public medical agencies.

## The Napoleon of the American Lecture Bureau.

MISS POND, the daughter of Major Pond, who for many years has been the great organiser of the American lecture system, is now in this country, and her presence has afforded an opportunity for the publication of an interesting article in the *Young Woman* for June. Miss Pond gives the following account of how her father went into the lecture business:—

"Twenty years ago my father was in the furniture business, and was at Salt Lake City furnishing 'Amelia's Palace,' the house of Brigham Young's favourite wife—or wife No. 17. I was with my father, as it was vacation time, and we were staying at the Walker House—the Gentile hotel. At that time Eliza Young—wife No. 19—ran away from her husband and came to our hotel, and at once my father suggested that she would be a great attraction to take through the country on a lecturing tour; there would be money in her, he said.

There was money in her, as Major Pond thought, and he has gone on finding money in notables ever since:—

Miss Pond has now been with him for five years, and does most of the preliminary work. When a series of lectures is proposed for some well-known man, the Major of course arranges all the financial details. But to Miss Pond falls the work of travelling round the country, engaging halls and rooms, ordering the bills and posters, and generally doing all the work that makes the lecture a success—especially from the financial point of view.

This is pure business work, and is not relieved even by hearing the lectures or readings for which she has to make such shrewd arrangements. For the moment a lecturer arrives in one town it is a signal to Miss Pond that she should be off to the next to see that all arrangements are properly made there. She rarely accompanies the "lion." Her father sees to all that.

Mr. Stanley earned £20,000 by his lecture tour, but that was exceptional. Ian Maclaren, who has just returned, has achieved almost as phenomenal a success:—

Instead of delivering fifty-seven lectures, Ian Maclaren delivered one hundred and twenty-seven—averaging nearly three a day. Dr. Watson was offered a very handsome fee if he would extend his stay, but he decided to return.

A VERY valuable feature in the June number of the *Geographical Journal* is the physical chart of North Polar regions by J. G. Bartholomew, "compiled from latest sources, including Dr. Nansen's data."

**"THE SOLDIERS OF THE QUEEN."**

BY SIR EVELYN WOOD.

In the *English Illustrated Magazine* for July, General Sir Evelyn Wood writes concerning the changes that have come about in the British Army since the Queen came to the throne. In a previous paper he pointed out that—

Our effective forces of Cavalry have been increased, that the number of guns is about sixty times greater than the number effective in 1837, and that the Infantry of the Line, with the Army Reserve, is rather more than three times as numerous as it was at the beginning of the Queen's reign.

**THE PEERS AND THE ARMY.**

In this new article he deals more with the social changes that have been wrought in the Army than with the increase of the strength of regiments or of battalions:—

As the Army in 1837 was at much less than half its present establishment, the small number of commissions available were generally obtained by a higher class socially than at present. Fusilier, Rifle and Light Infantry battalions did not serve in the Tropics, and through them, therefore, the titled aristocracy entered the Service. In a Fusilier battalion early in the reign there were a peer, four sons of peers, and three baronets, and ten titled officers in another regiment.

**ARISTOCRATIC BUT INEFFICIENT.**

Unfortunately, although the younger sons of peers were gallant enough as regimental officers, when they had to take to the field they—

could neither feed nor clothe an army, and six months after we invaded the Crimea the 25,000 men landed near Eupatoria on September 14, 1854, had practically ceased to exist. That these painful results were attributable mainly to a want of transport was brought to light in the subsequent inquiry on our disasters before Sebastopol, where 25,000 men were rendered non-effective in four or five months, almost entirely due to a want of means for conveying food a distance of eight miles—i.e., from Balaclava to the trenches which had been thrown up before the beleaguered city.

Even the arrangements for boarding and lodging the troops at home were extremely primitive.

**HOW IMPROVEMENT BEGAN.**

For the purpose of this paper, we may assume that the Army, as regards efficiency, stood still between 1837 and the date of the war in the Crimea. It was not until 1853 that brigades were brought together for exercise. It was, however, not till late in the "sixties" that a decided and persistent impulse was given to the hitherto spasmodic attempts to render the Army a fighting machine, by the coming to the Horse Guards of a young officer who has since become Commander-in-Chief.

**DEMOCRATIC BUT RESPECTABLE.**

Together with military efficiency there has been a great increase in the general respectability of the Army:—

It is not, however, in military efficiency alone that a great change has taken place in the officers. Without pretending that their inner life is entirely different from what it was forty years ago, there can be no question that they are decidedly more respectable. An officer, when ordered to embark for the Crimea, was so hopelessly involved in debt that he was conveyed on board ship in a large vat, to avoid being arrested at the instance of his creditors. He lived for many years after being dangerously wounded in the Crimea on June 18th, 1855. Late in the "sixties" I knew two commanding officers who obtained leave of absence, which was essential in their case, as, at the time, they were in a county gaol for

debt. One was released by a general "whip" of the officers of his regiment.

**A GOOD STORY.**

Sir Evelyn Wood concludes his paper by the following capital story, which has an added charm, inasmuch as it is told by the writer against himself. Sir Evelyn says:—

I have said that soldiers are much better behaved than they were when I entered the Service. They are certainly more intelligent, with the increase of education, but nevertheless they are still sufficiently drilled into automaton-like procedure and rigid obedience as occasionally to produce a comical situation. Four years ago, when in command of the Aldershot Division, I was riding past a regimental cook-house. I had been taking considerable interest in the preparation of the men's rations, and, seeing a soldier coming out of a cook-house with his mess-tin and what appeared to be very thin soup a few minutes before one o'clock, when the dinner bugle had only just sounded, I ordered the man to halt, and another man to bring me a spoon from the cook-house. "Hand me up that tin," said I, and the man obeyed and stood motionless while I tasted the liquid. Getting rid of it as rapidly as possible, I said: "It appears to me to be nothing but dirty water," when the man answered with the most stolid gravity, "Please, sir, that is what it is. I am washing the tin out!"

**THE VICTORIA CROSS: "FOR VALOUR."**

BY RUDYARD KIPLING.

In the *Windsor Magazine* for June, Mr. Rudyard Kipling contributes an interesting article on the Victoria Cross and the men who have won it.

**A DECORATION OPEN TO ALL.**

He says:—

Any officer or man of the Army, Navy, Reserve, or Volunteer forces, from a duke to a negro, can wear on his left breast the little bronze Maltese cross, with the crowned lion atop and the inscription "For Valour" below, if he has only "performed some signal act of valour" or devotion to his country "in the presence of the enemy." Nothing else makes any difference; for it is explicitly laid down in the Warrant that "neither rank nor long service nor wounds, nor any other circumstance whatsoever, save the merit of conspicuous bravery, shall be held to establish a sufficient claim to the Order."

There are many kinds of bravery; and if you look through the records of the four hundred and eleven men, living and dead, that have held the cross, out of the seven hundred thousand or so who can compete for it, you will find instances of every imaginable variety of heroism.

But it is very difficult to get details. I have met perhaps a dozen or so of V.C.s, and in every case they have explained that they did the first thing that came to hand without worrying about alternatives.

**HOW A MAN WON HIS V.C.**

Here is one of Mr. Kipling's stories of how a friend of his won the Victoria Cross:—

Another V.C. of my acquaintance once saved a trooper whose horse had been killed. His argument was rather original. The man was on foot, and the enemy—Zulus this time, and they are beautiful fighters—was coming down at a run, and he said very decently that he did not see his way to perilling his officer's life by double weighting the only horse there was. To this his answer was, "If you do not get up behind him, I will get off and give you such a licking that you never had in your life." The man was more affected by fists than assegais, and the good horse pulled them both out of the scrape. Now, by the regulations, an officer who insults or threatens with violence a subordinate of his service is liable to lose his commission, and to be declared "incapable of serving the Queen in any capacity," but for some reason or other the trooper never reported his superior.

## VALOUR NOT DECORATED.

Mr. Rudyard Kipling admits that many men are quite as brave as those who have won the Victoria Cross, but their bravery was not of a kind to obtain recognition. In illustration of this he tells a story of what happened on one occasion when a column of troops was retreating through a pass where the enemy, hidden behind rocks, were picking them off as they retreated. "It was twilight, and it was cold, and it was raining, and it was altogether horrible":—

A boy I knew was acting in command of one company that was specially bored and sulky, and there were shouts from the column in the dark of "Hurry up! Hurry there!" neither necessary nor soothing. He kept his men in hand as well as he could, hitting down the rifles when they fired wild, till some one along the line shouted, "What on earth are you fellows waiting there for?"

Then my friend—I am rather proud that he is my friend—hunted for his pipe and tobacco, filled the bowl in his pocket, because he didn't want any one to see how his hand shook, lit a fuzee and shouted back between very short puffs, "Hold on a minute! I'm lighting my pipe."

There was a roar of rather cackly laughter, and a regimental joker said, "Since you *are* so pressin', I think I'll 'ave a pipe myself."

I don't believe either pipe was smoked out, but—and this is a very big but—this little bit of acting steadied the company, and the news of it went along the column, and even the wounded laughed, and every one felt better.

Whether the enemy heard the laughing, or was impressed by the one—two—three—four firing that followed it, will never be known, but the column came to camp at the regulation step and not at a run. That is what I call the courage of the much-enduring Ulysses, but the only comment I ever heard on the affair was the boy's own, and all he said was, "It was transpontine but necessary."

Of course he must have been a good boy from the beginning, for little bits of pure inspiration very seldom come to, or are acted upon by, slovens, self-indulgent, or undisciplined people. I have never yet come across a V.C. who had not the strictest notions about washing and shaving, and keeping himself quiet and decent on his way through the civilised world.

Indeed it is very curious, after one has known hundreds of young men and young officers, to sit still at a distance and watch them come forward to success in their profession. The clean and considerate man always seems to take hold of circumstances at the right end.

## WHY THE V.C. IS SO PRIZED.

Mr. Rudyard Kipling's conclusion is as follows:—

And when all is said and done courage of mind is the finest thing any one can hope to attain to. A weak or undisciplined soul is apt to become rockless under strain (and this is being afraid the wrong way about) or to act for its own immediate advantage. For this reason the Victoria Cross is jealously guarded, and if there is any suspicion that a man is playing to the gallery or out pot-hunting for medals, as they call it, he must head his charges and rescue his wounded all over again as a guarantee of good faith.

Men are taught to volunteer for anything and everything, going out quietly after, not before, the authorities have filled their place. They are also instructed that it is cowardly, it is childish, and it is cheating to neglect or scamp the plain work immediately in front of them, the duties they are trusted and paid to do, for the sake of stepping aside to snatch at what to an outsider may resemble fame or distinction.

The Order itself is a personal decoration, and the honour and glory of it belongs to the wearer; but he can only win it by forgetting himself, his own honour and glory, and by working something beyond and outside and apart. And that is the only way you ever get anything in this world worth the keeping.

## HOW TO LEARN TO SWIM ON DRY LAND.

## A HINT FOR OUR SCHOOL BOARDS.

In the *Young Man* for July there appears a very interesting paper on swimming, based upon conversations with Mr. William Henry, the Honorary Secretary of the Life Saving Society. This society, which was only started in 1891, has as its object the promotion of technical education in life-saving and resuscitating of the apparently drowned, and the encouragement of floating, diving, plunging, and such swimming arts as will be of assistance to a person attempting to save life. Mr. William Henry, who is the amateur champion of England, and has taken nearly three hundred prizes, is a great enthusiast on the subject, and he maintains that swimming should be taught at schools, and the best place to teach children how to swim is on dry land. The old notion that no one can swim without going to the water is a great delusion. Nothing is easier than to teach children how to swim who never wet the sole of their foot. Here is the way in which it is done:—

First the children are drawn up in ranks as in ordinary drill, and when the command "Position" is given, they place their hands on their hips. The first movement in this swimming drill is the leg movement. When "One" is called, the children raise the left knee (directing it sideways), the heel of the left foot touching the inside of the right knee, with the toes pointing downwards. When "Two" is called, the left leg is straightened and lowered by a backward and rounded movement until the point of the big toe touches the ground one pace to the left. Then, when "Three" is called, the left foot is drawn along the ground, and the leg is closed smartly. The right leg is put through similar movements.

Next comes the arm movement. When the command "Position" is given, the children raise their arms by bending them upwards from the elbows, and shoot the hands forward, with arms extended and directed slightly upwards, thumbs touching, with the palms turned downward, and the head inclined slightly backward.

Then they sweep the arms round in a quarter curve right and left, until they are in line with each other, with the backs of the hands turned slightly towards the front.

Then the elbows are closed to the sides of the body, and the hands are brought to the sides of the chest slightly to the front; the fingers are closed, pointing to the front with palms downward, the thumbs about six inches apart.

Then the hands are shot forward to the full extent of the arms and slightly upward, thumbs touching, the palms turned down, and the head inclined backward. The third movement in this drill is a combined arm and leg movement, when the two movements just described are combined.

These movements if gone through continually become automatic, and when the children are taken to the water little explanation is required as to what they have to do. They are taught to trust themselves to the water, and to put into action the movements they have practised on land.

Instruction is also given on the management of the breath, which is, of course, of the greatest importance, for when the lungs are properly filled, the body is much more buoyant when in the water.

When in the water, the body should be kept steady, the back slightly hollowed, and the head thrown back in an easy, unstrained position; and when taking a stroke, all jerky action should be avoided. The arms and legs must act simultaneously, and in drawing up the legs for the kick, the knees should always be separated, and the kick and closing of the extended legs should be made sharply. Every action of the arms and legs should be rounded and gone through with an easy swinging motion. Care should be taken that the breathing is free, regular, and natural during the exercise. The inhalation should take place during the backward sweep of the arms, and expiration during the other part of the stroke. There must be no gasping, and the lungs should be inflated at each stroke.

## THE EXODUS OF PICTURES FROM ENGLAND,

## AND HOW TO PREVENT IT.

In the *Edinburgh Review* for April there was an interesting and suggestive paper entitled "The Exodus of the Pictures from England," which described how many valuable paintings which used to be the glory of English collections have been sold for export, chiefly to Germany. It would almost seem as if the import of cheap goods "made in Germany" has kept pace with the export to Germany of Art treasures which English collectors had been accumulating for centuries.

## SOME OF OUR LOST TREASURES.

The reviewer says that Charles I. in twenty years acquired the most wonderful collection of movable paintings that the world had seen up to his time. London at the time of the breaking out of the Civil War had in the picture galleries of the king, and the collections of the Earl of Arundel and the Duke of Buckingham, more right to be regarded as the treasure-house of great works than any other city in Europe. After the execution of Charles his collection was dispersed for the sake of the money which it brought, but Cromwell saved from the wreck Raphael's cartoons and Mantegna's "Triumph of Julius Cæsar." Many of the jewels of the purest water which adorned the galleries of the Louvre once belonged to Charles Stuart. After the Restoration, with few exceptions, few works of the first order were recovered. William III. sent several of the royal pictures over to Holland. In the latter half of the eighteenth century great private galleries were formed in England, and the collectors had their harvest in the wreck which followed the French Revolution and the revolutionary wars. It was in this century that the foreigner began to strip our collections of their glories. In 1821 the nucleus of the great Berlin Museum was founded by the purchase by the Prussian Government of the Angerstein pictures, a collection made by Mr. E. Solly, an English banker. Prussia paid £110,000. It is probable that a single group of panels in this collection, if they were sold to-day, would bring in nearly as much as was paid for all the Solly pictures. In 1882 the whole of the Hamilton Palace MSS. were purchased for Berlin at the price of £72,000. When Lord Dudley's gallery was sold Berlin bought Fra Angelico's "Last Judgment" for £10,000, and many other masterpieces. We have lost many others from the collections of the Duke of Marlborough, Lord Methuen, the Marquis of Lothian, and the Earl of Ashburnham.

At the same time that we have been selling, there have been some purchases, but the one cannot keep pace with the other:—

To analyse in detail the counterbalancing gains to England from without during these last disastrous years—and it must be said at once that they have been infinitesimal as compared with her losses—would require more space than can be accorded to this branch of the subject.

## A PROPOSED SOCIETY P. AND R.E.G.W.A.!

This all leads up to the proposal which the *Edinburgh Reviewer* has to make for the checking of the exodus which is so much to be deplored. He says:—

We have in England a Society for the Protection of Ancient Monuments; why should we not have also a Society for the Protection and Retention in England of Great Works of Art? Why could not a number of Englishmen of this type, having the means and the will to give assistance in such typical

cases as these, form themselves into a society having the main object above indicated? Its functions would not necessarily include, in the first instance, the purchase of all great works of art which material needs might compel collectors and owners from time to time to put upon the market, or to dispose of privately. It would, so far as is possible, catalogue all the really important examples of painting, sculpture, and applied art by deceased masters to be found in the United Kingdom, marking the movement of these things, the gains as well as the inevitable losses.

## WHAT IT WOULD DO.

It would seek to induce the owners of works of capital importance to communicate in the first place to the society their intention of selling them, and no longer—as M. Emile Michel puts it—to dispose of them to foreign negotiators *sub rosa* and under the seal of secrecy. The society would then consider the merits of each particular case, would take counsel with the directors of British museums and galleries, and obtain the opinion of experts; it would finally, where such a step might appear to be warranted, approach the Treasury with petition and advice. It is not pretended for a moment that the National Gallery, or the British, South Kensington, and provincial museums could be expected to swallow and digest all things, even of supreme artistic value, that might be so offered, or even a tithe of them. But at any rate they would thus secure the valuable right of pre-emption. Failing its exercise in any particular case, purchasers might possibly be found among the members of the society or other collectors permanently residing in the United Kingdom. Under exceptional circumstances the society, or some of its members, might come forward in aid of the Treasury and the museums, as certain corporations and individuals so generously did on the two occasions above cited. The rest must necessarily be left to the public spirit of the owners of great works; and this quality, though it has, to say the least, been strangely dormant, in a number of instances to which we need not again refer, is one which it surely ought not to be difficult to arouse in Englishmen.

The idea seems sound and practical.

## How to Save the Souls of the Chinese.

THERE was a remarkable article in a recent *Dublin Review*, by Mr. E. H. Parker, a non-Catholic, who has been employed in the Consular service in China, Korea, Burma, etc. He acquits the Protestant missionaries of living in luxury, but says they do not live in anything approaching the squalor of the Catholic missionaries. He says a good many kind things about the Protestant missionaries, which seem somewhat out of place in the austere Roman pages of the *Dublin Review*. The following extract illustrates the spirit of the article, and includes the most practical item of advice which he gives to the Churches:—

The Protestant missionaries of Chungking in my time all belonged to the China Inland Mission. They wore Chinese clothes, and all went freely about the streets. There was one lady dressed in Chinese "compromise," but she never walked out. These Protestants were pioneers, and did a great deal of useful work in rescuing would-be suicides. It will hardly be believed, but it is a fact, that within the walls of Chungking alone the missionaries were sent for almost every day, sometimes twice or three times a day, to assist in rescuing would-be suicides, usually young women, from the effects of swallowing opium. Several of the Inland Mission had a smattering of medical knowledge, which, in a country like China, where quackery is the rule rather than the exception, soon rises to the dignity of medical learning. The excessive contempt felt, or at all events expressed, for Europeans, was somewhat mitigated by the good work done in this way. In short, if I were asked: "What shall we missionaries do to save the souls of the Chinese?" I should unhesitatingly reply, "Fill their pockets with quinine, stomach-pumps, and eye-ointments."

**GOOD STORIES' BY THE LATE SIR C. MURRAY.**

AN excellent feature in *Cornhill* is its monthly dish of tasty reminiscences. This month offers some racy fragments from the recollections of the late Sir Charles Murray. His earliest memories are of his boyhood's home in Argyshire.

**THE "PIP" OF THE PEACH.**

The first story is about an old "Laird of Achna-shallanoch" who "had some English":—

He arrived just before luncheon, and as the drawing-room door was opened to admit him my mother was playing the harp. Form and sound were equally strange to him, and as she had of course ceased playing to greet him, he asked what it was; on her explaining it was a musical instrument, he asked to hear it. She sat down, but had scarcely played half-a-dozen bars when he put his great hand on her arm, saying, "Thank ye, dinna fash yourself; I only wanted to hear *what kind of a noise she made*." Soon after this luncheon was served, and towards the close a dish of peaches was handed round. The Laird, who had never seen a peach, asked, "What kind of an apple is that?" My mother told him it was called a peach. "Well," said he, "I'll take a peach-apple," and, forthwith seizing one, he bit into it, skin and all; but his teeth encountering the stone, he put it down, saying, "It's a gran' apple, but siccan a pip as it's got!"

**THE NETTLED PEER.**

When Sir Charles went to Edinburgh he met the famous wit, Harry Erskine, of whom this rhyming pun is recorded:—

Intelligence came one day into the Court of which Erskine was a member that a certain Scottish peer had failed to obtain the Thistle. Harry Erskine wrote two lines on a slip of paper, which he threw across the table to a brother-advocate:—

"When he heard the thing was settled  
Not being thistled, he was nettled."

**THE UNLUCKY DESSERT-SPOON.**

In the earlier part of the century, when table-spoon and teaspoon were the only spoons in common use in Scotland, the introduction of the dessert-spoon seems to have disconcerted some guests, if we may judge by this incident:—

A rough country squire, dining for the first time at Hamilton, had been served in the second course with a sweet dish containing cream or jelly, and with it the servant handed him a dessert-spoon. The laird turned it round and round in his great fist, and said to the servant: "Wha do you gie me this for, ye d——d fule? Do ye think ma mooth has got any smaller since a' lappit up my soup?"

**THE TRAIL—OF A RUSSIAN PRINCE.**

A Russian prince entertained by the Duchess of Hamilton once got into difficulties over the inside of a woodcock, the whole dish of which he devoured:—

He ascertained that the delicate meat upon the toast was not termed in polite circles the "stomach," but was called the "trail." Whether that particular dish or any other disagreed with his digestion, I know not, but it happened that the same night, a little before midnight, the Duke heard the footsteps of his guest walking up and down in the passage adjoining the rooms in which they both slept. The Duke lit a candle, opened his door, and went up to his guest, and inquired whether he was suffering any pain; and the latter replied, "Yes, I have got a very bad pain in my trail."

**BEFORE AND BEHIND.**

A later incident is as much of a bad joke as it is bad manners:—

The most pompous, self-important person I ever met was Mr. Randolph. An instance always comes back to me of

when some man, meeting him in the street, said to him, "Mr. Randolph, sir, I have had the pleasure of seeing you before."

Mr. R. looked him up and down, and turning on his heel, said, "And now, sir, you can have the pleasure of seeing me behind."

**MAIDEN SPEECHES OF NOTED SPEAKERS.**

MR. A. F. ROBBINS, writing in *Gentleman's* for July on "Some Famous Maiden Speeches," cuts up with unsparing hand the luxuriant myths which have gathered round the *début* of certain Parliamentary orators.

**MR. GLADSTONE'S.**

For example, Mr. Gladstone's virgin effort in the House was no sensational event; it was only a defence of Liverpool citizens from a charge of bribery:—

All the notice the next day's *Times* took of the speech was to say that "Mr. W. Gladstone was understood to protest against the statements made by the petitioners, and to state that he believed there had been no undue practices at the late election for Liverpool." Another leading London paper dismissed the effort with the sentence, "Mr. Gladstone made a few remarks, which were not audible in the Gallery;" while a third was so liberal as to give it five lines, commencing "Mr. Gladstone, who spoke under the Gallery, and who was almost inaudible." And it is the very irony of fate that a deliverance upon the question of colonial slavery, upon which biographer after biographer has dilated as Mr. Gladstone's maiden speech, was not his utterance at all, but that of his eldest brother.

**MR. DISRAELI'S.**

Mr. Disraeli's first speech in Parliament has similarly been the object of romantic imagination:—

It is known to every impartial student of the stormy political times of 1837, that the Disraelian effort was not a failure, and that it was due to the partisan rancour which at that period ragged with a virulence now unknown, that it had to be recorded in "Hansard," that "during the greater part of the time the hon. member was on his legs, he was so much interrupted that it was impossible to hear what he said."

**"HISTORICUS" HOIST WITH HIS OWN PETARD.**

A greater dramatic interest attaches to the maiden effort of Sir William Harcourt, whose high distinction it was to first speak in ecstatic praise of a constitutional weapon, which later was most grievously to wound himself. Early in the session of 1869 it was proposed to do away with that Statute of Anne which compels Ministers on acceptance of office to seek re-election. In fervent and almost poetic terms the "Historicus" of former days bade the House believe that this enactment "was the sword of our fathers, and it was our duty to keep it bright and burnished as we have received it from our ancestors. It was one of those safeguards which had proved hitherto, and might prove hereafter, alike a security for the stability of the throne and the liberties of the people." . . . Eleven years later, he was the first distinguished Minister for nearly half a century to be refused re-election upon taking office, badly wounded, indeed, by that very "sword of our fathers" which he had told the House it was its duty to keep bright and burnished.

**MEEK ENTRANCES.**

Mr. Balfour only broke silence at the end of his third session in the House; and then but to make a remark on the subject of bimetalism. Mr. Chamberlain came in like a lamb:—

He had so recently come into the House, he told his hearers, that he felt reluctant to trespass on its time, being of opinion that he should best show his respect for the Assembly he was so proud to enter by refraining from addressing it while inexperienced in its form and practice

The paper is a very racy one.

## THE CYCLIST AS WAR CORRESPONDENT.

IN the *Ludyate* for July, Mr. Wilfrid Pollock, who has been sailor in the West Indies and assistant editor in East India, and latest of all, war correspondent of the *Morning Post* in the Græco-Turkish war, tells the story of his adventures on the wheel. The longest ride he took during the campaign was from Chalcis to Athens:—

The decisive battle of Domoko had just been won by the Turks, and the Greeks were not even attempting to hold their immensely strong position at the Phourka Pass. All the English war correspondents were racing to Athens. With the exception of the representative of the *Daily Graphic*, a Greek steamer took us all as far as Chalcis, where we arrived precisely at midnight. It was a bright night with an excellent moon. The *Standard* man also had a bicycle with him on board the steamer, but he elected to "stop a bit and see how things might shape." My machine and myself went ashore in the first boat that came alongside, and ten minutes later I had crossed the bridge that joins the town of Chalcis, which is on the Island of Eubœa, to the mainland. Of course I had carefully read up the routes to Athens in *Baedeker*. I reached Thebes, which *Baedeker* gives as six and a quarter hours distant, at 4 a.m., or about three-quarters of an hour before daybreak.

It was decidedly lonely, and the few men that I did encounter were not of a kind to inspire confidence. But the feeling of loneliness was relieved by the thought that at an ever-increasing distance behind me the other correspondents were plugging along in carriages towards the same goal. I don't remember much about Thebes, save that the road through the town was up-hill, and not very easy to find. I had to get off in the market-place and light a candle by which to study the guide book afresh. There was not a soul about of whom to ask the way. However, it proved an easy matter, as *Baedeker* gives Thebes a map all to itself. I breakfasted at a village called Kriekouki, which is not far from Platœa. In the end, after a thoroughly enjoyable ride through most beautiful scenery, I reached my hotel in Athens at 9.30 a.m., having thus escaped the full strength of the Greek sun. Next to arrive were the representatives of *Reuter*, *The Times* and the *Manchester Guardian*, who had driven with a fresh four horses from Thebes, where they had breakfasted. They claim to have sent in their telegrams by 4 p.m.; but apparently this was not in time for publication on the following morning, and so I obtained a whole day's start of them.

Again, after the panic flight of the Greeks from Turnavos, he had a heavy and exciting race among the fugitives, but,

thanks to my bicycle, my stuff was duly printed in the *Morning Post* of Monday, while the long account sent by *Reuter's* representative, who was the next English journalist to reach Athens, did not appear until the following Thursday.

This ride awheel recalls, by contrast, Archibald Forbes' famous South African ride on horseback.

THE *Windsor* for July has plenty of light readable matter. Mr. Hall Caine in "The Christian" has got his clerical hero to the point of inducing his gay heroine to leave the music-hall, at least for a time. The all-prevailing summer game asserts itself in Mr. C. B. Fry's sketches of cricketers he has met, and in cricket yarns by A. Gibson. The season reflects itself again in Wilfrid Klickmann's holiday haunts. Maynard Butler describes the imperial fêtes attendant on the 100th birthday of the first Kaiser, which he felt to be a city, if not a merely Court pageant, in marked contrast to the national enthusiasm which our Queen's celebrations evoke. Miss M. A. Dickens chattily reports an interesting interview with Mr. Val Prinsep. The wild monkeys of India are sketched by Gambier Bolton with pen and camera.

## The Evolution of the "Ad."

OSCAR HERZBERG chats pleasantly in the July *Lippincott's* on the evolution of newspaper advertising. According to him the first newspaper in England was attempted in 1622, but it was not till January, 1652, that the first real English advertisement made its appearance:—

It was printed in the *Mercurius Politicus*, and read as follows:—"Grenodia Gratulatoria, Heroick Poem; being a congratulatory panegyrick for my Lord General's late return, summing up his successes in exquisite manner. To be sold by John Holden in the New Exchange, London."

Advertisements went on increasing until "in 1675 Sir Roger L'Estrange issued a weekly paper called *The City Mercury*, of which he distributed free one thousand copies, trusting to the revenue from advertisements to reimburse him." The plan proved a failure. The real father of advertising was, it appears, one John Houghton, "a Fellow of the Royal Society; his business was that of apothecary, to which he added the selling of tea, coffee, and chocolate, then new beverages that had yet to fight their way to popular acceptance." His one-folio half-sheet newspaper, which he called *A Collection for the Improvement of Husbandry and Trade*, was begun in 1682, and failed, but was revived ten years later. He went round to all the professions and canvassed the trades, pointing out to each the advantages of advertising. He brought the practice into vogue. The tax of 3s. 6d. on each advertisement, which was imposed in 1712 and continued till 1832, naturally checked its development. A nominal tax remained until 1853. The first advertising agent began business in 1846. The first magazine advertisements were inserted in 1867. "The advertisement writer who devotes himself exclusively to advertisement writing is a creation of the last ten years." "At present about 200,000,000 dols. are expended annually in the United States in newspaper advertising."

## The Rationality of Religious Observances.

MANY have been the sneers that have been wasted upon the solemn warnings so frequently found in the Bible as to the national disaster that would follow inevitably the neglect of religious observances. What can be more irrational, it has been asked a thousand times, than to imagine that the prosperity of the children of Israel, their prowess in war or comfort in peace, would depend upon whether or not they observed the fasts and festivals prescribed in the Book of Leviticus? In the *American Journal of Sociology* for May, Mr. E. A. Ross, in his seventh paper on the subject of "Social Control," points out that the Hebrew prophets had a solid scientific foundation for their warnings:—

To our glib rationalism it seems childish to connect national prosperity with national worship. But look below the surface. In the early expansion of society many of the forces that unite the scattered members of a modern state are wanting. A people without letters, arts, or trade, living in scattered agricultural communities, without communication, movement, or central authority, has little to keep alive mutual interest. The ties created by education, travel, intercourse, trade, news, common literature and central administration are unknown. Were it not for the far reverberation of those periodical feasts where a common emotion lifts the people to a common consciousness, the society would surely crumble. With the religion of doctrine and precept assemblage comes to have a value for instruction, but its old virtue does not cease.

ALEXANDER ANSTEAD in *Good Words* explains by the aid of diagrams exactly how the Union Jack was formed by the combination of the three crosses of St. George, St. Andrew and St. Patrick.

## GENIUS AND STATURE.

## IS GOOD STUFF PUT UP IN LITTLE BUNDLES?

MR. HAVELOCK ELLIS, in the *Nineteenth Century* for July, conducts a very interesting examination of the question whether there is any connection between Genius and Stature. He comes to the conclusion that there is, but it is not the connection popularly believed to exist. The proverb says "Good stuff is put up into small bundles," and it is notorious that dwarfs are supposed to be much more quick-witted than giants. Mr. Havelock Ellis subjects the question to an elaborate examination, and comes to the conclusion that there is no truth in the popular belief. The truth appears to be that men of genius are either taller or shorter than ordinary men. Genius is not favourable to the commonplace average. Persons between 5 ft. 4 and 5 ft. 9 inches are of medium height. He takes the names of 341 notable persons about whose stature we have any information, and comes to the conclusion that only 74 were of medium height, while 142 were taller and 125 shorter than the average. Another author who looks into the subject finds that of 84 famous writers, 40 were tall, 20 were of middle height, and 24 were short. This preponderance of exceptionally tall over exceptionally short persons among those who possessed genius has hitherto been unsuspected:—

While among the ordinary population the vast majority of 68 per cent. was of middle height, among men of genius, so far as the present investigation goes, they are only 22 per cent. the tall being 41 per cent. instead of 16, and the short 37 instead of 16.

TALL:—Burke (5 ft. 10), Burns (nearly 5 ft. 10), Sir R. Burton (nearly 6 ft.), Carlyle (5 ft. 11), Cobbett (over 6 ft.), Coleridge (5 ft. 9½), O. Cromwell (5 ft. 10), Darwin (about 6 ft.), Dumas *fil.* (5 ft. 10), Fielding (over 6 ft.), Hawthorn (5 ft. 10½), A. Lincoln (6 ft. 1), Marryat (5 ft. 10), Peter the Great (6 ft. 8½), Sir W. Raleigh (about 6 ft.), C. Reade (over 6 ft.), Sir W. Scott (about 6 ft.), Shelley (5 ft. 11), Southey (5 ft. 11), Thackeray (6 ft. 4), A. Trollope (5 ft. 10), G. Waashington (6 ft. 3), Whitman (6 ft.), Hans Anderson, Arago, T. Arnold, Bismarck, Lord Brougham, Bunyan, Julius Cæsar, Charlemagne, Clive, Columbus, Dumas *père*, Emerson, Flaubert, Froude, Goethe, Gounod, Helmholtz, A. von Humboldt, Leigh Hunt, Huxley, Edward Irving, Sir Henry Irving, Dr. Johnson, Ben Jonson, Lamartine, Lessing, Li Hung Chang, Longfellow, Mirabeau, Molière, Moltke, Petrarch, Richelieu, J. P. Richter, Ruskin, Schiller, Schopenhauer, Sheridan, Sir Philip Sidney, Smollett, Sterne, Taine, Tasso, Tennyson, St. Thomas Aquinas, Tourgueneff, D. Webster, William the Silent, Wordsworth.

MEDIUM.—Lord Beaconsfield (5 ft. 9), Byron (5 ft. 8½), Sir A. Cockburn (5 ft. 6), Dickens (5 ft. 9), Gladstone (about 5 ft. 8), Bulwer Lytton (about 5 ft. 9), F. D. Maurice (5 ft. 7), J. S. Mill (5 ft. 8), S. Richardson (about 5 ft. 5), D. G. Rossetti (barely 5 ft. 8), Swift (5 ft. 8), Voltaire (5 ft. 7), Wellington (5 ft. 7), Wesley (5 ft. 6), Zola (5 ft. 7), Alexander the Great (or short), Lord Bacon, St. Bernard, Browning, Camoens, Confucius, Cowper, Dante, De Foe, St. Francis of Assisi (rather below), Hazlitt, Heine, Hood, Keble, J. R. Lowell, Luther, Guy de Maupassant, Michelangelo, Newton (or short), Poe (or short), Renan, Sydney Smith, Spinoza.

SHORT.—Balzac (nearly 5 ft. 4), Beethoven (5 ft. 4), W. Blake (barely 5 ft.), St. Francis Xavier (4 ft. 6), Kant (about 5 ft.), Kents (5 ft.), Meissonier (about 5 ft.), T. Moore (5 ft.), Napoleon (5 ft. 1½), Nelson (5 ft. 4), De Quincey (5 ft. 3 or 4), Thiers (5 ft. 3), Bishop Wilberforce (5 ft. 3), Aristotle, Barrow, Baskerville, Beccaria, Bentham, Admiral Blake, Calvin, T. Campbell, Comte, Sir Francis Drake, Dryden, Erasmus, Faraday, Garrick, Gibbon, Goldsmith, Gray, Warren Hastings, Hogarth, O. W. Holmes, Horace, D. Jerrold, Kepler, Laud, Locke, Macaulay, Charles Martel, Melancthon, Mendelssohn, Milton (or medium), Montaigne, Sir T. More, Montesquieu, Mozart, Lord John Russell, Spenser, Dean Stanley, Turner, Wagner, Lord Westbury, Wilberforce.

## AN OLD FOLK'S RETREAT.

## HOW TO PROVIDE FOR THE WORTHY POOR.

MISS EDITH SELLERS contributes to the *New Review* for July an interesting paper suggesting that some Boards of Guardians should make the experiment of trying in England how an Old Folk's Retreat would work. By very carefully sifting the existing inmates of the Union workhouse, Miss Sellers thinks that the Guardians would find about forty respectable old men and women who are over sixty-five years of age, who have lived orderly, respectable lives, are thrifty, sober, and hardworking, and who must have lived in the district for at least seven years. The Guardians would then provide a home which the most convenient arrangement would be a central building with a dining hall, a common sitting-room, and two houses opening into each other, one for the officials, the other for the special cases, and on either side of the block, forming with it the three sides of a quadrangle, a number of two-roomed cottages, each of which would be occupied either by a married couple, or two old men, or two old women. The places should be furnished plainly, with comfortable beds, easy-chairs, and a very small garden, which they would be required to keep neat. The site ought not to be beyond walking distance of a threepenny tram fare of the district from which the inmates come. Breakfast would be served from 7.30 to 9, dinner from 12 to 1.30, supper from 7 to 8. There would be always two kinds of pudding for dinner, and they would be allowed to have tripe, sheep's head, liver and bacon, kippers and pork, as alternatives to beef and mutton. For breakfast there would be tea, bread and butter and marmalade, with an occasional kipper, and for supper a milk-pudding. They would receive ninepence per week pocket-money, with which they would have to provide themselves with tobacco, tea, candles, and soap. Nothing in their dress would show that they were pensioners. The women should dress themselves as they please. There would be as few rules and regulations as possible. They could go out when they pleased from one o'clock till nightfall. They would be free to attend what church they please, and to receive visitors every afternoon. If they abuse the liberty it could be curtailed. Strict laws would be made against drink of any kind being brought into the retreat. On misbehaviour the offending person would go back to the workhouse. The retreat would be managed by a master and matron, with a cook, general help, and a nurse, under their orders.

Such is the scheme which is outlined by Miss Sellers, and her description is based upon what she has seen in the French, Danish and the Austrian homes. In the Austrian old-age homes the cost per head is 11d. a day; in the Danish it is 1s., and in the French it is 1s. 2d. In London workhouses the inmates cost from 1s. 4d.; in the infirmary they cost 2s. 9d. per day. If Old Folk's Retreats were managed economically, she thinks the cost would not exceed 1s. 4d. a day. The difficulty of course is that, were such Retreats generally established, they would become so popular as to entail a very material increase on the rates.

THE pleasure-gardens of London offer a side of metropolitan life not usually made much of, but this month claim the attention of at least two of the magazines. *Temple Bar* takes their past for its theme, and Miss Pennell, in the *Century*, delineates their present. For four months of the year, if not for five, there seems no good reason why London should not be a world-famed open-air pleasure-resort.

## PASCAL.

BY LESLIE STEPHEN.

THE *Fortnightly Review* for July publishes as its first article the lecture which Leslie Stephen addressed to the West London Ethical Society upon Pascal. The task which Mr. Leslie Stephen set himself to do was to consider in what way Pascal's view was coloured by the conditions of the day, and what are its true relations to the development of thought.

He says the "Provincial Letters" marked an epoch in theological disputes and literature. His friends had entangled themselves in hopelessly intricate controversies, devoid apparently of all human interest:—

Pascal put the point so clearly and with such dexterous irony, that not only the religious world but the world of laughers and of sensible men—rightly powerful in France—came to his side. When he had finished, the great Society of Jesus was stamped with an opprobrium from which it has never been able to free itself, and Pascal had created, once for all, so the highest authorities assure us, a model of admirable French prose. That a man, dying before forty, immersed in ascetic practices, and having to struggle against constant infirmity, should have produced so great an effect in philosophy, in science, and in literature, is astonishing; and I think that, even among the great men of a great time, there is no one who excites more the sense of pure wonder at sheer intellectual power.

The article, as befits a lecture, is one of exposition, setting forth why it was that Pascal waxed so wroth with the Jesuit doctrine of probability and of intention. The real underlying contrast between the Jesuits and Pascal is thus stated:—

Essentially the struggle is between the view which assimilates the moral law to the positive law, and that which makes it define the heart or character; between the law which says "do this" and the law which says "be this." The ultimate moral principles, understood as defining the qualities of the heart, may claim to be immutable and eternal. Love your neighbour as yourself! it has been said, sums up the whole of your duty to men, and is true in all times and places. Substitute for this an external law—an attempted catalogue of the precise actions which I am to do if I love my neighbour—and you must at once have innumerable exceptions and distinctions: the law must alter as circumstances change; and actions be classed under one clause or another, according to superficial distinctions which sometimes, as we see, enable you to get the benefit of one law by combining two innocent actions. Therefore, if you attribute the immutability of the internal law of the heart to the external law of conduct, you are forced to equivocate and have recourse to subterfuge.

Pascal's fundamental point was that goodness consisted in the love of God. All that is good in man is due to the action of the Divine Spirit. All that is evil is due to the corruption of human nature. Turning from the "Provincial Letters" to the "Thoughts," he quotes Pascal's famous declaration in favour of taking holy water, attending mass, and doing other rites "which will naturally make you believe and will stupefy you." Mr. Stephen says:—

Was Pascal, then, a sceptic or a sincere believer? The answer is surely obvious. He was a sincere, a humble, and even an abject believer precisely because he was a thoroughgoing sceptic. The great Pascal, however, remains. This much I will venture to say. The root of all Pascal's creed, if I have judged rightly, is that primary doctrine: Man is corrupt, and all good is due to the inspiration of God. I think, therefore I am, says Descartes; I tremble, therefore God is, adds Pascal. His creed is made of feeling as well as of logic. That gives scepticism on one side and faith on the other. He is himself, as he declared man to be in general, a kind of incarnate antinomy.

The best sentence in Mr. Stephen's lecture is that in which he points out the immense change in the point of view that takes place when, for the old idea that the world began 6,000 years ago, there is substituted the modern conception of the immense time during which man has lived on this planet. When the 6,000 year theory was sincerely held—

the Catholic Church could still represent itself to the historian as the central phenomenon of all human history, not as an institution which dates but from a geological yesterday, and peculiar to a special group of nations which forms but a minute minority of the race. Faith in God could therefore be identified with faith in the Church, and a little factor in a vast evolution as equivalent to the whole.

But is it not true that the 6,000 year theory is that in which the great majority of Christians, especially Roman Catholic Christians, are brought up to this day?

## THE LATE HENRY DRUMMOND.

REV. D. M. ROSS, who enjoyed Professor Drummond's friendship for twenty-four years, writes in *McClure's* for July a glowing but by no means indiscriminate appreciation of the author of "The Ascent of Man." He puts most emphasis on the man's own personality and character, the spiritual influence he exerted over the people he met; and admits the one-sidedness of his works, from the exaggerated individualism of his "Natural Law" to the exaggerated socialism of "A City without a Church." He tells a striking anecdote of what the personal atmosphere of the man was felt to be:—

A woman whose husband was dying came to Mr. Drummond late on a Saturday evening, and asked him to come to the house. "My husband is deen', sir; he's no' able to speak to you, and he's no' able to hear you; but I would like him to hae a breath o' you aboot him afore he dees."

Speaking of his "message," Mr. Ross declares:—

He found the heart of Christianity in a personal friendship with Christ, and it was his ambition as an evangelist to introduce men to Christ. Friendship with Christ was the secret of a pure manhood and a beneficent life—the true strength for overcoming temptation and the true inspiration for manliness and goodness. It was a simple message; but, delivered with the thousand subtle influences radiating forth from his strong and rich personality, it evoked a wonderful response.

Here is a fact which helps to explain his success as a speaker:—

In view of what has been so often and so justly said of the magnetic impressiveness of his platform speaking, it is worth while recalling that in his undergraduate years he was a successful mesmerist. One of his fellow-students he had so completely under his power, that by touching a certain spot on his head with his finger, he could make him do or say anything he willed—sometimes with grotesque results in the students' debating societies. On one occasion, a mesmerized subject mistook what Drummond wished him to do with the poker, and only by the exercise of a ready wit did the mesmerist avert a dangerous blow. Occasionally he was induced to delight an evening party with a mesmerizing *séance*, but from a conviction of the possible harm that might be done to the persons mesmerized, he had renounced the exercise of his peculiar gift long before the close of his student days.

Is family prayer declining? is a question which the editor of the *Quiver* propounded to nineteen leading divines, Anglican and Nonconformist. According to the July number, "eleven of the replies are in the affirmative, six are neutral, and only two state that the practice is *not* dying out."

## HOW TO LIVE LONG.

## PRACTICAL ADVICE BY AN AMERICAN DOCTOR.

Dr. CHARLES W. PURDY contributes to the *North American Review* for June an interesting practical article on "Popular Errors in Living."

## THINGS TO BE MENDED.

He asks himself the following questions:—

(1) Are we not becoming more and more addicted to the use of drugs for the relief of ills and pains that are purely the result of faulty habits of living, and most of which would be more surely, more effectively and permanently relieved by simply correcting our improper habits of life?

(2) Are we not afflicted with a large amount of suffering, misery, and disease for which there is no necessity whatever; and are we not likely through hereditary transmission to entail much of this misery upon our offspring?

(3) Do not a very large number of our people die much earlier in life than their constitutions, apparent vigour, and family histories would seem to warrant; and are not these premature deaths very largely unnecessary, and therefore clearly avoidable?

## HOW LONG OUGHT WE TO LIVE?

His answer to all three of these is in the affirmative. He says:—

If a man who is born of healthy parents, and who is himself healthy at birth, become seriously disabled in health before the age of from sixty-five to seventy, barring accidents or infectious disease, it is solely because he has not lived properly.

## WE EAT TOO MUCH—ESPECIALLY MEAT AND SUGAR.

Wherein do we fail to live properly? Dr. Purdy promptly and explicitly explains wherein the error lies. First, well-to-do people eat far too much meat, and die of Bright's disease, heart failure, and allied diseases between fifty and fifty-five, while if they had adopted a modified vegetarianism, they might have attained their three-score years and ten. Next to the error of taking too much meat is the error of taking too much starchy food and sugar. This mistake is due quite as much to the drinking as to the eating. There is nearly a pound of sugar in every half-a-dozen bottles of champagne, while some domestic wines contain half-a-pound of sugar in every quart bottle. Beer has six grains of sugar per ounce. The headache and indigestion that follows drinking too much wine and beer is, as a rule, due to the sugar, and not to the alcohol. Another error which he states is the habit of not wearing wool next to the skin. Americans spend more money upon their dress than any other nation, and physiologically are the worst dressed nation in the world. Summing up his observations, Dr. Purdy draws up the following rules for the readers who wish to live long, and retain health to the end of the chapter. He says:—

## RULES OF DIET FOR SEDENTARY MEN.

The man of robust constitution and sedentary habits should live largely upon fish, green vegetables, and acid fruits, eating butchers' meat but once daily. He may in addition eat bread and potatoes, but these should constitute his limit of starchy foods. Cakes, farinas, oatmeal, and the various cereal breakfast foods should be indulged in but rarely or altogether avoided. Sugar should be used but sparingly, and only as a flavouring for food or beverages, and never as a food in itself. If he use wine with his dinner, it should preferably consist of the non-saccharine order; and he should limit the quantity of fluids consumed with his meals to from twelve to sixteen ounces. He should dine between six and seven o'clock in the evening, and at all times eat in moderation, never under any circumstances overloading his stomach.

## COSTUME FOR EXERCISE.

In northern latitudes, and especially in humid and changeable climates, such as those near the seaboard and the great chain of inland lakes, he should wear all wool undergarments, including stockings, the year round. In dryer and somewhat warmer climates, such as the Middle and Southern interior States, silk underwear may be substituted for wool. Warm or tepid baths are preferable to cold ones, and after middle age cold showers, and plunges, or even sea bathing, are not without serious risks. The man of sedentary life should reduce the temperature of his office and dwelling to 68 degrees Fahr., and he should habitually walk at least two miles in the open air each day or take an equivalent amount of physical exercise. The best form of exercise is horseback riding, next in order is bicycling, while walking may be ranked as third.

## ADVICE TO LABOURING MEN.

The labouring man may therefore safely, and with benefit, eat butchers' meat twice daily, and he may also eat oatmeal and puddings at least two or three days in the week in addition to his bread and potatoes. He should dine in the middle of the day, and he should be allowed a full hour for his dinner and rest. His dinner is best for him if served without any form of alcohol.

## MR. CLIFFORD HARRISON AND HIS RECITATIONS.

THE *Young Man* for July publishes an interview with Mr. Clifford Harrison, whose recitations at Steinway Hall on Saturday afternoons have become a favourite feature in London entertainments. Mr. Harrison explained to his interviewer readily enough both his difficulties and his successes. He says:—

I have a bad memory for events and so on, but my verbal memory is excellent. My repertoire consists of between four and five hundred pieces, and then I have composed, and, of course, have to remember, about a hundred musical accompaniments. For such work one must have more than an average memory, and, I may add, fairly good nerves."

"And don't you find a two-hours' public recital a great strain?"

"Well, my doctors have been surprised that I am able to go on with it; but although it is, of course, somewhat trying, I think one receives as much as one gives. A sympathetic audience seems to reanimate one, to recharge one with electricity, so to speak. Yes, I am giving sixteen Saturday afternoon recitals, after which I go on the Continent for a complete rest and change of occupation. Then I hope to give twelve more recitals in the autumn. I think it a good sign," Mr. Harrison continued, "that my audience increases in numbers with each recital."

"And were you the first one to adopt the plan of reciting with a musical accompaniment?" I inquired.

"Yes, and I imagine," said Mr. Harrison smilingly, "that a great many people who have followed my example in this direction would be extremely surprised if they were told that I originated this method of recitation. In Germany, Schumann did write some music for recitation purposes, but I have it on Madame Schumann's authority that I was the first one to carry out any such idea. And I am still alone in doing both things—in reciting and playing the piano myself, and I am very strongly of opinion that it is absolutely necessary for success that one brain should be responsible for both the recitation and the accompaniment."

"Yes, I compose all the accompaniments myself, and they are all in my memory—not on paper. I do all this work very carefully, but I am afraid a musician would consider it elementary. It is elementary," he continued, "and I think this elementariness is necessary to success. The music must be only a background, so to speak. The music must remain at suggestion, and not develop into expression. Actual musical expression is an interference with the reciter."

"Few people would believe the amount of work which even the modest amount of reciting which I can allow myself to undertake, actually entails. I have to keep up my practice, for instance, on the piano, for several hours every day."

## THE PRAYER TELEPHONE.

### RECORDS OF ITS SUCCESSFUL WORKING.

The *Sunday Magazine* has been publishing for some months past a series of articles on "Answers to Prayer," by well-known religious men.

#### DR. HORTON'S SUGGESTION.

The Rev. Dr. Horton, who contributes the fourth article of the series, has no long list of specific instances such as those which struck the public mind in the case of Dr. Barnardo, Mr. Quarrier, and Mr. Hugh Price Hughes, but he is not without instances of strange cases of healing of the sick, and other incidents of a like nature. He admits they can be explained as coincidences, but, nevertheless, in his own mind he is perfectly convinced they were answers to his own prayers. He maintains that any one can put the prayer telephone to a practical test in his own life by trying it on his own friends. This is practical and to the point. Here is his proposal:—

#### A PRACTICAL PRAYER TEST.

Take your friends, or better still the members of the church to which you belong, and set yourself systematically to pray for them. Leave alone those futile and often misguided petitions for temporal blessings, or even for success in their work, and plead with your God in the terms of that prayer with which St. Paul bowed his knees for the Ephesians. Ask that this person, or these persons, known to you, may have the enlightenment and expansion of the Spirit, the quickened love and zeal, the vision of God, the profound sympathy with Christ, which form the true Christian life. Pray and watch, and as you watch, still pray. And you will see a miracle, marvellous as the springing of the flowers in April, or the far-off regular rise and setting of the planets, a miracle proceeding before your eyes, a plain answer to your prayer, and yet without any intervention of your voice or hand. You will see the mysterious power of God at work upon these souls for which you pray. And by the subtle movements of the Spirit it is as likely as not that they will come to tell you of the divine blessings which have come to them in reply to your unknown prayers.

#### PRAYER AS A FORCE IN POLITICS.

The experiment is well worth trying, and the renovation of the spirit of a friend is quite as well worth making an effort for as the raising of a subscription for an orphanage. The hypothesis of the prayer telephone in that case would apply admirably. Dr. Horton insists that the churches and other persons who wish to raise funds had very much better follow the example of his church, who always pray for what they want first before they make any appeal for subscriptions. He also advocates strongly the use of believing prayer in political and social work. In this connection he tells the following story:—

I was staying with a gentleman in a great town, where the town council, of which he was a member, had just decided to close a music-hall which was exercising a pernicious influence. The decision was most unexpected, because a strong party in the council were directly interested in the hall. But to my friend's amazement the men who had threatened opposition came in and quietly voted for withdrawing the licence. Next day we were speaking about modern miracles: he, the best of men, expressed the opinion that miracles were confined to Bible times. His wife then happened to mention how, on the day of that council meeting, she and some other good women of the city had met and continued in prayer that the licence might be withdrawn. I ventured to ask my friend whether this was not the explanation of what he had confessed to be an amazing change of front on the part of the opposition. And, strange to say, it had not occurred to him—though an avowed believer in prayer—to connect the praying women and that beneficent vote.

It would be interesting to see if the good women of this country could pray the Women's Franchise Bill through the House of Commons this Session. It would be a distinct sign of grace if, as a beginning, their prayers could lead to the prompt removal of all these hampering amendments which are to be moved in Committee, nominally to strengthen the Bill, but in reality to destroy it. The author of most of them is, however, a tough subject.

#### A MANCHESTER BARNARDO.

The testimony of Mr. Leonard K. Shaw, of Manchester, who maintains refuges for children, and a beautiful hospital home known as Belleville, in the June number is very striking. Mr. Shaw is the Dr. Barnardo of Manchester, and his report is pretty much the same as that of Mr. Quarrier and George Müller. The institution was founded after prayer, and has been maintained by prayer. When it was first started they only took in boys between the age of ten and sixteen. It was proposed that they should take in younger children, but the money was lacking. The work could not be extended without £600, and his wife and he agreed to make this test as to whether or not it was the will of God this should be done. They made it a special matter of prayer, issued a general appeal, but no individual person was asked to contribute. In a few days a letter came with a cheque for £600. The Home was opened, and soon became so full that Mr. Shaw was again short of money. He sent out a second appeal, and asked for another signpost in the shape of funds. A few weeks afterwards a lady sent them a cheque for £1,000. When he wanted his third home, he prayed again, and sent out another appeal. Two or three weeks later there came a cheque for £700. The fourth home was founded in the same way, a cheque for £1,000 coming in after special prayer for a special sum. After twenty-seven years of work, Mr. Shaw expresses his profound conviction that both in money and in personally dealing with the children and others, he has no doubt whatever that definite prayer receives definite answer.

#### CANON KNOX LITTLE.

The July number contains the testimony of Canon Knox Little. Of course, the Canon does not suggest in his paper any solution to the mystery of answers to prayer, such as is suggested by the modern discovery of telepathy, but no one can read his case without being struck by the ease with which many of them can be accounted for by telepathy. All these cases are quoted from experience as his personal knowledge:—

A family, consisting of a number of children, had been brought up by parents who had very "free" ideas as to the Divine revelation and the teaching of the Church. The children, varying in age from seven or eight to one or two and twenty years, had, one way or another, been aroused to the teaching of Scripture and desired to be baptised. The father point-blank refused to permit it. The older members of the family consulted a clergyman. He felt strongly the force of the fifth commandment and advised them not to act in haste, to realise that difficulties do frequently arise from conflicting duties, and above all to pray. The clergyman asked a number of devout Christians to make the matter a subject of prayer. They did. In about three weeks the father called upon this very clergyman and asked him to baptise his children. The clergyman expressed his astonishment, believing that he was opposed to it. The father answered that that was true, but he had changed his mind. He could not say precisely why, but he thought his children ought to be baptised. They were, and he, by his own wish, was present and most devout at the administration of the sacrament of baptism.

A few years ago, a clergyman in London had been invited

to visit a friend for one night in the country in order to meet an old friend whom he had not seen for long. It was bitter winter weather and he decided not to go. Walking his parish in the afternoon, he believed that a voice three times urged him to go. He hurriedly changed his arrangements and went. The snow was tremendously deep, and the house of his friend, some miles from the railway station, was reached with difficulty. In the course of the night the clergyman was roused from sleep by the butler, who begged him to go and visit a groom in the service of the family, who was ill and "like to die." Crossing a field path with difficulty, as the snow was very deep, they reached the poor man's house. He had been in agony of mind and longed to see a clergyman. When it was found impossible to fetch the nearest clergyman owing to the impassable state of the roads, he had prayed earnestly that one might be sent to him. The poor fellow died in the clergyman's arms in the early morning, much comforted and in great peace.

A strangely similar case happened more recently. An American gentleman travelling in Europe was taken suddenly and seriously ill in one of our northern towns. The day before this happened, a clergyman, who was at a distance in the country, was seized with a sudden and unaccountable desire to visit this very town. He had no idea why, but prayed for guidance in the matter, and finally felt convinced that he must go. Having stayed the night there he was about to return home, rather inclined to think himself a very foolish person, when a waiter in the hotel brought him an American lady's card, and said that the lady wished to see him. He was the only English clergyman of whom she and her husband had any knowledge. They had happened to hear him preach in America. She had no idea where he lived, but when her husband was taken ill she and her daughter had prayed that he might be sent to them. On inquiry, strange to say, he was found to be in the hotel, and was able to render some assistance to the poor sufferer, who died in a few hours, and to his surviving and mourning relatives.

A still more striking instance, perhaps, is as follows: Some years ago in London a clergyman had succeeded, with the help of some friends, in opening a "home" in the suburbs to meet some special mission needs. It was necessary to support it by charity. For some time all went well. The home at last, however, became even more necessary and more filled with inmates, whilst subscriptions did not increase, but rather slackened. The lady in charge wrote to the clergyman as to her needs, and especially drew his attention to the fact that £40 was required immediately to meet the pressing demand of a tradesman. The clergyman himself was excessively poor, and he knew not to whom to turn in the emergency. He at once went and spent an hour in prayer. He then left his house and walked slowly along the streets thinking with himself how he should act. Passing up Regent Street, a carriage drew up in front of Madame Elise's shop, just as he was passing. Out of the carriage stepped a handsomely dressed lady. "Mr. So-and-So, I think," she said when she saw him. "Yes, madam," he answered, raising his hat. She drew an envelope from her pocket and handed it to him, saying: "You have many calls upon your charity, you will know what to do with that." The envelope contained a Bank of England note for £50. The whole thing happened in a much shorter time than it can be related; he passed on up the street, she passed into the shop. Who she was he did not know, and never since has he learnt. The threatening creditor was paid. The "home" received further help and did its work well.

The Canon's last case cannot be referred to telepathy. If it is capable of explanation by psychical research, it would rather suggest the revival of a subconscious memory:—

Another example is of a different kind. A person of real earnestness in religious questions, and one who gave time and strength for advancing the kingdom of God, some years ago became restless and unsatisfied in spiritual matters, failing to enjoy peaceful communion with God, and generally upset and uneasy. The advice of a good clergyman was asked, and after many conversations on the subject, he urged steady

earnest prayer for light, and agreed himself to make the matter a subject of prayer. Within a fortnight, after an earnest midday prayer, it was declared by this troubled soul that it had been clearly borne in upon the mind that the sacrament of baptism had never been received. Inquiry was made, and after much careful investigation it was found that, while every other member of a large family had been baptised, in this case the sacrament had been neglected owing to the death of the mother, and the child being committed to the care of a somewhat prejudiced relative. The person in question was forthwith baptised, and immediately there was peace and calmness of mind and a sense of quiet communion with God.

#### ALL IN THE ORDER OF NATURAL CAUSATION.

In the *Forum* for May there is an elaborate article by the Rev. James M. Whiton, entitled "Fallacies Concerning Prayer." In the course of one section of his essay he touches upon the telephonic aspect of prayer:—

Prayer for the healing of the sick may legitimately undertake to effect no breach at all in the order of natural causation, but simply the substitution of a psychological for a physiological cause of cure. When the case is one to which a psychological cause is adequate, the cure will follow. Of course, the condition of its effectiveness is that the patient must fully believe in the healing power of prayer. At least, the prayer tends to call into activity the psychical powers of auto-suggestion and expectant attention. These are, indeed, equally effective, whether generated through prayer or otherwise; but I am now considering the power. If an undevout mind regards prayer in this case as mere incantation, a reverent mind is nearer the truth in holding that "there is no power but of God"; whether in the psychical body or the political, "the powers that be are ordained of God."

The records of the Society for Psychical Research abound in fully verified instances of communications sped from friend to friend in a moment across hundreds of miles in some supreme crisis which called into momentary action some previously latent energy of the spirit. Such cases suggest the yet undiscovered possibilities and limits of prayer, considered simply as a mode of psychical force moving upon an unseen psychical environment, through which, as through the physical, Divine forces are ever energising in the interplay of action and reaction. That religious enthusiasm dwells closer to the springs of this mysterious force than our present science or philosophy is thoroughly credible. The saying attributed to Jesus, that, if He chose, He could by prayer summon myriads of spirits to His aid, is not to be thought the idle fantasy of one unique in spiritual insight and energy. Much more reasonable is it to suppose that men in an embryonic stage of moral and spiritual development are as incapable of employing such a force intelligently as are savages of using mathematical instruments.

THE *Journal of the Royal United Service Institution* for June is chiefly of technical interest. The story of the Dongola expedition of 1896 is succinctly and statistically told by Captain A. H. Atteridge, whom even this official publication does not hesitate to announce as the special correspondent of the *Daily Chronicle*. Captain Oliver gives an abstract of General Duchesne's official report on the Madagascar expedition of 1895-96. The pains which Colonel Hale takes to urge the importance of the professional study of military history implies in his military readers so rooted a dislike both of study and of history as is likely to make Germans, and indeed any specialists, smile. Major Noel puts forward a scheme for the better organisation of the British infantry. He would organise the infantry in administrative brigades of four battalions, among which the officers and men would be interchangeable. He would add 16 new battalions, making a total of 153 battalions, but he would reduce 39 to half strength, and abolish nearly half the existing depôts, thus bringing down the present number of companies from 1,136 to 1,100.

## WOMEN WHO ARE AGAINST WOMEN.

A BRACE OF MRS. PARTINGTONS.

WE are all familiar with the mean-spirited slaves to be found who, on the eve of the emancipation of their class, display a perverse ingenuity in demonstrating, to the satisfaction of their masters, that, while freedom may do very well for the ruling class, "libbatty's a kind of thing that don't agree with niggers." The July magazines contain two papers which show that women are very like men in this as in other respects. Here in the *Nineteenth Century* is the Hon. Mrs. Chapman, in an article entitled, "Women Suffrage Again!" who writes one of those articles which irresistibly suggest the slave who curries favour with his master. Mrs. Chapman objects to the appearance of women in the political arena *in toto*. Her principle apparently leads her to object as much to the canvassing of Primrose Dames as to the exercise of the Parliamentary franchise.

REALLY!

We are told once more that no Act of Parliament conferring the suffrage on women could change their nature or the main demands of life on their energy; and that Nature points out the general unfitness of women for voting in polling booths, to be members of Parliament, or to be soldiers or sailors.

Why in the name of goodness, then, cannot Mrs. Chapman leave Nature alone, instead of wanting to buttress and reinforce its authority\* by legislative restrictions? It reminds us of those persons who were opposed to the emancipation of the Jews on the ground that it was manifestly against the decree of God Almighty, and of Macaulay's famous retort that, if it was the will of the Almighty Being that the Jews should not be emancipated, there was certainly no need for displaying such zeal in preventing what in that case would certainly never take place.

A QUESTION OF LIBERTY.

Nobody wants Mrs. Chapman to vote if she does not think it suits her to do so. All that we ask is that Mrs. Chapman should have the liberty to vote if she pleases, just as she has the liberty to become a navy if she likes, or to do anything else for which she feels herself constitutionally qualified. It is surely not unreasonable to ask that women shall themselves decide what they can do or what they are fitted to do, instead of having it laid down for them by Acts of Parliament, passed by men, who arrogate to themselves the right to decide what is womanly and what is not. I should like to see the man who would be imbecile enough to allow any parliament of women to usurp a right to define what was manly and what was not. That is a question which each man must decide for himself. Neither sex has the right to define for the other the limitations within which their own nature allows them scope for useful activity.

Mrs. Chapman is bad, but the Countess of Desart is rather worse. This lady writes on "Women" in the *National Review*, for July, and is a conspicuous example of the women who are against women. She is of the "rest and be thankful" school. We have well-nigh reached, she thinks, the outer limit of what women will try to do. The advanced woman has gone into a wilderness where she has fairly lost her way and is incapable of guiding anybody.

WANTED, A CURIOUS PROPHECY!

Where is the prophet, cries Lady Desart, who will impress upon woman at large that, do what she will, she cannot become a man any more than a cow

can become a horse? There have been very many disparaging things said concerning woman in these latter days, but seldom has it been reserved for any one so to insult the sex as to suggest that a prophet must arise to teach them what is as plain as the nose upon their face.

LOGIC!

We want, she says, education that shall teach not only book-lore and figures, but reason and logic—of which indeed there is great need in certain cases, viz., Lady Desart, whose paper is now under notice; for what do we find? That this good lady actually refers to the action of the Queen as a conclusive demonstration of the fact that women do not require citizenship in order to exercise influence. Surely Lady Desart must be well aware of the fact that the Queen's influence would have been worth little indeed if she had not by the Constitution been permitted to occupy a position of authority which enabled her to intervene in the affairs of State with far greater effect and far more constantly than will ever be possible to a woman who is merely armed with the vote, to which as a householder and taxpayer she has a fair claim. The Queen has never declaimed in public because the law and constitution enabled her to interpose with effect in private. No one is asking for women any more liberty of declaiming in public than that which they possess at present. All that we ask is that they may have an opportunity of intervening in the privacy of the ballot-box with the effect of a voting-paper. Lady Desart's delightful inconsistency leads her on one page to tell us that women have caused "half the revolutions and nine-tenths of the wars of the world," and then on another page she declares "that woman should admit her limitations and glory as much in her inability to make direct laws and wars as man does in his incapacity to embroider and to knit." Lady Desart seems to know as little about men as she does about women. The man, especially in these days of travel, who would glory in his incapacity to sew on his own shirt buttons and mend his own stockings, would be regarded as a pretty considerable fool for his pains.

## The Piety of President Kruger.

DR. F. E. CLARK, of the Christian Endeavour Society, recently paid a visit to Pretoria, where he found a hearty welcome from President Kruger. He was introduced by a Mr. Bosman, a friend and helper of the Christian Endeavour in the Transvaal:—

When Mr. Bosman told him of my life-work, and that my present visit to Pretoria was in connection with the Christian Endeavour movement, he replied, "Ah, that is good. I love all those who love the Lord Jesus Christ. When we love Christ, there is a link that binds us all together."

Then I told him that in America, too, we rejoiced in having a Christian President, that we had often been thus favoured, and that ex-President Harrison's Cabinet was even called in pleasantry "A Presbyterian Cabinet," there were so many Presbyterian elders in it.

"I am glad you have such good rulers," said the old man: "for the nation that fears God and obeys Him is the only prosperous nation."

Remembering that President Kruger was converted under the preaching of Mr. Lindley, one of the pioneer missionaries of the American Board to Africa, I told him that I belonged to the same Church in America as did Mr. Lindley.

At this the old man's eyes glistened, for he loves and reverences the memory of his spiritual father, and he said with genuine warmth, "Ah, he was a good man, he was a good man. He preached Jesus Christ. We all need Christ's strength;" and again he repeated, "Those of us who love Him, whatever our creed, should love each other."

## THE WIT AND WISDOM OF OUR BAIRNS.

EXTRACTS FROM A PRIZE COMPETITION.

THE editor of the *Sunday Magazine* offered a prize competition for the best collection of Children's Sayings. Some of the contributions are very amusing. I will quote them in their order, without reference to their authorship:—

One little girl, on being charged with being naughty, she replied, "I not naughty, I not kite well."

"Poor Uncle Horace," said Isobel, after a visit to an English rectory, "he gets so sad; he wants all the people in the parish to go to heaven, and they *won't* go."

One little boy, standing by a window watching the flies on the pane, said:

"I didn't you say God made everything, mother?"

"Yes, my boy, everything."

"Then He made the flies?"

"Yes, even the flies."

After a momentary silence he remarked:

"Fiddling work making flies!"

Little Ian's father was visiting London, and had promised to bring a toy train for his little son. The day that the father was to travel Ian prayed, "God bless papa, and bring him home safely, and—and—his luggage!"

A father, before punishing his little son, who had been naughty and stubborn, said they would both pray. The father did so, and then the little boy said: "Please God, give me a better father."

"If you don't forgive me *now*, mother, *when I'm sorry*," exclaimed a little boy who was in disgrace for a fault, "I'll soon *not be sorry*, and then I won't *care* about the forgiving!"

A little girl of our acquaintance was repeating her prayer:

"This night, when I lie down to sleep,  
give my *soul* to Christ to keep."

On reaching this point she looked up in her father's face and asked the startling question: "Will I give Him my *heels* too?"

Another child who had heard for the first time the story of Elijah's translation in the fiery chariot, began to weep bitterly. His mother said: "What are you crying for, Willie?" "'Cos I've feerd 'Lijah will be burned,' was the unexpected answer.

This is how Jonah is "handled": "No, Jonah wasn't 'zactly a bad man, only he didn't want to go and teach the children which was their right hands and lefts." He is not very clear on this point himself, so this is given out with a fine air of scorn.

"So, of course, the whale swallowed him; but I'spect he felt pretty tight, for he soon began to cough and cough till up came Jonah, and he wasn't hurted the least bit; but I *think* he must have been very dirty. And so—well, that's all about Jonah."

A rather pretty idea concerning the stars; a little boy thought the stars might be the places where God put his fingers through. Another said, "Oh! look at the gold tacks in the carpet of heaven!"

When about six years old, Janet was taught, in her geography lesson that "Yarmouth is celebrated for the *curing* of herrings." "Oh, how funny it must be," she exclaimed, "to see the little ill herrings sitting round *getting better*!"

Flossie was enjoying her first visit to the seaside, when one morning her mother told her she would have to go into the town instead of to the shore: "Oh, mother," said Flossie, "and all the beautiful water will be wasting."

My little friend Teddy, the less than four-year-old son of a Wesleyan minister, had been greatly interested in the construction of a martin's nest outside his father's study-window, and had made many inquiries concerning it. He thus reproduced his lately acquired knowledge of the habits of different birds. "Do you know that the swallows go away in winter; but the sparrows *belong* to this circuit?"

## IN PRAISE OF CRICKET.

BY PRINCE RANJITSINGHI.

THE princely Indian cricketer opens *Blackwood* for July with a panegyric on cricket in general and cricket in the Victorian era in particular. He remarks at the outset:—

The rise and development of athleticism, until it has become a most important aspect of British life, has been one of the marked characteristics of the Victorian era. . . . It is during the last sixty years, and especially during the latter half of this period, that the two great games cricket and football have become such enormous factors in the sum of English life.

Comparing English games with French or German military service as a means of physical development, the prince is not prepared to dogmatise, but does not hesitate to say that the Frenchmen and Germans he has seen "certainly fall below the physical standard attained by the average Englishman." Games are free from the unpleasant concomitants of barrack-life and "give those who play them an unconquerable *joie de vivre*—a buoyancy that refuses to be overwheeled." The prince waxes eloquent over the humanising and morally healthful effects of cricket both on player and spectators.

Speaking of the subsequent career of the professional player, the writer declares that "the demand for players who have been first-class to fill the posts at clubs and schools is far in excess of the supply."

Reviewing the sixty years' progress, the prince considers that "the number of good players has enormously increased"—fifty now where there was one. He recalls the change in wickets; the change from under to round-arm, begun by Mr. John Willes in 1822, and generally adopted about 1827, F. W. Lillywhite being the great exponent of the innovation; and the epoch-making advent of Dr. W. G. Grace in 1865. "He revolutionised batting. He turned it from an accomplishment into a science. . . . I hold him to be not only the finest player, born or unborn, but the maker of modern batting." The growth of the organisation now in use is traced thus:—

In the beginning it was local club cricket pure and simple; then out of this grew representative local cricket—that is, district or county cricket, which flourished along with local club cricket. Out of county cricket, which was then only local cricket glorified, sprang exhibition cricket, which lived side by side with, but distinct from, the other. Finally, exhibition and county cricket merged and became one. And that is where we are now.

Down to 1846 "all cricket was practically club cricket." The great local club of early days was in Hambledon in Hants, which lasted from 1750 to 1791. County clubs were early formed in Surrey, Kent, Sussex, Hants, Middlesex and Notts. 'Gentlemen' versus 'Players' began in 1806, North v. South in 1836. The M.C.C. began in 1789. "It originated partly in the desire of certain gentlemen in London to form a club and play cricket, partly in the business enterprise of a man named Lord, who is immortal for ever."

The All-England Eleven was started by William Clarke in 1846. The United England Eleven began in 1852.

The prince evidently wields the English pen with almost as much facility as the English bat.

THE *Economic Journal* for June contains, besides Bernard Holland's paper on the incidence of Irish taxation, which claims special notice, a very valuable account by Professor Brentano of "Agrarian Reform in Prussia."

### Notable Typewriters.

IN the *Strand Magazine* for June there is an article concerning the origin of the typewriter, in which many interesting facts are stated. The writer says:—

There have been many curious and beautiful machines constructed from time to time to the order of various people, or for presentation. Perhaps the most elaborate typewriter ever produced was that made for the Czarina of Russia, by the Remington people. All parts of the machine ordinarily black were enamelled blue, and those portions of the framework usually outlined in gold were inlaid with mother-of-pearl. The keys were of African ivory, and the bright parts of solid gold. A similar machine was presented on her wedding-day to the Duchess of York; and another was recently made to order for the Khedive of Egypt. The Queen also possesses an extremely elaborate typewriter. It is a "bar-lock," ivory-keyed, gold-plated throughout, and very beautifully engraved.

An extraordinarily curious machine was that made by the "Hammond" Company for Li Hung Chang. It was fitted with twenty sets of characters—eighteen hundred in all—each of which, as no dies were available, had to be engraved by hand. *Apropos* of this remarkable machine, its introduction into Pekin was promptly followed by the appearance in London of an enterprising Celestial bent upon forming a company for placing typewriters on the Chinese market. According to this gentleman, it is quite possible to write the Chinese language, or at all events a sort of modified phonographic version of it, with as few as 250 characters. The machines he proposed to manufacture, and for which he asserted there would be a ready sale in the Flowery Kingdom, were to have been about five times the width of an ordinary typewriter, and the sale price was to have been one thousand pounds apiece. The English capitalists, however, failed to "bite," and China still does its writing in the old-fashioned way.

### Mr. George Russell's Reminiscences.

MR. ARTHUR LAWRENCE has an article in the *Young Man* for July upon "Mr. George W. E. Russell at Home." In the course of his conversation, Mr. Russell says:—

"I ought to tell you that in my earlier days I met an old lady—she was a hundred and one—who recollected the execution of Louis XVI.,—that is to say, she was at a children's party, which broke up on hearing the news,—and to complete her record, she lived to see the Jubilee year of Queen Victoria's reign. I have a kinswoman still alive," Mr. Russell adled, "who buckled the Duke of Wellington's sword when he started out for Waterloo. My uncle, Lord John Russell, was the only man I have ever known who had actually talked with Napoleon the Great; and as an instance of what changes time brings, a cousin of mine, Sir Hamilton Seymour, formerly our Ambassador at Vienna, and who died as recently as 1880, had the pleasant experience of being stopped by highwaymen in Grosvenor Place! When I was at Harrow in 1867, there was still living an old woman named Polly Arnold, who had sold 'cribs' to Byron when he was at school there. 'Birron' was the way she pronounced his name. There was an old Baron Heath, who used to 'fag' for him, and who used to remember him well, as Byron being partially deformed, could not do so much for himself as the other boys did, and I am afraid his 'fag' did not find it altogether a delightful experience!"

The interviewer, after chronicling these reminiscences, proceeds to describe Mr. Russell's political and religious views. Among other things, he says:—

From his boyhood Mr. Russell has been busily engaged in visiting the poor, and in rescue and preventive work, and was active in what he modestly describes as "social service" before he left home, to a slight extent at school, and to a larger degree when at Oxford, and was one of the best friends of the dockers before their woes had been advertised, and besides a great deal of other work which I need not refer to here, he is on the Committee of the Queen Square Hospital for the Paralytic, which he visits once a week.

### How Mr. McCarthy Wrote "The History of Our Own Times."

MR. MCCARTHY tells his interviewer in the *English Illustrated Magazine* for July that the first conception he had of "The History of Our Own Times" was a notion that he should tell the story of the growth of the Radical Party. On talking it over with his friends, he modified his proposals so as to make it the history of our own times. A great London publishing firm asked him to write a book on the subject. This he undertook to do; but when the first and second volumes were finished, he was invited to stand for Parliament as an Irish Nationalist, whereupon his publisher took fright and backed out. Chatto and Windus then stepped in and gave him more than ten times as much for the book. Mr. Justin McCarthy gives the following explanation of his method in subject and in dealing with the material:—

"My way is," replied Mr. McCarthy, "to write from my own knowledge the great big things first, filling in the others at such length as they are fairly entitled to. What I want is to avoid the dead-level of the *Annual Register*, which would give as much space to a Whitechapel murder as to the Greek crisis. My method of taking the big episodes first may have its drawbacks, but it is my way. I write even novels thus. Sometimes the final scene is written first. I fix, as it were, my strongest effect and work up to it

"And here," continued my host, "I may refer to what I acknowledge may be counted my defect—I cannot 'prepare,' be it chapter, lecture, or speech. Everything must come spontaneously, without the fetter of a programme. If I prepare a speech, it is sure to be delivered in quite a new form; some hint from somebody who spoke last, it may be, having suggested quite a fresh way of treating the subject."

### Workmen's Insurance and Commercial Supremacy.

ARE the Germans beating us in many of the world's markets not merely by reason of their superior technical education, but because they take better care of their workmen? This is the question with which Mr. C. B. Roylance-Kent opens his paper in *Gentleman's* for July on "Working Men's Insurance in Germany." Improved vitality and greater productivity may be expected to result from this insurance system. Here are some of the figures for the labouring population of eleven millions:—

SICK INSURANCE, 1893.—The sick clubs number 21,226; the insured number 7,106,804; the cases of sickness number 2,794,027; the income reaches 132,137,396 marks; the expenditure reaches 126,018,810 marks.

ACCIDENT INSURANCE, 1894.—The number of corporate trade unions number 497; the insured number 18,660,000; the cases of compensation number 266,400; the income reaches 78,000,000 marks; the expenditure reaches 64,200,000 marks.

OLD AGE AND INVALID INSURANCE, 1894.—The insurance institutions number 40; the insured number 11,510,000; the pensioners number 295,200; the income reaches 109,580,000 marks; the expenditure reaches 25,560,000 marks; the Imperial subsidy reaches 13,920,000 marks.

Employers alone compensate for accidents. Employers and employed share sick payments. The State joins employers and employed in paying old age and invalid pensions. The rates are relieved, the number of accidents nominally increases, but the severe and fatal accidents are diminishing, and Socialism is not curtailed, but spreading.

THE most important article in *McClure's* is Mr. Ross's sketch of the late Henry Drummond, with a striking portrait. There are also interesting historical items and chapters from the log of the *Mayflower*, portraits and reminiscences of Andrew Jackson, and Hamlin Garland's account of Grant before Vicksburg.

**WANTED—A NATIONAL BOYS' BRIGADE.****THE RECEPTION OF LORD MEATH'S PROPOSAL.**

LAST month I published Lord Meath's proposal that the Government should take in hand the organisation of a National Boys' Brigade on a modification of the lines on which Professor Drummond founded the existing Boys' Brigade.

In reply to an appeal from this office, I have received many very interesting letters from Helpers in various parts of the country as to the suggestion. In the first place, it is evident that there is a very strong feeling in certain quarters, chiefly Nonconformist, against Boys' Brigades on the grounds that they minister to the passion for militarism, and that, as more than one of my Helpers put it, they disapprove of attempts to civilise our boys by familiarising them with drill for slaughter. On the other hand, I have received many communications which expressed in the strongest terms the satisfaction with which any such extension of the Boys' Brigade would be hailed by many of those who are most interested in social reform throughout the country. Although in many cases the Nonconformists stand aloof, in others very successful brigades are established in connection with Nonconformist churches. At Browning Settlement, my brother reports that the result of their experience has been extremely favourable, as the methods employed enable them to obtain a hold over the lads who would have escaped all other kinds of influence.

There are two or three points that need to be borne in mind. The first and chief difficulty is the need of securing a competent drill sergeant, and the competence must be moral as well as military. There is a great tendency on the part of the boys to regard their instructor, especially if he is a veteran who has served through many campaigns, as a hero of the first rank. He acquires an immense influence over them, and if he should happen to be, as is not infrequently the case with old soldiers, a man whose interests are more spiritual than spiritual, the result is apt to be disastrous. On the other hand, a civilian who has never been in the army, or who has only acquired a smattering of drill in the volunteers, is apt to be lacking in the capacity for command and the art of enforcing discipline.

Now in the formation of a Boys' Brigade, although a man may speak with the tongue of men and of angels, may have the sweetness of St. John, or the eloquence of St. Paul, he is no good if he allows the lads to get out of step and does not make them go through all their manoeuvres with promptitude and precision. The cost of equipping a brigade is not very great. The indispensable are a cap (5d.), a haversack (4½d.), a waist-belt (10d.), and a carbine; the latter is a small weapon which costs 3s. 9d. Altogether the total outfit of a Boys' Brigade does not amount to much more than seven shillings per head, exclusive of the band.

Now a band is a valuable addition to a brigade, though it is not indispensable, but a good drum and fife band can be furnished with instruments for the sum of £10. Places in which they can be drilled are also necessary, but these can usually be found either in the schoolrooms or yards or playgrounds connected with schools and other institutions. A suggestion has been made by several correspondents that the task of organising these Boys' Brigades should be entrusted to the School Boards, through whose hands the lads pass, and who have undoubtedly the best machinery, both in building, drill-grounds, etc., for working a brigade at a minimum of expense. It is possible that the brigade might be worked in connection with the Recreative Evening Association or

the Evening Continuation Schools. Such rudimentary military training as is given to the Boys' Brigade is an education by no means without its uses, and quite as much deserving to be recognised as a subject for Government grants as many of the other studies that entitle the Evening Continuation Schools to appeal to the Education Department for a grant.

It is possible that something might be done in this direction. Last month was not favourable to any attempt to bring persons together who are practically interested in this subject, but possibly before the next number of the REVIEW is issued I may have something to report which may indicate a possibility of practical action being taken in this direction.

**THE SPHINX OF LONDON.**

WRITING under this title in the *Leisure Hour*, Rev. F. W. Newland reviews the last volume of Mr. Charles Booth's great work. Two impressions left on him by the book may be quoted:—

Very significant is the marked hopefulness of tone which pervades this volume: the cynical despair of some writers and the gloomy apprehensions of many earnest reformers are conspicuous by their absence. . . . When we have made full allowance for the crest of the wave of industrial prosperity on which we are riding, it is clear that there are many signs of a permanently quickened vitality in the world of labour. Mr. Booth has found a brightness and a vivacity in the lives of the poor which few who have not lived among them would believe possible; he has come to recognise . . . that there is a buoyancy of spirit which is childlike in its influence and leads to the full enjoyment of the present without irksome care for the future.

As worry makes up more than one-half the misery of life, the poor would seem to be felicitously exempt.

**NO HEROIC REMEDIES.**

No less conspicuous is the utter absence of any heroic remedies; there are many signs that the trend of Mr. Booth's thoughts has been in the direction of individual reform, and the development of existing agencies, rather than any great collective movement to reorganise society. Fuller knowledge has increased caution, and the elaborate survey of the whole population first, street by street, and then occupation after occupation, has plainly led to a more deliberate suspense of judgment. The investigation is largely one of environment, the prescription is based very much on the regeneration of the individual. "The reform of the individual by the individual" stands rightly in the forefront; immense stress is laid upon fuller and wiser education, "the basis of all industrial reform;" influences which enable a man to act more freely and intelligently himself are more important than those which control him. The writers of this volume treat sympathetically of all that can be done by the community for the help of its poorer members; but they hark back to the need of a vital movement, which shall create a quiet determination on the part of every individual, rich or poor, to do his share.

**THE FATE OF PANACEAS.**

East and South London have been as quagmires swallowing up great schemes, each of which was to be a panacea for their woes; waves of enthusiasm have led to stupendous efforts. A Palace of Delight was to bring sweetness and light to desolate homes; General Booth's elaborate "Darkest England" scheme was to be so complete that poverty was to be dealt with on every side, and the problem of the houseless and workless vanish; University settlements were to show the churches a more excellent way, and to weld together the gilded youth of Oxford and Cambridge with the artisan and docker in a league of personal fellowship; missions and movements of the most varied character have been initiated. Most of these agencies are doing useful work, but no one would now be thought of as a solution of the riddle of the sphinx: these have become auxiliaries to those older forms of Christian and philanthropic effort which are slowly changing the community.

# THE REVIEWS REVIEWED.

## THE CONTEMPORARY REVIEW.

THERE are some capital articles in the July number of the *Contemporary Review*, the more important of which are noticed elsewhere.

### AUSTRIA-HUNGARY AND THE PEACE OF EUROPE.

"Austriacus," writing on "The Dead-lock in Austria-Hungary," lays a great stress upon what he asserts to be the fact that the confidence of the Emperor Francis Joseph in the good faith of Germany was greatly shaken by the recent revelation of the Secret Treaty with Russia into which Bismarck had entered without Austria's knowledge. He thinks also that the German party in Austria is in great danger of pushing matters to such an extremity as to render it impossible to carry on. As long as the Emperor lives, however, there will be no upset; but if he dies? "Austriacus" says:—

The peace of Europe, the question whether Austro-Hungary can and will continue to exist in its present form and shape, depend on one life. And therein lies the danger of the situation for Europe as much as for the Hapsburg monarchy. How will things go on in Austria when there will be nobody who commands universal respect, and to whose will all parties in the Empire finally give way? Should the Germans then tend towards the north-west and the Slavs to the north-east, with nobody in power to prevent this double centrifugal motion, a general conflagration and a general European war would be unavoidable.

### A PROBLEM OF CHRISTIAN RE-UNION.

Vernon Barillet, writing on "The Lambeth Conference and the Historic Episcopate," asks whether, now that the Pope has shut the door with a bang against all overtures in that direction, the Anglican Church should not reconsider the whole question afresh, and right to the bottom. If this were done, he thinks that Dr. Hort's careful discussion of the original conception of the Ecclesia of Christ may help to hasten the day of clearer light and larger charity. If Protestant Christendom is to be united, the first thing to be done is to frankly recognise the relativity of all existing Ecclesiastical politics:—

The true problem is this: How to blend the strength of each—Diocesan Episcopacy, Presbyterianism, Congregationalism—into a finely adjusted polity, so as to minimise the abuses to which each alone is liable. That this is no academic notion, but something towards which considerable approximations have already taken place.

The first stage in the union is not formal federation or fusion of existing bodies, but the internal fusion of ideals.

### HOW WE HAVE LOST OUR TRADE IN PERSIA.

Mr. J. F. Fraser has a brief but very significant article upon our trade with Persia. Eight years ago, Manchester sent Persia goods valued at £2,000,000 per annum. Now the Manchester export to Persia does not amount to half-a-million. So it is all round. This is due, in the first case, to the heavy import duty put on by Russia. The only way in which our goods can get in without paying duty to Russia is by Trebizond, and the cost of transit overland is heavy. But the Russian protective tariff is not the only cause why we are being beaten out of the field. Our Consul-General at Tabriz repeats the general and, indeed, the universal complaint. Our manufacturers do not study the Persian market. Says the Consul-General:—"The Russian printer will supply

exactly what is wanted. The Englishman refuses, and sends what he considers best." Sometimes the English goods are delivered short, possibly having been tampered with on the way, but instead of listening to the Persian complaint, the English manufacturer closes his account. Says the English Consul:—"Our opportunities for trade in North Persia are few, but our manufacturers by their arbitrary and high-handed conduct make them fewer." Russia, says Mr. Fraser, has closed the Afghan and Transcaspian frontiers to our goods. There are doors thrown open to foreign enterprise in Persia, of which the Belgians have promptly taken advantage, while England stands aside, or allows herself to be pushed aside. Mr. Fraser closes with a suggestion that we should increase the number of our Consuls in Persia, and that we should make more use of the Port Bunder Abbas, the port of the South Coast, where we have long been predominant.

### THE HOUSING OF THE WALLACE COLLECTION.

Mr. Spielmann pleads that the Wallace Collection should be housed next to the National Gallery, and that the National Gallery itself should be completed by taking in the larger half of the parade ground at present used by the soldiers of St. George's Barracks. This will cost £500,000, but as the Wallace Collection is worth about £3,000,000 sterling, Mr. Spielmann thinks the nation would do well to provide adequately for its accommodation. Incidentally, Mr. Spielmann calls attention to one feature in our national character, which does not often receive adequate recognition:—

England is fortunate beyond all other countries in the solicitous pride with which her position in art among the nations is regarded by those who are best able to influence it. A whole succession of benefactors has carried on that tradition of endowing the public with a wealth of art to which the nation was slowly awakened soon after the birth of the present century. No other country, I apprehend, can point to such a series of gifts as those identified with the names of Vernon, Sheepshanks, William Smith, Mr. Tate, Mr. Alexander, and Mr. Watts, or bequests the equal of those of Turner, Holwell Carr, Wynn Ellis, Townshend, Henderson, Jones, and Wallace—a list which, by the inclusion of bequests not many degrees less important, might be extended to a length unsuspected by the ordinary visitor to our galleries.

### OTHER ARTICLES.

Mr. Richard Heath, who has already demonstrated to his own satisfaction that John Bunyan drew his material for his "Pilgrim's Progress" from the tradition of the Anabaptists of Munster, now gives us the sequel to that paper, in which he shows how very probable it was that Bunyan heard and assimilated the story of the Anabaptists, the kingdom of Munster, by the living voice of tradition, and that it was from this source that he got most of the distinctive features in his "Holy War." The Countess Martinego Cesaresco writes on "Husbandry in the Greek Dramatists," and Mr. Hartley Withers propounds a policy of investment for the benefit of the professional man, and others who wish to save money to provide for their old age. One point on which he strongly insists is that interest on invested savings should always be re-invested. Interest on warrants should be paid into the Post Office Savings Bank, and left to grow until they reach a sum large enough to be withdrawn and added to the original investment.

## THE NINETEENTH CENTURY.

**THE Nineteenth Century** is a good number, with plenty of interesting reading in it. I notice elsewhere the articles on our Colonial Fiscal Policy, on Genius and Stature, and Prince Kropotkin's account of Recent Discoveries in Brain Structure.

## IS THE PLAGUE COMING?

Prince Kropotkin thinks it is. He thinks that it is inevitable that either by a rat or by some other humble messenger the bacteria of the Black Death now raging at Bombay will be brought to this country, and this causes him to devote some space to a very cheering account of the extent to which the serum treatment has enabled the doctors of the Pasteur school to cope with the Bubonic Plague. Prince Kropotkin also reports that Dr. Haffkine has adopted a plan of vaccinating people against the plague, which has been very successful. In another chapter of his paper on Recent Science, Prince Kropotkin tells of the success which has followed the serum treatment in the cure for the snake-bite. Some of the results which he supposes are truly remarkable, patients having been brought back almost from the door of death by copious inoculation of the proper serum.

## THEY DO THESE THINGS BETTER IN FRANCE.

Lady Priestley, who is winning recognition as one of the brightest contributors to our periodicals, describes the difference between the French and English treatment of Research. Lady Priestley is an enthusiastic worshipper of Pasteur, and exultantly records the service which the Pasteur researches have rendered to medical science, and also incidentally to such money-making industries as the manufacture of silk and the making of beer. She records with satisfaction that a site has been found on the Thames Embankment upon which a building is being built, which will be a school of hygiene as well as a school of preventive medicine. She suggests that the Government Vaccine Station should be annexed to this new school with a suitable subsidy. By the aid of the Berridge Fund, she thinks that reproach may be wiped away from England, although she does not venture to believe that we shall ever attain to the standard of Paris. Lady Priestley makes one suggestion which I have not seen before, to the effect that if any one is bitten by a dog reputed to be mad, instead of worrying themselves needlessly about what may after all be only a false alarm, they should have the dog killed and send its head to the Research Laboratory, where a rabbit would be at once inoculated with a portion of the dog's brain. If the dog is mad the rabbit will die after a few days, but if the dog's character has been maligned unjustly, the rabbit will live. In that case the friends will have no need for anxiety on account of the dog biting.

## THE ROMAN CATHOLIC VIEW OF ANGLICAN ORDERS.

Father Ryder, writing on the "Pope and the Anglican Archbishops," states in the most uncompromising fashion his contention on the Anglican Orders. He says:—

Our contention is that the Church of England (1) has no orders—i.e. possesses bishops, priests, and deacons in name only, without the *potestas ordinis*; (2) has made shipwreck of her faith, at least, by committing herself to positions of indifference in respect to a point of faith and its opposite heresy, and by remaining in full communion with notorious heretics; (3) has thereby forfeited all authority and jurisdiction in respect to Christ's mystical body. If it be heresy to deny the Real Presence and the oblation of Christ, which had been part of the explicit teaching both of East and West for so many centuries, assuredly it is also heresy to teach indifference as

to belief or disbelief. It is this heresy of indifference upon which I am contented to base my charge of heresy against the Anglican Church. As the final cause of the manipulation of the ordinal it has vitiated both form and intention, and as formal heresy it is a bar to all exercise of jurisdiction.

## PENSIONS FOR POOR LADIES.

Miss Frances Low replies to her critics, and concludes her paper with a Jubilee suggestion which is as follows:—

It has been suggested to me that I should approach Her Majesty, and obtain her co-operation in some scheme by which part of the enormous funds now being collected for the hospitals and district nurses (both benefiting a class for which an immense amount of charity is given) should be utilised for pensions and homes for aged gentlewomen. I believe that the sympathy of the Queen, herself well on in years, could without difficulty be obtained; and that, if the matter were taken up by a person of standing, we might in this Jubilee year see the initiation of a movement whose purpose would be to give shelter to the large army of gentle, blameless ladies thrown upon the rough world in their pathetically helpless and ailing old age.

## REMINISCENCES OF ENGLISH JOURNALISM.

Sir Wemyss Reid has a very pleasantly written paper under this head, in which an old journalist who first entered the newspaper office forty years ago at a time when there was only one morning provincial daily paper in the country, meditates and moralises over the changes which have come about in his profession. He thinks that English newspapers occupy a position of unrivalled supremacy in contemporary journalism, and he deplores the extension of the vice of hasty work of the reviewing department. He laments the disappearance of the descriptive writer, and he is righteously indignant, not without cause, at the excessive vulgarity of much of the writing that disfigures modern newspapers when descriptions of public functions are mixed up with copious personal chit-chat by the writer concerning the blacking of his boots, or his conversation with his friends. The egotism of the latter-day journalists is also commented upon, but after all that is said as to the aggressiveness and apparent vanity of the modern newspaper, its brusqueness, its personality, its familiarity, and its arrogance, Sir Wemyss Reid declares that the newspaper press is not only better informed, and better equipped for the discussion of public affairs than was the press of forty years ago, it is also far more earnest and sincere.

## OTHER ARTICLES.

Sir John Willoughby publishes the narrative of the Jameson Expedition which he wrote in Pretoria Jail three days after his capture. Mr. J. E. Chamberlain describes "The Growth of Caste in the United States." James Payn gossips pleasantly concerning Conversation. Professor Courthope has a paper on "Life in Poetry," but there is not very much life in his article. Colonel Lockwood, M.P., tells us a good deal of information that we had not heard before concerning the journals of Thomas Day, the author of "Sandford and Merton."

THE cult of the curious which is pervading magazine-dom is in full force in *Ludgate* for July. Robert Machray has got a number of facts and pictures of Comic Coins. E. S. Grew illustrates from old prints the story of certain famous ghosts. And there is a sketch of artificial limbs and how they are made. Mr. Shelley's paper on "Norfolk Broads" and another on "Flowers of the Sea" suggest the holiday season. The story of Mr. Pollock, the cyclist war correspondent, claims separate notice.

## THE FORTNIGHTLY REVIEW.

## ENGLAND'S MILITARY POSITION.

SIR HENRY HAVELOCK-ALLAN takes a very gloomy view as to what we are getting at present in return for an army expenditure of eighteen or nineteen millions a year. The army at home consists of little more than two army corps of 65,000 men, nearly half of them non-effective. It is totally inadequate to meet the requirements of the country, or to uphold its own footing if emergency arose. Something, he thinks, should be done and done at once, and he sets forth proposals with precision as follows, which he thinks would vie'd—

From the Militia, an increased Militia Reserve of 30,000 men. From the Volunteers probably not a less number, viz., 30,000 thoroughly trained Volunteers. From the time-expired men of the Line, Supplementary "Reserve D," 20,000 men.

Making a grand total of quite 65,000 to 75,000 men who might be obtained to increase the numbers of our regular army in time of war; thus exactly doubling its force for the field, and at the comparatively very small additional cost in round figures of a million a year.

## SLAVERY IN CHINA.

Mr. Parker, who writes a very interesting account of the Burmo-Chinese Frontier and the Kakhien tribes, incidentally enters upon a defence of Oriental slavery which is worth quoting. He says:—

A great fuss is made by certain philanthropic enthusiasts about Kakhien slavery. Because the Romans and the Anglo-Saxon races in turn have treated slaves with cowardly cruelty, we assume that eastern slavery must be even worse, because we imagine the eastern code of morality to be worse than our own. During over twenty years' residence in China, I have always had a difficulty in discerning what was the external distinction between master and slave, or mistress and slave; and in none of the eastern countries are slaves treated with greater harshness than children of the family or hired domestics. I have seen a Chinese viceroy hand his pipe to a male slave who puffed it into a good blaze for his master by putting it into his own mouth. I have also seen a Chinese master and his slave lie down and smoke opium together. A body servant, a barber, a policeman, a slave, are all equally debarred from the official career; but a slave is no worse off than the other three: after the lapse of three generations the taint disappears. It is often cheaper to buy a person in China than to hire one, and many Europeans do so, simply treating the "slave" as an ordinary domestic, and never for a moment attempting to assert their own "dominion."

## THE DUC D'AUMALE.

Miss Constance Sutcliffe writes an article concerning the Princes of Orleans which is highly eulogistic, but she does not quite lose herself in singing the praises of the family until she comes to dealing with the Duc d'Aumale. She declares he was the most high-minded man in all Europe, and adds:—

Of the Duke personally it is difficult to speak in moderation. He was a king among men, a gallant knight, a brave soldier, a fine scholar, an illustrious man in the best sense of the word, and the most loyal-hearted son France ever had. If men write epic poems in the centuries to come, they will make of him their hero, and in this they will do well. The longing of his life was to serve his country—in the field if might be, but anyhow to serve; and it is pathetic in the extreme to see him offer each good gift in turn—his sword, his wealth, his literary and scientific attainments, his counsels, clear-sighted and high-souled—and have all either refused or accepted only in condescension.

## FLAUBERT: BY PAUL BOURGET.

The last article in the number contains a translation of a lecture which M. Paul Bourget delivered at Oxford on Flaubert, whom he treats as "a man who possessed the religion of letters carried to fanaticism." His explanation of the charm of Flaubert's books is that despite all his efforts Flaubert is ever present:—

Throughout his writings this man, who aimed at being impassive, impersonal and unconcerned, proves to have chosen as the prime motive of all his books that evil from which he suffered himself—the being unable to fashion his life in accordance with his thought and dreams.

M. Bourget concludes by declaring that Flaubert gives to all writers the most splendid example of passionate, exclusive love of country:—

With his long years of patient and scrupulous toil, his noble contempt of wealth, honours, and popularity, with his courage in pursuing to the end the realisation of his dream, and the accomplishment of his task, he looms upon us an intellectual hero, the greatest, purest, most complete of our literary artists

## THE NEW REVIEW.

THE *New Review* is so delighted with Mr. Nicholson's extraordinary caricature of the Queen which was published last month, that it has engaged him to do a portrait a month of leading men and women of the day. For July he has done Sarah Bernhardt. There is rather a solid block of thirty-two pages devoted to "Sir Thomas Urquhart," of Cromarty, and "Richard Verstegan, alias Rowly"—subjects which certainly cannot be said to have much fascination for the general reader. Mr. David Hannay explains the new regulations introduced for the admission of boys to the *Britannia*. The age has been raised from 13½ to 14½, and will be raised next year to 15½. The examination is made more severe, with a result that there will be an appreciable increase in the cost of sending a boy to the Navy, and the ruler of the money-bag will become supreme in the one service which has hitherto supplied openings for those who were unmoneyed gentlemen. There is an out-of-the-way paper on "Religious Life in Poland," by Mr. H. Dziewicki, who tells us that the Jesuit organ, called the *Messenger of the Sacred Heart*, sells to the extent of over 150,000 copies every month in Galicia and Prussian Poland, although the total population, including the Protestants and Jews, is only 8,000,000. Its sale is prohibited in Russian provinces, but there is a great demand for Catholic books of devotion. They are indeed almost the only books that are sold in any quantities in Russian Poland. The priests are under the strictest censorship, and in large towns only allowed to read sermons which have previously been submitted to the censor. Mr. Dziewicki says:—

In those parts where the crushing despotism is not at work there are few sermons which do not contain some allusion or express some hope, which do not either touch upon the glories of the past, or point to the resurrection awaited in the future. Dreams all these may be; but, if so, they are at least noble dreams. Delirium is better than death; and the very soul of patriotism, the very centre of national life, is the Roman Catholic clergy. A patriot said to me one day, what I will repeat in its entirety, though I can endorse only the latter part of what he said:—"I don't believe in Christ, I don't believe in the soul, I don't believe in God; but I believe that Catholicism will save Poland, if Poland is to be saved."

Mr. Lionel Hart tells the story of the "First Chartered Company," of how the Russian company was formed in the middle of the sixteenth century:—

It finally flickered out with the birth of the nineteenth century, and its history, as that of nearly all the early chartered companies, may be thus epitomised:—(1) charter, (2) trade, (3) success, (4) competition, (5) encroachment, (6) decline, (7) debt, (8) difficulties, and (9) disappearance. It gave England no colony, placed no lands under her protection, acquired her no new territories. But it did more—it was the pioneer of our enormous foreign trade.

## THE NORTH AMERICAN REVIEW.

THE *North American Review* for June is a very good number. The three most important articles—"The Military Value of the Ship-Yard," "Popular Errors of Living," and "The Queen's Parliaments"—I have dealt with elsewhere.

## TREASURE-TROVE IN EGYPT.

Professor R. Lanciani, in an article entitled "Literary Treasure-Trove on the Nile," describes the discovery of the remains of fifteen distinct poems by the lyric poet Bacchylides, who was considered by the ancients as a worthy rival of Pindar. M. Lanciani says:—

There seems to be no doubt that one or more Arabs have discovered, somewhere on the banks of the Nile, a library of the Alexandrine period, or else the tomb of a man of science of the same epoch buried with his books. I do not know whether the place of discovery is known, even approximately, to the British representatives in Egypt. I think not; but if even they are acquainted with it, they are perfectly justified in keeping the secret to themselves, so as to prevent international jealousy and competition from interfering in their dealings with the discoverers.

## THE MIDDLE STATES OF THE AMERICAN UNION.

Mr. Mulhall, continuing his account of the United States, devotes his attention this month to what he calls the Middle States; namely, New York, Pennsylvania, New Jersey, Delaware, Maryland, and Columbia. Mr. Mulhall says:—

The European reader may form an accurate idea of the Middle States when he is told that they are equal in area to the United Kingdom, in population to Spain, in manufactures to Germany; that their mineral output more than doubles in value that of France; and that as regards wealth the single State of New York is equal to Belgium and Holland put together.

The most interesting fact he mentions concerning these Middle States is that:—

In 1893 the Middle States spent on public schools the sum of 43,000,000 dols., that is only 4,000,000 dols. less than the school expenditure of Great Britain.

## A PLEA FOR TRUSTS.

The Hon. Lloyd Bryce, in an article entitled "The Trust and the Working Man," maintains that the public prejudice against trusts in the United States is almost entirely without foundation. He says that the net effect of all these trusts and pooling arrangements is to cheapen the cost of commodities to the consumer, and he points out that, while the price of everything has fallen, the wages of working men have gone up. Carrying the war into the enemy's camp, Mr. Bryce says:—

While there is undoubtedly much that is harsh in connection with trusts, pools, associations, and contracts, it is really the harshness of the industrial system, and this hardship is directed only against the comparatively few, in substituting adequate for inadequate labour. In short, these poolings and contracts are but another form of co-operation. Co-operation is the eventual development of all industries which cannot stand alone, and which depend on a large output for their profits, since combination is the only condition of their continued existence.

## CANADA AND THE UNITED STATES.

Mr. J. W. Russell, writing on the "Trade Relations between the United States and Canada," discusses the question of tariff, and admits frankly that many Americans wish to use their tariff for the purpose of compelling

Canada to sever connection with Great Britain. He says:—

There is in the United States a phase of thought and a school of journalism which disposes of the whole question by the alleged rule of political necessity. Not Canada, but Great Britain, is the chief object of its attention. It seems to look upon a modification of the Dominion's political status as necessary to a final determination of the point at issue. In effect it demands: Cease your connection with the Old World and accept unreservedly the democracy of the New; dissolve your relation as the western arm of an Empire which ought not to have voice or direction on this continent; leave feudalism and its hereditary rank and precedence on the soil where they have so long grown—do this or you shall not have access to the markets of the Republic; we do not wish our business relations with you to be in any way conditioned by your political relations with a foreign State. The fact that Canada has already complied with some of these conditions is apparently not recognised; that she still retains a political connection with England makes her answerable for all the rest.

## THE LEGISLATIVE BLOCK AT WASHINGTON.

The first place in the Review is given to an article by Speaker Reed, entitled "How the House does Business." It would be more accurate if it had been entitled "How the House does not do Business," for, among other things, Mr. Reed points out the block that has been occasioned by the enormous legislative activity of Members of Congress. He says:—

It is curious to notice how tremendous has been the increase in the presentation of bills by Members of the House. In 1863-64 in the Thirty-eighth Congress the number was only 813. Such a number could be dealt with and all of them passed upon and decided. But who could dare to attempt to struggle with 10,378?

## ENGLAND'S FOOD SUPPLY.

Mr. H. Seton-Karr, writing on "England's Food Supply in the Time of War," pleads for a reimposition of the Corn Laws as a means of enabling England to feed from her own soil. At present, he says—

five out of every six of the population of the British Isles (and some say this is understating the case) are fed on imported breadstuffs, and four out of these five, or two-thirds of the whole, are fed on imports exclusively foreign. Moreover, as things now are, these proportions will inevitably grow larger every year.

This extreme dependence upon foreign food was never foreseen by Mr. Cobden:—

In 1843, Cobden himself estimated that of our yearly national consumption of 21,000,000 quarters of wheat, we only imported 1,000,000 quarters, producing 20,000,000 quarters at home. With 15,000,000 less population to feed than now, the United Kingdom at that time—fifty years ago—had over double the wheat area it now possesses, and produced at home more than nineteen-twentieths of its national requirements.

THE *Century* for July caters for light summer tastes. Hogarth is the old English master selected for study by J. C. Van Dyke, and Horace Porter recounts his winter campaigns with Grant; these are perhaps the most solid and serious papers. Three of the articles suggest *Badminton* rather than the *Century*—Mr. Seton-Karr's experiences "after big game in Africa and India," W. W. Howard's hunting the jaguar in Venezuela, and W. A. Baillie-Grohman's sports in the seventeenth century. Miss E. R. Pennell gives a sympathetic account of the pleasure-gardens at Earl's Court, and defends Londoners from the charge of not knowing how to enjoy themselves in the open air. Mrs. Van Rensselaer makes the mouth water for holidays abroad by her sketch of the Churches of Poitiers and Caen.

## CORNHILL.

*Cornhill* for July is a readable and racy number, but without any article of eminent value. The recollections of Sir Charles Murray are noticed elsewhere.

## ANIMALS AS CRIMINALS AND HERETICS.

A curious set of facts is brought to view in Dr. T. E. Withington's paper on Legal Proceedings against Animals. "It is an historical fact," he says, "that a cock was publicly burnt at Basle in August 1474, for the diabolical crime of laying an egg; the egg also being burnt lest it should produce a cockatrice, or fiery flying serpent." The pig was a more frequent defendant. Record is given of a sow which was solemnly imprisoned, tried, and executed by the Paris hangman for the murder of a baby, in 1403. Chassenew himself first became famous through the skill with which he advocated the cause of the rats of Autun. Caterpillars and beetles were summoned before the magistrates to answer for the ravages they committed, and were occasionally solemnly excommunicated. So late as 1731 Franciscan friars in Brazil brought an action before their bishop against the ants, great numbers of which sorely plagued them. The bishop awarded the ants a suitable place, to which they obediently went after the judgment had been read aloud before the ant-holes.

## A STORY OF DR. JOWETT.

Rev. H. C. Beeching opens a paper on the poverty of the clergy with a story of the late Master of Balliol. At his dinner table an eloquent clergyman inveighed against lay apathy:—

"It is degrading that we should have to go round and beg hat in hand for what the charity of laymen should spontaneously supply." . . . When it was concluded, the small, piping, husky voice of the Master was heard to say: "Yes, what is degrading is, that the clergy should have to exaggerate." Then, having done his duty to his guests, the Master recollected that he also was a clergyman, and owed something to his cloth, and so continued: "I never exaggerate; but then I never get any money."

## OTHER ARTICLES.

The anniversary study is by Mr. C. H. Firth, upon the battle of Marston Moor, which was fought on July 2nd, 1644. Mr. Hartley Withers gives much solid advice to intending investors on "How to scan a prospectus." Mr. J. W. Mackail contributes an interesting study of Piers Ploughman and English life in the fourteenth century. One of the reasons why Chaucer was popular and Langland became obsolete is found in Langland's championing the dumb toiling multitudes who cannot reward their patron.

## The Australasian Review of Reviews.

The *Australasian Review of Reviews* for May contains Mr. Fitchett's fifth "Fight for the Flag," the story of "Lord Howe and the 1st of June." There are also several papers on the Federal Convention. Mr. H. B. Higgins describes the "Convention at Work," while the results of the Convention are set forth in brief papers by Mr. Reid, Premier of New South Wales, Mr. Deakin of Victoria, Sir E. Braddon, Premier of Tasmania, and three representatives of South Australia. Our *Australasian Review of Reviews* has become more and more indispensable to those who would keep themselves in touch with the political and social problems that are being solved at the Antipodes.

## THE NATIONAL REVIEW.

In the *National Review* for July, the chief place is given to three articles on the Wolcott Commission, about which the editor, being a bimetallist, is much exercised. Spenser Wilkinson reviews Captain Mahan's "Life of Nelson" under the title of "The New Nelson." There are the usual three *chroniques*—British, American and Colonial.

## WILL PAN-ANGLICANISM RE-ESTABLISH THE MASS?

Mr. Bernard Holland, writing on "The Present Position of the Anglican Church," says:—

At present the outward surface of the Anglican Church is calm compared with a period thirty years ago, but there is, I think, latent a certain profound disquietude, the kind of disquietude which precedes a final conflict of opposing convictions. The present life of the Reformed Anglican Church is becoming more and more at discord with her history and written Articles of Faith. A still distant Lambeth Conference may have a great part to play; that of sanctioning and giving due form to a victorious movement.

The victorious movement is the Tractarian movement, and the end which Mr. Holland anticipates is the collective and formal restoration, that is, of the central conception and act of worship, as now and always understood in the Roman and Eastern Churches, received in England itself before the Reformation, repudiated at the Reformation, and now in part virtually restored by the irregular action of the clergy.

## THE NEW SICK MAN OF EUROPE.

Mr. J. Foreman has an interesting article upon Spain under the title of "Europe's New Invalid." He makes a curious remark, that if Cuba were free, and the Spaniards evacuated the country, 100,000 men would return home to swell the ranks of the unemployed, and precipitate a civil war. Mr. Foreman says:—

I can see no other remedies for the calamities which must ensue than the abandonment of Spain's fifteenth century Colonial policy, the propagation of a liberal secular education amongst the masses, and the abolition of priestcraft. But what prospect is there of such measures being adopted?

## INSURANCE IN WAR TIME.

Lieut.-Colonel Sir G. S. Clarke, writing on "War, Trade and Food Supply," thinks that in case of war the State should insure our commerce against war risks. Lieut.-Colonel Clarke says:—

An arrangement which I discussed with Sir G. Tryon at Malta would be to entrust the whole working of the scheme to Lloyd's, which would charge a commission on insurances effected. The business of insurance of ordinary risks would proceed as usual. War risks would be insured at low fixed premiums on conditions laid down by the Admiralty. The issue of State policies might terminate in six months, or a year, by which time the "greatest pinch" would have passed, and the underwriter, having arrived at a just estimate of war risks, would henceforth carry on the business. I am unable to understand how such an arrangement could be regarded as a State interference with trade.

*Cassell's Magazine* for July keeps up its record. Among many good articles two may be mentioned. Mr. Theo. Cook gives an interesting account with most instructive prints of London's expansion during the Queen's reign. Major Arthur Griffiths describes the police of Paris. The ready co-operation between them and the London police reveals the working existence of a real international police: in the detection of crime as in the transmission of letters the civilized world is practically one State.

## LA NOUVELLE REVUE.

THE first June number of the *Nouvelle Revue* is remarkable for a letter from the Emperor Menelick II. addressed to M. Gambetta, which Mme. Adam owes to the courtesy of Mme. Leris-Gambetta. Menelick's letter exhibits the warm friendship which he felt for M. Gambetta, who was at the time President of the Chamber of Deputies, and also the political astuteness which prompted him to make friends with so powerful a statesman. The letter is dated November 1st, 1880.

M. Ebray's article on the new dangers of German emigration is a discussion of the new bill in the Reichstag on the subject of emigration in a methodic manner. Shortly stated, the object is to keep together in small communities the Germans who have emigrated to other countries in order that in the presence of populations of a different race they may retain their national characteristics.

The Duchess of Fitz-James contributes an article full of recollections of the Court of Louis Philippe. It is interesting gossip, which is to be continued in a future number, but it does not add much of importance to what is already known.

M. Mur's article on the King of Siam in Europe is sufficiently actual, appearing as it does in the very month of that monarch's arrival. M. Mur has a very high opinion of King Chulalongkorn's political ability, and he is evidently afraid that the king's visit to England may perceptibly modify his relations with France, whose conduct towards Siam has not been remarkable either for humanity or honourable dealing.

## THE TURK AS A MODEL OF HUMANITY.

M. Denais, whose study of the Sultan of Turkey's personality we noticed recently, begins a series of articles on Turkish fanaticism. In this he ranges himself to a certain extent with the defenders of Turkey. He considers that the Armenian massacres were clearly carried out by order of the Sultan, and that the guilt of them rests far more with the Sovereign than with the people. He brings forward many remarkable facts in support of his theory that the Turks are really a very humane people. Their kindness extends to the animal kingdom to a degree which should put to shame countries like France and Italy, where man's duty to the lower animals is either ignored or very imperfectly realised. A Turkish child will never destroy a bird's nest; on the contrary, it is considered a meritorious act to buy birds from Christian or Jew hawkers in order to set them at liberty. Even the despised dog in Turkey is regarded as entitled to care and consideration. Stray dogs which encumber the streets are not, as in England, put to death, but are fed and cared for by the people themselves, and any one who injures them is certain to be fined and perhaps even to be imprisoned. A Society for the Prevention of Cruelty to Animals would have nothing to do in Turkey. It is by such little details as these that the manners of a people must be judged. M. Denais thinks that the great fault of the Turks lies in their Government and all the corruptions which it encourages. The Turks are constitutionally passive and docile, and the rule of Abdul Hamid has, if possible, increased that quality. It is easy to understand, therefore, that with a Sovereign who is capricious, out of his mind, unspeakably ignorant, and yet extraordinarily cunning, and who retains in his hand all the reins of government, such a people would naturally become the accomplice of the tyrant. M. Denais's defence of the Turk may not be

particularly convincing to our English Philhellenes, but at any rate it has the advantage of being based upon personal experience and observation.

## THE FRENCH NAVY AND GERMAN LITERATURE.

Commandant Chassériaud continues his series of papers on the defence of France. In a former article he expounded the danger of building new coastguard cruisers, even of 12,000 tons and of 18 knots; and now he goes on to say that what France needs are ships of the cruiser type, which should yet be available to serve as line of battle ships on occasion; in other words, ships which combine great strength of armament with extreme speed. The Commandant is very indignant that France seems to have given up the idea of ever engaging in a naval war with England, and he thinks that France should prepare herself against both the Triple Alliance and England.

M. Rossel is interesting in his paper on the literature of the new German Empire. It is not necessary to follow him in the detailed criticisms which he gives of particular authors; it may be sufficient to say in general, that in his opinion German literature is full of talent and has a sure touch, but depends too much upon foreign influence. He notes a complete absence of unity of conception in the inspiration of German literature, as well as unspeakable weakness of the national conscience, and a great disproportion between the results achieved and the efforts put forth to achieve them. He is unable to make up his mind whether these tentative experiments are the prelude of a great renaissance or the signs of a period of decadence.

M. Souriauw writes learnedly on the physical attraction of beauty. He develops the theory that, just as the animal is unconsciously made more beautiful by the process of sexual selection, so it is possible that man, the being of imagination, the poet, the artist, may be improved by a kind of æsthetic selection.

Among other articles may be mentioned a historical study of Talleyrand as a coloniser by the skilful pen of M. Guétary.

## LA REVUE DES DEUX MONDES.

We have noticed elsewhere the pathetic article by M. Talmeyr on the teaching profession for Frenchwomen.

In the first June number M. d'Haussonville continues his curious and interesting account of the little Duchess of Burgundy, whom in this instalment he marries.

Of more contemporary historical interest is M. Lefebvre de Béhaine's account of the relations between the Papacy and Prince Bismarck. This paper covers the mission of M. de Schlœzer to Rome between the years 1883 and 1885. We are taken behind the scenes of Prince Bismarck's tortuous diplomacy, and we are also shown something of the striking personalities which at that time surrounded Pope Leo XIII.

M. George Perrot contributes a curious study, which he calls "A Forgotten People." These forgotten people are the Sikeloi of Homer, who are always mentioned as being distinct from the Sicænes. The Sicænes appear to have arrived in Sicily first, probably from Spain, and they seem to have been driven out partly from fear of the eruptions of Mount Etna, partly by an invasion of the Sikeloi. The latter people gave the island the name which it bears to-day. M. Perrot traces their history in some detail, and endeavours to disentangle them from the peoples of a similar name with whom they are liable to be confused. The light which is thrown upon this ancient people by archaeology is very curious.

## FRENCH CONSERVATIVES.

The second June number of the *Revue* is perhaps more immediately interesting. M. Pion has a very timely study of the relations between French Conservatives and the democracy. It is indeed singular that in a country like France, where everything is continually changing, the Conservative party should still find itself excluded from power. It possesses all the regular means of influence—education, intelligence, wealth and tradition—but it has a continuous record of defeat ever since 1876. The party has no reason to blame either its chiefs or the rank and file for this exclusion from power. The cause of this unpopularity is, in M. Pion's opinion, to be found in a certain disdain, mingled with fear, which they inspire in the democracy. Napoleon once asked a great foreign lady what Europe thought of him. "The old Courts," she replied, "love you about as much as old women love young ones." The feelings of the French democracy for the Conservatives may be compared to Napoleon's feelings for the old Courts. As to the future, M. Pion asks pathetically: Will the democracy be a Cæsarism or liberal, materialist or Christian, Socialist or a brotherhood? That is the problem of the hour, and upon its solution depends the future of France. He points out that if the Conservatives do not exercise any longer a considerable electoral influence, they nevertheless exercise an extraordinary social influence, and it is on the social field that the decisive battle will be fought. The French Conservatives have been often enough lectured for their stoical indifference, and perhaps one more lecture from M. Pion will not make much difference.

M. Bréal has discovered a new science, which he calls *La Sémantique*. It is, as he explains it, the science of the signification of words as opposed to the science which deals with the sounds of words. He gives some extremely interesting examples of how words originally traceable to the same source have become invested with widely different meanings.

## WHAT SHALL BE DONE WITH ALCOHOL?

M. Lévy has an elaborate article on the idea of a State monopoly of alcohol—no doubt with reference to the proposed law in France. He writes from the point of view of an opponent of alcohol and of tobacco, and he traces the history of monopolies in alcohol from the earliest times. He develops the always dangerous argument drawn from the experience of other countries, such as Russia, Switzerland, England, the United States, Germany, and Holland. In all these countries alcohol is heavily taxed, and its sale is placed under the most rigid surveillance, though in spite of these drawbacks the consumption everywhere increases. The idea of a monopoly of alcohol in the hands of the State is essentially a Socialistic idea, and would be welcomed by that party as tending to destroy a great private industry and an enormous field in which individual initiative finds large scope. With the special arguments as applied to France we need not trouble ourselves here. M. Lévy ably points out that the advocates of a State monopoly have never succeeded in disposing of the dilemma, that the more alcohol is consumed under the monopoly the more harm is done to the citizens, while if less alcohol is consumed, the revenues of the country suffer.

## JURY REFORM.

M. Cruppi continues his series of articles on the Seine Assize Court with an instalment of suggested reforms. He suggests two courses with regard to the reform of the jury. The first would be to suppress the jury

altogether, and to establish a criminal magistracy sufficiently wise, independent and respected. The objection to this would be the difficulty of discovering suitable magistrates of sufficient impartiality and sufficient knowledge of law. The second course would be to recognise as one of the foundations of the French public law the principle that magistrates should collaborate in the judgments of the criminal tribunals. This is really the jury in another form. The trained legal intelligence of the magistrate brings to bear on the cases before him a knowledge of law and an experience of affairs, while the jurymen contributes a certain unprejudiced frankness, and represents the feeling of the public. A combination of these would probably produce, on the whole, just decisions. The second part of M. Cruppi's article, dealing with the choice of the President of the Seine Assize Court, is of special interest to Frenchmen only.

Among other articles may be mentioned M. Gaston Boissier's on the French Academy in the seventeenth century.

## LA REVUE DE PARIS.

No article in the June numbers of the *Revue de Paris* calls for special notice. Indeed, the editors seem to have carefully avoided any subject of a topical nature, unless a biographical sketch of the great Italian actress, Signora Duse, enriched with some letters of Dumas *filis*, can be considered as such. The career of this extraordinary woman is interesting from many points of view. She has never sought notoriety and exceedingly little is known of her private life, and yet she has conquered a great place in the history of the modern stage. She was born in 1859, and came from a theatrical family. She made her *début* at the age of four years old as little Cosette in Hugo's "Misérables," and before she was twelve she had played many Shakespearian rôles; she is probably the only modern actress who played Juliet at the age of fourteen. Her first great histrionic triumph occurred in 1879, when she was just twenty years of age, in Alfieri's "Electra." Shortly after she electrified all Naples as Thérèse in Zola's terrible study "Thérèse Raquin." Signora Duse has acted in Great Britain, in Russia, in Germany, and in America; but not till this spring did she venture to play before the Parisian public.

In each number of the *Revue* several pages are devoted to the Eastern Question. "Athens and Constantinople in 1869" are described by M. Thouvenel, a diplomatist who played a certain rôle during the Second Empire. Although France's sympathies were at that time naturally entirely Turkish, the French envoy did not scruple to write home that he considered Turkey in *articulo mortis*, and that he regarded the Turkish Empire as a mummy which might, lifeless, subsist for a considerable number of years. The article is chiefly interesting as showing what extraordinary springs of hidden life must even then have existed in Constantinople. M. Lavissee continues his analysis of France's present Eastern policy. He pays a tribute to the honesty of British statesmen, and exposes, with a sense and courage too often lacking in French writers, some of the absurd delusions as to the real aims of British diplomacy which are current on the Continent. It is evident that M. Lavissee sympathises with Greece, but he greatly blames the Greek Royal Family for the part they took, not so much in fostering, as in allowing, the outbreak of hostilities between Greece and Turkey. He declares that as long ago as last autumn King George already saw what was coming, and during

his visit to France the Greek Sovereign did not hesitate to express his fears to French statesmen. M. Lavissee denies the existence of the European Concert. He points out that what is called a "Concert" really consists of two very definite camps, that occupied by the Dual and that by the Triple Alliance, with Great Britain taking up a middle position, trusted and liked by neither of the other two parties.

M. Saint-Saëns attempts to give a sketch of all that Gounod achieved for French music. Much of the French composer's peculiar type of musical genius is attributed by his biographer to the fact that he was, during many years of his early life, preparing for the priesthood, and an inmate of a seminary.

The year '48 is always an attractive period to the French reading public, and a curious account of Berlin during the eventful days when the capital of Prussia was given over to the revolutionary elements has been exhumed from the papers and diaries of the Comte de Circourt, who was at that time French ambassador to Prussia. Excepting from a purely historical point of view, these few pages are only interesting as showing the forces which slumbered even fifty years ago in the Prussian nation. The short revolution was apparently the work of the educated classes, and, as is so often the case on the Continent, the students played a great part in erecting the barricades. And yet, so little in sympathy with the movement was the majority of the population that in the space of ten days seventy thousand people left the town.

Another historical paper discusses and describes the peculiar relations which existed between Bernadotte, then heir presumptive to the King of Sweden, and the Bourbons, between the years 1812-1814. Louis XVIII. was anxious that Napoleon's ex-general should play the part of General Monk, and offers to that effect were conveyed to him. However, if M. Pingaud is to be believed, the future King of Sweden was very much more anxious to play a leading rôle in France himself than to pull the chestnuts out of the fire for the heir to the old dynasty. But he was not popular with either his old comrades or with the French populace, and with considerable astuteness, instead of pursuing his first intention of making a determined bid for the succession to Bonaparte, he retired, and lived to found a new European dynasty.

### THE ITALIAN REVIEWS.

We are not in the habit of thinking very highly ourselves of our national facilities for technical and commercial education, and we are, as a rule, quite ready to admit that the Germans are far ahead of us in such matters. It is therefore satisfactory to find in the *Rassegna Nazionale* (June 16th) a lengthy and on the whole exceedingly well-informed article explaining our whole system of middle-class education and dilating with enthusiasm on our technical institutes, etc., and on the admirably practical nature of most of our education. The writer, Signor Valgimigli, does, indeed, admit that there should be more theory in our technical instruction, but for the rest he sees it all *couleur de rose*, and gives it as his opinion that we have little to fear from German competition. Our social condition, however, does not appear so satisfactory to a writer in the *Civiltà Cattolica* (June 19th) on "Plutocracy and Pauperism," who quotes statistics showing at once the vast wealth and the appalling poverty of England, and draws conclusions therefrom in

support of papal utterances concerning the evil tendencies of modern industrialism. The *Civiltà* for May 5th, on the occasion of the 50th anniversary of the death of O'Connell, which was celebrated with much pomp in Rome, publishes a critical and sympathetic study of his life, comparing his work to that of Windhorst in Germany, and holding him up as a model to Italian Catholics. For the rest the Italian magazines are greatly taken up this month with the spread of Socialism, both at home and abroad, Signor Boglietti among others dealing with Socialism in France in the pages of the *Nuova Antologia* (June 16th) in what promises to be a very exhaustive series of articles.

### COSMOPOLIS.

THE July number is varied and interesting. Among the English articles a quaint charm attaches to Professor Max Müller's Reminiscences of the ducal family of Dessau, his native town, and a sovereign state. He gives a most instructive glimpse into what life was in the old days of moss-grown feudalism and petty German States. Mr. Henry Norman, in his monthly chronicle, quotes from an officer friend the suggestion that if the people of England wished to know their position in the world, then let all the 160 men of war after the Jubilee review sail out of the Channel with sealed orders. "The attack of nerves that would come upon Europe within twenty-four hours" would teach us many things. Of the French contributors, E. Halpérine-Kaminsky describes the present position of Russian literature. With plenty of talent and with an ever-expanding reading public, it stands at a crisis or turning point where it is hard to discern the future direction. The writer, after dealing with present-day romance, remarks on the signal development of scientific, and notably of sociological study in modern Russia. M. Henry des Rioux concludes his study of political life in Roumania, and its intense partizanship, with the despondent suggestion that perhaps absolute personal government is the only remedy for the political gangrene from which the young kingdom suffers. Among the German papers may be mentioned Herr Francke's study of the growth of the population and the internal development of the German Empire. He shows how the increasing population has helped to turn Germany from being an agrarian into a manufacturing nation. The number of mouths to be filled necessitated imports of food from abroad, to pay for which manufactured goods must be sent across the frontiers. It is interesting, in view of our fear of German competition in the markets of the world, that the writer bids his countrymen prepare for the danger of their foreign trade being similarly curtailed. He advises them to find compensation for foreign consumers in their working classes. "A highly-paid, well-nourished, intelligent and socially stable working-class population is the best and most trustworthy consumer." This suggestion may be commended to manufacturers nearer home. E. Richter discussed the feeling of pleasure occasioned by the beauty of natural scenery, and classes it with the general order of perceptions and sensations associated with art. His is a very interesting and suggestive study in psychology.

"SOME Aspects of the Greater Dumas" is the title of a warm appreciation of the novelist in *Temple Bar* for July. Great emphasis is laid on his cheery gaiety and restoration of laughter in an age which made Victor Hugo despondent and reduced Thomas Carlyle to despair.

## ILLUSTRATED MAGAZINES.

**The Temple Magazine.**

THE *Temple Magazine* for July contains a good deal of very interesting reading, but not much that calls for notice. The Rev. D. M. Ross writes an article, illustrated by an excellent portrait of Professor Drummond, upon "Professor Drummond as I Knew Him." Katharine Tynan writes a brief paper about Killarney, and Miss Elizabeth Banks gossips very pleasantly about the "Home of the American President." Among other items she tells us that Mr. McKinley is an authority on the subject of ladies' bonnets, and chooses himself all those that are worn by his wife. Hats, he is said to have declared, should only be worn by young and robust women, or as he puts it, only by women who can run. Dean Farrar's "Reminiscences and Appreciations" of men whom he has known include three archbishops—Tate, Thomson and Benson; two cardinals—Newman and Manning; Dr. Pusey, Canon Liddon and Dean Church. They are illustrated with portraits and autographs, the latter chiefly dealing with the famous controversy of the "Eternal Hope." Mr. Haweis figures as the ninth preacher whose portrait is published in the series of "Preachers in their Pulpits." Four humorists discuss in the "Temple Club" "What is man's favourite attribute in woman?" Mr. Burgin declares that it is tact, the Rev. J. R. Howatt thinks that her chief attribute, apart from love, is a sublime concreteness, and Joseph Hocking says that it is womanliness, while the last contributor says sympathy comes first and domesticity second.

**The Strand Magazine.**

THE leading article in the *Strand* Diamond Jubilee double number on "The Personal Relics of the Queen" is noticed elsewhere. Conan Doyle's serial, "The Tragedy of the Korosko," is cut down to half-a-dozen pages, and merely describes how the party of tourists was seized by the Dervishes and carried off into the Soudan. The article on "The Evolution of the Typewriter" is interesting reading, and the pictures drawn by typewriters will surprise many who have not seen such things before. The illustrated interview is devoted to Sir Martin Conway, and is copiously illustrated by photographs representing scenes in his mountaineering expeditions. The articles on "How Buildings Are Moved," and the new flying machine by Professor Langley, both deal with subjects more familiar to American than to British readers. Mr. Alfred Story gossips about "Captains of Atlantic Liners," and Mr. Pelham-Clinton prepares an article on the Queen's stables, with Her Majesty's permission and approval. The article on "Witch-Scarers" is an out-of-the-way narrative illustrating the way in which Red Indians scare away witches.

**The Pall Mall Magazine.**

THE chief feature in the *Pall Mall Magazine* for July is the beginning of a series of articles upon General Robert Lee of Virginia, by Henry Tyrrell. Mr. Frederick Whyte writes on the "Victorian Stage;" Mr. Schooling, on the contrast between 1837 and 1897. The sport of the month is Yachting, which is dealt with by Mr. R. S. Palmer. Mr. W. L. Alden has a short story, "A Volcanic Valve," describing how the eruption of Krakatoa was occasioned. It is an ingenious romance, attributing the great volcanic eruption to an unique experiment

by an American inventor, who fitted the volcano with a valve. The Marquis of Lorne, who will write an article upon Cliveden in the August number, contributes a poem from the Gaelic, entitled "The Fairy Blacksmith." In the August number, Lord Harris will write about Cricket, and Mr. R. S. Hichens and Lord Frederick Hamilton will write a psychical study under the title of "A Tribute to Souls."

**Scribner's Magazine.**

MR. H. E. HOLLAND describes "Undergraduate Life at Yale" in the series of articles which *Scribner's Magazine* is publishing on American universities. Mr. Steffens contributes the fifth paper on "The Conduct of Great Businesses," by describing the way in which the modern business building, the striking feature of the American city, is run and managed. From this we learn that they are beginning to introduce arcades, and the sky-scrapers are now being fitted up as residential chambers. They have bath-rooms on each floor, internal telephone systems, bicycle storage-rooms, libraries for the use of tenants, and ice-water in summer and heat in winter can be turned on when wanted. The article contains many interesting and novel facts, as, for instance, that the charwomen are hired on the basis of covering 32,000 square feet of floor per mop per day. The men who clean the outside windows of these lofty buildings are chained to the window-sills, and only work inside when the water freezes on the sills. From 20 to 100 men and women are employed on a building in which there are 6,000 tenants, and in some buildings the lift carries as many as 40,000 passengers per day. Mr. C. D. Gibson concludes his sketches of London people with some portraits of ladies, of Phil May and of Mr. Du Maurier. He says that the English are the most hospitable people he ever met, and they have laughed together about the same people in the truest and sweetest natured way in all the world. He also declares that English people are never forgetful of services rendered. Mr. Walter Crane contributes an illustrated article upon William Morris, which is important as being a tribute paid by one man of genius to another whom he knew well.

**Pearson's Magazine.**

*Pearson's* for July illustrates a growing tendency to postpone other interests to the quest after the curious and odd. Marcus Tindall describes the feats of certain performing horses; Garçon satirises the American button craze, which leads our cousins to wear buttons with pictures of anything that strikes their fancy, from an actress to an ironclad; M. Griffith depicts the art and mystery of doll-making, as seen in Jumeau's famous factory; Robert Machray collects a number of comic maps under the heading of geographical humour; V. M. Howard imagines or describes with comic diagrams certain odd uses to which electricity may be put. Mr. Malcolm Fraser gives a humorous sketch of alligator hunting in Florida, and Mr. C. Field presents a number of pictures of "figure-heads, past and passing." A dash of the gruesome is supplied by Geo. Griffith's account of the condemned cells. Mr. Holt Schooling's paper on the gradual increase in the length of life claims separate mention.

ELIHU BURRITT, the learned blacksmith, is the subject of an interesting sketch by Ellen S. Bartlett in the June *New England Magazine*.

# THE REBUILDING OF THE BRITISH NAVY.

## HOW A GREAT IMPERIAL WORK WAS BEGUN.

**I**N the great week of Jubilee which celebrated the completion of the sixty years of the record reign, there was nothing more significant than the Naval Review at Spithead, which brought the demonstrations to a close. The brilliant military pageant in London had supplied a bright and splendid decoration for a picture, of which the Queen was the central figure. The procession of Colonial and Imperial troops was also significant enough in its way, but the significance was rather of the future than of the present.

### THE NAVAL REVIEW AT SPITHEAD.

It was at Spithead, between Portsmouth and the Isle of Wight, that the real demonstration took place of the actual might of Britain. It was there, and there alone, where our rivals and foes recognised the manifested reality of our Imperial power. Sea power, as Captain Mahan has been teaching the world steadily for the last dozen years—sea power is everything, and at Portsmouth this Midsummer there was mustered the most magnificent fleet of the greatest Sea Power of the world. According to statistics, with which the papers abounded, there were no fewer than 160 modern fighting ships, of all sizes, but not one of them was obsolete. Almost all of them have been built within the last fifteen years. An army of 40,000 trained seamen manned the fleet, which, as it lay in three long lines at the threshold of the Ocean Gate of England, filled the patriotic observer with a feeling of profound gratitude not unmingled with a proper pride. Not for offence or aggression had that great fleet been created, but for the purpose of keeping free and open the highways of the sea, across which, summer and winter, midnight and noontide, there speed without resting the great fleets of merchantmen, carrying in their capacious holds the fruits of the harvests of the world by which our people are fed.

### A STORY OF THE BEGINNINGS.

The creation of this immense fleet is one of the most notable things that Britain has accomplished in the last quarter of the century. The rebuilding of the English fleet, by which was achieved the restoration of the Imperial naval supremacy of Great Britain, began in the year 1885. The story of the beginning of it is one that I may venture to put on record, without fear of the inevitable reproach of egotism, which is unavoidable, for it must be faced if the facts are told. The story, quite apart from the personal interest to myself, and to my innumerable friends and readers in all parts of the Empire, is an encouragement and may be an inspiration to those who are to come after us, for it shows how mighty a result has often been achieved by the most insignificant of instances, and how the whole future destiny of Empire may quiver in the balance, and the most fateful position may be precipitated by the humblest and most unexpected circumstances.

### MR. ARNOLD FORSTER'S APPEAL.

At the beginning of the year 1884, the naval power of England had sunk to its lowest point. It is difficult to-day, exulting as we do in the consciousness of the restoration of our naval strength, to realise the absolute despair which had fallen upon the best men in the

British Navy in the third and fourth years of Mr. Gladstone's Administration. It was the second year of my editorship of the *Pull Mall Gazette* when Mr. Arnold Forster, to whose initiative in this matter the Empire and the nation are deeply indebted, came to me, and in his brusque, abrupt fashion asked me when I was going to take up the question of the Navy. He then set forth roughly an outline of the actual position of things which, of course, I had often heard in a vague way before, but which had never been brought forcibly home to me. I asked him to leave his papers and undertook to do what could be done. I at once set about the fulfilment of my promise, and was soon overwhelmed with evidence that Mr. Forster had in no way exaggerated the danger of our position.

### THE BRITISH NAVY IN 1884.

It was evident that something must be done, and done at once, unless our Imperial position was to go by the board of Germany, who was just entering the field of Colonial extension. France was bitter and hot against us on account of the recently concluded Egyptian campaign. Little or nothing had been done to consolidate our Colonial Empire, and it seemed difficult to exaggerate the peril to which we were exposed. We depended absolutely on the Navy, and the Navy itself was far below par. To realise this condition of Imperial peril, and to devote every energy which, either personally or journalistically, I possessed to remedy it, was one of those duties which are instinctive, and for a month or more I lived and moved and had my being in what may be called the world of the Navy. I am fortunately dowered with a temperament that is almost absurdly optimistic. To see a great evil or a terrible peril clearly, is a sure prophecy that the time has come to strike a great blow against the evil, or to ward off the threatened danger. But notwithstanding this inheritance of buoyant confidence, I had some difficulty in making head against the all-pervading despair which possessed the Service.

### THE SEA LORDS IN DESPAIR

I well remember my first interview with the then First Sea Lord, who received me kindly at the Admiralty, listened to me with a certain sympathetic compassion, and assured me that it was all of no use. There was indeed in the old admiral's eye a certain feeling of incredulous wonder at the supreme audacity of the young journalist, who cheerily declared that if only he could secure his facts he would compel any Government, even Mr. Gladstone's, to grant as many millions as were necessary to restore the sea power of England.

"It cannot be done, sir," said Sir Cooper Key mildly, but firmly. "It is no use. I have done my best. We have all done our best, and we have failed—utterly failed. Do you think that you could succeed where all the Sea Lords have failed and move Mr. Gladstone?"

"Yes," I said, "I think I shall, if you will give me my facts."

"But," said Sir Cooper Key, bluntly, "I have already given them to Lord Northbrook. I have given them to Mr. Gladstone. We have all done everything short of resigning our offices to awaken the Government to a sense of the deadly peril in which we stand. But it is

no use. Mr. Gladstone thinks of nothing but Ireland and home affairs, and we can get nothing for the Navy, not a penny."

#### LORD ALCESTER'S GRIM PROPHECY.

One of Sir Cooper's colleagues, a bluff old Beauchamp Seymour, who was created Lord Alcester after the bombardment of the Alexandrian forts, was equally despondent, but expressed his despair in much more blunt, sailorlike language. He was speaking concerning the extent to which the Navy had been allowed to run down. I said to him, "But if these things are so, in case of a war, say, with France, what would happen?"

"I tell you what would happen," said Lord Alcester, grimly. "Within twenty-four hours of the declaration of war, Sir Cooper Key and I and all the rest of us at the Admiralty would be swinging by our necks from the lamp-posts in front of Whitehall, where should be strung up every man Jack of us by the nation whom we had betrayed, and it would serve us right too," said he. "But what can we do? We protest, we make representations, we threaten to resign—I really do not know whether it is not our duty to resign outright, and declare that we refuse to be responsible for a service which we know to be far below the safety level."

#### THE NAVAL OFFICERS WHO HELPED.

These were the two at the head, but when I went lower down in the Service and consulted the admirals, commanders of the Fleet, the captains in active service, the younger men who were coming forward to the front, and have since succeeded to chief command, I found everywhere the same story. Optimist or pessimist, they all knew their facts, and those facts were very bad indeed. I had an immense difficulty which all those connected with the Service will realise in getting officers to talk. I well remember one good captain, to whose patriotism and courage I was immensely indebted, who met me surreptitiously in byeways and highways, and always concluded his conversation by pledging me to the most solemn secrecy as to the source of my information, ruthfully adding:—"You have got enough in your wallet to break half the officers in Her Majesty's Service if you split."

Needless to say, the confidence so freely given was sacredly preserved, nor has a single naval man, from the highest to the lowest, ever had occasion to regret that, in face of the summons of supreme patriotic duty, he disregarded the regulations of the Service so far as to communicate the facts vital to the welfare of the nation to a journalist whose only object was to arouse public opinion to the true state of the Navy.

Thirteen years have passed since then. As to the survivors among those who helped me in working up "The Truth about the Navy," however grateful I may feel for the help they rendered their country on that occasion, I am still under the seal of secrecy, but as they read these lines they will understand.

#### VICTORY IN SIGHT.

As the weeks passed, and I gradually completed the survey of the British Navy and its coaling stations, which at that time were undefended—at the mercy of any enemy who cared to seize them—I felt perfectly certain that I had the case strong enough to break down even the impenetrable indifference of the Liberal Cabinet. Yet so obstinate had been the officials, and so long had prevailed the Liberal tradition that the first duty of the Chancellor of the Exchequer was to cut down the vote for the Navy, that I was almost in a minority of one

when on passing the proofs of "The Truth about the Navy" for the *Pall Mall Gazette* I declared that the victory was won before the first gun was fired.

#### LORD NORTHBROOK'S DECLARATION IN MAY.

It must be admitted that the doubting Thomases had reason for their unbelief. In the May of 1884, Lord Northbrook, who was the First Lord of the Admiralty, made a public declaration from his place in the House of Lords as to the excellence of the Service for which he was constitutionally responsible. According to him, as First Lord, the British Navy was in a position of super-eminent perfection. Those who wished to increase the estimates he derided as persons who had not been able to make up their minds as to what they wanted; and what with the division of opinion on their part, and with the excellence of the Navy on the other part, he did not hesitate to declare that if Parliament were to give him an extra vote of £2,000,000 sterling, he really would not know what to do with it—such was his confidence in the equipment of the fleet, and such his utter inability to discern any definite improvement that could be made in the Senior Service. That was a tolerably explicit declaration with which to confront the non-naval journalist whose good fortune it was to be the mouthpiece of all the ablest men in the Navy. They supplied me with their facts; I supplied them, as my share, with a buoyant faith in the possibility of rousing public opinion by the vigorous use of the *Pall Mall Gazette*.

#### "THE TRUTH ABOUT THE NAVY."

When "The Truth about the Navy" appeared, the effect which it produced was immense. The newspaper press, with few exceptions, took up the subject, for it is notable that in this last great Imperial work of the century neither the Commons nor the Lords rendered any service worth speaking of. The work was done from first to last by the Press. All that the Commons did was to vote the money which the newspapers had taught the public to demand. The articles appeared day after day until they were completed, and were then reprinted in a pamphlet, called "The Truth about the Navy and the Coaling Stations." I have never written anything in my life, not even "The Maiden Tribute," which produced so immediate and so overwhelming an effect upon public opinion. No doubt the ground had been prepared by many other writers much abler and far better informed than myself, but, as a matter of fact, all these good men had failed, and admitted their failure, when it came to my turn to sound the alarm; and to my dying day I shall never cease to remember with exultant gratitude the success—success undimmed even by a single flaw—which followed that patriotic appeal.

#### LORD DALHOUSIE'S REPORT.

Lord Dalhousie was then in a subordinate position in the Admiralty, and according to the story, he was asked by Mr. Gladstone to look into "The Truth about the Navy," and report to him. Lord Dalhousie, with the natural instinct of a naval man who finds his province suddenly invaded by a landsman, replied that he had no doubt that there was a lot of sensational exaggeration about the articles, but that he would take them home and go into the matter carefully. The result was that in a week or two he returned them to Mr. Gladstone with a statement that he had gone very carefully through the whole of the articles, and with the exception of a percentage of the breech-loading or muzzle-loading guns—I forget which—he had been unable to find a single mistake. Things were exactly as they were represented.

## LORD NORTHBROOK'S DEMAND IN NOVEMBER.

Then Lord Northbrook came home from Egypt, and found himself confronted by his own Sea Lords, and by his own most confident advisers, while the whole Press of the country was urging that something should be done. The Duke of Devonshire—who then was Lord Hartington, and as Secretary for War was responsible for the ordnance—did his best to take advantage of the change effected in public opinion, and in this he was ably supported by Mr. Brett, who was then his private secretary, and whose invaluable services in that capacity,

the story went that it was cut down by Mr. Chamberlain, who was then in a state of the blindest ignorance concerning all naval matters. Mr. Gladstone, falling back upon his one-foot-in-the-grave argument, left the responsibility for the supplementary estimate to Lord Northbrook and Lord Hartington. Mr. Chamberlain led the opposition thereupon, and succeeded in mutilating the proposals which the advocates for a supreme navy had with infinite difficulties forced upon the attention of the Cabinet. Fortunately, the mischief which Mr. Chamberlain had succeeded in effecting was overcome next year by the good

## THE NAVIES OF THE WORLD COMPARED.

*Reproduced from the "Daily News."*

like those of all good private secretaries, are known only to his chief.

The net result of it all was that within three months of the publication of "The Truth about the Navy," I had the supreme satisfaction of going down to the House of Lords to hear Lord Northbrook stand up in his place in the senate, and from the very bench where, in the month of May, he had declared that the Navy was so perfect he would not know what to do with £2,000,000 if he got it as a gift, he declared that the state of the Navy was such that he must have at least three and a half millions over and above the ordinary estimates of the year.

## MR. CHAMBERLAIN'S ILL SERVICE.

The sum which he had urgently demanded in the Cabinet it was always understood was even larger, but

service of the Emperor of Russia, who by his conduct in the Penjdeh incident succeeded in compelling the Liberal Administration to vote the money that was needed for the Navy, and then he allowed the incident to close.

## VICTORY ACHIEVED.

Ghastly, indeed, would have been the condition of England if, in 1885, the insensate folly of our Afghan officers had really precipitated us into war with Russia; but the episode did good service by compelling the Lords of the Admiralty to look war in the eyes, and realise how utterly unprepared they were in every respect.

From that date everything has been smooth sailing. A multitude of willing and able pens carried on the work with a zeal and a knowledge which left nothing to be desired. My task was over when, in face of a storm

of protest and a universal drizzle of discouragement, I succeeded in compelling Lord Northbrook and the Gladstone Administration, despite Mr. Chamberlain's protest, to admit that the naval power of England had fallen below par, and that millions must be spent in order to re-establish our position.

#### A COMPLIMENT INDEED.

The change that was produced in public sentiment had no doubt long been in preparation, but the publication of "The Truth about the Navy" was the spark which fired the mine. It led a gallant officer in the navy, who is now in the very first rank, to pay me one of the most magnificent compliments I ever received in the whole of my career. Its very extravagance will deliver me from any accusation of desire to pretend to have deserved it. It was on the occasion of my first visit to Portsmouth Dockyard, after "The Truth about the Navy" had appeared. I was presented to Admiral Hornby, who was then Commander-in-Chief. My host, who introduced me, said: "Admiral Hornby, I wish to present to you a man who has done more for the British Navy than any Englishman since the days of Lord Nelson!" However little a man may deserve such fantastic praise, the fact that such a compliment was paid with a full heart by an officer who realised how suddenly and completely the Service had passed from the darkness of despair to the joy of a new day, is a reminiscence upon which any one might be pardoned for dwelling with patriotic pride.

#### A TRIBUTE FROM THE UNITED STATES.

The extent to which the British Navy has been renewed since 1885 is very inadequately realised by the public at large; but there is an article by one Mr. Louis Nixon, in the *North American Review* for June, entitled "The Military Value of the Ship-yard," which shows how vividly this great Imperial achievement has impressed the imagination of other nations. Mr. Nixon is urging upon his countrymen to bestow more attention upon their Navy, and in order to emphasize his points, he calls attention to English naval policy. Since 1885, he maintains, England has made the shipyard the keystone of the arch of Imperial power. Her domination of the sea dates back of old, but Mr. Nixon points out that it was in 1885 that the new era of naval construction set in. England, he said, in that year recognised the new conditions, adopted them, applied them to a still greater expansion of her sea power, and set the pace of new construction which quickly made the other nations of the world lag by comparison with her strides.

#### WHAT HAS BEEN DONE SINCE 1884.

He summarises the result as follows:—

From 1885 to 1896, inclusive, England expended for new warships and their armament (including new breech-loading guns for some of the old ships) 97,000,000 pounds sterling in round figures (exactly £96,815,000). And Parliament in March last voted for the fiscal year beginning April 1st last 21,435,000 pounds sterling, the grand total since 1885 being 108,250,000 pounds, or the equivalent of 541,250,000 dols.

During the same period she has increased the *personnel* of her navy from 52,800 men in 1885 to 100,050 in 1897.

The grand total of all types and classes is 262 ships, displacing in the aggregate 1,209,400 tons and propelled by a total horse-power of 1,945,600.

This is England's increase of her navy since 1885. It is her expression of the value she places on the perpetuity of her sea-power. To all appearances it has sufficed to renew her lease of absolute autocracy on the ocean for an indefinite period,

because there has been no naval increase elsewhere, putting all the other Powers together, approaching the nature of a menace to it.

The naval progress of England since 1885 has been to that of France in the same period as 14 to 4; to that of Russia as 22 to 4; to that of Germany as 28 to 4; to that of Italy as 34 to 4, and to our own as 24 to 4. To avoid prolonged calculation, we will take 70 as the nearest mean common integer, and it will be seen that since 1885 England has built a new navy on modern lines which bears to the combined new navies of the rest of the world the ratio of 70 to 64.

#### WHAT IT MEANS TO ENGLAND AND THE WORLD.

Mr. Nixon so far forgets the facts as to speak of our overshadowing sea power as a perennial threat held over the rest of mankind; but that he has no justification for this may be deduced from the fact that when he wishes to illustrate it, he can only refer to an instance in which the Navy is potent not in attacking our neighbours, but in preventing them from attacking us. Referring to the stories telegraphed to the American newspapers, and greedily swallowed by readers whose knowledge of European affairs is not even elementary, that the German Emperor was arranging a European coalition against us in case difficulties came to a head in the Transvaal, Mr. Nixon says:—

The whole continent of Europe could not land one soldier in South Africa or anywhere else by sea transport against the will of England. Or, if by stealth or stratagem or by British neglect they should succeed in landing their soldier, they could never afterward supply him with three days' rations from a sea-base without England's consent. These are facts of the most stubborn kind, though everybody, except the English themselves, seems trying to evade or ignore them.

#### THE VALUE OF SEA POWER.

Mr. Nixon concludes his paper as follows:—

Summing up, we find that British shipbuilding has built the British Empire as we see it to-day; that, having built the empire, it maintains its integrity, asserts its supremacy, and, as compared with the feeble efforts of other Powers, assures its impregnability in sea power; all this in the military sense only. If we extend our view to the commercial, industrial, and financial aspects of the resulting state of things, the contemplation becomes if possible still more astounding. British ships now carry more than seven-tenths of the world's ocean-borne commerce as a whole, not merely in the traffic between other countries and Great Britain herself, but in the international traffic of all other countries with each other, irrespective of British ports. This is a source of absolute tribute from all nations to Great Britain amounting to nearly eight hundred millions of dollars a year, every cent of which is cash on a gold basis. And the only escape from it possible to any nation under present conditions is simply to stop trading; because, as matters stand, there can be no sea-borne commerce unless it is carried in British ships. For the time to come, if existing conditions are perpetuated, our lot will be little better than that of producing cargoes for British ships to carry, and of earning money to pay British traffic-tolls.

#### THE UNITED STATES AND THE BRITISH NAVY.

This is an exaggeration on the part of Mr. Nixon, but it is well to see how our naval position strikes our American kinsmen. But of all mad ideas, the maddest is surely that which sees in the British Navy a menace to the United States of America. At present our friends in the States have hardly begun to realise what empire over-sea means. After much hesitation they have at last decided to make the plunge, and in the Sandwich Islands they are establishing their first external dependency. The first, but not the last. As Mr. Maxim said to me long ago, "I guess we come of your breed, and as you have done we shall do." But no Englishman ever regards the American Navy as other than an ally of our

own. The moment the American people address themselves seriously to the task of external extension, they will discover the value of the English alliance which it has been the object of the *REVIEW OF REVIEWS* to advocate in all sections of the English-speaking world since it first issued from the Press.

#### THE DUAL FLAG OF THE ENGLISH RACE.

It is no use talking of their illimitable resources and energies as compensating for prior occupation. For if the citizens of the United States determine to adopt an external policy without the British alliance, they will find that they are practically shut out of three-fourths of the world. In modern warfare coaling stations are an indispensable basis for naval operations, and without these stepping stones of empire, no naval power can make itself felt far beyond its native shores. If an alliance were formed by which the common race agreed to regard their two flags as mutually interchangeable or identical in the face of a common foe, this difficulty would not arise. This is a contingency the advantage of which our American kinsmen will recognise in due time.

#### THE DOOM OF THE IRONCLAD: (1) AERIAL TORPEDOES.

Foreign observers vie with our American critics in paying homage to the magnificence of the naval display at Portsmouth, and yet even as we steamed down between the lines of the greatest armada the world has ever seen, there was not lacking the haunting thought that the opening century will probably sound the death knell of all this mighty armament. Even in Jubilee Week Hiram Maxim, the man who has given his name to the latest sceptre of civilisation, was predicting the doom of the large ironclad at the muzzle of the artillery of the future. The gun which Mr. Maxim maintains will practically revolutionise naval warfare partakes of the nature of an aerial torpedo. At present torpedoes are launched under water. They are subjected to the influence of currents and tides, and their range is far short of a mile. But, says Mr. Maxim, if you will launch your torpedo through the air, it will be easy to construct a gun which will enable you to hurl a ton of dynamite or some still more potent explosive for nine miles in any direction you please. A very small boat with a twenty-four inch gun or torpedo tube, capable of firing a ton of picric acid or melenite at any ship within nine miles range, would be a very ugly customer indeed. And yet, according to Mr. Maxim, one hundred such vessels could be built for

the cost of one of the great Leviathans which were reviewed at Spithead.

#### (2) AIR-SHIPS.

Last month, too, the attention of the world was somewhat sharply called to the possibilities of aerial warfare in navigable air-ships by the misfortunes which overwhelmed Dr. Wolfvent whilst experimenting in his air-ships in Germany. No doubt Dr. Wolfvent lost his life, but his ship flew, and before many years are over we shall find ourselves face to face with aerial ships whose inventors will not lose their lives. Against a navy in the clouds dropping charged torpedoes from above our men of war would be powerless.

#### (3) SUBMARINE BOATS.

Nor is that by any means the only danger which threatens our naval supremacy. The American newspapers publish every month, and sometimes oftener, the most marvellous stories as to the progress that has been made in the construction of submarine torpedo-boats. The last which came to hand described what has been achieved by a Mr. Holland, of New York, whose boat, if the newspaper report be correct, is capable of remaining under water with her crew, of moving about silently and invisibly under the very keels of our ships, to each of which she could affix a torpedo which could be fired either by a timepiece or by electricity as soon as the invisible engine-boat had retired to a safe distance.

#### (4) THE MARCONI CURRENT OF ELECTRICITY.

There is also the startling possibility suggested by the recent experiments in electricity, to which we called attention in a recent number of the *REVIEW OF REVIEWS*, the suggestion being that it might be possible to fire the magazine of any ship of war within the range of many miles by simply passing an electric current of sufficient degree of intensity through the water on which the ship was riding.

All these things may be. Into the future it is impossible for us to pry more than a very little way. It is probable enough that never again in the history of the world will mankind witness so imposing a spectacle of readiness for naval war, but such is the fate of all mortal things, and when the morrow comes we shall be prepared to meet its demands. We shall be prepared to meet it with the same indomitable energy and wealth of resource which has enabled us to place Britain at the forefront of the world.

THE CEREMONY BEFORE ST. PAUL'S, JUNE 22, 1897,

# THE BOOK OF THE MONTH.

## THE JUBILEE OF THE QUEEN.

THERE was no Book of the Month in June but the Jubilee. There are other books than those composed of printed sheets, and this is one of them. It is a book in three volumes—the first, the Majesty of the Monarchy; the second, the Sovereignty of the People; and the third, the Plenitude of Imperial Power. In these books the English-speaking folk, in all their lands, have been reading from day to day since the Jubilee began. And it has been with us as it was in the Apocalyptic vision when the great book, written within and without and sealed with seven seals, was opened. Ever since Jubilee Day we have all been singing a new song to the Queen and Her most excellent Majesty, who has made us realise that we are one family and of one blood, that we have become kings and rulers on the earth.

And as we heard the voices of those who sang, the number of them was ten thousand times ten thousand, and thousands of thousands. Nor was it the voices of the living alone that seemed to mingle in the strain. For, as when the books were opened and another book was opened, which is the book of Life, the dead, small and great, stood before the Throne. In the noble ode which Francis Thompson contributed to the *Daily Chronicle*, he sang:—

Lo, in this day we keep the yesterdays,  
And those great Dead of the Victorian line.  
They passed, they passed, but cannot pass away,  
For England feels them in her blood like wine.  
She was their mother, and she is their daughter,  
This Lady of the water,  
And from their loins she draws the greatness which  
they were.  
And still their wisdom sways,  
Their power lives in her.  
Their thows it is, England, that lift thy sword,  
They are the splendour, England, in thy song,

They sit unbidden at thy council-board,  
Their fame doth compass all thy coasts from wrong,  
And in thy sinews they are strong.  
Their absence is a presence and a guest  
In this day's feast;  
This living feast is also of the dead,

And this, O England, is thine  
All Souls' Day.  
And when thy cities flake the  
night with flames,  
Thy proudest torches yet shall  
be their names.

From *Punch*

JUBILATE! IO TRIUMPHE!

The Queen of Sixty Years.

[June 22, 1897.]

exactly analogous to the familiar phenomenon of a religious revival.

There was the great awakening to the real bearing of truths often languidly assented to but never fully perceived to have any vital personal relation to a man's own life. There was the repentance not unmingled with self-reproaching marvel that we had been blind so long to so great and so obvious a truth. And, finally, there was the utmost ecstatic joy that naturally results from a discovery that, despite all our shortcomings and all our sins and all our failures, we had, nevertheless, been miraculously and gloriously saved, not by any merit of our own, but by the grace of God. The uncontrollable outburst of intense emotion that is wit-

It is not for me to attempt to condense into a page or two of cold print the contents of this book of the Jubilee, or to express the effect which its perusal produced upon a nation, enthusiastic indeed, but by no means much addicted to ecstasies. For the whole month the heart of the ordinary commonplace Englishman has been throbbing with the pulse-beat of that morning drum which gave the American orator so magnificent an ideal of our Imperial position. The strange thing about it all is that there was nothing new in the elements which brought about so astonishing an exaltation. But there is a great difference between mere head-knowledge and realising faith. A mere intellectual acquiescence in a proposition is one thing, the saving faith that apprehends and appropriates and incorporates it with the life of the heart is another thing. And that is just what happened this Jubilee. It was in Imperial and national life

nessed when—to use the technical phraseology of the Inquiry Room—a poor, lost, hell-deserving sinner puts forth the hand of faith, and grasping the finished work of Christ, passes in a moment from death into life, is the nearest analogy which can be adduced to explain the hitherto unknown spirit of exultant joy and unspeakable gratitude which culminated in the Jubilee. There was nothing new in the facts of the reign or of the Empire any more than there is anything new in the great doctrines of the Christian Church. In every land and at all times there have been those who have lived in more or less constant and vivid realisation of the true relations both of the soul to God and of the Empire to the race. But they are always the few; the elect souls are always in a minority. Only on rare occasions, when the windows of heaven appear to be opened, a realising sense of the truth of things seems to flood the world. And ordinary folk who had seemed incapable of living above the commonplace, become suddenly transfigured with a radiance that is not of this world.

The Jubilee had all the distinctive notes of a Revival. It was carefully prepared for long in advance, but when it came it simply struck us dumb with amazement and surprise. Mark Twain, the genial American humorist, who by good fortune happened to be in London last month, communicated his impressions to his countrymen in terms which express better than those couched in more dignified phrase this note of wonder and amazement:—

I never dreamed of so stunning a show. All the nations seemed to be filing by. It was a sort of allegorical suggestion of the Last Day, and some who live to see that day will probably recall this one, if they are not too much disturbed in mind at the time.

That was the exclamation of an American, an outsider, speaking from the outside when dazzled by the new and unexpected splendours which he declares much surpassed any pageant that he had ever seen. What then must it have been to the Briton to whom all these things were but a revelation of his own, of which he had hitherto been so strangely unaware?

There was nothing new about it all, we keep repeating. How absurd to be so thrilled about what everybody knew! It reminds us of Molière's hero, who was so transported with joy on discovering that he had been talking prose all his life without knowing it. But it is of no use trying to wet-blanket the flame of patriotic emotion with such reflections. For the prose which we have been talking has been the building of Empires, and, as Mr. Reid, the Premier of New South Wales expressed it, "the growth of British power throughout the world is another guarantee for the peace, progress, and prosperity of mankind." It is true that Daniel Webster sixty-three years ago expressed in sonorous eloquence the impression which the Colonial procession produced upon the man in the street. Webster described England even then, when our Empire was but in its swaddling clothes, as

a Power to which Rome in the height of her glory is not to be compared; a Power which has dotted over the surface of the whole globe, with her possessions and military posts, whose morning drum beats, following the sun, and keeping company with the hours, circles the earth with one continuous and unbroken strain of the martial airs of England.

But men of genius and imagination are like lone watchers on the mountain top, who see the splendour of the dawn long before a ray of sunlight has pierced to the misty plain at their feet. And the effect of the Jubilee cannot be better summed up than by saying that

our millions for the first time heard the beat of that morning drum going the round of the world:—

Such visions are of morning,  
Theirs is no vague forewarning.  
The dreams which nations dream come true.  
And shape the world anew. . . .

Down the happy future runs a flood  
Of prophesying light;  
It shows an Earth no longer stained with blood,  
Blossom and fruit where now we see the bud  
Of Brotherhood and Right.

It is no place to attempt to describe the series of demonstrations which began with the arrival of the first of the Colonial Premiers and culminated in the splendours of the naval display at Portsmouth. It is enough for me to endeavour to indicate the inner spirit to sound again, however faulty, the note which made millions catch their breath, and caused tears of gratitude and pride to dim the eyes of a whole nation.

That I have not exaggerated it in any respect, American and foreign observers abundantly testify. After the Thanksgiving Service at St. Paul's, the American Ambassador and special Envoy bore emphatic testimony to the deep impression produced by the splendid outburst of loyalty they had witnessed as the glories of the British Empire passed by. Mr. Chauncey Depew declared that the reality was far grander and more picturesque than the spectacle that had been conjured up in anticipation. It was the most superb exhibition of world-wide Empire and loyalty to a sovereign witnessed in modern times.

But it was reserved for the French, so long our rivals on the sea, to pay the most signal homage to the lesson of the Jubilee. The *Temps*, for instance, says:—

The whole of Europe has contemplated with an admiration not exempt from envy this grand affirmation of national unity in the loyalty, spontaneity, and sincerity of their homage rendered by so many millions of men to the public and private virtues, the pure and spotless life, the tact, prudence, and truly constitutional spirit of a Sovereign whose real greatness has consisted in not remaining an inch within the limit of her duties, but also in not going a hair's-breadth beyond her prerogative. Conspicuous in these *fêtes*, which were saddened by no accident, by no even momentary excess on the part of the crowd, was that spirit of order, that manly self-control, that habit of respecting in the liberty of others the sole guarantee of your own—in a word, those qualities of discipline and self-government which are the honour and strength of the English character, and which, slowly acquired by ages of effort, are the unshakable foundations of the edifice of public freedom. . . . And all this civil and military pomp, all these intoxicating sensations to which a people has given itself for a week are, as it were, summed up and concentrated in the proclamation unceasingly repeated and re-echoed from every quarter of the heavens of the greatness and power of the British Empire one and indivisible.

This was the dominant trait, the special characteristic of this Jubilee, in which Imperialism appeared for the first time as a first-class power—asserted by the striking demonstrations of the patriotism of the mother country and the colonies—visibly embodied by the group of the Prime Ministers of the self-governing colonies, whose appearance in the midst of the brilliant uniforms were somewhat austere but all the more noticeable on that account—and transfigured in the Spithead review, an apotheosis of the sea, the element prepared by destiny for Anglo-Saxon conquest and expansion, and of the Fleet, the symbol and instrument of national unity.

Of the Naval Review and the impression which it left upon the minds of those who saw it, I prefer to quote the generous tribute of the nation with which we have contended for centuries for the lordship of the seas.

For the most touching of all the tributes to the naval review proceeded from the pen of M. Melchior Vicomte de Vogüé, the most brilliant of all workers in contemporary France. Writing in the *Figaro*, M. de Vogüé says:—

The Invincible Armada would doubtless appear a mere toy alongside these ninety-two giants ranged in three long lines, motionless under their heavy armour, covered by a curtain of seventy-three despatch or torpedo-boats. Behind them lay the line of foreign warships, which seemed like a deputation of tributaries. The swarm of craft filled with spectators from the enormous Cunard liner to the little sailing cutter, they move with the same confidence as busy pedestrians in the crowded London street. The sea is their home, the familiar room in which they would walk blindfold, the obedient material which they handle with ease. One common sentiment animates all these men as even the most obtuse spectator can divine. Beyond the visible lines which our vision takes in, the Englishman discerns their invisible prolongations, the chain of similar rings which encircle the globe. For these numerous vessels are only the children remaining at home. Of their brethren, scattered over every ocean, not one has stirred. To-day, as yesterday, they are keeping watch at their posts in Asia, Africa, Oceania, the trusty watchdogs of England, ready to bite anywhere at an order from the mother-country. That order English thought can transmit in a moment. It runs at the bottom of the sea on English cables. Above and beneath the ocean the two networks of iron, that which orders and that which executes, are well riveted round the planet. The world is fast held in the double net of the Saxon fishermen, a world, an empire in comparison with which the Roman Empire was but a little State. You will, doubtless, correct me, "Not Rome, but Carthage." Yes, of course, Carthage in certain respects, by the predominance of material interests, by the ardent thirst for lucre. But let us be fair, Rome as well, Rome by will, courage, the intellectual force of genius, the duration and nobility of traditions.

Pride—the word is ever coming from my pen, but assuredly not as a reproach. This is the sentiment which to-day pours out from their souls, which is read in their countenances, which is audible in all their words. And we deem it legitimate, this national pride. It comes from successes obtained by the tenacious efforts of beloved ancestors, by the sacrifices of the present generation, by the firm intention of persevering at all cost. Let us not grudge this noble people nor her who rules it our tribute of admiration and respect. Were the collision of this mass to crush us, he would not be worthy of the name of man who did not feel a little more proud of that name in the presence of the spectacle offered us by the English nation, in the presence of the greatness of these men, who have carried human genius to such a height. . . . One would have said that the English signified to us to-day, and with strong reasons for their claim, that the express decree of the Eternal had conferred on them the command of the sea.

All that is true and is well said. But it was neither the Colonial Procession nor the Navy that most touched the nation's heart. It was the Queen herself. Her appearance on Jubilee Day was a positive revelation to her subjects. That plain little Lady in Black in the midst of the gorgeous cavalcade of princes for the first time was seen as she is. Since last Jubilee what a transformation! What have the photographers been doing that they never gave us a hint of the way in which age has transfigured, not to say glorified, these familiar features? Never before was I so astonished at the change in any face. There was in the Queen's countenance as she passed through the long miles of embodied enthusiasm, an expression of might and of beneficence I had never seen before. There was majesty, but it was suffused with kindness, but the supreme expression was one of power and tenderness. We felt we had never known her till then. But again I dare not suffer myself to speak, and will fall back upon the written words of Americans who owe her no allegiance.

Mark Twain wrote in his description of the procession:—

All the world rose to its feet and uncovered. The Queen Empress was come. She was received with great enthusiasm. It was realisable that she was the procession herself; that all the rest of it was mere embroidery; that in her the public saw the British Empire itself.

Even more striking is what Mr. Harold Frederic sent to the *New York Times*, as summarised by Mr. Smalley in his cable to the *Times*:—

After remarking that the English are still dazzled by a triumph so much greater than was anticipated, Mr. Frederic explains that their delight springs not only from the demonstrations of Imperial power, not only "from the pages of telegraphic reports from a thousand red points all over the globe," not only from the proofs of colonial loyalty, in which all Englishmen have learned to believe, not only from the remarkable tribute of the Continental Press, lately so used to preaching that England had become a second-rate Power, while now comes "an unbroken chorus of admiration from all the European capitals." Then he says:—

"This is not what has made England turn hot and cold under such a thrill of conscious destiny as never was known before. How shall one express it? The thing has not come to the English people from without. It proceeds from within them. It burst forth tremblingly at the sight of the Queen. She became visibly transfigured before the eyes of her subjects. Those who could not see caught the throb from those in the front. It ran from heart to breast through the kingdom with more than electric swiftness. It was all the Queen, this most beautiful lady with delicately gray hair and an expression which gave you at once the sublimity of majesty, pride, and tenderness."

THE NAVAL REVIEW AT SPITHEAD: THE SANSPAREIL.

## SOME NOTABLE BOOKS OF THE MONTH.

### MR. MORLEY ON MACHIAVELLI.

Messrs. Macmillan and Co. publish the Romanes lecture for 1897, which was delivered by Mr. John Morley at the Sheldonian Theatre, Oxford, on the 2nd of June last, in a cloth bound volume of sixty-four pages. The lecture itself, if printed in full, would hardly fill ten pages of the Review, but there is plenty of good matter compressed into this small space.

The subject, it must be admitted, is a tempting one, and Mr. Morley, as the wearer of the mantle of John Bright, and the most conspicuous living exponent of the moral law in politics, affords a striking contrast to the sinister Italian of the sixteenth century. Of Lord Rosebery it has been said that there is in him the making of a saint were it not that in his temperament there is a strong infusion of Machiavelli. But not even his worst enemies have ever accused "Honest John" of any sympathy, latent or otherwise, with the cynical exponent of Italian statecraft. There is, however, as many philosophers have observed, a certain attraction of opposites which often is as potent as the antipathy which is felt by persons who resemble each other too closely, and the study of Machiavelli has evidently been to Mr. Morley a labour of love. "For thirty years and more," Mr. Morley says, "this singular shade has been seen in all the great countries all over the West, haunting men's minds, exciting, frightening, provoking, and perplexing them like some unholy necromancer, bewildering reason and conscience by riddles and paradox." No writer has ever been so fiercely abused, so continuously studied, and, if Mr. Morley be right, so faithfully followed by the rulers of men.

It is impossible in such brief space as can be spared here to attempt to follow Mr. Morley in his brilliant characterisation of the Italian genius. In our own country, Thomas Cromwell, Queen Elizabeth and Lord Bacon among the makers of modern England, drank deeply at the troubled waters which sprang from the Machiavellian fount. Mr. Morley points out that the makers of modern Europe would appear equally to have sat at his feet. William the Silent, Henry of Navarre, Elizabeth of England, Frederick the Great of Prussia, and above all Napoleon, supply only too forcible illustrations of the extent to which the Machiavellian doctrine continues to spring up eternal in the heart of man. Mr. Morley takes an extremely hostile view of Napoleon, of whom he speaks as follows:—

Napoleon, a Cæsar Borgia on a giant scale, deliberately called evil good and good evil; and, almost alone among the past masters of all the arts of violence and fraud, he sacrificed pity, humanity, faith, religion and public law, less for the sake of the State than to satisfy his own ravening egotism and exorbitant passion for personal domination.

Frederick the Great is "the aptest of all modern types of the perverse book." Nor does Mr. Morley refrain from the passing jibe at some of his contemporaries, of whom Goldwin Smith and Lord Wolseley are not difficult to discern. "The misgivings of a political valetudinarian" is not a bad phrase for the later writings of Mr. Goldwin Smith, and Lord Wolseley's soldier's text-book is laid under contribution to show that in the battlefield at least the ethics of Machiavelli prevail in full force. Science also, he points out, tends to give an apparent justification of the Italian's teaching. "Nature does not work by moral rules. Why should States? Is not the

whole universe a sentient being haunted all day and all night long by the haggard shapes of Hunger, Cruelty, Force, and Fear?" But what is the real doctrine of Machiavelli? Mr. Morley thus summarises the essence of the lessons which he inculcated on the world:—

He has been charged with inconsistency because in the "Prince" he lays down the conditions on which an absolute ruler, rising to power by force of genius backed by circumstances, may maintain that power, with safety to himself and most advantage to his subjects; while in the "Discourses" he examines the rules that enable a self-governing State to retain its freedom. The cardinal precepts are the same. In either case the saving principle is one: self-sufficiency, military strength, force, flexibility, address, above all, no half-measures. In either case the preservation of the State is equally the one end, reason of State equally the one adequate and sufficient test and justification of the means. The "Prince" deals with one problem, the "Discourses" with the other, but the spring of Machiavelli's political inspirations is the same, to whatever type of rule they apply—the secular State supreme; self-interest, and self-regard, avowed as the single principles of State action; material force the master-key to civil policy. Clear intelligence backed by unsparring will, unflinching energy, remorseless vigour, the brain to plan and the hand to strike—here is the salvation of States, whether monarchies or republics. The spirit of humility and resignation that Christianity had brought into the world, he contemns and repudiates. That whole scheme of the Middle Ages in which invisible powers rule all our mortal affairs, he dismisses. Calculation, courage, fit means for resolute ends, human force—only these can rebuild a world in ruins.

For it is frequently necessary—and here is the sentence that has done so much to damn its writer—for the upholding of the State to go to work against faith, against charity, against humanity, against religion; and a new prince cannot observe all the things for which men are reckoned good.

The universal test is reason of State. We should never condemn a man for extraordinary acts to which he has been compelled to resort in establishing his empire or founding a republic. In a case where the safety of a country is concerned, whether it be principedom or republic, no regard ought to be paid to justice or injustice, to pity or severity, to glory or shame; but putting aside every other consideration, that course alone ought to be followed which may preserve to the country its existence and its freedom.

Mr. Morley then proceeds to deal from the point of view of the moralist with Machiavellian doctrines. But he does not much improve upon Diderot's pithy criticism embodied in the suggestion that "the most distinctly Machiavellian chapters might be headed as 'The circumstances under which it is right for a Prince to be a scoundrel.'"

Mr. Morley thinks that the popular clamour against Machiavelli was based upon a sound instinct. Machiavelli only saw half of human nature, and that the worst half. The world, although at tortoise pace, is steadily moving away from Machiavelli and his Romans. The modern conception of a State has long made it a moral person capable of right and wrong, just as are the individuals composing it. Machiavelli, in discussing the art of government which was the security and permanence of the ruling power, started from the fundamental principle that the application of moral standards to this business was as little to the point as it would be in the navigation of a ship. But these moral principles, which he puts on one side as irrelevant, are nothing less than the living forces by which societies subsist and Governments are strong. In a fine passage,

Mr. Morley eulogises Calvin and the theocracy which he founded at Geneva as the triumph of moral force in spite of all his shortcomings. If moral force and spiritual force is exhausted, with what hope are you to look for either good soldiers or good rulers? Mr. Morley sums up his judgment by declaring, "In the great cycles of human chance, Machiavelli can have no place among the strong thinkers and orators and writers who have elevated the conception of the State and humanised the methods and maxims of government and raised citizenship to be a partner in every virtue and in all perfection. If he represents certain living forces in our actual world, and is not a vanishing type, but a constant and contemporary influence, this is because energy, force, will and violence still keep alive in the world their resistance to the control and justice of conscience, humanity and right."

### A PROPHECY OF STRIFE.

By MR. MARION CRAWFORD.

MR. MARION CRAWFORD looks forward to the future with a mind full of gloomy foreboding. He sees coming a time of struggle and battle the like of which has never been seen since the beginning of the world.

#### THE COMING SOCIAL WAR.

In his new novel, "A Rose of Yesterday" (Macmillan, 6s.), he points out the issues on which this battle will be fought:—

The Social War, which is coming, will turn incidentally upon religion, and be perhaps called a religious war hereafter, but it will not be declared for the sake of faith against unbelief, nor be fought at first by any church, or alliance of churches, against Atheism. It will simply turn out that the men who fight on the one side will have either the convictions or the prejudices of Christianity, or both, and that their adversaries will have neither. But the struggle will be at its height when the original steady current of facts which led to inevitable strife has sunk into apparent insignificance under the raging storm of conflicting belief and unbelief.

#### "SO-CALLED PROGRESS."

It is on the question of divorce that Mr. Crawford thinks the battle will first be fought. He has conjured up a fearful monster and labelled it Socialism, and he pictures it roaming over the land seeking whom it may devour. He thinks that Socialists naturally attack marriage because marriage is an incentive to accumulation, perpetuates families, and keeps property together:—

Socialism, collectively, has dug a mine under Social Order's strongest tower, which is called marriage, and the edifice is beginning to shake from its foundations, even before the slow match is lighted.

Mr. Crawford evidently wishes to make a pitched-battle out of the preliminary skirmish on the question of divorce. He does not, however, seem to have much confidence in the ultimate issue of the conflict, for he remarks bitterly:—

In what is called Society, there seems still to be a prejudice against a third marriage for divorced persons, but at the present rate of so-called progress this cannot last long, and the old significance of the word marriage will be quite lost before our great-grandchildren are dead; in other words, by the end of the next century at the furthest.

#### WOMAN'S "MORE OR LESS IMAGINARY RIGHTS."

Mr. Crawford professes to have great faith in and admiration for women, and there are many fine passages in his book in which he describes woman's devotion and love. But, in reality, he does not appear to have either much trust or faith in men or women. Take, for

instance, the following passage. As a cynical view of human nature it would be hard to beat:—

They (the Socialists) practically propose to take away woman's privileges in exchange for certain more or less imaginary "rights." There is an apparent justice in the "conversion," as it would be called in business. If woman is to have all the rights of man, which, indeed, seem reducible to a political vote now and then, why should she keep all the privileges which man is not allowed? But tell her that when she is allowed to vote for the President of the United States once in four years, no man shall be expected to stand up in a public conveyance to give her a seat, nor to fetch and carry for her, nor to support her instead of being supported by her, nor to keep her for his wife any longer than he chooses, and the "conversion" looks less attractive.

What do these much-vaunted privileges amount to? Not very much, Mr. Crawford himself being judge. He says:—

It is a wonder that women should love, seeing what some men are and what most men may be when the devil is in them. It is a wonder that women should not rise up in a body and demand laws to free them from marriage, for one half the cause that so many of them have.

#### AN UNHAPPY MARRIAGE.

Mr. Crawford's point of view is that marriage is a bond and not a contract. The difference between the two definitions he does not make very clear. The whole story is told to enforce this point of view. As a story it is admirable, and as a study of life it is well drawn; but as a demonstration of the correctness of his views it is decidedly disappointing. Few books will do more than "A Rose of Yesterday" to convince the reader that in some cases divorce is a beneficent institution. Briefly the story is this. Helen, the central figure of the story, marries a Mr. Harmon when she is very young. She never really loves him, and he soon grows tired of her. Harmon was handsome and full of life, but he changed rapidly. From being fast he became dissipated. He drank systematically. In his drunkenness her face recalled other days to him, and forgotten words of passion found thick and indistinct utterance. Once she turned on him, white and desperate, in self-defence. He seized a cut-glass decanter from her toilet table and struck her on the forehead. He deliberately ill-treated his son without his mother's knowledge, so that he grew up half an imbecile. At last Harmon almost killed a man who took care of him, and had to be taken to an asylum struggling like a wild beast. Colonel Wimpole, a very fine character, had loved Helen as a girl, and had continued to do so ever since. In reality she loved the Colonel, but neither would confess the fact. When the story opens Helen is in Lucerne, leading a peaceful life taking care of her son. She is filled with an enormous loathing for the man who is still her husband. Suddenly she receives a letter from Harmon, saying he is better, asking forgiveness for the past, and begging to be allowed to come back to her.

#### WHAT IS TRUE FORGIVENESS?

The greater part of the story is devoted to describing Helen's struggle, between her head and heart, as to how she shall answer this appeal. She regards Harmon with dread and loathing on account of herself and her son, but is possessed with the idea that she must return to him and take care of him, having bound herself to do so by the marriage vow. Colonel Wimpole urges her not to sacrifice herself and her son to such a brute as Harmon.

"You are pressing me to do what is wise, not what is right. Don't do that! Please don't do that!"

"Do you forgive him?" asked the Colonel very gravely.

She paused before answering him. "Why should you doubt it?" she asked in her turn. "Don't you see that I wish to go back to him?"

"You know what I mean. It is not the same thing. You are a very good woman, and by sheer force of goodness you could make an enormous sacrifice for the sake of what you thought right."

"And would not that be forgiveness?"

"No. If you freely forgave him it would be no sacrifice, for you would believe in him again. You would have just the same faith in Harmon which you had on the day you married him. If forgiveness means anything, it means that one takes back the man who has hurt one, on the same real inward terms with oneself on which one formerly lived with him. You cannot do that, for it would not be sane."

"No, I cannot quite do that," Helen answered.

#### LOYALTY TO THE LETTER, NOT THE SPIRIT.

Marion Crawford makes it unmistakably plain that the whole of the spirit of the marriage vow had gone beyond possibility of return, but the letter was still of binding force which it would be a sin against God and man to undo. Thus Mr. Crawford himself reduces marriage almost to the mere contract which he denounces. He is very severe upon anything like compromise or any law to correct bad results, but to cut away abuses and remove injustice from an institution does not necessarily destroy that institution; on the contrary, it invariably strengthens it, so long of course as in the process the foundations are left uninjured.

### THE GROWTH OF THE ENGLISH-SPEAKING RACE.

By SIR WALTER BESANT.

In order to enable Englishmen to take an intelligent interest in the great Colonies which look to us as their Motherland, Messrs. Horace Marshall and Son have commenced the publication of an excellent series of histories, entitled "The Story of the Empire." These will tell briefly the stories of the various portions of the British Empire. The series is to be edited by Mr. H. Angus Kennedy.

#### THE EVOLUTION OF THE VILLAGE.

Sir Walter Besant writes the first volume on "The Rise of the Empire" (1s. 6d.). He gives us a brief but comprehensive glance of the gradual expansion of the Empire from the earliest times. In "The Making of the People" Sir Walter describes the drawing together of isolated villages, each almost entirely self-supporting. Almost, but not entirely. The great civilising agent, Sir Walter Besant maintains, was—salt. Without it life is intolerable. To obtain it mutual intercourse and barter is necessary. So trade grew and taught men to break bread with each other rather than break each other's heads.

Trade bound a people together, but war welded them into a nation. It taught in a rough-and-ready fashion the duty of union. So the English nation was formed; but to the villager the whole world was an unknown wilderness. Suddenly all this was changed. The villager became a Christian, and he began to go on pilgrimage. In this way the Englishman, as we know him, was moulded.

#### THE AVERAGE ENGLISHMAN.

The following is Sir Walter Besant's character sketch of the average Englishman:—

He is, to begin with, more readily attracted by things practical than by things theoretical; he prefers a feat of arms to any intellectual achievement; he would rather hear of things done than of things attempted; he worships success in

everything, because success means battle and victory; he is combative and aggressive; he likes fighting as much as his ancestors. Whenever there is fighting to be had, whenever the army is creditably engaged, the recruits flock in by thousands. He is subject to restlessness; he cannot be always sitting still; he will throw up his situation and go roaming about the world; he likes trade, especially trade across the seas, because it demands enterprise and courage—it is a great mistake to suppose that the love of trade denotes a mean and money-grubbing spirit. He is profoundly religious, but he will not endure the dominion of priests; he is tender and even chivalrous towards women; he loves children; he sits at home with his wife and children, and desires no other society. To the kings who have from time to time attempted to extend the royal prerogative, and to curtail his own liberties, he has always opposed a steady, stubborn resistance—in the long run it has been the worse for that king—and he demands freedom of speech, freedom of thought, freedom of faith. He insists on self-government as his inheritance, he enters into combinations and associations with readiness, and understands what is meant by give and take. He is not the most courteous person in the civilised world; he is well satisfied with himself; he seldom troubles himself much about the position and the views of other people. Add to all these points that he is a strong, big, and healthy animal; that he is greatly led by his animal instincts; and that his views on all subjects are influenced by sentiment rather than reason.

Sir Walter Besant points out that the European idea of the extension of a country has always been by conquest. This is the worst possible way of extension, and the weakest; but it has ever dominated the mind of Europe. England for a century at least was influenced by the same idea. But she saw in time the fatal weakness of this view, and the Empire was not formed by conquest but by colonisation. The sixteenth century marked the turning-point in our history. The world then practically consisted of the Baltic, the Mediterranean, the land around their shores, Western Europe, with only the southern shores of Norway and Sweden. The rest of the world was shut off from the eyes of Western Europe by a thick black cloud. Suddenly the cloud rolled away and the path across the ocean was opened in all directions, north, south, east, and west.

#### A PLEA FOR AN IMPERIAL STATESMAN.

Sir Walter Besant describes how in Virginia, where the first colonies were planted, blunder after blunder was made. It was only out of the jaws of defeat that the way to success was discovered. He then briefly describes the building of the Empire of the West, of the East, of the South, and of the Isles, until the world was covered with six English-speaking nations. Sir Walter strongly urges the necessity of promoting emigration. He would direct it to our colonies rather than allow it all to drift to the United States. These colonies are a heritage for the skilled, the sober, and the industrious; but our statesmen have done nothing to bring the people to them. There has not been a single statesman in office who has had a statesmanlike idea of what the colonies mean. We have sent six millions away. Happily they have not gone beyond the borders of the Anglo-Saxon Empire, but Sir Walter says:—

As long as one part of the Empire is separated from the mother-land and the other parts are not, there is no question as to the direction in which the mother-land should look for the new homes of her people.

Sir Walter cries aloud for a statesman who will cope with the question of emigration and will help the people to take their share in their own inheritance.

## WHAT OF THE FUTURE—WAR OR PEACE?

As to the future Sir Walter is hopeful. We have now six countries which speak the same language, practically claim the same religion, have the same ancestry, obey the same institutions and read the same literature. These six countries are Great Britain and Ireland, the United States of America, the Dominion of Canada, South Africa, Australia, and New Zealand. They occupy the best places of the world, and are unassailable by other nations except, by sea. They lead the van of civilisation all the world over. Are these peoples to fight like the European nations? "In that case one would despair of humanity; one would desire death rather than the loss of so splendid a chance for the advancement of humanity and the peace of the world."

## A FEDERATION OF THE ENGLISH-SPEAKING STATES.

But he thinks people are beginning to realise the great and glorious future possible for a united federation of the English-speaking States:—

The one thing needful is so to legislate, so to speak and write of each other, so to encourage each other, that this bond may be strengthened and not loosened. We want, should a time of parting arrive, to separate only in form; we want an everlasting alliance, offensive and defensive, such an alliance as may make us absolutely free from the fear of any other alliance which could crush us. We do not want to go on conquering: on the contrary, we want no extension of territory, but to develop our own. The sixth of the nations may, perhaps, continue to stand aloof; if so, there is all the more reasons for the five to stand together.

But he hopes that this may not be so:—

Surely the time is nigh at hand when the greatness and the glory of the United States of America will not require, even on Independence Day, to be inflated with froth and gas about the wickedness of Great Britain; when it will be understood that it is beneath the dignity of a Great Power to rail at one equally great, which receives the insults without making any sign or reply—in a word, with the dignity belonging to a Great Power; when at last the Great Reconciliation shall take place; and we may be proud of each other, as we ought to be and as we deserve to be.

## THE LAND OF THE THOUSAND LAKES.

MRS. TWEEDIE's new book, "Through Finland in Carts" (C. and A. Black, 15s.); will be a revelation to many people. Most of us have hitherto regarded the Finns as somewhat akin to the Lapps and other inhabitants of the Polar regions. To find that, in reality, in some things they are in the forefront of civilisation is not a little surprising. Mrs. Tweedie travelled over and around a great part of Finland, although the journey in carts was only one of many incidents. She praises the Finns highly, and with reason. Finland is the land of the thousand lakes, and of the many thousand islands. The scenery is neither grand nor impressive, but it has a charm all its own. The country is very flat; even in the north the highest point is barely four thousand feet.

## THE PLAGUE OF INSECTS.

It is a primitive and picturesque land, with most kind and hospitable people, but it has one great drawback—its mosquitoes, its bugs, and its flies. These seem to be perfect pests. Mrs. Tweedie gives a graphic account of the tortures she underwent. Her ankles became hot and swollen, and, in spite of ammonia and camphor baths, grew so stiff that walking became positively painful, and her ears and eyes were mere distorted lumps of inflamed flesh. She warns her

readers that if they visit Finland they will become absolutely hideous and unrecognisable. She also gives a gruesome account of her experiences in a wayside cottage where she and her companions had taken refuge for the night. She says:—

Quarter of an hour passed; first one turned uneasily and then another; the first one sighed and then the second; first one spoke and then another; first one rose and went to the window and then another. Could it be. No, yes, no. Oh, the horror of it! the place was alive! Only quarter of an hour and yet we were bitten nearly to death, for we had made the personal acquaintance of a pest too terrible to name. We heard movements in the kitchen. We called. The answer said, "Come in, certainly," and we entered to find our men's hair literally standing on end as they stood, rug in hand, scanning the floor, over which a perfect zoological garden was promenading as coolly as flies on a hot summer's day over a kitchen ceiling—and we had no shoes and stockings on! There were small red animals creeping sideways, there were little brown animals hopping, there were huge fat round beasts whose death left an unpleasant odour, there were crawling grey creatures, and every one was an enormous specimen of its kind, and they were there in millions.

The flies also are such torments that when milking time arrives the people simply build fires and the animals at once come to the smoke to be relieved of their persecutors.

## WOMEN IN FINLAND.

But it would be unfair to regard Finland simply as a land which suffers from a permanent plague of insects. After being dormant for centuries the people have at last awakened and have made great strides in civilisation. They enjoy a large measure of home rule from the Tsar, and have been allowed to do much what they please. One would hardly have expected to find Finland in the van of the woman's movement; but so it is. Women in Finland enjoy great freedom, even being allowed—tell it not in Cambridge!—to take their degrees at the universities. "There is no sex in Finland," Mrs. Tweedie declares; "men and women are practically equals; and on that basis society is formed." There is no law to prevent women working at anything they choose. They have availed themselves fully of this right. Mrs. Tweedie gives a very interesting table of the employments in which women are engaged. They are carpenters, paperhangers, watchmakers, goldsmiths, slaughterers, printers, and bricklayers. They are also employed as clerks in business offices of all kinds, in shops and public works. In 1894 there were 50 women principals of workhouses, 130 women poor law guardians, and 283 members of school boards; 849 women occupy positions under the State, and 100 are employed in municipal offices. Women in Finland are even magistrates, and policemen in the office, but not out of doors. They are not debarred from becoming members of the great societies. Seventy-three women belong to the Geographical Society, and yet our Royal Geographical Society, which does not suffer from a too mean opinion of itself, is ready to faint at the very suggestion that women should enter its doors. The Literary Society has eighty-two women on its books. Finland also is making great strides in education. Common schools, where boys and girls are taught together, are being established all over the land. Everything is being done to improve the education of the people, and in this movement women take a prominent part. Mrs. Tweedie gives a very interesting account of the people and their customs, and of her personal experiences. It is a well written travel book, which contains much that is useful and entertaining.

## THE CONQUEST OF THE WEST.

JAMES LANE ALLEN is a well-known writer on the other side of the Atlantic, but in this country he is almost a stranger. He is not likely to remain so long. His novel, "The Choir Invisible" (Macmillan, 6s.), has achieved a great success in the United States, and it deserves to meet with a similar tribute on this side of the water.

## THE ONWARD MARCH OF THE ANGLO-SAXON.

Mr. Allen tells the romance of the conquest of the West. He writes of the onward march of the Anglo-Saxon to take possession and to settle in the land of his inheritance. The book is not without its defects—the commencement is rather long drawn out—but as a whole it is a powerful and charming description of a country which is gradually being transformed from a wilderness to a fertile and peaceful land. The conquest of the wild Western wilderness by the hardy Anglo-Saxon pioneer, his struggles with the Indian, the wild beasts, and with nature, and his final triumph, is a subject which may well fascinate the imagination of man. The scene of the story is laid in Kentucky in the early days when it was first invaded by the Anglo-Saxon, seized again with the irresistible desire to press Westward, ever Westward. Some of Mr. Allen's descriptions of the struggles and the triumphs of the white men are very well written. The white man entered into his heritage and enjoyed it not for a time merely, but for all time. The mastodon had trodden the dust of the land, but he had vanished; for ages the bison was the sole possessor, but he had gone. So had the red men. These had all possessed and been dispossessed in turn:—

Last of all into this ancient woodland street of war there had stepped a strange new-comer—the Anglo-Saxon, fair-haired, blue-eyed, always a lover of Land and of Woman, and therefore of Home; in whose blood beat the conquest of many a wilderness before this—the wilderness of Britain, the wilderness of Normandy, the wilderness of the Black, of the Hercynian forest, the wilderness of the frosted marshes of the Elbe and the Rhine and the North Sea's wildest wandering foam and fury. Here white lover and red lover had met and fought: with the same high spirit and overstrung will, scorn of danger, greed of pain; the same vehemence of hatred, excess of revenge; the same ideal of a hero as a young man who stands in the thick of carnage, calm and unconscious of his wounds, or rushes gladly to any poetic beauty of death that is beautiful and sublime. And already the red lover was gone and the white fair-haired lover stood the quiet owner of the road, the last of all its long train of conquerors brute and human—with his cabin near by, his wife smiling beside the spinning-wheel, his baby crowing on the threshold.

## THE PAST, THE PRESENT, THE FUTURE.

Or again take this passage and the thoughts it suggests, John Gray, the schoolmaster of Lexington, lying on his bed recovering from the bites of a panther, looks through the open doorway:—

The making of history was going on under his eyes down there in the town. The mere procession of figures across his field of vision symbolised the march of destiny, the onward sweep of the race, the winning of the Continent. Now the barbaric paint and plumes of some proud Indian, peaceably come to trade in pelts, but really to note the changes that had taken place in his great hunting ground, loved and ranged of old beyond all others: this figure was the Past—the old, old Past. Next, the picturesque, rugged outlines of some backwood rifleman, who, with his fellows, had dislodged and pushed the Indian westward: this figure was the Present—the short-lived Present. Lastly, dislodging this figure in turn and pushing him westwards as he had driven the Indian, a third type of historic man, the fixed settler, the land-loving, house-building, wife-bringing, child-getting, stock-breeding yeoman

of the new field and pasture; this was the figure of the endless Future. The retreating wave of Indian life, the thin restless wave of frontier life, the on-coming, all-bringing wave of civilised life—he seemed to feel close to him the mighty movements of the three.

Lexington stood on the frontier and received the mighty stream of migration of the Anglo-Saxon race, rushing on to the unknown, the illimitable West. But it also received the return current of the fearful, the disappointed, the weak as they recoiled from the awful frontier of backwood life—the defeated army of civilisation.

## THE TWO IDEALS.

Together with this picture of frontier life is woven and intertwined so skillfully the story of John Gray the schoolmaster, that the two are inseparable. In John Gray Mr. Allen has typified the best of the manly straightforward race which conquered the wilderness. He is a rough hewn block of human nature, conscious of his strength, full of noble ideals, and a determination to carry them through. He is very ignorant of the world, but filled with enthusiasm. He comes under the influence of Mrs. Falconer, the wife of a Colonel in the Revolutionary army, who has migrated to Kentucky. She sees the noble spirit of the young man and loves him for it. He sees in her the highest type of womanhood. Mr. Allen describes the moulding of Gray's character under the influence of this woman. She taught him that in the world there are little things as well as large. With Gray everything was a mortal combat. He had the mental and moral strength, but it was she who taught him how to use it, taught him that the only thing that need trouble him much was not the things it is right to conquer, but the things it is wrong to conquer. There are two kinds of ideals, she told him: Those that correspond to our highest sense of perfection. They express what we might be were life, the world, ourselves, all different, all better. These are unattainable:—

But there are ideals of another sort; it is these that you lack. As we advance into life out of larger experience of this world and of ourselves, are unfolded the ideals of what will be possible to us if we make the best use of the world and of ourselves, taken as we are. Let these be as high as they may they will always be lower than those others which are, perhaps, the veiled intimations of our immortality. Those will always be imperfect; but life is not a failure because they are so. It is these that are to burn for us, not like lighthouses in the distance, but like candles in our hands. For so many of us they are too much like candles!—the longer they burn, the lower they burn, until before death they go out altogether! But I know that it will not be thus with you. At first you will have disappointments and sufferings—the world on one side, unattainable ideals of perfection on the other. But by degrees the comforting light of what you may actually do and be in an imperfect world will shine close to you and all around you, more and more. It is this that will lead you, never to perfection, but always towards it.

"THANK YOU AND THANK GOD!"

Gray's first great battle was with his love for this woman he could not marry. It taxed his strength to the uttermost, but he triumphed. The conclusion of the story is very pathetic, but it is here that Mr. Allen shows his power. Both John Gray and Mrs. Falconer live out their lives bravely to the end. The struggle, though bitter, brought out the best in each of them. John Gray married and became a successful man, but it was ever the inspiration of the woman who had shaped his early life that guided him through the hard battle of life. Twenty years later he was able to write, "If I have kept unbroken faith with any of mine, thank you and thank God!"

**THE SUPERIORITY OF THE ANGLO-SAXON.****A FRENCH TRIBUTE.**

In the light of the enthusiasm created by the splendid ceremonials of the Jubilee it is interesting to read the tribute paid to the genius of the Anglo-Saxon race by a Frenchman. What are the qualities of our race which made the Jubilee, and all that it stood for, possible? M. Edmond Demolins tries to answer this question in his book, "What is the Secret of the Superiority of the Anglo-Saxon?" a second edition of which has just been published in Paris by the Maison Didot.

**THE MAN WITH THE PLOUGH.**

M. Demolins' imagination is impressed with the omnipresence of the Anglo-Saxon, and he sounds a note of alarm. The great peril, he declares, is not to be found on the other side of the Rhine. The great adversary is to be found on the other side of the Channel and the Atlantic—everywhere, in fact, where a pioneer of the Anglo-Saxon race is to be found. "We despise that man," he remarks, "because he does not arrive, like the Germans, with great battalions or with a perfectly equipped army; we despise him because he comes alone and with a plough. But we forget what is the value of a plough and what is the value of that man." This race is everywhere, has invaded all lands and planted colonies all round the world. M. Demolins points out that the situation is a serious one, and that it is useless simply to denounce the English. On the contrary, all Frenchmen should study the Anglo-Saxon character in the hopes of discovering the secret of its superiority. He then proceeds to carefully analyse the English character and compare it with the French.

**THE SECRET: I.—HIS INDEPENDENCE.**

His conclusions amount to this: that the Englishman is trained up to be independent and to be equal to any occasion that may present itself in life. The Frenchman, on the contrary, is destined from his cradle to be an official of some description under the Government. The French boy is taught in barrack schools, which is excellent training for an official, but which altogether unfits him for independent life. He is crammed for examination. He makes one supreme effort, and then, when he has obtained his post, drifts for the rest of his life. Parents, he complains, are cruelly kind to their children, and allow them no independence. All that a Frenchman looks forward to is a Government position and a rich wife. He does not strike out for himself—he belongs to the past. The English boy, on the other hand, is prepared from his youth up to face the battle of life. He is left to his own resources, and has to fend for himself. A Frenchman depends on his family, an Englishman on himself. In private life a French parent is burdened by the necessity of providing a *dot* for his children. When they are born he does not see a human being, but a *dot*, which rises up before him like a spectre. He slaves for his children, and only succeeds in unfitting them for the struggle of life.

**II.—THE HOME.**

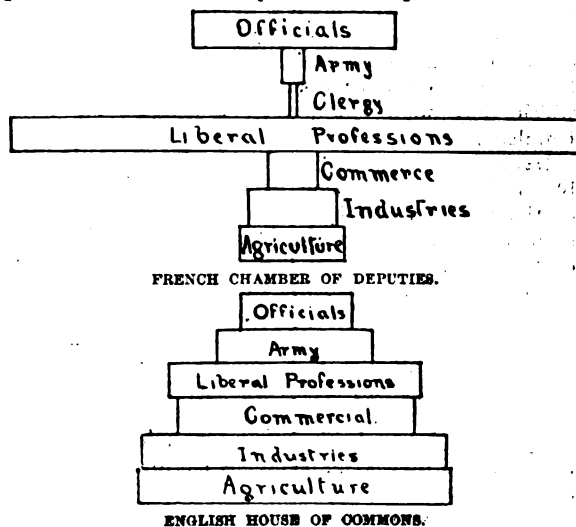

But the real secret of the superiority of the Anglo-Saxon, according to M. Demolins, is the way in which he regards his home. The Frenchman looks at it from the material point of view, the Englishman from the moral and spiritual. A Frenchman is bound down to a particular spot; the Englishman, on the contrary, takes his home with him wherever he goes. M. Demolins says:—

The Anglo-Saxon has an extraordinary facility of changing his abode. He does not hesitate to move his residence, if a favourable opportunity presents itself of bettering his position, often by going to the ends of the earth. He fixes his gaze

more upon the future than the past, and counts more upon his own personal initiative than upon traditional and family institutions. It is this necessity of the social formation which leads him to create the small cottage, because a man is less tied by a small habitation than by a large one; he is master of it and is not mastered by it. He does not cling to the stones, and the stones do not hold him.

**THE TWO PARLIAMENTS—A CONTRAST.**

One of the most striking things in M. Demolins' book is the two diagrams he has constructed showing the proportion of the various professions represented in the

Parliaments of the two nations. The diagrams speak for themselves, and explain many things which to the casual observer seem inexplicable.

**FALSE AND TRUE PATRIOTISM.**

Finally M. Demolins contrasts the various forms of patriotism. There is the patriotism founded on political ambitions and that founded on the independence of private life. Of the former, the best types are France, Germany, Russia, Italy and Spain. This patriotism is supported by a nation in arms, and upon the centralisation of all power. The second type of patriotism is the English. It is marked by four things: first, the extraordinary facility with which the individual leaves the mother country; second, the independence of the colonies; third, the complete repudiation of militarism; and fourth, the tendency to regulate international difficulties by arbitration. Of the seventy-two treaties of arbitration concluded since 1816, fifty-nine were made by English-speaking nations. The secret of the superiority of the Anglo-Saxon is the independence of the individual, and the principle of self-government which is implanted in them. The result is that while—

On both sides of the Rhine and Alps we endeavour to revive, by all possible means, a patriotism which is dying; while we hold reviews and celebrate warlike anniversaries, an adversary which we do not see, and which we despise because it is not armed to the teeth like ourselves, quietly traverses the seas with its innumerable ships and invades the world insensible with its innumerable colonies.

M. Demolins urges France to sit at our feet and learn lessons of wisdom before it is too late. He may take rather too gloomy a view, but much that he has written is well worth careful consideration, and is interesting as an indication that the idea of the unity of the English-speaking race is beginning to impress the mind of Europe.

### THE APOSTLE OF RUSSOPHOBIA.

It was the ingenious idea of the author of "Vathek" to adorn the halls of Eblis with statues of those who had attained pre-eminence above their fellows.

In that idea there is nothing new; the originality of Beckford's idea was, that while the benefactors of the race were carved in white marble, those who had exercised a malefic influence on the fortunes of mankind were hewn out of marble as black as ebony. If the halls of Eblis were to be peopled with statues of the master-spirits of our time, there would be few figures more conspicuous, alike for their pre-eminence and for the blackness as of outer darkness of the material from which they were hewn, than the figure of David Urquhart.

David Urquhart was a Highland gentleman who began his life by fighting as a volunteer on the side of the Greeks in the War of Independence, and who spent the whole of his later years as the fanatic apostle of the Turk. With him Russophobia was elevated to the dignity of a religion. In his strange theory of the universe, the Russian Empire was the living devil whose presence haunted his waking thoughts and his sleeping dreams.

As it has been my lot for the last twenty-five years to labour in season and out of season in combating the poison of Russophobia, a task now fortunately so far accomplished that it can be largely left to other hands, I am in a position to form some estimate of the extent to which David Urquhart's faith left an impress upon the minds of his countrymen. The last great rally of the Russophobists in this country was in 1878, when Lord Beaconsfield, with the rabble rout of music-hall jingoes at his heels, failed indeed to plunge us into war, but succeeded in inflicting upon Europe the curse, from which we are still suffering, of renewing Turkish domination in the southern part of the Balkan peninsula. During the whole of that critical and exciting time, when we were for three years practically at swords' point with the Russophobist, I was compelled again and again to recognise the fact that David Urquhart and his disciples were the only foemen in the country who were worthy of our steel. They believed passionately in their creed, and they knew what they believed. As for the rowdy partisans who sang the Jingo songs and raved about Constantinople, they were mere camp-followers. The real heart and soul of the Russophobist party was to be found in the little nucleus of men who had been warped by the passionate genius of David Urquhart.

It is, therefore, with great interest that I welcome "The Life of Mrs. Urquhart" (Kegan Paul, 6s.), which has just been written by Miss Bishop. It is a curious thing that the first account of the life of a man who exercised so great an influence upon his country should appear in the shape of a memoir of his wife.

It is impossible in the very short space that I have at my disposal to do more than mention the fact of the publication of this book, and call attention to the light which it sheds on the character of Urquhart. Perhaps one of the best things in the book is the extract from his letter to Bishop Wilberforce describing how it was that he awoke to the convictions that afterwards dominated his life.

He was but a lad, and was fresh from participation in the Greek War of Independence, when he passed a night in a Turkish bivouac. The Turkish soldiers were

talking round the fire of their adventures, and one of them described a small fortress that had been surrounded by the Russians in 1828 before war had been declared. "Why," said Urquhart, "did you not prevent their advance?" The soldiers answered, "How could we fire on them when war had not been declared?" Urquhart expressed his amazement at what he regarded as incredible stupidity, when one of the soldiers rushed to his musket and, kissing the stock, said, "Unless I use this, blessed by God, it is put in my hands by the devil." Urquhart was suddenly struck down by shame at realising the part which he had played. He had been and was a pirate, and had not so much as known it.

What I suffered I can only portray by saying that, with the feelings of a repentant felon, I should have gone and offered myself to justice had there been a tribunal to take cognisance of such crimes. It was only towards the morning of a sleepless night that the sense came home to me of the condition of the whole of my countrymen being parallel to what my own had been, and not only my countrymen, but all the European nations; and it was then that the idea of a possible atonement presented itself in devoting myself to the attempt of awakening them from their judicial blindness. From that hour I date my intellectual existence; to it I refer every purpose, and all the enjoyments of life.

It was a noble resolve which did credit to the young man's heart, but one cannot help wishing that the Turkish soldier's observation had not struck the Scotchman's conscience just in that way. For without that passion of repentance, so oddly produced, we should have been spared much of that violent hatred of Russia which Urquhart afterwards seemed to consider it the chief object of his life to promote.

His wife was an Irish lady, sister of Chichester Fortescue (afterwards Lord Carlingford). She brought him a fortune and was the guardian angel of his life, and was altogether such another person as himself. She went with him through thick and thin, supporting him not merely by her means, but by her pen and by her unflinching counsel, sympathy and adoration. They were a strange pair, and her correspondence shows how faithfully and zealously she worked with him hand in hand by night and by day. David was the very God of her idolatry. In everything she saw his handiwork, as he in every evil thing saw the omnipresent diabolical activity of Russia. As far back as 1855 she wrote on one occasion: "Disraeli himself owes to David all his knowledge of the subject. There was a time when he went to David's bedside day after day to be instructed. Every one who has spoken or written, whether on the East or on matters abroad or at home, on the wrongs going on or the remedies, have been taught by him, have been roused by him into action, and have had their faces set the right way."

To Miss Bishop, David Urquhart is not so much the Russophobist apostle as a man dominated by the idea of reviving the national sense of the duty of controlling diplomatists and cabinets in the matter of unwarranted bloodshed. Whatever may have been his ultimate aim in this matter, his practical influence as a working force has been for fifty years steadily acting in the opposite direction.

Peace, however, to his ashes! The poison of Urquhartism has well nigh worked itself out of our English veins, and possibly posterity, forgetting all else, will remember him with gratitude for his introduction of the Turkish bath. Mrs. Urquhart was the devoted wife of a very trying husband, and she has found a very sympathetic chronicler in Miss Bishop. The book, I am glad to see, is well indexed.

## INDEX TO THE PERIODICALS OF 1896.\*

## PREFACE TO VOLUME VII.

THE growth in popularity of such a work as the "Annual Index to Periodicals," the seventh volume of which is now presented to the public, rather resembles the growth of an oak-tree than that of Jonah's gourd. The gourd sprang up in a night and withered before noon, whereas the oak in its seventh year has only begun to strike its deep root into the earth and spread its branches abroad in the sight of men.

It requires time for the full utility of the Index to the Periodical Literature of the English-speaking world to be realised, but as year follows year there is a steady and regular increase in the appreciation of its usefulness. No one who has ever used it for practical purposes can ever feel that he can dispense with so necessary a guide to the periodical expression of contemporary thought. And so the hope grows that in time the Index may even become self-supporting.

In the present volume of the Index, articles in foreign languages may be said to appear for the first time. In previous years there has been an occasional article in French in the *New Review*; but the year 1896 was marked by the publication in London of a review with distinct sections in English, French, and German in each number, and all the articles in *Cosmopolis* are included in the Index. The most extensive and tedious topics to deal with, from the indexing point of view, in 1896, seem to have been South Africa, and the United States Presidential Campaign with its Free Silver and other issues; Venezuela, Cuba, and Armenia have continued to make a heavy demand on space in 1896; the Education Bill and the question of Anglican Orders are also among the much discussed topics of the year; Mr. Balfour's "Foundations of Belief," and Mr. Lecky's "Democracy and Liberty" have still been favourite subjects of criticism; recent books have renewed the interest in Bishop Butler, Matthew Arnold, Cardinal Manning, and others; and death has brought to special notice the lives and work of such men as Lord Leighton and William Morris.

Next year we may, of course, expect that the "Annual Index" will bear ample traces of the Diamond Jubilee celebration, as the periodicals are full of reviews of the Queen's reign from every possible standpoint.

It should scarcely be necessary to call attention once more to the value of indexes, yet some quite important books, bristling with allusions to persons and historical events, have recently been issued without any indexes to their contents. The *Memoirs of Cardinal de Retz*, the *Paget Papers*, Sir Mountstuart E. Grant Duff's book on *Renan*, Miss Frances Power Cobbe's *Autobiography*, may be cited as conspicuous instances of this indifference to a very essential detail in book-production. But such sins of omission are no longer passed over in silence, and it is gratifying to note that there has been of late a growing appreciation of the doctrine urged by the more enlightened, that copyright should be refused to any book that is published without an adequate index.

The whole question of bibliography is likely to be brought prominently to the front again by the meeting of the Second International Library Conference at the Guildhall this month. To refer to all the contributions made to bibliography during the past year would be

somewhat out of place here. To compile a list of them is much more the work of a general literary year-book, but a complete catalogue of bibliographies now in existence would serve to show a considerable duplication of work. The Library Associations naturally desire that there should be no such waste of effort. Add to the list of bibliographies made a list of the various bibliographical proposals mooted and discussed during the year, and we see at once what an advance in the department of bibliography has been made of recent years. Not the least striking instance of this progress is supplied by Mr. Gladstone in his recent edition of *Bishop Butler's Works*. He was of opinion that Butler had suffered in the hands of students owing to the difficulty, for want of index, of referring from one part to another of the Works. He has, therefore, not only broken up the text into sections, each supplied with a cross-heading to assist the eye and the mind of the reader, but he has had the happy thought to assist imperfect memory by adding indexes. To his own question, What is the proper basis of an index? he thus makes answer in the Preface to the "Analogy":—

Not to present an exhaustive analysis, but rather to supply an aid to the memory of the student. The student ought to find in the several items of an index, under the most natural and (so to speak) salient heads, every point of his author's text to which it is likely that, in default of exact recollection, he may desire to refer.

And it is in accordance with a similar idea that these Annual Indexes to Periodicals have been constructed.

If the necessity of indexes to books, which, after all, are for the most part confined to a single subject, or group of subjects, be thus recognised, how much more essential must be a convenient key to the miscellaneous mass of encyclopædic information, observation, reflection, and criticism which appears periodically in the English language in all parts of the world! Every one of these articles, however slight and meagre, represents to some extent the result of human thought and the accumulated record of human experience; and for lack of some such comprehensive "Baedeker" to the vast and unmapped realm of periodical literature, who can estimate how much honest toil has been wasted, how laboriously many a student, journalist, or inventor has hewn out for himself a new path through the jungle, while here, ready to hand, lay a well-trodden road, which he could have traversed had he known where to find it?

The principles on which this Index have been constructed, frequently as they have been stated, may be explained once more for the sake of those who make acquaintance with the series for the first time. The work is no mere mechanical production, based simply on the idea of indexing everything exactly as it appears, that is, according to the title which the fancy of the author, or, it may be, the caprice of the editor, may have chosen to affix. Due note is taken of original titles, but the majority need to be amended or explained in some way or other. The Index is the result of the application of the mind of an expert to the task of selecting, explaining, and classifying under appropriate headings and sub-headings those articles which have been given to the periodical press in the course of the past year. There is no lack of idiosyncrasy, of originality, or of independent judgment in the arrangement of this Index, and to Miss Hetherington and her colleagues, whose work it is my privilege to publish, I may apply the familiar and oft-quoted remark of Opie, who, when asked by some presumptuous amateur how he mixed his colours, replied, "With brains, Sir."

\* "Index to the Periodicals of 1896." REVIEW OF REVIEWS Office. 10s., post free.

## BOOKS RECEIVED.

## BIOGRAPHY.

- BISHOP, M. C. *Memoir of Mrs. Urquhart.* (Kegan Paul.) 6s.  
 BROWN, A. M. *Molière and His Medical Association.* (The Cotton Press.)  
 FINDLAY, J. J. *Arnold of Rugby: His School Life and Contributions to Education.* (Cambridge University Press.) 5s.

## ESSAYS, ETC.

- AVELING, F. W. *Who Was Jesus Christ?* (Kegan Paul.) 6s.  
 ELIZABETH, QUEEN. *The Mirror of a Sinful Soul.* (Asher and Co.) 10s. 6d.

A facsimile reproduction of Princess Elizabeth's prose translation from the French of a poem by Queen Margaret of Navarre made at the age of eleven. This very handsome volume is published for the Royal Society of Literature.

- JAMES, W. *The Will to Believe, etc. Essays in Popular Philosophy.* (Longmans.) 7s. 6d.  
 PEARSON, F. B. *Words of Counsel.* (E. Stock.)  
 POPE, REV. G. A. *St. John in the Desert.* (Frowde.) 2s.  
 Interesting and carefully compiled notes on Browning's poem, "A Death in the Desert."

- TARVER, J. C. *Some Observations of a Foster-Parent.* (Constable.) 6s.

## FICTION.

- ALLEN, G. *An African Millionaire.* (G. Richards.) 6s.  
 ALLEN, J. L. *The Choir Invisible.* (Macmillan.) 6s.  
 BERKELEY, MILDRED. *Empty Pockets, and other Stories.* (Edwin, Vaughan.) 1s. 6d.  
 CRAWFORD, F. M. *A Rose of Yesterday.* (Macmillan.) 6s.  
 FITZGERALD, G. BEHESFORD. *A Fleeting Show.* (Digby.) 6s.  
 FOLL, HALTIL. *Major Carlile.* (Digby.) 6s.  
 FORD, G. *The Larramys.* (Hutchinson.) 6s.  
 GERARD, E. *An Electric Shock.* (Blackwood.) 6s.  
 GILCHRIST, R. M. *A Peakland Faggot: Tales Told of Milton Folk.* (G. Richards.) 2s. 6d.

The first volume of a new series entitled the Sylvan Series.

- HERVEY, M. H. *David Dimsdale, M.D.* (Redway.) 4s. 6d.  
 HIND, D. *In Search of a Religion.* (C. Wilson.) 3s. 6d.

- BARKLEY, F. *Among Boers and Basutos.* (Roxburghe Press.)  
 MACRITCHIE, REV. W. *Diary of a Tour Through Great Britain in 1795.* (E. Stock.) 6s.

## LEARNING LANGUAGE BY LETTER-WRITING.

**P**ROGRESS is still the order of the day, both as regards our own and other countries. The *Revue Universitaire* reports that the number of applicants from Germany is so large, that their recommendation to French professors to send only the names of a few of their most advanced students was an unnecessary precaution, for, in Saxony especially, the scheme has been received in the heartiest manner. Many of our own correspondents ask whether grammatical points as well as spelling should be discussed in the letters—surely that is a fundamental part of the plan.

M. Hartmann, of Leipzig, has sent in a list of German boys willing to correspond with English boys, and, doubtless, names of girls and adults will be forthcoming so soon as the demand on our side is sufficiently strong.

The *Bibliothèque Universelle* of Lausanne will publish, in July, an appeal to its Swiss readers, and will afterwards receive and publish names, as does the *Revue Universitaire* in Paris. This will be a great gain, as the readers of the *Bibliothèque Universelle* are to be found both in the French and German-speaking cantons. We are promised the like help in Belgium, so that our girls can now send in as many names as they please.

It seems necessary to repeat one or two remarks already made. Lists of names of schoolboys and schoolgirls sent in before the 1st of the month are published in France on the 15th; letters from France can thus only be expected the fourth week of the month. If, by mistake, letters from two French correspondents are received, the second letter should be forwarded to me at once. Such a mistake may easily occur when so large a number of names has to be paired, and may happen the more easily with the adult correspondence, as, the *Revue Universitaire* circulating more amongst teachers than business people, names of adults sent to Paris have remained so long unpaired, that a correspondent has been found elsewhere and in Paris almost at the same time. Other accidents happen. The professor of English at a certain French school left soon after sending in his list of boys. His successor knew nothing of the scheme, did not look in the *Revue Universitaire* for the names, and consequently his boys and the English boys paired with them waited some time before the cause of the delay was discovered. I may add, that if our English adults are awaiting correspondents, their names are few compared with those of

the French schoolboys who are vainly sending to ask why they should be left out in the cold.

Our correspondents are not always careful to write their signatures legibly, and though flourishes may adorn a cheque, they add to the difficulty of deciphering an unknown name, which must of course be written very clearly for the French lists.

It is almost impossible for us to find correspondents for girls or boys under thirteen; and speaking generally, it is rare for an English boy or girl to know sufficient French at an earlier age. The difficulty cannot be overcome by pairing an advanced scholar of ten with a less advanced of fourteen—there would be no community of interests. The same remark applies to pairing adults with advanced scholars, which we are often asked to do.

French teachers are asking teachers in our secondary schools to communicate with them. Names may be sent to us or to the office of the *Practical Teacher*, the editor of which is working so hard to forward the scheme; but they must not be sent to both, and it is absolutely necessary that age and the class of school should be mentioned—indeed, some names sent to the Franco-English Guild have remained unpaired on account of defective description. No stamps need be sent by schoolboys or girls unless a reply is needed; the shillingsworth of stamps asked from such adults as can afford it, is because for them many letters have to be written to various parts of France.

The thanks of many are due to the kind offices of various French professors, notably M. Livet, of the great Technical Institution at Nantes. M. Mieille has been compelled to keep his bed from over-work, but from his sick room he sent the following telegram in the Jubilee week:—

In behalf of Dranguignan and all Franco-English correspondents. Congratulations for Diamond Jubilee and *sympathie cordiale*.

Very few responses have been received to the applications published in the *REVIEW*. Probably English people abroad have not a large acquaintance with their neighbours.

A largely attended meeting of the Society known as "L'Entente Cordiale" was held in St. Martin's Hall on June 11th. The Secretary is W. H. Sands, Esq., 6, Fig Tree Court, Temple.

### ENGLISHMEN DESIRING TO CORRESPOND WITH FRENCHMEN.

|               | OCCUPATION.          | AGE ABOUT. | SUBJECT OF CORRESPONDENCE.  |
|---------------|----------------------|------------|---|
| 1. T. H.      | Trade                | 20         | Improvement in French, silk and stuff manufacture.                    |
| 2. L. F.      | Trade                | —          | History and politics.   |
| 3. A. H.      | Civil Service        | 22         | Literature and politics.  |

PRINCE BISMARCK.

# THE PROGRESS OF THE WORLD.

LONDON, *August 2nd, 1897.*

**Holidays once  
More.**

The holidays have begun. Parliament will rise before these pages are in the hands of our readers, and in the first days of release from the excitement and preoccupation of politics there will be but little inclination on the part of the public to dwell on the progress of the world, or on any progress save that of the train to the seaside or to the hills. By the middle of next month we shall begin to think once more of politics and business, but at present beyond the fact that the Jubilee is over at last, and that the Queen is better rather than worse for the prolonged strain of the great festival, the history of the last seven months has not left a very definite impression upon the public mind. The Queen's letter of thanks to her subjects brings to an appropriate close the most famous, national, and Imperial demonstration of our times.

**The Colonial  
Premiers  
and the  
Old Home Folk.**

The Colonial Premiers, whose attendance at the Jubilee was the most significant instance in that Imperial celebration, are now on their way home. It is, therefore, too early to attempt any final estimate of the result of the gathering together in the capital of the Empire of the elected rulers of the self-governing Colonies. There are, however, certain facts which stand out clear and unmistakable amidst the confusion of contradictory rumours which have filled the papers. First and foremost, every Premier has gone back with an increased, and in some cases an entirely new, conception of the pride with which the British people regard their Colonies. They have been welcomed to the Motherland as heirs of the Empire, to whom the home dwellers were delighted to accord the leading place in the family circle. Whether it was the Queen on the throne or the coster on the kerbstone, the welcome which they received has been equally hearty and unmistakably sincere. Henceforth no Colony can feel that it is regarded either as an orphaned outcast or a disinherited child of England. And that is the first and perhaps the greatest of all the gains which have resulted from the visit.

**An  
Invaluable  
Imperial  
Reserve.**

The second is like unto it. If the Premiers have learnt to know England, we have learnt to know them and to appreciate the addition which our self-governing Colonies make to what may be

called the available fund of statesmanship and administrative capacity in the Empire. Sir Wilfrid Laurier—alike from his eloquence, culture, and from his commanding position, due partly to his nationality and also to his position as the representative of the one great Federation which exists within the Empire—had no difficulty in holding the leading place. But Mr. Reid, of New South Wales, was no unworthy second to the Canadian's first. Mr. Reid's courageous and uncompromising defence of Free Trade had a refreshing novelty to a public which has heard of late little but melancholy jeremiads over the decadence of British industry. Mr. Seddon, of New Zealand, represented the most progressive colony of the Empire. No Premier combined to the same extent practical experience in working out experiments of social democracy with a wide outlook over the whole Imperial field. Sir Gordon Sprigg, from South Africa, the modest and unobtrusive bearer of the first colonial contribution to the Imperial navy, divided the honours with Sir Wilfrid Laurier and his reduced tariff. But time would fail me to go through all the others, each of whom represents a man who, after years of test and strain and struggle, has been installed in supreme office by the free votes of the electors among whom he has passed his life. They are the pick of the picked men of Greater Britain.

**Making  
the bounds of  
Freedom  
wider yet.**

Apart from the great benefits accruing from this appreciation on both sides, not very much direct political result has been attained by their visit to this country, with one exception. The conferences at the Colonial Office were chiefly negative in their result. The Premiers are only unanimous on one point, and that is that the self-governing Colonies have a right to a further concession of Home Rule in the shape of the removal of all trammels imposed by Imperial treaties on their commercial policy. That is to say, there was not a Premier of the band who was not absolutely at one with Sir Wilfrid Laurier in demanding an abrogation of the commercial treaties with Belgium and Germany, if these treaties render it impossible for a British Colony to put a premium in the shape of reduced duties upon imports from markets where colonial products are admitted free. On that one point the Government has given way. The denunciation of the German and Belgian treaties of commerce, which

was announced at the end of last month, has been received with general satisfaction. These two commercial treaties are the only instruments in existence which impair the liberty of our Colonies to alter their

SIR LOUIS DAVIES.  
Canadian Minister of Marine.

tariff according to their own sweet will and pleasure. Their denunciation is the firstfruit of the action taken by Sir Wilfrid Laurier, and marks a new stage in the direction of that closer union between Britain and Greater Britain which is attained not by tightening the bonds, but by lengthening the cords and strengthening the stakes which mark out the area within which

the new commonwealths may do as they please. The treaties can be renewed if Germany and Belgium agree—minus the clause restricting Colonial liberty, which was an excrescence found in no other commercial treaty negotiated by Downing Street

The Conference proved that there was an insuperable difference of opinion upon almost every other question. The idea of a British Zollverein or Customs Union within the Empire, which Mr. Chamberlain favoured, found such scant support from the Premiers that Mr. Chamberlain in the most emphatic manner proclaimed the abandonment of his favourite child. He said:—

It would have been hard enough to carry through the idea had all the Colonies been its enthusiastic and persistent advocates. But Canada does not favour it, and New South Wales opposes it. These are the two leading Colonies, and with them in frank opposition it becomes impossible. I would not now touch it with a pair of tongs.

It was found to be equally impossible to establish any agreement on the subject of the direct representation of the Colonies at Westminster. Sir Wilfrid Laurier was in favour of it. Mr. Reid was against it. Mr. Seddon advocated it on principles which would logically involve the addition of 160 Colonial representatives to the House of Commons, and the other Premiers were all at sixes and sevens. They were not even able to agree to the much more practical proposal of establishing Imperial Penny Postage. They were all for it on principle, but all against it in practice. "We can't afford it," was the general cry;

and it must be admitted that until the Colonies establish a penny post within their own territory, it is rather difficult to expect them to tax their citizens for the establishment of a penny postage outside the Colonial limits.

The  
Home Lands  
of the  
White Man.

There is another question on which there is more prospect of agreement, and that is the vexed question of the restriction of Asiatic emigration.

Natal, British Columbia, and the Australian Colonies have all raised this question in a more or less formal fashion. It is easy to understand the objection which the British settlers in the self-governing Colonies entertain to a great incursion of the dark-skinned races. Whether by direct prohibition or by a heavy poll-tax on coloured emigrants, the Colonial Governments are all more or less bent upon keeping the yellow man and the brown man in Asia, where they belong. This may be a mistaken policy, or it may not, but it is practically certain that Downing Street could hardly take a more fatal line of opposition to the Colonial demand than to raise the plea that it is impossible for the Queen to forbid the free passage of any section of her subjects from one part of the Empire to another. Such a contention would put a dangerous premium upon the party of disruption if any such party were hereafter to arise. Every additional province inhabited by yellow men or brown men that was annexed to the Empire would be regarded by our self-governing Colonists with dread, as increasing the army of potential invaders. "It is all very well," they will say, "to belong to the British Empire for honour and glory, and safety from foreign foes, but if this is to be bought by an exposure of unrestricted immigration of Chinamen and coolies, we will have none of it. It is possible to buy even diamonds too dearly, and we cannot afford to continue within the Empire if it entails a readiness to permit the unchecked immigration of Asiatics into Africa, Australia or America."

From the Imperial point of view, by far the most striking and hopeful "H.M.S. Africkander." incident connected with the visit of the Premiers was Sir Gordon Sprigg's

simple but impressive announcement that the Cape Parliament had decided to contribute, as a Jubilee gift to the Imperial navy, a first-class ironclad. Such was practically the unanimous decision of the Cape Parliament immediately before Sir Gordon Sprigg left the Colony, and although the necessary formalities have not been gone through, it is understood there will be no question as to the fulfilment

of Sir Gordon Sprigg's undertaking. The fact is, that the decision to contribute an ironclad, without stipulation or condition as to where it should be employed, is due, not merely to the vote of the Cape Parliament, but to the practically unanimous expression of the public opinion of South Africa in favour of making such a contribution to the Imperial navy. This decision is independent of and superior to the fortunes of Parliamentary majorities. It does not depend upon Sir Gordon Sprigg, or any other single Minister, but if any one individual in South Africa deserves the credit of this Imperial resolve, that one is Mr. Garrett, whose appointment to the *Cape Times*, as I pointed out years ago, was infinitely more important to the future of the Empire than the return of Lord Rosmead as High Commissioner. This offer of the ironclad from the Cape is but the latest illustration of the patriotic service which an intelligent and resolute journalist can render to the Empire. Mr. Garrett no sooner seated himself in his editorial chair than he conducted a most successful agitation throughout South Africa in favour of what he christened—and no one had better right to name his offspring—*H.M.S. Afrikander*. Mr. Garrett had discussed the whole matter with Sir W. H. White at the Admiralty before he left this country, and ascertained at the fountain-head exactly what was the best manner in which a Colony could contribute to the strength of the Queen's navy. Hence it is that the offer from the Cape comes untrammelled by any of those parochial limitations as to the retention of the ship in Colonial waters which have so often marred Colonial propositions for contributing to the naval strength of the Empire.

The  
Unity of the  
English-  
speaking Race.

Mr. Whitelaw Reid, the special envoy of the President at the Jubilee, has returned to the United States, bearing with him the liveliest recollection of the extreme cordiality with which America and the Americans are regarded in this country. He was most impressed, he said, by the manifest and profound devotion of the people to the Queen, and after that, nothing impressed him more than the fact that it was the obvious and strong desire of every Englishman to be on good terms with America, and the fact that harsh words from America surprised and troubled Englishmen more than if they proceeded from any other country in any quarter of the world. Therein Mr. Whitelaw Reid bore true testimony, which is all the more valuable because it was rendered immediately after the publication of the

SENATOR SHERMAN,  
United States Minister of Foreign Affairs.

despatch signed by Mr. Sherman on the subject of the seals in Behring Sea—the despatch for the phrasing of which it is charitably said Mr. Sherman was in no way responsible, and over the contents of which it is well in the interests of international amity to draw a veil. In talking to me Mr. Whitelaw Reid made an observation which, although somewhat startling at first, appears on reflection to embody a profound truth. He said, “I have seen a good deal of your Colonial Premiers, and the one thing that has impressed me about them is that they are all Yankees. They are much more like Americans than they are like citizens of the old country. They are Englishmen who are developed under what I should call American conditions. That is to say, they are living in new countries dealing with the problem of government under democratic conditions. Their way of looking at things, their habits of speech, their political standpoint, is much more American than British.” That is true in one sense, but not at all in another, and the sense in which it is true points to the fact that the Americans themselves, as Lord Beaconsfield once remarked, did not

cease to be Colonists when they signed the Declaration of Independence. The English-speaking man over sea, whether in the United States or self-governing Colonies, is essentially an Englishman, but he is modified by his environment, and as the environment of English-speaking men in the New World is not materially affected by the difference of the bunting which flies overhead, the outcome is everywhere pretty much the same.

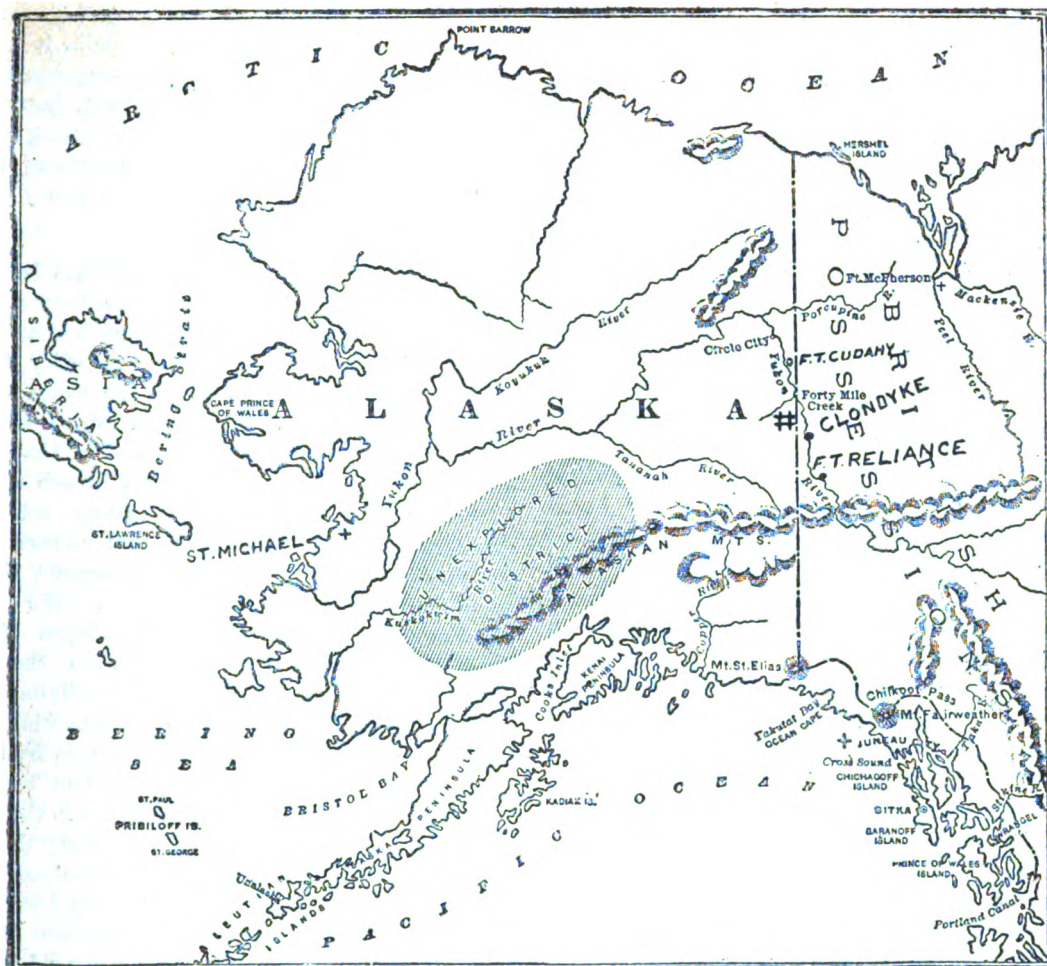

The question of the seals, which was brought before the attention of the public by the premature and unauthorised publication of a purposely rude despatch, is very simple, and will probably be settled amicably at the conference which is to be held in October. Only a month or two ago, Dr. Shaw, writing in the *Review of Reviews* of New York, proclaimed that it was perfectly within the power of the United States, without occasioning any international complications or ill-feeling, adequately to protect the seals of the Alaskan Islands from destruction. He published an article from the pen of Dr. Starr Jordan, in which the *modus operandi* of suppressing all seal-killing on the deep sea was carefully set out. All that is necessary is to herd the bulls and brand the cows so as to render their fur useless. To do this is fully within the power of the United States Government. All the trouble has arisen from the anxiety of the United States to put down the killing of the seals on the deep sea by gunboats and by international regulations. The regulations now in force were drawn up in accordance with the award of the Paris Tribunal of Arbitration, to which the whole question was referred. These regulations, in any case, will come up for renewal next August, and if they are inadequate they can be strengthened. But if the American Government, as Dr. Shaw and Dr. Jordan declare, have the remedy in their own hands, why should they not save the seals from destruction by adopting the method of herding and branding recommended by Dr. Jordan? We should be only too glad if they would do so. Most of the shares in the commercial company to which the seals are farmed out are held by Englishmen. All the skins are sent to London to be made up, and there is more money made in dressing the skins than there is in taking them in the first instance. As Dr. Jordan, the American expert, points out, the worst slaughterers of the seals on the deep sea are ships fitted out by citizens of the United States. The Canadians have also a share in pelagic

sealing, and it will be much the easiest way out if the Americans would herd and brand their own seals, and so cut the ground under the feet of those who object to any increase in the severity of the regulations against sealing on the high seas. It is probable, however, that five years' close time, or a five years' armistice in the warfare waged by man against the seal, will be necessary to avert the threatened extermination of the herd.

The centre of interest in the Alaskan region during last month has not been the seals of the Pribyloff Islands, but the discovery of the surpassing richness of the Klondike gold fields. Klondike river, as will be seen from the accompanying map, lies far at the back of Back O' Beyont, just within the British frontier where it marches with that of Alaska. For practical purposes it might be said to lie within the Arctic circle, for the winter lasts from October until May, when the thermometer registers a temperature of from sixty to seventy degrees below zero, and the ground is as hard as marble. Whether approached by land or by sea, the journey to Klondike takes from five to eight weeks, and hence those who wish to try their chances in the new El Dorado will have to postpone their departure until next April. The Yukon river, up which it is possible to steam for 1800 miles to the gold fields, is only clear of ice for three months in the year, from June to September, so that the rush to Klondike is severely limited by climatic conditions. The gold fields, which appear to be of extraordinary richness, are stated to have yielded nearly a million sterling this year. Marvellous tales are told of river banks, every pebble in which is a nugget of gold. The curious have seen miners' cabins in which five-gallon cans were full to the brim with nuggets and gold dust. A great rush has taken place from the Pacific coast to this new land of gold; for in pursuit of the precious metal men think as little of Arctic cold as of equatorial heat. The Americans naturally feel as sore about Klondike as Mr. Rhodes felt when the treasures of the Rand were unearthed on the wrong side of the Transvaal frontier. Klondike is a good one hundred miles on the British side of a clearly defined frontier, there is no American population on the Alaskan side numerous enough to "jump" Klondike, and the Canadian Government seems to have the district well in hand. Although some of the newspapers are screaming against the restrictions placed upon the inrush of gold-seekers, it is to be hoped that no Klondike question will arise to trouble the peace of the world.

An  
El Dorado  
in the  
Arctic Regions.

The centre of interest in the Alaskan region during last month has not been the seals of the Pribyloff Islands, but the discovery of the surpassing richness of the Klondike gold fields.

MAP OF THE KLONDIKE GOLD FIELDS.

From Victoria to the mouth of the Yukon River by sea is 4,500 miles; up the Yukon to Klondike is 1,500 miles.

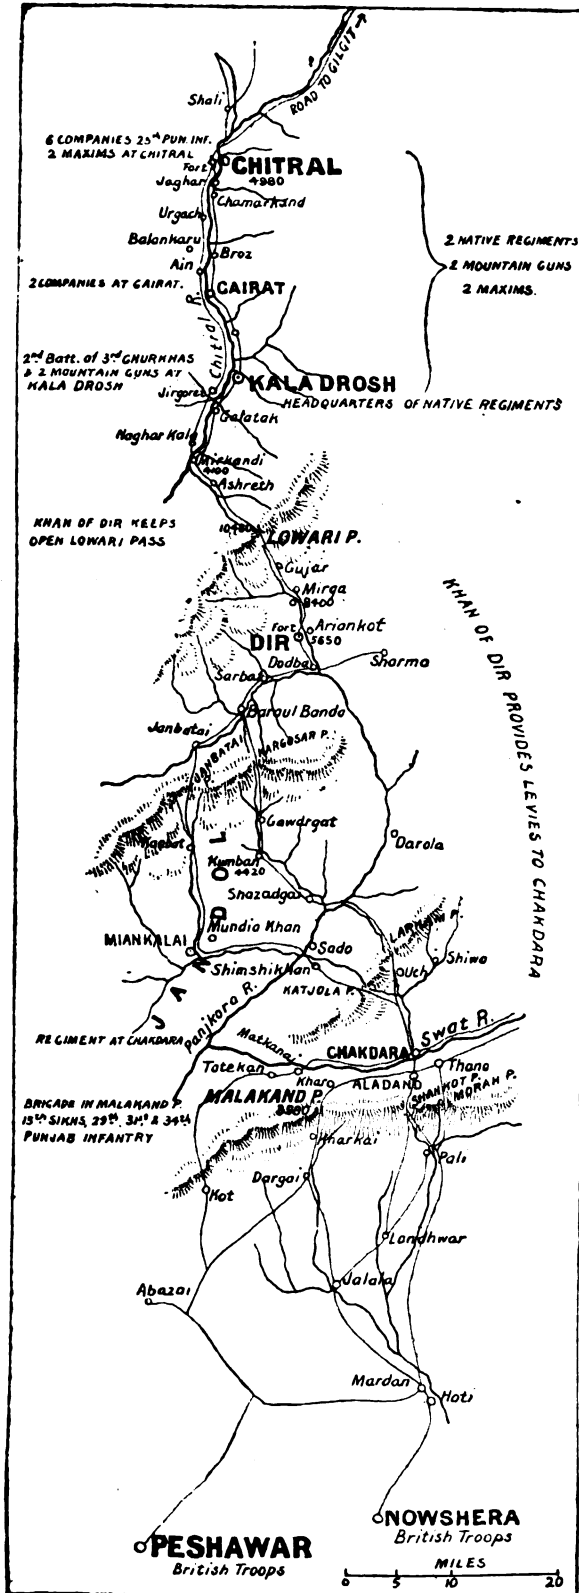

From Victoria by the White Pass to Klondike is 1,600 miles.

**Provoking Rebellion for the sake of Sanitation.** If our self-governing Colonies send us nothing but good news, the reverse is the case with our great Indian dependency, over which the gloom remains unabated. No success seems to attend the efforts to eradicate the plague, while the disaffection and almost revolutionary discontent provoked by the efforts to enforce sanitary regulations in Poona continues to harass public attention. The savage resentment occasioned by the use of soldiers and police to enforce the most elementary sanitary regulations ought at least to convince Lord George Hamilton that he had better proceed very cautiously in attempting to reimpose the C. D. Acts in India. As Mrs. F. A. Steel has warned the advocates of this retrograde legislation, against which a petition signed by sixty-

one thousand women has just been presented to the House of Commons—

any legislation even remotely affecting the women of India—whether they be good or bad—would be most unwise at this juncture when, to my eyes, all that is needed to change ignorant dissatisfaction to ignorant defiance is some common cause, such as unscrupulous agitators found forty years ago in the greased cartridge. I only venture to remind those in power that men are always ready to fight for their gods or their women; and that, knowing, as I do, the vast credulity of the masses in India, I do not see how any new legislation regarding women can be other than a weapon of calumny gifted into our enemies' hand at a most critical time.

The Government has prosecuted newspapers and agitators who have been circulating inflammatory appeals calculated to excite feelings of disaffection towards the Government. Prosecutions are always regarded in this country as a sign of weakness on the part of the prosecuting Government, but it is

MAP OF CHITRAL.

possible that under such extremely different conditions as those which prevail in India it may be possible to carry this prejudice to a dangerous extent. The action of the Indian Government, however, in searching newspaper offices and arresting editors should help to make some of our Pharisees a little more lenient when judging the press policy of the Russian Government

#### Paying the Penalty for Chitral.

One of the misfortunes that befell the Empire when Lord Rosebery resigned was that Lord Salisbury had an opportunity of reversing the policy decided upon by his predecessors as to the evacuation of Chitral. There was nothing on which the late Government was more unanimous than that it was a blunder and a crime, as well as a breach of faith, to retain Chitral. But, unfortunately, before the arrangement for the evacuation could be carried out, the Ministry was changed, and the present Government decided to retain the territory. We are now experiencing some of the disadvantages of that decision. Last month, the tribes in the Swat Valley rose in their thousands, and rallying round a mad Mullah, began operations by attacking Malakand, on the road to Chitral, which is held by a garrison of three thousand men. The telegraph wire was cut, and the tribesmen along the whole valley, amounting, it is said, to some forty thousand men, are in arms. Every night a determined attack was made upon British outposts, which lasted until daybreak. Our troops had to evacuate one of their camps in order to concentrate on a rocky ridge which formed the centre of their position, and the burning of the abandoned camp was the signal for a rising of the whole of the tribes against the beleaguered garrison. It is evident we are in for a very serious campaign. There is no doubt that our garrisons will be able to hold their own so long as their ammunition lasts, but each garrison is evidently but as an isolated island round which foam the fiery waves of a general insurrection. Two brigades with a complete staff are now in the field, but although they will stamp out the rebellion in blood, there is no security but that it will break out again as soon as the reinforcements return to India. Before Christmas we shall probably have had good reason to appreciate the wisdom of the decision arrived at by Sir Henry Fowler to abandon Chitral.

#### "The Scandal of Westminster"

The Parliamentary history of the month has been practically confined to two subjects of general interest. The first in Parliament was the discussion upon the white-

washing of Mr. Chamberlain, which is the sole outcome of the hushing-up report of the Committee of No Inquiry into the Jameson Raid. I deal elsewhere with this scandalous report. At first a dogged resistance was offered to any discussion on South African affairs. The conspiracy of silence was persisted in until Mr. Arnold Forster succeeded in getting an opportunity on the Colonial estimates, which compelled the reluctant Government to grant a day for the discussion of the report. The discussion took place on Monday, the 26th ult., on a motion brought forward by Mr. Stanhope lamenting the inconclusive action of the Committee, and moving that Mr. Hawksley should be ordered to attend at the Bar of the House and produce the cables which had passed between Mr. Rhodes and his emissaries in London. After the debate, in which Mr. Courtney, who made the chief speech in support of Mr. Stanhope's resolution, went out of his way to acquit Mr. Chamberlain of complicity in the conspiracy against the Transvaal, Mr. Chamberlain wound up the discussion by a vigorous harangue in which he shook even Mr. Labouchere's robust faith in his innocence by publicly repudiating the passage in the report condemning Mr. Rhodes as a liar, a coward, and a blackmailer, to which he had a few days before appended his signature. He declared that nothing had been proved against Mr. Rhodes's personal honour, that Mr. Rhodes should not be prosecuted, and that the Charter should not be cancelled. Not one word of explanation was given to justify the refusal of the Colonial Office to produce its correspondence, or to give any information as to the communications which passed between the Department and the representatives of Mr. Rhodes. The House of Commons divided twice, and in the second division Mr. Stanhope's resolution was rejected by 304 votes to 77.

**How  
Circumstances  
alter Cases.**

By this vote, the House assumed the responsibility for the refusal of its Committee to insist upon obedience to its demand for the production of evidence which the law officer of the Crown declared to be "undoubtedly material to the inquiry," and thereby, as Professor Beesley has pointed out, still further impaired the reputation of the House of Commons. As if to emphasise the difference between the treatment of contumacious witnesses who hold information which criminales a party leader, and other witnesses who possess no such compromising documents, we had the scandal of seeing a recalcitrant money-lender summoned to the Bar of the House,

severely rebuked, and ordered to produce information required by a Select Committee, notwithstanding all his pleas of privilege and of confidence. But the information which Mr. Kirkwood was compelled to give had no bearing upon the political future of any man on the Front Bench. Therefore he was thrown to the wolves without mercy. But when it came to be a question which involved the downfall of Mr. Chamberlain, it was, of course, another matter, and the same House which ordered Mr. Kirkwood to divulge the secrets of his business rejected by a majority of nearly four to one a proposal to order Mr. Hawksley to produce the telegrams in his possession, which, according to Sir Henry Campbell-Bannerman, had been used for intimidating one public department after another.

#### At Last !

The other subject of interest was the Employers' Liability Bill, which, after having passed through the House of Commons, and been read a second time in the House of Lords, was amended in Committee in accordance with the views of its opponents rather than of its friends. The Lords' amendments were agreed to, and the Bill becomes law.

#### Verminous Persons in Parliament.

A very disreputable incident in the Parliamentary history of the month was the cowardly subterfuge resorted to by the House of Commons for the purpose of shirking the issue raised by the Woman's Suffrage Bill. This measure had been read a second time on the 3rd of February by 228 votes to 157. On July 7th two measures, which in ordinary circumstances would have been disposed of in a few minutes—the Verminous Persons Bill and the Plumbers Bill—were talked about the whole afternoon, with the avowed object of shelving the Woman's Suffrage Bill, which stood next on the list. If the House of Commons had desired to justify the petition signed by women, which Mr. Courtney presented a day or two previously, it could have adopted no more effective method. The petitioners had the temerity to address the House of Commons in plain terms, telling them that they viewed with indignation and alarm its existing procedure, which reduced legislation to a mere game of chance, and permitted the repeated and insulting postponement of the just claims of women to citizenship. There was quite a small scene in the House when the petition was read at the table, for the House of Commons is one of the most conceited bodies in existence. The cowardice which leads a Legislative Assembly, after carrying a measure of this importance

by a majority of 71, to shirk and dodge further consideration of the Bill by playing the sorry farce of debating trumpety measures like the Verminous Persons Bill, irresistibly suggests the observation that there are a good many more verminous persons than those dealt with in the Bill; for who can more justly be described as vermin than men who are equally devoid of the instinct of chivalry and the sentiment of justice?

When Mr. Burns went down to the Naval Review and saw our thirty square miles of warships, he came

back filled with the conviction that at last we had reached a stage of naval strength with which we could rest content and be thankful. This, however, is not the opinion of the Admiralty. In addition to the four battleships which they are laying down, they intend to meet additional shipbuilding on the part of other Naval Powers by building four new armoured cruisers like the *Powerful*, of 11,850 tons, capable of maintaining a speed of 21 knots per hour. Each of these cruisers will cost £700,000, of which we shall only spend this year about £50,000 apiece, and four torpedo boat-destroyers are to be built. Mr. Goschen announces in the same speech an item of shipbuilding programme which in no sense adds to the strength of the fleet, but which may be regarded as a kind of Jubilee compliment to Her Majesty. The Admiralty proposes to build a new royal yacht, with a speed of 20 knots, and a displacement of 4600 tons. It will cost a quarter of a million of money.

A Prospect  
of  
Peace in the  
East.

At last some progress has been made in the settlement of the dispute between Greece and Turkey. The Turks are still in Thessaly, but they have agreed to go if they get their indemnity guaranteed by the financial control of the Powers over the Greek Treasury. Nothing practical has yet been done in Crete, and the *status quo* remains in Armenia. Negotiations drag on a long time at Constantinople, but there is always danger that somebody will lose patience, and then over will go the apple-cart. If there was any possibility of an agreement among the Powers for partitioning the Empire, the disappearance of the Sultan would be hailed with profound relief. Unfortunately no Power has sufficient confidence in its neighbours to agree upon any drastic solution of that kind, and until confidence grows the Assassin will continue to cumber the ground.

DR. VON MIGUEL,

Vice-President of the Prussian Ministry.

The Kaiser  
and  
the Tsar.

The German Emperor, who has been cruising in Scandinavian waters, had a rather nasty blow on the eye by a rope which struck him as they were lowering the spar on board his yacht, the *Hohenzollern*. It has not affected his sight; but a patriotic German might well draw a long breath at the thought of what might have happened if, instead of a flick from the rope-end, the Emperor had been struck by the falling spar. Even those who are most severe in their comments upon William II. will admit that his disappearance would expose Germany to risks from which every patriot would recoil. He is now on his way to St. Petersburg to visit the Emperor, with whom he may get on better than he did with Alexander III. He could hardly get on worse. He will be followed rapidly by President Faure, who will travel to Petersburg by sea, so as to avoid the necessity of crossing German territory. It is not expected, however, even in France, that the return visit will result in any more explicit declaration as to the need of the Franco-Russian Alliance.

**The Prussian  
Chamber  
and the Law  
of  
Public Meeting.**

It is probable that the German Emperor took much more to heart the slap in the face which he received when the Prussian Lower House rejected his Bill for the suppression of the Social Democrats than he felt the blow which hurt his eye at Christiania. The Prussian Government had framed a Bill which the Upper House passed by a majority of 112 to 19, which gave agents of the police power to dissolve public meetings whenever they chose to consider that Anarchist or Social Democratic movements were manifest, having for their object the overthrow of the existing order of State or of society, and finding expression in a manner which endangers public security, and in particular the security of the State. The Minister of the Interior asserted the Government must be armed with stronger weapons to combat the Social Democratic agitation, and the Vice-President, Dr. von Miguel, appealed plaintively to the House to unite with the Government in solving the great problems affecting the State. The House listened, and then cast out the Bill by a narrow majority of four, 209 voting against it, 205 in its favour. The warfare against the Social Democrats must, therefore, in the opinion of the Prussian House—in which not a single Social Democrat has a seat—be conducted without the aid of a weapon which would enable the police to abolish freedom of meeting and freedom of speech throughout Prussia.

**The  
Dutch  
Elections.**

In writing last month of the result of the general election in Holland, I assumed from the first ballots that the Liberal party had sustained a defeat at the hands of the denominational coalition of Calvinists and Catholics. The second ballots, it appears, enabled the Liberals to hold their own, although with a reduced majority. For the election of the new Parliament has been promptly followed by the creation of a new Ministry under Dr. Pierson, who is Premier and Finance Minister. His Cabinet is not only Liberal throughout, but is more progressive than the administration which it replaces.

**John Bull  
and  
Silver Money.**

Those who are interested in the currency question have been much exercised in the last month by the presence in London of Senator Wolcott, who arrived from Paris at the beginning of the month with assurances that the French Government were willing to support the American initiative in favour of silver. The *National Review*, the only organ of the bimetallists in our periodical press, says that when Senator Wolcott began to negotiate with

Lord Salisbury, the English Prime Minister had virtually to deal with a Franco-American combination. The same authority says that Great Britain is willing to co-operate in the rehabilitation of silver by reopening the Indian mints, and is also prepared to propose the more extended use of silver in Great Britain by making it the basis for notes, raising its legal tender, making it a part of the Bank Reserves, etc. The Indian mints may be opened with a stroke of the pen, but the other measures will take time. Those who are not in the least given to sympathise with the bimetallist idea will not be disposed to regret the success of the Wolcott mission. Until something is tried in this direction, nothing will get it out of the heads of the American people that what seems to be becoming a chronic state of industrial depression and financial crisis can be remedied in some way by tinkering the currency. If the Wolcott mission succeeded in achieving this end, it is probable the industrial and financial crisis in the United States would remain just as it is. In that case the sober second thoughts of the American people would have to look further afield than the question of the currency. Bimetallism is something like Local Option in another department of politics. There are so many people who have made it a fetish that until they have an opportunity of proving by practical experience that it won't do any good, it is hopeless attempting to get them to listen to any more practical proposals.

**Royalty  
in  
Ireland.**

One of the Jubilee incidents which escaped general attention, but which possessed a certain grim significance of its own, was the popular demonstration held in one of the Irish towns to commemorate the twenty-eight days which Her Majesty had spent in Ireland in the sixty years of her reign. An ingenious statistician has calculated that the total sojourn of the Royal Family in Ireland during the last sixty years has been exactly fifty-nine days. The Queen on her three visits put in twenty-eight days. The Prince and Princess of Wales were twice there for twenty-seven days, while Prince Albert Victor and his brother spent four days in the country in 1887. It is to be hoped that in what yet remains of the Queen's reign, the Royal Family will break the record of the previous sixty years. The Duke and Duchess of York will make a beginning by visiting Ireland this month; they will stay twenty-one days, in the course of which they will traverse the country from Dublin to Killarney, and from Cork to Belfast. It is to be

regretted that the Government have not decided to commemorate the Jubilee by establishing the long-talked-of Royal residence in Ireland. There was no urgent need for another Royal yacht this year, and if they had spent their quarter of a million in creating an Irish Balmoral, the political effect would have been a thousand times greater than any that is likely to follow from building a new yacht which Her Majesty will probably seldom or never use.

Dr. Andrée, accompanied by Dr. Strendberg, a young scientist of twenty-five, and Mr. Frænckell, an engineer, started from Danes' Island on the North-West coast of Spitzbergen for the North Pole on July 11. All

HERR ANDRÉE.

previous efforts to cross the frozen Arctic Ocean by ship or sledge having failed, Dr. Andrée decided that the easiest way to the heart of the mystery was to travel through the air. He sailed therefore in his balloon, the Eagle, specially equipped for the journey, starting northward at the rate of twenty-two miles an hour. If that rate were kept up, she would cross the Pole in thirty hours from the time of departure, and would only have taken forty more to traverse the 900 miles of ice on the other side. But although it is now August 2 no authentic news by carrier pigeon or otherwise has reached the world of the safe arrival of the intrepid explorers. The distance, however, is great, there are no cables to the North Pole, and it by no means follows that they may not turn up safe and sound. If they perish, it is at least some consolation that there are only three. In marine Arctic expeditions the lives risked are much more numerous. The

balloon only cost £2000. The car is five feet deep and six feet in diameter, with sleeping accommodation for one man. It is hoped that by allowing guide ropes varying in length from 1000 to 1200 feet to drag over the ice, it may be possible to direct or at least to deflect its course. But balloons, from their great bulk, are bad to steer, and Dr. Andrée has gone perforce where the wind chose to take him.

Photo by Stereoscopic Co.]

THE LATE A. J. MUNDELLA, ESQ., M.P.

Mr. Mundella's death makes no difference in politics, beyond creating a vacancy in the Brightside seat at Sheffield, which had almost become a personal possession. Mr. Mundella had done his work and was lingering superfluous on the stage. No prominent man had fewer enemies or more friends. Few employers of labour had done so much to promote the cause of industrial peace, few Liberal

politicians maintained such Radical opinions with so little offence to his political opponents. Mr. Mundella was an ardent educationist long before education had been recognised as a national duty, and he had rendered yeoman's service to the cause of social democracy years before the socialist revival was heard of. His enforced retirement from the late Cabinet, because of his connection with flyblown finance, was regarded with general regret and universal sympathy. His disappearance leaves the Opposition weaker than ever, and at present it is so weak—thanks to Sir W. Harcourt's blunder over South Africa—as to be practically the shadow of a name rather than a solid reality.

that date, £30,000 was distributed as strike-pay to those who are lying idle, of whom only 16,500 are engineers, 14,500 allied workers, and 5,000 non-unionists, a levy of 3s. 6d. per week being paid by the engineers still remaining at work. It is calculated that of the 20,000 men engaged in the engineering trade in the metropolitan district, 13,000 have been conceded the eight-hours day, and only 2,600 are on strike or locked out.

Arbitration,  
Compulsory  
and  
Otherwise.

This strike led some of our New Zealand visitors to lament that the old country has not yet followed the example of her remotest colony in adopting the Compulsory Arbitration Act. Mr.

THE NEW HENRY TATE ART GALLERY AT MILLBANK.

When  
Shall Overtime  
Begin?

The chief industrial event of this month has been the beginning of the great struggle between the Amalgamated Society of Engineers and the Employers' Federation for the eight-hours day. The great strike of 1871 established the nine-hours day as the rule in the engineering trade. That is to say, overtime begins when a man has worked his nine hours, and overtime means extra pay. It is now proposed that overtime should begin when a man has worked eight hours, so that he shall have his extra pay from his ninth hour, instead of from his tenth hour. The struggle, which began on a comparatively small scale, rapidly attained national dimensions, and the last day in July, 36,000 workmen were either locked out or on strike. On

Seddon was of opinion that such a strike as this would be impossible under the compulsory arbitration law, which he reported to be working extremely well in New Zealand. The first report of the Board of Trade on our own Conciliation Act of 1896 is pretty fair so far as it goes. Of thirty-five disputes, in which some kind of action by the Board of Trade has either been taken or invited, nineteen have been settled under the Act by conciliation or arbitration. Of these only five have been cases of actual arbitration. The department report that so far as they have gone experience shows that advantage has been found, and may be expected to be found, from negotiations conducted by independent persons whose only object is the termination of disputes which must be injurious to trade.

The  
King of Siam  
in  
London.

The King of Siam, a fine-looking monarch of forty-four, arrived in his yacht at Portsmouth at the end of last month, and came on to London, where

between them have eaten up all the other States in the further East, and our Royal visitor alone preserves a precarious shadow of independent sovereignty. As a buffer state between the outposts of the British

KING CHULALONGKORN OF SIAM.

he is regarded with much interest and curiosity. His son is being educated at Harrow with two Siamese companions. Siam represents the last leaf of the artichoke of Indo-China. England and France

Empire and the French Republic, Siam has its uses, and it will certainly not be with our goodwill that any further curtailment of the independence and integrity of the Siamese Kingdom will take place.

# DIARY FOR JULY.

## EVENTS OF THE MONTH.

- July 1. The Queen witnessed the review of the troops at Aldershot.  
 Federation of Engineer Employers' Association at Manchester declared their intention to discharge 25 per cent. of the members of Unions if the suggested strike occur.  
 Mr. Chamberlain held a conference with the Colonial Premiers.  
 The Lord Mayor entertained the Colonial Premiers and others at the Mansion House.  
 Resignation of Dr. von Boettcher and the appointment of Count Posadowsky and Dr. von Mignel announced by the Berlin Imperial Gazette.
2. The Queen entertained the Colonial and Indian Troops at Windsor.  
 Miss Flora Shaw further examined by the South Africa Committee.  
 Deputation led by Lord Londonderry urging objections to the Workmen's Compensation Bill was received by Lord Salisbury, Sir M. W. Ridley and Mr. Chamberlain.  
 Historical Jubilee Ball given by the Duke and Duchess of Devonshire.  
 Sir John Pender Memorial inaugurated at University College.  
 Mr. Rand, Plague Commissioner, died from wounds received at Poona.  
 Bishops attending the Lambeth Conference held a service at the spot where Augustine landed in England.
3. The Queen received the Members of the House of Commons and their wives at Windsor Castle.  
 Colonial Premiers entertained at Luncheon by the National Liberal Club.  
 Prince of Wales inspected the Colonial Troops at Buckingham Palace.  
 Princess of Wales received the Colonial Premiers and their wives.  
 Deputation from the Australasian Chamber of Mines waited upon the Australasian Premiers.  
 The Archbishop of Canterbury from the Chair of St. Augustine welcomed the Bishops to the Lambeth Conference.
4. Survivors of the *Aden* arrived at Suez.  
 Queen's Diamond Jubilee Service held in Calcutta Cathedral.  
 The Sultan commanded Tewfik Pasha to advise the Ambassadors that no definite answer as to the Thessalian boundary could be sent them.
5. The Queen, at Windsor, decorated the Officers of the Indian Imperial Service Troops and the Indian Native Cavalry with Jubilee Medals.  
 The Prince and Princess of Wales, at Chelsea Hospital, inspected a company of old soldiers and sailors who had fought for the Queen.  
 Mr. Chamberlain held a conference with the Colonial Premiers.  
 The Lord Mayor promised to open a Fund for the Essex hailstorm sufferers.  
 Conference of Anglican Bishops opened at Lambeth Palace.  
 Colonial Premiers in the City of London welcomed by the British Empire League.  
 Extradition treaty with Liberia signed in Paris.  
 Refugees from Candia appealed to Lord Salisbury for protection.  
 Corporation of London gave a reception and ball in honour of the Queen's Jubilee.
6. Deputation from the Liverpool Chamber of Commerce waited upon Lord Salisbury, urging

direct Imperial control of the Niger territories.  
 International Congress of Naval Architects opened at the Imperial Institute.  
 The Austrian Embassy informed Tewfik Pasha that unless the Porte set a time for the discussion of the Frontier the Ambassadors will ask the Powers to take severe steps.  
 Treasurer and Masters of the Inner Temple

7. Naval Manœuvres began at Midnight.  
 United States Senate passed the Tariff Bill by 38 to 28 votes.  
 The Lambeth Conference discussed Foreign Missions.  
 Princess Christian opened the new, Birmingham General Hospital.  
 Bristol constituted a Bishopric.  
 Fishmongers' Company entertained the Colonial Premiers.  
 The Tsar received the King of Siam.
8. Ambassadors in Constantinople presented a Note to the Porte declaring that the Powers would adopt severe measures if peace is not soon concluded.  
 The Queen received at Windsor the Lord Mayor, Sheriffs, and Members of the City of London, the Members of the London County Council, and a deputation from the Houses of Convocation.  
 International Arbitration and Church Unity discussed by the Lambeth Conference.  
 A Bill to repeal the Cantonments Act of 1895 introduced in the Simla Viceregal Legislative Council.  
 Reported that the Royal Niger Company's Constabulary on June 11th captured the town shielding King Benin—The King escaped.
9. Amalgamated Society of Engineers issued a circular vindicating the men.  
 Publication of Blue Book on Cretan Affairs.  
 South African Committee considered Mr. Jackson's report on the Raid.  
 Sir John Forrest, Premier of Western Australia, received at Hotel Cecil a deputation from the Western Australian Chamber of Mines.  
 Sir J. Gordon Sprigg, Premier of Cape Colony, received a deputation from the Imperial Federation Committee congratulating the Cape upon their contribution to the Imperial Navy.  
 Lambeth Public Baths opened by the Prince and Princess of Wales.  
 Duke and Duchess of York witness the destruction of the plates for the Prince of Wales' Hospital Fund Stamps.  
 Emperor Francis Joseph counselled the Sultan to conclude the Peace.
10. Mr. W. H. Haggard appointed Minister at Caracas. Sir Harry Johnston made Consul-General at Tunis.  
 Dr. Cornelius Herz offered all information in his possession to the Panama Committee.  
 Troops attacked Chiumba's kraal on the Unyani River, capturing 600 natives.  
 The Queen received addresses from the Universities of Oxford, Cambridge and London.
- Mr. Gladstone entertained Sir W. Laurier, Mr. Seldon, and Mr. Reid at Hawarden.  
 The Queen received, at Windsor, the delegates to the International Congress of Naval Architects, and their wives.
11. Herr André ascended in his balloon from Danes Island.
12. Publication of Mr. Gladstone's letter on the Policy of the Powers and Armenia.  
 Bisley Meeting of the National Rifle Association opened.  
 Hiltner-green, Lewisham, Hospital opened by the Prince and Princess of Wales.  
 Yellow Book on the Eastern Situation issued by France.  
 Fatal railway disaster occurred near Copenhagen.

Photo by Elliott and Fry.]

## THE LATE MISS JEAN INGELow.

- gave a garden party in celebration of the Queen's Jubilee.  
 The Duke and Duchess of Connaught attended the Annual Drill of the London Board Schools at the Royal Albert Hall.  
 The Colonial Premiers and others entertained by the Master of the Rolls and Lady Escher.  
 General Weyer issued a proclamation of amnesty to all submissive Cuban insurgents.  
 Royal Geographical Society held a conference regarding Antarctic explorations to secure the assistance of the Australasian Governments.  
 Calcutta mob dispersed upon the arrival of the Troops.
7. The Queen received at Windsor a deputation from Ceylon, and the Colonial Premiers and their wives.

- British steamer *Peju* reported railed by Chinese passengers.
- Frano-Scottish Society opened its Second Annual Meeting in Edinburgh.
13. Irish Members urging the acceleration of the Irish mills called upon the Duke of Norfolk and Mr. Hanbury.
- The Queen received, at Windsor, the Bishops attending the Lambeth Conference.
- Strike and Lock-out of members of the Amalgamated Society of Engineers demanding an eight hours' day instituted throughout the country.
- Viceroy of India reports 3,303,963 persons on Relief Work.
- International Library Conference opened at the Guildhall.
14. Henley Regatta opened.
15. Mr. C. Holroyd announced as Keeper of the National Gallery of British Art.
- The Queen received at Windsor deputations from several Nonconformist Associations and from the Royal Society.
- Northern Polytechnic Institute, Holloway Road, opened by the Lord Mayor.
- Publication of the Report of the Select Committee on the Transvaal Rail.
- The Queen thanked her people for their unbounded loyalty.
17. Amalgamated Society of Engineers estimated 24,000 men were on strike or lock-out.
- Ambassadors refused to receive Turkish delegates in place of Tewfik Pasha.
19. London Postal Telegraph Clerks' Association petitioned the Postmaster-General.
- Premiers of Canada, Cape Colony, and New South Wales entertained by the British Chamber of Commerce in Paris.
20. Miss Jean Ingelow, poet and novelist, died in Kensington.
- Publication of Professor Koch's report on the Plague.
- Large percentage of telegraph clerks in favour of a strike.
- Franchise of Johannesburg defenders against the Jameson Raid discussed by the Volks-rail.
- Deputation from London Chamber of Commerce waited upon Sir John Forrest, urging attention to the Australian Mining Laws.
21. Sultan accepted the Frontier line with reservations.
- The Prince of Wales at St. James's Palace received many congratulatory addresses for the Queen.
- National Gallery of British Art, given by Mr. Henry Tate, opened by the Prince of Wales.
- Strike postponed by Telegraph Clerks at Memorial Hall.
- Bridge at Sunlight village opened by the Rt. Hon. G. H. Reid.
22. Viceroy's Council at Simla passed the Bill regarding Contagious Diseases.
- Ambassadors accepted the Porte's adoption of proposed Frontier.
- Djeval Pasha with Ammunition sent to Crete.
- Dr. Jameson arrived in Bulawayo.
23. Canadian Ministers considered Schemes for opening up the Yukon gold country.
- The Queen received an address at Newport, Isle of Wight.
- Indians on relief work reported to number 3,462,000.
- Law of Association Amendment Bill rejected by the Lower Prussian House.
- United States Senate passed the Tariff Bill by 40 to 30 votes, and President McKinley affixed his signature, and sent a Message to Congress recommending the appointment of a Commission on Currency.
- Samuel Webbe memorial unveiled in St. Pancras churchyard by Mr. G. Riseley.
- Japanese Government agreed to submit the Hawaiian Immigration dispute to arbitration.
25. Great Gold Excitement reported from Victoria, British Columbia.
26. Native attacks Malakand in the Swat Valley.
- Tochi Expedition destroyed the defences of the Maizar villages.
- British South Africa Company published a refutation of Sir R. Martin's report on their native administration.
27. The Queen received an address at Cowes.
28. The Postmaster-General met representatives of the Telegraph and Postal departments to discuss the grievances of the clerks.
- Sirdar Baluwaatrao Nattu, Tayta Sahib and

- Gangadhar Tilak, arrested for connection with the Indian troubles.
- Refugees in Greece reported starving.
29. The Queen received congratulatory address at Ryde.
- Maulvi Hidayat Rasool sentenced at Lucknow to imprisonment.
30. King of Siam arrived in London.
- Commercial Treaty (1865) between Great Britain and Germany denounced by the former Government.
31. Princess Henry of Battenberg laid a foundation-stone at Venter Consumption Hospital as a Memorial of the late Prince Henry.

## ELECTIONS.

15. Roscommon (South): Mr. John P. Haden, Parnellite.—Unopposed.

## PARLIAMENTARY.

## HOUSE OF LORDS.

- July 2. Fisheries Act Amendment Bill read a third time and the Market Gardeners' Compensation (Scotland) Bill a second time.
5. Lord Clonbrock resumed the discussion of Lord Inchiquin's motion calling for justice for Irish Landlords. After discussion by Lord Londonderry, the Duke of Argyll, the Lord Chancellor of Ireland, Lord Lansdowne and others, the motion withdrawn.
- Mersey Channels Bill read a third time.
6. Lord Thring moved the Second Reading of the Floods Prevention Bill. After some discussion rejected by 37 to 18.
- In reply to Lord Connemara, Lord Salisbury said the delay in the negotiations at Constantinople was due to the Ottoman Government.
8. Lord Salisbury discussed the Delagoa Bay Railway Arbitration.
- Third Reading of the Extraordinary Tithe Bill.
9. Third Reading of the Church Patronage Transfer Bill.
12. Lord Belmore moved an address to the Queen praying for a Commission to inquire into Irish tithe rent-charges. Motion seconded by Lord Mayo. Lord Denbigh said the question would have Government consideration.
- Lord Wantage introduced the subject of associations of Voluntary Schools in Berkshire.
- Lord Stanmore, the Bishop of Oxford, Lord Heneage, the Bishop of Lincoln, Lord Spencer, the Archbishop of Canterbury, the Duke of Devonshire, and Lord Kimberley took part in the discussion.
- Third Reading of the Finance Bill.
13. Second Reading of the Chaff-cutting Machines (Accidents) Bill.
15. Finance Bill and others received the Royal assent by Commission.
- Discussion of the Volunteers Bill a journal.
16. The Archbishop of Canterbury moved an address to Her Majesty praying that she withhold her assent to a certain scheme under the Welsh Intermediate Education Act. After discussion by the Duke of Devonshire, Lord Salisbury and others, motion carried by 72 to 33.
- Lord Belmore's motion relating to Irish tithe-rents, after discussion, withdrawn.
- First Reading of the Workmen (Compensation for Accidents) Bill.
19. Parliament (Scotland) (Casual Vacancies) Bill read a second time.
20. Second Reading of the Weights and Measures (Metric System) Bill.
- Lord Belper moved the Second Reading of the Workmen Compensation Bill. After discussion by Lord Wemyss, Lord Londonderry, Lord Kimberley, Lord Salisbury, and others, the Bill was read a second time.
22. Amendments made by the Committee to the Provisional Order (Scotland) Bill agreed to.
23. The Duke of Abercorn moved an Address to Her Majesty touching the Commission on the Irish Land Acts. After discussion by Lord Lansdowne, Lord Salisbury and others, motion withdrawn.
- Third Reading of the Lunacy and Copyright Bills.
26. Workmen (Compensation for Accidents) Bill considered. Lord Selborne moved substituting clause be omitted. Several other changes being made, the Bill passed Committee.
27. London University Commission Bill read a third time.
- In reply to Lord Loch, Lord Salisbury stated

the Chartered Company would not forfeit their Charter.

29. Lord Belper moved the Workmen (Compensation for Accidents) Bill be read a third time.
- Lord Wemyss moved it be read three months hence. After discussion by Lord Salisbury, Lord Kimberley and others, Lord Belper's motion passed by 69 to 6 votes.
- Lord Carrington asked as to the restoration of Commissions to Sir John Willoughby and his fellow offenders. Lord Lansdowne said the Government knew of no reason why they should be restored.
30. Second Reading of the Public Health (Scotland) Bill.
31. Reasons of the Commons for disagreeing with some of the amendments of the Lords to the Workmen Bill received.

## HOUSE OF COMMONS.

- July 1. The Question of the Liberty of the Indian Press introduced by Mr. Heath, and discussed by Lord G. Hamilton and others.
- Mr. Ritchie stated the Board of Trade intended to inquire into the causes of the wreck of the *Aden* on Sokotra.
- Second Reading of the Education (Scotland) Bill and the Land Transfer Bill.
- Third Reading of the Police (Property) Bill.
2. Replying to Mr. Morley, Mr. Gerald Balfour set forth the Terms of Reference to the Commission of Inquiry into the working of the Irish Land Acts.
- Civil Service Estimates relating to Ireland considered in Committee of Supply.
- On vote for Public Works and Buildings, Mr. Dillon moved a reduction of £100 of the sum for Queen's College, Belfast. Motion negatived by 224 to 70.
- Vote for Railways in Ireland agreed to.
- On the Vote for Public Education Mr. T. M. Healy moved a reduction by the amount intended for the Model Schools. Negatived by 160 to 42.
- Teachers' Pension Fund discussed by T. M. Healy, Mr. Dillon, Sir M. Hicks-Beach, Mr. Carson, and Mr. G. Balfour.—Vote for Education and several others agreed to.
5. In response to a question, Mr. Brodick said any operations in Egypt would be carried on by that Government.
- Mr. Balfour stated that the Committee reported in favour of the purchase of Hertford House for the Wallace collection.
- Lord G. Hamilton read a communication from Lord Sandhurst denying the allegations against plague inspectors.
- Resolution forming the foundation of the Naval Works Bill agreed to.
- Sir M. W. Ridley moved the insertion of a new Clause in the Workmen's Compensation Bill which would, under certain conditions, diminish the liability of the employer.
- Carried by 351 to 43.
- Mr. Cripps moved to amend Clause 1. Negatived by 150 to 126.
- Mr. Asquith's amendment negatived by 203 to 123.
- Amendments moved by Sir M. W. Ridley and Sir A. Forwood agreed to.
- Mr. Tennant moved that nothing in the Act should affect the work of the factory inspectors.
6. Mr. Courtney presented a petition, signed by women, praying that the House would reform its procedure to insure just consideration of all public questions.
- The Workmen Bill was further considered.
- Mr. Tennant's amendment and several others agreed to. Several amendments rejected.
- Third Reading of the Chaff-cutting Machines (Accidents) Bill.
7. Mr. Hazell moved the Third Reading of the Vermineous Persons Bill. After some discussion the Bill read a third time.
- The Plumbers Registration Bill considered.
- Other orders of the day postponed.
8. Mr. Carson stated that an agreement had been concluded between Her Majesty's Government and Emperor Menelik.
- Workmen Bill considered. Clauses 3, 4 and 5 and Amendments discussed.
- Third Reading of the Weights and Measures (Metric System) Bill.
9. In reply to Mr. J. Morley, Mr. Gerald Balfour stated the Commission to inquire into the

- working of the Land Law Acts (Ireland) would consist of Mr. E. Fry, Mr. K. Vigers, Mr. G. Gordon, Dr. Traill, Mr. Fotherell, and Mr. Cherry.
- Civil Service Estimates for Ireland discussed in Committee. The vote for the Office of Public Works after discussion by Mr. Balfour, Mr. Healy and others, agreed to. The vote for Queen's College was debated by Mr. MacNeill, Mr. Dillon, Mr. Arnold-Forster, Mr. Carson, Mr. Balfour, Mr. Morley and Mr. Rentoul.
12. Mr. Goschen set forth the arrangement of the Cape Colony to contribute the price of a first-class warship.
- Consideration of the Workmen Compensation Bill resumed.
13. Report of the South African Committee brought in by Mr. Jackson.
- Mr. Chamberlain stated, in reply to Mr. Hogan, that the Conferences with the Colonial Premiers had been informal, but a brief report would be published.
- Workmen (Compensation for Accidents) Bill discussed and concluded.
- In Committee on the Foreign Prison-Made Goods Bill.—Several Amendments rejected or withdrawn after discussion.
14. Naval Works Bill moved by Mr. Austen Chamberlain and discussed by Mr. Robertson, Sir W. Harcourt, and others read a second time.
- Metropolitan Water Companies Bill discussed in Committee.
- Order for going into Committee on the Parliamentary Franchise (Extension to Women) Bill read and the Bill withdrawn.
15. Mr. Stanhope requested the appointment of a day for consideration of the Report of the Select Committee on British South Africa.
- Mr. T. W. Russell reported that John Kirkwood refused to answer questions addressed him by the Committee on Money-lending.—J. Kirkwood ordered to attend the House at 3 p.m.
- Mr. Balfour moved the suspension of the 12 o'clock rule.
- Sir W. Harcourt hoped influence would be used for the early removal of the Workmen Bill.
- Mr. Strachey moved the House should not be adjourned immediately after Government business was concluded. Amendment negatived. Original motion agreed to.
- First Reading of a Relief for Ireland Bill.
- Third Reading of the Workmen (Compensation for Accidents) Bill.
16. Mr. Balfour stated, in reply to Sir W. Lawson, that the Government has the future control of African Territories under consideration.
- Mr. J. Kirkwood stated he would answer any questions put to him by the House. Mr. Dillon said the House would do wisely in not pressing this obscure person in view of recent affairs in another Committee. The Speaker commanded Mr. Kirkwood to appear before the Committee and reply to their questions.
- Civil Service and Revenue Departments estimates considered in Committee of Supply. On the Post Office Vote Sir H. Fowler complained that the House did not have proper control of this State Department. Sir A. Rolitt moved a reduction of the vote, calling attention to the grievances of the Post Office Employees. After discussion motion withdrawn.
- Mr. P. A. M'Hugh referred to Mr. Hanbury's ignorance of Irish postal affairs. He was requested to resume his seat, but refused. At last conducted from the House by the Deputy Serjeant-at-Arms.
- Mr. Dillon's motion to report progress and Mr. Weir's for the reduction of the vote by £100 negatived.
- Mr. Balfour's motion for closure carried by 108 to 29, and vote passed by 114 to 19.
19. Mr. Curzon stated the attitude of the Government on the Behring Sea seal question.
- In Committee of Supply on the Foreign Office Vote, Sir W. Harcourt, Sir C. Dilke, Mr. Curzon, and others discussed the Eastern situation. Closure carried by 166 to 73, and vote agreed to. On the Colonial Office Vote, Mr. Arnold Forster, Mr. Balfour, Sir W. Harcourt, and Mr. Stanhope spoke on South African Affairs.
20. Prison-made Goods Bill reported to the House.
21. Scotch Education Bill discussed in Committee and ordered reported to the House.
- Third Reading Cotton Cloth Factories Bill.
22. Mr. Gerald Balfour introduced a Bill to amend the Judicature (Ireland) Acts—1877 to 1888.

- Congested Districts (Scotland) Bill and the Public Health (Scotland) Bill considered.
23. Estimates for the War Office considered in Committee. After much discussion Vote agreed to, as were several others.
26. Mr. Stanhope moved a resolution stating the House regretted the inconclusive action of the South Africa Committee, and that Mr. Hawksley should be ordered to lay the telegrams before the House.
- Discussion by Mr. Labouchere, Sir M. Hicks-Beach, Sir W. Harcourt, Mr. Courtney and others.
- Mr. Birrell moved the omission of the first paragraph of Mr. Stanhope's resolution. After discussion by Mr. Chamberlain, Sir E. Lees and others, motion was negatived by 333 to 74. Mr. Stanhope's negatived by 334 to 77.
27. Army and Navy estimates considered in Committee of Supply. Votes for shipbuilding, stores, etc., agreed to.
28. Public Health (Scotland) Bill, the Metropolitan Water Companies Bill, the Post Office and Telegraphs (Facilities and Pensions) Bill, the Metropolitan Police (Borrowing Power) Bill, Infant Life Protection Bill, and Wicklow Harbour (Advances) Bill read a third time.
- In Committee on the Archdeaconry of London Bill progress reported after some discussion.
29. Civil Service Estimates considered in Committee. On the Vote for supplementary sum for Education in England and Wales, Sir W. Harcourt, Mr. Balfour, Lord Cranborne, Sir J. Gorst, and many others discussed the Vote, which was finally agreed to.
- Votes for the British Museum and Science and Art Department agreed to.
30. Third Reading of the Foreign Prison-Made Goods Bill, the Education (Scotland) Bill, the Municipal Elections (Scotland) Bill and the Isle of Man (Church Building Acts) Bill. The Lords' Amendments to the Workmen (Compensation for Accidents) Bill discussed and generally agreed to.
31. Third Reading of the Military Manœuvres Bill and several others.
- After discussion the Supreme Court of Judicature (Ireland) Bill passed through Committee.

## SPEECHES.

- July 1. The Lord Mayor, Lord Salisbury, Sir Wilfrid Laurier, and the Rt. Hon. G. H. Reid, at the Mansion House, on Britain and Her Colonies.
2. Lord Roberts, at Windsor, at the command of the Queen, expressed her pleasure at seeing so many of her subjects from the Colonies.
- The Duke of Connaught, Sir J. Gordon Sprigg, Mr. Goschen, Sir Wilfrid Laurier, Hon. G. H. Reid, and others, at the Colonial Institute Banquet at Hotel Cecil, on a United Britain.
3. Lord Kimberley, Sir Wilfrid Laurier, Sir George Turner, Sir William Harcourt, Lord Rosebery, Mr. R. J. Seldon, and Lord Carrington, at the National Liberal Club, on the Empire.
4. The Rev. Dr. Milburn, the blind chaplain of the United States Senate, Hon. W. P. Reeves, and others, at Browning Hall, on the Unity of the English-Speaking World, Mr. W. T. Stead in the chair.
5. The Duke of Devonshire, Sir William Whiteaway, Mr. G. H. Reid, Sir E. Braddon, Colonel G. T. Deulson, and others, at the Merchant Taylors' Hall, on the Desire for Imperial Unity.
6. Sir G. Taubman-Madley, at the Salters' Company, before the London Chamber of Commerce, on the Future of Nigeria.
7. Lord Wolesey, at the Duke of York's Royal Military School, Chelsea, on the success of the School.
8. Mr. Sidney Lee, Mr. Leslie Stephen, Canon Alinger, and others, at Hotel Métropole, on the Dictionary of National Biography.
- Rt. Hon. R. J. Seldon, and others, at Holborn Restaurant, on New Zealand Affairs.
9. Sir A. K. Rolitt, Sir J. Forrest, Hon. G. H. Reid, Sir E. Braddon, Mr. Seldon, and others, at Hotel Métropole, on Colonial Commerce.
- Mrs. Josephine Butler, Sir James Stansfeld, Mr. James Stewart, M.P., Mr. H. J. Wilson, M.P., at St. Martin's Town Hall, on State Regulation of Vice.
10. Sir E. N. C. Braddon, Mr. Goschen, Lord Leob, Sir H. M. Nelson, Sir G. Sprigg, Sir D. Smith, Sir J. Forrest, Lord Knutsford, at St. George's

- Club House, Hanover Square, on the Colonies and the Navy.
12. Admiral Sir N. Bowden-Smith, the Earl of Selborne, Mr. G. H. Reid, at Kensington, on the Commercial Relations of Great Britain and Her Colonies.
- Lord Reay and Comte de Franqueville, at Edinburgh, on Franco-Scottish Influences.
14. Lord James of Hereford, at Bath, on the Policy of the Government.
- Sir M. Hicks-Beach, at the Mansion House banquet, on the Merits of the British System of Taxation.
- Sir Wilfrid Laurier, at the Canada Club dinner, Albion Tavern, on Canadian Resources.
19. Sir John Forrest, at Cannon Street Hotel, on Mining in Australia.
20. Signor Crispi, at Milazzo, on the Possibilities of Italy.
- Hon. J. Rose-Innes, Q.C., at the Anglo-African Writers' Club, on Loyalty at the Cape.
- Mr. F. W. Verney, before the London Chamber of Commerce, on "Siam."
24. Mr. R. J. Seldon, Premier of New Zealand, at Cannon Street Hotel, on the Mining Prospects of the Colony.
- Mr. Birrell, M.P., before the Hardwick Society, Lincoln's Inn, on the Pretensions of the Press.
28. Mr. Escombe, Premier of Natal, and Sir Gordon Sprigg of Cape Colony, at Hotel Métropole, on Colonial Defence.
- Sir Wm. Whiteway, at Fotherly, on the Development of Newfoundland.
31. Lord Roberts, at Curragh, on the Necessity for good marksmanship.

## OBITUARY.

- July 1. Dr. Frank Chance, Hebrew Scholar, 71.
2. General Sir Richard Denis Kelly, 83.
3. John Strange Jocelyn, 5th Earl of Roden, 74.
- Rev. David Brown, D.D., Principal Aberdeen Free Church College.
- Sir John Bennett, 81.
- Major-General Philip Bedingfeld.
5. Sir Joseph Henry Warner, 61.
6. Hon. Chas. A. Gore, 86.
7. Vice-Admiral Wm. Elington Gordon, 66.
8. Senator Harris of Tennessee.
- Captain the Hon. Denis A. Bingham.
- Wolesey Lew's Tutor to King of Siam's sons.
9. Rev. Wm. James Jenkins, late Rector of Fillingham, 75.
10. Admiral William K. Stephens, 83.
12. Samuel C. Allsopp, Lord Huddip, 55.
13. Colonel Brown Chamberlain, Queen's printer in Canada.
14. Francis R. Stonor, Lord Camoys, 41.
- Pierre Chevreau, Frère Cyprien, Superior of the Brothers of Christian Education.
15. Thierry William Preyer, German physiologist.
16. Major-General Geo. Maister, 71.
- Levin Goldschmidt, Professor of Law at Berlin.
17. Edward Chas. Barling, Lord Revelstoke, 69.
20. Sir John C. Bucknill, M.D., psychologist, 79.
- Jean Ingelow, Poet, 77.
- Sir John Skelton, late Vice-President Local Government Board of Scotland, 66.
- Alexander Thielen, Vice-President Iron and Steel Institute, 56.
21. Anthony John Mundella, M.P., 72.
- Captain Bertram Untley Slater, R.E., 31.
26. Richard Benyon, philanthropist, 86.
29. Richard B. Wade, Financier, 76.
30. Major-General Chas. A. Sim, R.E., 57.

## DEATHS ANNOUNCED.

- Rev. Joseph Gegg, formerly Dean of Perth.
- M. Le Blanc, archaeologist, 71.
- M. Henri Meilhac, playwright, 67.
- Major-General George J. Smart.
- M. Adolphe Binet, French painter, 43.
- Friedrich Althaus, Professor German Literature, University of London, 64.
- M. Dantan, French painter, and his wife.
- Hon. Sir Patrick Jennings, ex-Premier New South Wales, 66.
- Robert Blair McCafe, Indian Civil Service.
- Max Joseph Oertel, Professor of Laryngology.
- Dr. Georges Clémenceau, Journalist, 87.
- General St. Marc, 67.
- Commanter Frederik Arthur Winter, R.N.
- Li Hung Tsao, Grand Comptroller.
- Very Rev. Edward Bowen, Dean of Raphoe.
- M. Etienne Vacherot, Philosopher, 88.
- Alfred Arnoth, President Austrian Academy of Sciences, 78.

MARK TWAIN IN 1895.

# CHARACTER SKETCH.

## MARK TWAIN.

"Victoria reigns over more territory than any other Sovereign in the world's history ever reigned over. Her estate covers a fourth part of the habitable area of the globe, and her subjects number about four hundred millions. It is indeed a mighty estate.

"And I perceive now that the English are mentioned in the Bible.

"Blessed are the Meek, for they shall inherit the earth."—*Mark Twain's special correspondence for the "New York Journal," June 20th, 1897.*

### I.—IN PRAISE OF THE HUMORIST.

**M**ARK TWAIN was retained as one of a staff of descriptive writers to do the recent Jubilee for the *New York Journal*. In the above sentence, with which he brings to a close his first Jubilee letter, we have the undimmed brilliancy of the original Mark—the Mark Twain who for nearly thirty years has held the foremost place among all the modern men who "tickle the midriff of the world."

Of late years Mark Twain has been cultivating a different style from that which won him fame in the early seventies. Mark Twain, the humorist, has receded somewhat into the background, while Mr. Samuel Clemens, historical novelist and reverent chronicler of the heroism and piety of Jeanne D'Arc, has come to the front. Far be it from me to speak disrespectfully of Mr. Clemens' excursion into the field of historical romance. It is a wide field and fertile withal, and he is a labourer who indeed is worthy of his hire. But there is no use denying the fact that Mark Twain's fame rests primarily on the bedrock of his capacity for exciting mirth. He has been, and still is for this generation, the very high priest of Momus, the most favoured of all the hierarchy of the Laughter-loving God.

It was, therefore, with delight that I stumbled upon this gleam of the old Mark Twain, and one which for humour and sarcasm is as good as anything that has been written for many a long day. Who can over-estimate the debt of gratitude which mankind owes to those rare children of genius who are able to make us for a time forget our cares in the abandonment of hearty laughter? Your jester has in every age been one of the most popular members of the community, and yet one whose popularity, strange enough, perishes with the using. Poor Yorick with all his infinite jest never seems to command the gratitude of those whose life he has lightened and brightened by his wit, to anything like the same extent as the soldier, the statesman, the philosopher or the apostle. It would almost seem as if care had eaten so deeply into the heart of man as to beget a certain half latent sense of shame as the twin brother of mirth. Why should we laugh and be merry in this sad world all scarred with graves? We laugh almost as urchins in prayer-time, with a certain furtive feeling of alarm lest we should be found out, and as if a broad grin was almost treason to humanity. Of course it sounds ridiculous to put it in this way; but if there be not this inarticulate resentment against whole-hearted mirth, how is it that the merry-makers of the world are passed on one side as a man passes a poor relation of whose existence he does not wish to be reminded? Nay, why do our jesters and humorists themselves more or less assume an apologetic attitude, as if the knack of banishing dull care and filling the heart of man with gladsome and genial thoughts was not a gift of the gods for which there is much more reason to sing a *Te Deum* in the churches than for half the victories which call

forth the sound of loud thanksgiving over slaughtered men?

In other lands it may be otherwise, but here in northern latitudes the comic muse, although cherished, is not honoured as befits her desert, and the proof of that, if proof be wanting, is that probably few of my readers will think that I am not indulging in a paradox when I claim for Mark Twain a foremost place among the benefactors of the world. Mark Twain has waged no battles, has founded no university, has amassed no fortune, has made no great discovery in science, neither has he explored any unknown continent, but he has done more than all these things. For nearly thirty years he has gone to and fro among the nations of the earth, causing, for many a happy hour, the weary and the care-worn to forget their sadness, and trimming with fresh and fragrant oil the flame of jocund mirth which should ever burn on the altar of home. "Merely to make men laugh," say the austere, "merely to tickle the ribs of silly fools so that they cackle like geese over the follies and fictions of the scribbler, call you that a benefaction to the human race?" "Yea! verily," I reply. "A blessed benefaction, indeed, and one for which all the wealth of all the Vanderbilts, if it could be offered us, would be but a poor exchange." For the quality of mirth, like that of mercy, is not strained. It is, indeed, like the oil in the widow's cruse, which multiplied the more it was used, and instead of losing value by its infinite diffusion through space, acquires additional potency the more widely its healing virtues are diffused among mankind.

### II.—FIRST IMPRESSIONS.

I well remember the first time I made the acquaintance of Mark Twain's writings. I was a young bachelor, living in lodgings, and my sister and cousin had come to enliven my solitude. It was in the most strenuous days of early youth, when an editor, not yet twenty-five, feels the full strain of the burden of the world; and I remember as if it were yesterday a certain feeling of irritation at my flippant cousin, who, while I was pounding through the papers, curled herself up on the sofa, and after a series of subcutaneous chuckles, would explode in irrepressible laughter. She was reading a yellow-backed sixpenny edition of "The Innocents Abroad," by one Mark Twain, of whom before that day I had never heard. It seemed to me rather silly that any one should giggle and guffaw over a book in that fashion, especially by an author not certified as a classic, who seemed to be vulgar enough withal. But after a few days the temptation to see what it was moved her risible faculties so constantly, led me, under protest as it were, from the literary and journalistic conscience, which was in a sad state in those days, to turn over a few of the pages myself. Alas! there is only one rule of safety in dealing with Mark Twain, and that is to obey scrupulously the command, "Touch not, taste not, handle not"; for those who begin to dally with the tempter will find

that he is too much for them, and that one by one all their scruples and qualms of conscience are laughed away. So it was with me. So I doubt not it has been with many hundred thousand others who have long since learnt to regard Mark Twain as one of the perennial springs of amusement in a world where such springs are rare. "The New Pilgrim's Progress" and "The Innocents Abroad" have now somewhat gone out of fashion, but I can never forget the mirthful hours which we spent over those pages. Like many other humorists, Mark Twain is best read aloud to a small but sympathetic company of listeners. Better still, no doubt, it is to hear Mark Twain read his own stories; but even without the personal presence of the author, any one who can read the English language and articulate audibly can be relied upon to produce somewhat of the same effect. If I owe to "The Innocents Abroad" and "The New Pilgrim's Progress" my first introduction to Mark Twain, I must give the second place to his inimitable "Tramp Abroad." And this reminds me that in mentioning the benefactions of the humorist to mankind, I laid too much stress upon his services as an anodyne for care and trouble. His services are quite as useful and much more likely to be appreciated when they tend to heighten a pleasurable mood by finishing, rounding off, and completing the whole. When you are on a holiday, especially when you go up the Rhine or into German countries, there is no better book to take, especially if you have with you a genial companion, than "A Tramp Abroad." To read it aloud at any time after tramping round all day is quite one of the pleasantest and merriest additions to the day's pleasure. I still remember with a certain genial glow round that particular spot in my memory, the old inn at Boppard, in which after various wrestlings with the German language through the day on our own account, we revelled in Mark Twain's exposition of its beauties and its mysteries in "A Tramp Abroad." It is good, no doubt, and great to cheer the mourner and to smooth the furrows of care from the brow, but it is not less good an achievement, and one not less gratefully remembered, to crown a pleasant day with a merry hour when the candles are lighted and it wants but a good laugh to make the day complete.

Nor must I in glancing very rapidly over the contributions which Mark Twain has made to the enjoyment of human kind, omit his inimitable boys, Tom Sawyer and Huck Finn, who are the common possessions of the English-speaking family. Their pranks, their adventures, their quaint outlook on the world, and the things that are therein, have made them universal favourites. Merely to have invented Tom Sawyer and Huck Finn would in itself have been a sufficient passport to the gratitude of all English-speaking men and women; but when these form but one exhibit in the caravan of Mark Twain's unparalleled show, even the most sceptical must admit that he has made good his claim to be regarded as one of the benefactors of the world.

I sometimes wonder how far the good feeling which undoubtedly prevails on our side of the water towards the citizens of the United States is due to the fact that Mark Twain is more read amongst us than any other American author. It is a very curious fact, often overlooked by those who pride themselves on their philosophic views, or their profound observations of men and things, that the conception of the man in the street of America and the Americans is usually based upon data very different from those which are possessed by writers and speakers on the subject. The English journalist, for

instance, sometimes, at least, sees American newspapers, and forms his estimate of his kinsmen across the Atlantic from the scare-heads and blanket-sheets of their marvellous papers; but of the forty millions of people who inhabit these islands, it is safe to say forty thousand would be an outside estimate for those who have read the American newspapers. On the other hand, the number of those who have read Mark Twain must be numbered by the million. Thus while the American newspaper is the interpreter of American men and things to but a handful, the multitude know Americans best, not from their journalists, but from Mark Twain and those who have preceded him as popular favourites. Mrs. Stowe, Henry Ward Beecher, Longfellow, Emerson, and, of late, Russell Lowell, are the only American writers who have left the impress of their personality on the mind and heart of the ordinary Briton. Hence it is not to be wondered at that among our people there is an utter absence of any of that feeling against Americans such as undoubtedly, alas! prevails in many quarters of the United States against the English. We know the Americans only by their best, and judge them only by writers whose voices are audible across the Atlantic as samples of the bulk. Hence it is possible that Mark Twain counts for more in the promotion of good and friendly feelings between the two great branches of the English-speaking race than any act of statecraft, the Alabama Arbitration Treaty itself not excepted.

Be it remembered, too, that in all Mark Twain's writings—and Messrs. Chatto and Windus have just sent me in a complete and uniform edition of his works, which number nearly a score of volumes—there is not one unkind or bitter word, nor is there a page which could not be read aloud in any company. When we consider what constitutes the staple of humorous literature in other countries, this is no mean testimony to the restraint and delicacy of the American humorist, who, if all men had their deserts in coin as well as in favour, would certainly be the multi-millionaire of the United States.

### III.—A PERSONAL REMINISCENCE.

It was my good fortune some four years ago to cross the Atlantic in the *New York* as a fellow passenger with Mark Twain. It was in the early months of 1891. I was returning from Chicago. Mark Twain was hastening from New York to rejoin his family at Paris. We had a capital passage, and, as we were neither of us inconvenienced by *mal de mer*, we used to have long and pleasant conversations every day on deck. Before I left the ship I dictated notes of our talk, and from these notes I venture to draw freely for the purposes of this sketch. For they were jotted down while the presence of the man was still with me, when his quaint sayings were still murmuring in my ears. I do not suppose that Mark Twain has changed much since 1891, although he was then at the zenith of his fortune, while now plaguy Fortune, with her revolving wheel, has landed him otherwise.

Mr. Clemens is a man below the average height, with bushy, shaggy grey hair, and a somewhat shambling gait. He has a moustache, but no beard or whiskers. The face is fresh-coloured, the eyes grey and kindly-looking. When on board the *New York*, he had a slight cold, and for the most part wore an overcoat, which he threw off his shoulders halfway down his arms when he was in the sunlight, and pulled over his shoulders again when he was in the shade. He smoked a briar-wood pipe, and then three cigars, before twelve in the morning.

For the most part he kept himself to himself, writing regularly every morning a certain definite quantity of copy, and devoting the rest of the day to reading, revising, or conversation. At an entertainment in the saloon on the eve of our arrival he gave a reading from his works, selecting the story of his experiences as a courier. No one could have been more kindly, more friendly, or more obliging when communications were opened, but for the majority the opening never came.

The first word I heard from his lips was an amusing anathema upon a recalcitrant match, which, despite all he could do to the contrary, obstinately refused to light his pipe. The way he condemned that match, the pathetic solemnity of his protest against the ignominy of being "insulted by a mere inanimate thing" lingers with me to this day. It was the genuine keynote of the "Innocents Abroad."

We had much talk about his books, and I was delighted to have the opportunity of saying to him in person how much I felt indebted to him for many a laughter-lifted hour. He said that laughter was a very good thing, but for himself he scarcely got two laughs a month, and this was natural, because every humorist dwelt upon the serious side of life. All true humour was based on seriousness, and hence the humorist, who often made other people laugh, laughed least himself. He said it was so in his own case anyhow.

On my saying that I thought I had laughed more over his description of the German language in "A Tramp Abroad" than over anything else, he said that probably appealed very much to those who were struggling with German. As for himself, he had never been able to master the mysteries of a foreign language to his own satisfaction. He had done his best, but it had been no use. For seven years he used to put himself to sleep by constructing German sentences. He got on fairly well on those occasions, when there was no one to listen, but he had never been able to stand up and face a human being and air his German more than two words at a time without coming to a dead stop.

A short time before he came on board he had made a speech on George Washington. He said that the Washington joke had always been one from which he had made a great deal of fun. The usual way he got it off was by remarking that there were many points of difference between himself and Washington, only one of which he need specify. He used to say, "Washington could not tell a lie, I can"—then he would pause until they took in the joke, and then would add, "but I won't."

Talking about his books, he said that for the last sixteen years he had a regular yearly account from Chatto and Windus which specified how many of each of his books in each edition had been sold, how many sets were in hand, and who had them all. He was able to tell at a moment's notice what the sale of his books had been, both in England and in India—for there is an East Indian edition. He said that some years ago he had taken the trouble to total up how many copies Chatto and Windus had sold. He found up to that date they had sold three hundred and eighty thousand copies of his various books. There were five other publishers who published his earlier works who gave him no royalties, so that there must be a pretty considerable sale for his books. A fact which pleased him as much as the receipt of money was the universal recognition which this circulation secured him wherever he went.

He said that "A Tramp Abroad" was the greatest favourite of his books, then "Roughing It," and after them "The Innocents Abroad." At one time "The Innocents

MARK TWAIN.

Abroad" was the most popular, but that now his works stood in the above order. In England "A Tramp Abroad," "Huckleberry Finn" and "Tom Sawyer" were the most popular. He could not say whether "Roughing It" was as popular in England as in America. Humour, he remarked, could not be served up alone, it needed something with it. It was like embroidery, very good as an ornament, but one could not dress in embroidery; you needed something else to keep the cold out.

He said that of the American humorists there were very few who were doing any work at present. One whom he named was still working, but he was the bond-slave of a syndicate, for whom he had to pound out jokes whether he had anything in his mill or not, and no one could do that and not suffer. "M. Quad" of the *Detroit Free Press* is also extremely clever, but he was not working an inexhaustible vein. Writing people, like other folks, have only a certain amount of capital, and when that is done they have nothing more to go on with. Burdette had done very good work, but for some time past he had not done anything. He did not know of any new man who was coming on.

When he was asked to sign his name on the back of a steamer-ticket, I said they could keep it as an autograph. He said, "Yes, it ought to be worth 25 cents." He said that Aldrich had come in one time with a catalogue of autographs to Howells and said with great glee, "Here is fame indeed! I find that my signature is valued in this catalogue at 25 cents. There is glory!" Howells turned over the pages, and then said, "Yes, I see. Here is Habberton who wrote 'Helen's Babies'—his autograph is worth 75 cents, three times as much as yours."

The colour of the sea being green led him to remark that we were in shoal water. He did not know why the water should be green in shoal water, but it was so. Certainly after we got out of sight of land it became deeply and beautifully blue. I asked him about the Mississippi. He said that the colour of the Mississippi was the colour of coffee when made up with a very great deal of cream; that it was a varying shade of brown, changing according to the quantity of rain. I asked him if they drank it. He said, "Yes, and people who drink it never like to drink any other." If he went back to the Mississippi, he would as soon drink that as any other water. It was very strange the taste people acquired for drinking Mississippi water. To a person accustomed to drink it, clear water is positively distasteful. If you took a glass of Mississippi water and allowed it to stand for a little time, there formed a sediment of about an inch deep at the bottom. If you are accustomed to Mississippi water, you stir it up before drinking in order that you may have the sediment in solution. Was it not very unhealthy? No, he said, it was good alluvial loam, and the utmost that it would do would be to line your inside with more aluminium than would otherwise be the case. I asked him about the river. He said you could always see both sides of it, and that both banks were flat, with the exception of the Chicaw Bluffs and the Bluffs before Memphis; but they were very small. The only impression that he got from the river was one of immense solemnity, such as you got from the desert or any other immense wild place.

He said that when he was in St. Louis, Chicago was not considered to be the rival of that city. Then for about ten years the rivalry continued; but after the census of 1870, when Chicago had 350,000 population, St. Louis dropped behind. There has never been any more talk about rivalry between the two cities. Speaking of Chicago, he said he thought there was a greater mixture of all nationalities there than in any other place excepting Hell. Speaking of Chicago, he laughed heartily over the story of the contest between the Chicago liar and the St. Louis liar, which was won by the St. Louis man, who began by saying: "There was once upon a time a gentleman in St. Louis—" whereupon the Chicago man gave up and declared that no one could possibly tell a greater lie than that. Twain said: "A Chicago man was once in St. Louis and sent a telegram to some place in Missouri. He was charged so heavily for it that he protested. 'Great Scott,' he exclaimed, 'why, in Chicago it does not cost so much to telegraph to Hell!' " "No," said the operator quickly, "that's in the city limits"—an unpremeditated and unconscious sarcasm, which is always worth much more than a premeditated one.

When we got upon the subject of clothes, Mark discoursed learnedly and at much length upon the sinfulness of apparel. It had come in with the Fall and was the badge of depravity. No one ought to wear more than a breech-clout, and even that ought some day to be dispensed with. The worst of it was that when people simplified their clothes to the extent of a breech-clout, they seemed to find it necessary to do other wicked things to make up for the virtue of dispensing with garments. They took to scalping and other abominations, which for their neighbours were even worse than their clothes. Cycling, he said, was doing good service in tending to simplify woman's costume, and in making clothes to be adapted to the necessities and uses of life.

I asked him if he ever cycled. He said yes, he had, but it was a long while ago. It was in the days of the

high cycles. He had never ridden, but he used to take lessons from a professor in cycling, who after watching him for some time remarked judiciously: "'Clemens, it seems to me that you have the art of falling off in a greater variety of ways than I had ever conceived it possible for any one to fall off.' I suppose it was so, for although I never happened to break a limb, I raised a large bump upon my head and the skin on my legs hung in festoons." He was all for a bicycle; a tricycle, he thought, was a miserable compromise.

#### IV.—HIS TYPE-SETTING MACHINE.

I had some talk to him about Chicago and about monopolies. He said he had thought a great deal about monopolies, and thought that it was impossible to do anything excepting very slowly, and that it would take one hundred years to do it. "You see," he said, "they have such a hold upon all the agencies by which you can express public opinion. There is a great deal of cowardice, if you like to call it so, but cowardice is not the right word. It is a great principle in the human heart. I am not going to do anything that will deprive my wife and children of their daily bread, and as long as men are not willing to sacrifice their wives and children as well as themselves in denouncing millionaires, the millionaires will have things pretty much their own way. There are some things upon which you can get public opinion roused. For instance, if it were to be proved that gas were so deadly as to poison people, nothing would be easier than to get up an agitation to pass a law sentencing any man who had a gas-jet in his possession to instant death. That would be easy enough, but the case of the monopolist is very different, and it is very difficult to see what can be done."

Mark Twain himself was then contemplating no less a monopoly than the exclusive contract for the type-setting of the world. For many years past he said he has been engaged on a type-setting machine. I asked him how he was getting on. He said they were about to place the machine upon the market. Two machines had already been built, nine were almost finished, while forty were in process of construction, when the cyclone of the financial disaster struck the country last year and compelled them to postpone everything. He said he was very glad it was so, for by his old arrangement there were two companies, one of which had granted a concession to another. The second company was a business-like concern, but the other was of moonshine and water. When the crisis came last year the moonshine one had to disappear, and the two companies were amalgamated into one. He said that he had struck oil. The two companies amalgamated into one had a capital of five million dollars instead of seven and a half millions, and were then ready to go ahead.

I asked him what kind of machine his was. He said it was a perfect machine. "It is made of blue steel, polished, graceful and beautiful; a thing of beauty and a joy to the eye. You could place it upon the finest carpet in the house without fear of any dirt or broken type. It is a machine which to know is to love; a machine which the men who were making it were so fascinated by that they said that if I had not money to pay their wages, they would go on working at it as long as they had anything left to pawn in order to keep them alive. They are now being gathered together from where they have been working. They will come back any distance in order to work at that machine. It is a fascination," he said. "To be allowed to work on that machine is enough for them. When that machine is in the market all other machines

*Photo by Edouart, San Francisco.]*

MARK TWAIN IN 1868, AGED 33.

will disappear; 65,000 compositors in the United States will be thrown out of work, or will have to find other work to do."

He then entered into an elaborate explanation of the immense superiority of his machine over all others, and especially over one, which, he declared, seemed to develop more unscientific lying and bad spacing than any other machine invented. He really feared that it was possessed by an evil spirit. Whereas other machines cheapened the cost of composition by 25 per cent., his machine would cut it by 90 per cent.

"My machine will enable a man to do the work of 10, 15, 24 men. With my machine an ordinary instructed man can set 10,000 ems an hour, a smarter man could do 15,000, and the capacity of the machine, if it were worked by the supreme expert, is 24,000 ems an hour. Some time ago I could not believe that a type-writing girl could do 46 words a minute until I saw it done before my eyes. Since then, 100 words a minute is by no means unusual, while the supreme expert will sometimes do 120 words a minute on superior speed machines. So it is with our machine. With the evolution of the supreme expert we will get up to the maximum speed. We do not, however, expect anything more than 10,000 or 15,000 ems, which gives us a margin of 4,000 ems an hour over the maximum claimed by other machines."

The way they would put the machine upon the market is as follows. They would not sell any nor would they lease them at an annual rental. They would simply go to any one who was using either hand composition or the Linotype machine, and ask them how much their present composition was costing them. "Take your best man and your best machine and cipher it out exactly, and we will undertake to put our machine in and charge you less for the best work than for the poor results which you obtain from your existing machines. We shall be able to bring down the cost of composition to

five cents per thousand ems, and we shall be able to attain a perfection of composition in the way of exact spacing to which hand composition cannot compare. We have nine different sized spaces so that we can space to the breadth of a hair. The machine makes no mistakes, for it adjusts the spaces after the line is set."

I said I did not see how this was possible until he had constructed a machine which could think. "But," he said, "it does think. That is one of the beauties of the machine. Suppose," said he, "you have a line of 27 ems to space, the words varying from 6 to 7 ems. When the operator is striking the keys at the end of each word, he strikes the space key, but no space drops. All he does is to remind the machine that the space ought to come in that place. He sets straight on, and when he has filled up his 27 ems, the machine takes the line of type and measures off 27 ems so as to make the word either fall rightly or turn correctly. It then fills in exactly the spaces which are required to make the line fit. This it does with mathematical accuracy. The ordinary compositor has only spaces of four sizes, we have nine. As I said, we can adjust to a hair.

"When our space bar is struck a space is left large enough for the insertion of any size that may be required, but the thickness of the space is not calculated until the whole line has been set, when the machine measures it automatically and takes up the spaces as they are wanted. Our machine distributes the type as well as sets it." I remarked that I thought there would be a great deal of difficulty in distinguishing between the various spaces. He said that was all done by the machine, and it knew what to do.

"Another great advantage of our machine over existing type-setting machines, is that it does not have to depend upon gravity for getting the type into the right place. That is to say, it does not have to depend upon the

MARK TWAIN'S BIRTHPLACE, FLORIDA, MO.

weight of the type and the degree of friction it may have to overcome. Then again, in the old machines, you have to have a perfectly smooth type and a clean groove or your type will not fall easily. Hence in the gravitation machines type continually falls at varying rates of speed with resulting irregularities and frequently a block. Nothing of this takes place in my machine. Nothing is left to the uncertain action of gravitation. Every type from the moment that the keyboard is struck is clutched by the mechanism and thrust into its place. Hence there is no danger of that blocking, and no irregularity."

"I suppose you work it as a typewriter does?"

"Yes, with this exception, that whereas a typewriter must strike every letter in rotation, in our machine you can strike several keys at once—a whole word can be struck simultaneously."

"What about correction?" I said.

"We have no corrections," he said. "People may think that strange. But ask a good pianist how many false notes he strikes in playing a piece of music. He strikes none, he is not expected to strike any. So it is with our machine, it can be played as correctly as a piano, and the corrections are not due to errors and do not amount to two literals in a column. That is, of course, when you have good copy, as is the case in all reprints. In fact, we do not reckon anything for corrections. Author's corrections, of course, are different, but what may be called compositor's corrections disappear in our machine."

Of course, if his machine would do all he said it would be an earthquake. Labour-saving machines in the long run increase employment no doubt, but in their immediate effects they inflict great hardships on multitudes.

He admitted this, but the process of introducing a new machine was always slow. It took seven years for the Linotype even to attain its present position, so that there is a period of grace allowed to compositors to clear out and adapt themselves to other functions. "For instance, my machine is bound to throw out of work 65,000 men in the United States. That is to say, it will enable their

work to be done better than it is done now, but it will lead to the employment of many more than sixty-five thousand men by the impulse which it will give to the multiplication of printed matter. There will be more men wanted in paperworks and in the manufacture of printers' ink, and more women and girls in binderies, and the result will be that it will give work to two or three for every one it throws out of employment."

I said I had no doubt but that was true in the long run. What was wanted was some kind of Industrial Insurance Society which would enable

workmen to tide over the transition period.

He said he did not see how it was to be fixed up. The same thing has always occurred in every department of life. Take, for instance, crinolines. There was a great industry which employed hundreds and thousands of men and women. Suddenly, in the twinkling of an eye, crinolines went out of fashion and all these people were thrown out of work.

I said this was true, and hence the social reformer always considered that changes of fashion were of the devil, producing great hardship with no compensating advantages.

He said, "Look at the wood-engraving trade! There were thousands of men making their living by engraving in wood. Then the Morse process came in and away they went. There still remained the better class of wood-engravers, but then came photography and other processes and cleared out the rest of them. Take the cotton gin, which enabled one man to do the work of 2000, and the spinning jenny, and all those means of production. The world adjusts itself to them, and people find that they can make their living all the better. In fact," he said, "it is the discovery of these labour-saving machines which have brought about the great increase of population. It is wonderful to think that England and Scotland remained for centuries with such small populations, and then a hundred years ago suddenly blossomed out into their present millions."

#### V.—MARK TWAIN AT HOME.

In his domestic life Mark Twain has been almost ideally fortunate. He told me that during the twenty-four years of his married life whenever his wife had been absent she had written to him with the punctuality of a planet, every day of the week. He had written to her every mail with one exception, which caused him great grief. Some mutton-headed idiot, he said, had told him that the quickest steamer sailed on Thursday, whereas it sailed on Wednesday. He wanted to add some more to his letter, and so missed the mail. She was greatly grieved, and he has been getting letters full of despair ever since. When

she first left he wrote once, twice, or thrice a day, until he discovered that the mail only went once or twice a week. He still wrote every day, but he kept them till mail day. He put everything into the letters that came into his life, writing with a freedom which was utterly impossible when he was writing for a magazine or a book. "From a literary point of view," he said, "these letters to my wife in the last six months satisfy me much better than anything I have ever written; there is a lightness of touch and a vividness of description, and altogether a lightness which I try for in vain when I am writing for magazines or books."

He said on an average his letters were twenty-five pages each, containing from four to five thousand words. These were sent twice a week, so that in the six months he must have written some 200,000 words to her. "I was telling Walker, of the *Cosmopolitan*," he said, "the other day what I had been doing. He said, 'What a waste, what a waste to send all those letters to your wife, when you know I would give you a thousand dollars apiece for them.' So I wrote to my wife, and told her I was afraid I had been guilty of much waste, and that I must ask her to send me my letters back, inasmuch as Walker of the *Cosmopolitan* would give me one thousand dollars apiece. She replied she would not give them up for one thousand five hundred dollars apiece." I suggested he might get that from Walker. "No," he replied, "she would go up again." I said it would be well if in a few years he published these letters, altering the names and places. He objected that it would make them unreal. They were a picture of New York as it is to-day. "There is nothing that I have written or read compared in value to these letters to my wife."

Some day possibly these voluminous letters will see the light, duly expurgated, a kind of new and domestic diary of a nineteenth century Pepys.

His friend Mr. Twichell, writing in *Harper's Magazine* last year on the subject of Twain's family life, pays a noteworthy tribute to the domestic side of the great humorist. Nowhere is Mark Twain more entirely admirable, more favorably esteemed by all his friends, than in his capacity of a family man.

In 1868, when a newly-married friend was asking him why he did not begin to think of marrying, he replied with deep feeling:—

"I am taking thought of it. I am in love beyond all telling with the dearest and best girl in the whole world. I don't suppose she will marry me. I can't think it

possible. She ought not to. But if she doesn't, I shall always be sure that the best thing I ever did was to fall in love with her, and proud to have it known that I tried to win her!"

Mr. Twichell says:—

Two years afterward the lady of whom he spoke became his wife. From their wedding-day he has never ceased to be the lover revealed in that confession and humble declaration, as every one who has been observant of him under his own roof will bear witness. His wife's companionship is his perpetual supreme felicity, absence from her his supreme discomfort. He is eminently fond of abiding at home. His fireside is ever his peculiar delight. Nothing gives him more pleasure than to arrange and take part in simple domestic festivities and entertainments—tableaux, charades, etc.—for which he has the happiest talent.

Perhaps no better insight of his family life, and, by inference, of himself as a factor of it, can be given than that afforded by a letter which, in 1885, he wrote to the *Christian Union*. It was drawn out by a foregoing letter, printed in the same paper, on the subject of the discipline of children, to which he was moved to reply. There is no need to state the particular point in discussion, or the argument on either side. But, as pertinent to what he had been saying, Mark, toward the end of his communication, broke into this personal strain:

"The mother of my children adores them—there is no milder term for it—and they worship her; they even worship anything which the touch of her hand has made sacred. They know her for the best and truest friend they have ever had, or ever shall have; they know her for one who never did them a wrong, and cannot do them a wrong; who never told them a lie nor the shadow of one; who never deceived them by even an ambiguous gesture; who never gave them an unreasonable command, nor ever contented

herself with anything short of a perfect obedience: who has always treated them as politely and considerately as she would the best and oldest in the land, and has always required of them gentle speech and courteous conduct towards all, of whatsoever degree, with whom they chanced to come in contact; they know her for one whose promise, whether of reward or punishment, is gold, and always worth its face to the uttermost farthing. In a word, they know her, and I know her, for the best and dearest mother that lives—and by a long, long way the wisest."

Of the four children born of this happy marriage two only survive. His only son died in infancy; but the death of Miss Clemens was the heaviest blow that fate has yet dealt Mark Twain.

MARK TWAIN.

## VI.—MARK TWAIN'S HUMOUR.

The peculiar quality of Mark Twain's humour has been the subject of some interesting criticisms by a brother humorist. Mr. Frank R. Stockton made some observations on the subject that are very pertinent and just. He said:—

Mark Twain's most notable characteristic is courage. Few other men—even if the other men could think of such things—would dare to say the things that Mark Twain says. To describe the travels of a man on a glacier, with particular reference to the fact that being pressed for time, he rode upon the middle of the glacier, which moves faster than the edges, is one of the bravest things in literature. Mark Twain does not depend entirely upon the humour of his situations and conditions to make his points. His faculty and range of expression are wonderful, and it is his courage which gives to his expressions, as well as his inventions, their force and unique effect. His glittering phrases are as daring as they are bright, and they sparkle through all his books like stars in the sky. A humiliated person has the aspect of a "bladder that has been stepped on by a cow." A disguised king, practising obeisances, looks about "as humble as the leaning tower of Pisa," and an orator is described "who loved to stand forth before a dazed world and pour forth flame and smoke, and lava, and pumice stone, into the skies, and work his subterranean thunders, and shake himself with earthquakes, and stench himself with sulphur fumes. If he consumed his own fields and vineyards, that was a pity, yes; but he would have his eruption at any cost." The Yankee at King Arthur's court speaks thus of a damsel of the period:—

"I was gradually coming to have a mysterious and abdunder reverence for this girl; for nowadays whenever she pulled out from the station and got her train fairly started on one of those horizonless trans-continental sentences of hers, it was borne in upon me, that I was standing in the awful presence of the Mother of the German Language."

Examples of the poignancy of expression with which Mark Twain spurs his readers into a proper appreciation of what he is telling them, are too abundant for further reference, but although he uses them so easily, he does not always find them necessary. Some of the funniest passages in his later works, as well as in those by which he made his reputation, contain not a flash of wit nor any unusual expressions. A combination is presented in the plainest and simplest way, and as the substances are poured together the humour effervesces, not in the author's story, but in the reader's mind. The author draws out the wit of his readers as a magnet draws needles from a cushion.

Mark Twain somewhere declared that there were only thirty-five varieties of joke known to the human race. He has practised most of these at one time or another—sometimes under dreary circumstances enough. As he said grimly when resigning the direction of the humorous department of the *Galaxy* in 1871:—

For the last eight months, with hardly an interval, I have had for my fellows and comrades, night and day, doctors and watchers of the sick. During these eight months death has taken two members of my home circle and malignantly threatened two others. All this I have experienced, yet all the time been under contract to furnish humorous matter once a month for this magazine.

His wide and varied experiences of life have begot in him a somewhat sombre way of looking at things, which occasionally finds expression in a mordant phrase. Take for example some of the sententious passages from "Pudd'nhead Wilson's Calendar":—

Whoever has lived long enough to find out what life is, knows how deep a debt of gratitude we owe to Adam, the first great benefactor of our race. He brought death into the world.

Why is it that we rejoice at a birth and grieve at a funeral? It is because we are not the person involved.

If you pick up a starving dog and make him prosperous, he

will not bite you. This is the principal difference between a dog and a man.

One of the most striking differences between a cat and a lion is that a cat has only nine lives.

The holy passion of friendship is of so sweet and steady and loyal and enduring a nature that it will last through a whole lifetime, if not asked to lend money.

The charm of the unexpected is one of the secrets of Mark Twain's humour, which is perhaps more noticeable in his talk than even in his books. Here are two of Mr. Twichell's anecdotes illustrating this:—

Chancing to look one morning at the house opposite, into which a family had recently moved, he saw something that made him cross the street quickly and deliver this speech, in substance, to a group of the new neighbours seated on the verandah: "My name is Clemens. My wife and I have been intending to call on you and make your acquaintance. We owe you an apology for not doing it before now. I beg your pardon for intruding on you in this informal manner and at this time of day, *but your house is afire!*"

That at this point the meeting suddenly adjourned it is unnecessary to state.

For another example of his humorous way of saying a serious thing: One Sunday, when he had happened specially to like the sermon he heard in church, he lingered at the door after service, waiting for the minister to come out, in order to give him a pleasant word; which he did in this fashion: "I mean no offence, but I feel obliged to tell you that the preaching this morning has been of a kind that I can spare. I go to church to pursue my own trains of thought. But today I couldn't do it. You have interfered with me. You have forced me to attend to *you*—and have lost me a whole half-hour. I beg that it may not occur again."

The useful art of telling apposite anecdotes—real or invented—has seldom been cultivated more successfully than by Mark Twain. One of his friends is voucher for the following illustration of this gift:—

The students of Bryn Mawr College in Pennsylvania made him an honorary member of the class of '94. In accepting it he said that he really did not deserve the honour as his education had neglected him, but that now it had been thrust upon him his ambition had been fired and he wanted to be not only a member of a Bryn Mawr class, but a member of the Bryn Mawr faculty. "I should like to be," said he, "a professor of anecdote. It's a very useful art. I'll give you a lesson. One kind of anecdote contains only words. You talk till you're tired, and then you ring in a laugh—if you're lucky. I'll illustrate this plan by an anecdote of a Scotch-Irish christening. In this Scotch-Irish village a baby had been born, and a large number of friends had collected to see it christened. The minister, thinking this a good opportunity to display his oratorical powers, took the baby in his hand, saying, "What is his name?"

"He is a little fellow—yes, a little fellow—and as I look into your faces I see an expression of scorn that suggests that you despise him. But if you had the soul of a poet and the gift of prophecy you would not despise him. You would look far into the future and see what it might be. Consider how small the acorn is from which grows the mighty oak. So this little child may be a great poet and write tragedies, or a great statesman, or perhaps a future warrior wading in blood up to his neck; he may be—er—what is his name?"

"His name?" asked the mother, who had been carried away by the preacher's eloquence: "Oh, Mary Ann, sir."

There is a Continental *largesse* about his mode of expression, a fine colossal breadth about his phrases that has about it the humour of the extravaganza. For instance, when he exults over the misfortune of an enemy, he writes:—

I am more than charmed to hear of it; still, it doesn't do me half the good it could have done if it had come sooner. My malignity has so worn out and wasted away with time and the exercise of charity that even his death would not afford

me anything more than a mere fleeting ecstasy, a sort of momentary, pleasurable titillation, now.

In a similar vein he is never weary of denouncing the pesky nuisance that man calls his conscience. Again and again does he express his resentment, but seldom more characteristically than when one of his immortal boys soliloquises concerning the inconvenience of this internal monitor:—

But that's always the way; it don't make no difference whether you do right or wrong, a person's conscience ain't got no sense, and just goes for him *anyway*. If I had a yaller dog that didn't know no more than a person's conscience does, I would pisen him. It takes up more room than all the rest of a person's insides and ain't no good, nohow.

The startling incongruity of the Western humorist, the portentous gravity with which the more absurd remarks are handed out to the listener as if they were nuggets of golden wisdom, have seldom been cultivated more successfully than by Mark Twain. There was "fine audacity in his offer in his lecture on the Sandwich Islands to offer to show his audience how the cannibals consume their food if only some one would lend him a live baby." His story of the Jumping Frog has become one of the universal possessions of the human race. Some of his phrases stick like burrs. How unforgettable his prescription for the carving of the ancient fowl served at a German restaurant: "To carve a German chicken, use a club and avoid the joints."

His writing abounds in quaint turns and happy hits:—

October. This is one of the peculiarly dangerous months to speculate in stocks in. The others are July, January, September, April, November, May, March, June, December, August and February.

Training is everything. The peach was once a bitter almond; cauliflower is nothing but cabbage with a college education.

When the reporters circulated recently that Mark Twain was dying in poverty in London, Mark observed gravely, "Yes, I am dying—of course I am dying. But I do not know that I am doing it any faster than anybody else." We all hope that he will imitate the Merry Monarch in being an unconscionably long time in dying, for as long as he lives, as Mr. Stockton truly remarks, Mark Twain will not cease to be the man of the double stroke—the Bismarck of humourists.

#### VII.—AS MAN OF LETTERS.

Mark Twain was not educated for a literary career, nor was he passed through the curriculum of the colleges. He graduated in the university of the world, in which he entered as a freshman at the early age of thirteen, when he was apprenticed to a printer. From the composing stick to the wheel of a Mississippi steamboat, and from the Great River to the Great Desert, and the silver mines of Nevada—these were his class-rooms. He is a graduate of the Far West. Born in Florida, trained on the Mississippi, he took his degree in the Rockies, made his first mark as a descriptive writer as special correspondent in the Sandwich Islands, and first achieved fame in his humorous description of the Old World as seen by this most modern of all the children of the newest West. Few men have had more ups and downs. He has experienced almost every extreme of good and ill fortune. He has confronted the temptation to commit suicide when he had only a ten cent. piece in his pocket, he has been one of the wealthiest of authors, and he is once more in financial straits, facing the difficulties like a man confident now as ever of coming out on top.

And as the result of this rich and varied experience,

MARK TWAIN.

(From a photo taken in 1890 by James Mapes Dodge.)

Mark Twain, altogether apart from his humour, has developed a literary genius which entitles him to rank in the forefront of contemporary authors. Mr. Howells, who is no mean judge, declares he "portrays and interprets real types, not only with exquisite appreciation and sympathy, but with a force and truth of drawing that makes them permanent." If the literary man is he who alone can express things in words so that they live before the eye of the readers, Mark Twain is one of the first literary men of his day. For vivid portraiture of men and things, it would be difficult to find his equal. His description of the way in which the coyote is hunted over the plains is an excellent illustration of his peculiar talent. The coyote, or wolf of the plains, he says, first fools the dog by allowing him to keep within a few feet of his rear. But when the dog grows desperate, and makes a sprint, "forthwith there is a rushing sound, and the sudden splitting of a long crack through the atmosphere, and behold, that dog is solitary and alone in the midst of a vast solitude." In another vein, but not less effective, is the little sketch of the significance of a cat as an element or character of a house:—

When there was room on the ledge outside of the pots and boxes for a cat, the cat was there—in sunny weather stretched at full length, asleep and blissful, with her furry belly to the sun and a paw covered over her nose. Then that house was complete, and its contentment and peace were made manifest to the world by this symbol, whose testimony is infallible. A home without a cat—and a well-fed, well-petted and properly revered cat—may be a perfect home, perhaps, but how can it prove title?

His description of the Sandwich Islands remains to this day unequalled. "Roughing It" to this day is

the standard description of the beginning of the Great Silver States. And who is there among all writing men who has so completely and satisfactorily interpreted a great river to the world as Mark Twain has interpreted the Mississippi? As Mr. Twichell says:—

His description of the Father of Waters, for beauty and splendour and deep feeling of Nature in some of her rarer aspects and most bewitching moods, was doubtless never surpassed.

His sympathy with Nature, which betrays the soul of the poet behind the mask of the humorist, is always present in Mark Twain's writings. Here is an extract from some of his private letters quoted in *Harper's*, which illustrate this fact. Writing on November 21, 1895, from Napier, New Zealand, he says:—

Here we have the smooth and placidly complaining sea at our door, with nothing between us and it but twenty yards of shingle—and hardly a suggestion of life in that space to mark it or make a noise. Away down here, fifty-five degrees south of the equator, this sea seems to murmur in an unfamiliar tongue—a foreign tongue—a tongue bred among the ice-fields of the Antarctic—a murmur with a note of melancholy in it proper to the vast, unvisited solitudes it has come from. It was very delicious and solacing to wake in the night and find it still pulsing there.

Take as another example the following rhapsody over the Alps:—

"O Switzerland! the further it recedes into the enriching haze of time, the more intolerably delicious the charm of it, and the cheer of it, and the glory and majesty and solemnity and pathos of it, grow. Those mountains had a soul; they thought; they spoke—one couldn't hear it with the ears of the body, but what a voice it was!—and how real! Deep down in my memory it is sounding yet. Alp call-th unto Alp!—that stately old Scriptural wording is the right one for God's Alps and God's ocean.

How puny we were in that awful presence—and how painless it was to be so; how fitting and right it seemed, and how stingless was the sense of our unspeakable insignificance! And, Lord, how pervading were the repose and peace and blessedness that poured out of the heart of the invisible Great Spirit of the Mountains! Now, what is it? There are mountains and mountains and mountains in this world—but only *these* take you by the heart-strings. I wonder what the secret of it is? Well, time and time again it has seemed to me that I *must* drop everything and flee to Switzerland once more. It is a *longing*; a deep, strong, tugging *longing*—that is the word. We must go again.

Readers of his "Jeanne D'Arc" need not be surprised to know that nothing is so fascinating to the wild humorist of the Pacific Slope as the history of the Middle Ages. Says Mr. Twichell:—

In those fields he has been an indefatigable, it is not too much to say, exhaustive, reader, while, by grace of a rarely tenacious memory, his learning in them is remarkably at hand and accessible to him. Hardly ever will an event of any importance in their annals be mentioned in his presence that he cannot at once supply the date of it.

The aspect of remote times that chiefly fascinates his interest is the social. Books like Pepys's *Diary*, that afford the means of looking narrowly and with human sympathy into the life and manners of bygone generations, have a peculiar charm to him.

He is a laborious and conscientious worker, returning often to his MS. after the lapse of many years. "It is a strange thing," he once told a friend:—

"You have your ideas, your facts, your plot, and you go to work on your book and write yourself up. You use all the material you have in your brain and then you stop, naturally. Well, lay the book aside and go to work on something else.

"After awhile, three or four months, say, or perhaps three

or four years, something suggests that old story to you, and you feel a sudden awakening of interest in it. And then, lo and behold! you find that your stock of ideas and facts has been replenished, and your mind is full of your subject again, and you must write, your brain is overflowing and you finish your book—if you are lucky."

#### VIII.—UP TO DATE.

Messrs. Chatto and Windus have just issued a new uniform edition of his works, including a volume of selected pieces of American humour which Mark Twain edited. Many who have read much of Mark Twain can now read more, nor will they regret completing their collection. But there is still better news. For this Christmas Mark Twain will bring out a new book under the title "A Surviving Innocent Abroad." It is a narrative of his experiences and observations in the lecturing tour which he has been making round the world. Speaking of this forthcoming volume to the *New York Herald* interviewer, Mark Twain said:—

"Everybody has done his little circumnavigation act, and I thought it about time I did mine, so I have been getting it ready for the press since I have been here, and therefore, for the matter of that, the book is just my impressions of the world at large. I go into no details. I never do, for that matter. Details are not my strong point, unless I choose for my own pleasure to go into them seriously. Besides, I am under no contract to supply details to the reader. All that I undertake to do is to interest him. If I instruct him, that is his fate. He is that much ahead."

"What is to be its name?"

"I had thought of calling it 'Another Innocent Abroad'; but following advice, as the lawyers say, I have decided to call it 'The Surviving Innocent Abroad.'"

"Now, my wife said, 'But that is not true, because there's So-and-so in Cleveland, and that and the other in Philadelphia.' But, I said to her, 'I will fix that.' So I am going to put a little explanatory note to that title pointing out that although there are still in existence some eight or ten of the pilgrims who went on the Quaker City expedition some twenty-eight years ago, I am the only surviving one that has remained innocent."

"In fact, that title 'The Innocents Abroad' could only be strictly applied to two even at the time it was written, and the other is dead."

"When do you expect the survivor to appear?"

"Oh, about Christmas," said Mark Twain. "Christmas is a good time to bring out a book. Everybody is thinking about Christmas presents, and the pious are praying that Divine Providence may give them some clue as to what to give for a present, and the book, if it comes just at the right time, is about as good a thing as one could desire."

We have seen Great Britain through the eyes of Max O'Rell; it will be a rare treat to journey through the English-speaking world in company with Mark Twain.

The fact that Mark Twain has been involved in difficulties through no fault of his own, and is now once more manfully struggling like Sir Walter Scott to satisfy his creditors, will, I hope, cause all those who owe him many happy hours to at least pay a peppercorn acknowledgment of their debt by purchasing "The Surviving Innocent." In no other way is it possible to help him. The *New York Herald* recently started a fund to extricate him from the worst of his liabilities; but he stopped it.

"The facts," said the *Westminster Gazette*, "speaking roughly, are, we believe, that some years ago he became a publisher in the firm of Charles L. Webster and Company, of New York, of which on the death of Mr. Webster he became the controlling member. In this capacity he had a considerable measure of success, but he became concerned in certain outside ventures, among them the production of a new typewriter, which brought trouble

and made an assignment necessary. This was about three years ago, and the upshot was to leave him as poor as when he began work thirty years earlier. The *New York Herald* adds a rumour that he became personally responsible for over £40,000 of the firm's debts, and it was to earn the money with which to pay these off that he undertook his subsequent extensive lecturing tour."

"Poverty," said Mark Twain, "is relative. I have been in poverty so often that it does not worry me very much. A more serious matter is the money owing to other people, not by any fault of mine, and yet owing to them by me." But he put his foot down all the same upon the subscription. He wrote to the Editor of the *Herald* as follows:—

I made no revelation to my family of your generous undertaking in my behalf and for my relief from debt, and in that I was wrong. Now that they know all about the matter they contend that I have no right to allow my friends to help me while my health is good and my ability to work remains; that it is not fair to the friends and not justifiable; that it will be time enough to accept help when it shall be proven that I am no longer able to work. I am persuaded that they are right. While they are grateful for what you have done and for the kindly instinct which prompted you, they are urgent that the contributions be returned to the givers, with their thanks and mine. I yield to their desire and forward their request and my endorsement of it to you. I was glad when you initiated that movement, for I was tired of the fret and worry of debt, but I recognise that it is not permissible for a man whose case is not hopeless to shift his burdens to other men's shoulders.

S. L. CLEMENS.

Mark Twain was in London over Jubilee Day, and was retained by the *New York Journal* to write his impressions

of the great festival for the entertainment of American readers. His letters were good journalistic copy; but, with the exception of the one inimitable joke quoted at the head of this article, there was not much in them to remind us of the sole surviving "Innocent Abroad." Shortly after the Jubilee, Mr. Clemens with his family left London for Lucerne, where he is busy at work finishing his book. He says that Lucerne is a good place to work in, but not so good as London, from which let us hope that we may infer that before long we shall have Mark back in this capital.

I have not attempted in this sketch to tell the story of Mark Twain's life. To do so would make a volume, and an interesting volume, and it could be compiled without much difficulty from his various books; but for such a compilation we should have the author at our elbow, and a volume as large as "A Tramp Abroad" in which to set things forth. These conditions being absent, the compilation of the autobiography must be left for Mr. Clemens to undertake himself. I am well content if in these few pages I have made some acknowledgment of the debt under which the genial humorist has placed all English-speaking men, and have contributed, however little, to help the sale of the new edition of his works and the forthcoming volume of his latest travels.

One word by way of apology and explanation. Believing that Mr. Clemens was within short postal range I left myself no time to submit these proofs to a man as far away as the Lake of Lucerne. So for all mistakes and things that should not have been said, I alone am responsible. I am very sorry, but it can't be helped.

# THE TOPIC OF THE MONTH.

## THE WHITEWASHING OF MR. CHAMBERLAIN.

"I have heard it said that the judgment of foreigners is the judgment of posterity."—MR. COURTNEY in South African debate, July 26th, 1897.

GERMANY.—"The verdict as to the manner in which the investigation in England has now been Parliamentarily suppressed is an essentially English affair. If in England they are content with this procedure the fact will, it is true, not be without importance in the eyes of the world as indicating the measure of morality which obtains in English politics as soon as an extension of English territory comes into question."—*Berlin National Zeitung*.

FRANCE.—"The course pursued by the Committee is in itself an avowal. It must henceforth be regarded as clearly proved that the Queen's Government in time of peace plotted the invasion of a friendly country, and that there does not exist in moral England a majority to denounce the crime and punish the guilty."—*Le Temps*.

RUSSIA.—"This scandalous and disgraceful sham of an investigation by the South Africa Committee is an instructive illustration of the fact that in Parliamentary England the end justifies the means. Miss Flora Shaw's telegram hurrying up the insurrection in the name of the Colonial Office gave the key to the truth which the Committee has refused to investigate."—*The Moscow Gazette*.

UNITED STATES.—"The Committee completely exonerates Mr. Chamberlain and the Colonial Office, in the face of facts which have made the guilt of the Colonial Office far more generally believed than before the investigation began. A frank and straightforward avowal of connection with the Raid would have brought Mr. Chamberlain's administration of the Colonial Office far less discredit than the existing belief everywhere that the Office was involved in a roundabout and indirect promotion of the affair, with careful provision for shirking responsibility in case of failure. Mr. Rhodes's position is enviable in comparison with that of the British Colonial Office, the hypocritical conduct of which is rendered all the more conspicuous by the whitewashing of the Committee."—DR. ALBERT SHAW in the *Review of Reviews* of New York.

THE DUTCH.—The Hon. John Hofmeyr, the Afrikaner authority, said the whole finish to the inquiry was deplorable and disappointing, especially in view of the loyal attitude of the Bond and of the Dutch generally at the time of the Jubilee. "All we asked, all we wanted, was fair play, not vindictive punishment. The Dutch belief in British fair play, in Imperial thoroughness and impartiality, has received a serious shock. Even Sir William Harcourt, at the last moment, shifts his political compass, not because Mr. Chamberlain was in it, but because other people had to be shielded. The Commons have decided for continued suspicion, instead of a clear and honest understanding."—*One Land*.

From the Westminster Budget.]

[June 11, 1897.]

THE GRAVE OF THE SOUTH AFRICA COMMITTEE.

### I.—THE GAME THAT WAS PLAYED AND THE STAKES THAT WERE LOST.

"THE game is played!" is the only appropriate comment to be made upon the Report of the South Africa Committee, and the debate in the House of Commons thereupon. "The game is played," but the stakes are lost, and the stake which has been lost is the reputation of the House of Commons, and the good name of England before the world. Professor Beesley, in the *Positivist Review*, remarks that the incident will increase "the contempt into which the popular branch of our Legislature has for many reasons fallen. The House of Commons becomes every year more flabby, more prostrate before the Ministry on the one hand and the electors on the other." That no doubt is true, but it is the least of the losses which we have to count for as the result of the game which has been played between Mr. Chamberlain on the one hand and Mr. Rhodes on the other. It is difficult for any one who knows as I do the inside track of this

tangled mystery, to speak calmly concerning the elaborate system of subterfuge, prevarication, if not of downright lying which has been pursued steadily in the interests of Mr. Chamberlain from the beginning to the end. If Mr. Chamberlain had had any serious high crime and misdemeanour to conceal, there might have been some excuse, although no justification, for the desperate mendacities with which it has been endeavoured to conceal the skeleton in his cupboard. But, as a matter of fact, all that Mr. Chamberlain did in 1895 was venial compared with what has been done this year. The worst that can be alleged against him for winking at the conspiracy at the Transvaal two years ago is but the veriest peccadillo compared with the infamous conspiracy which has now been carried triumphantly to a close. For the latter conspiracy has been a conspiracy to deceive the nation, to befoul Parliament, and to commit both parties in the State to a verdict which no one knows better than Mr. Chamberlain himself is not justified by the facts.

Sir William Harcourt, who has played a very unhappy part in all this miserable business, appealed to the House of Commons to support the Committee on the ground that the Committee was an average sample of the House of Commons, and that if they passed an adverse judgment upon the Committee, they would pass an adverse judgment upon themselves. His words are thus reported:—

There have been allegations that this Committee was actuated by some sinister motive in the course that they pursued. Well, that Committee, I think, was an average sample of the House of Commons, and if the House of Commons are going to pass such judgments as that upon that Committee they are passing a judgment upon themselves. It is suggested that the Committee of the House of Commons—I even think it is stated they have contained a certain “polluted element”—are engaged in a plot to suppress evidence and hush up charges. In my opinion charges of that character are worthy only of disdain and contempt. I hope at least that I shall not live to see the day when the House of Commons is prepared to declare by a majority that it does not trust the word of its statesmen, and that it has no reliance or confidence in the good faith of its Committee.

The division therefore which closed the question so far as the House of Commons was concerned, was, according to Sir William Harcourt, neither more nor less than a vote of confidence in their own most noble selves—a certificate of character granted by the House of Commons to the House of Commons. These votes are all very well. They stand in the records of the House, and are duly reported in “Hansard”; but to use a vulgar but expressive phrase “They won’t wash.” Facts are facts, truth is truth, and all findings of committees and votes of the House of Commons that are in diametrical opposition to the facts are of no more account than the rustling of withered leaves in the autumn wind. The making of such reports and the registering of such divisions only damage those who are parties to this fraud and imposture, which, so far, has been with apparent success foisted upon the world.

So far as the world outside England is concerned, the attempt to palm off as the verdict of an impartial tribunal this foregone conclusion of a packed Committee has already been a conspicuous failure. The long silence of the German press was broken very significantly on the day after the debate, by a contemptuous and disdainful repudiation of the verdict of the Committee and the House of Commons. The opinion of the French and the Russian press has long been on record. As a matter of fact no intelligent human being can be confronted with the facts and findings as they stand in the Report of the

Committee, and in the debate in the House of Commons, without, apparently feeling that a fraud has been practised, for personal and party reasons, upon the public. The manoeuvres of the gentry who play the three-card trick, or the thimble-riggers who invite the ingenuous rustic to guess under which thimble lies the pea, do not practise their little games with more unblushing audacity than do these Right Honourable Gentlemen who have taken part in the whitewashing of Mr. Chamberlain. It is no doubt a difficult, nay, almost an impossible feat, to convince honest Englishmen that a Colonial Secretary, a Minister of the Crown, could stoop so low as to deceive his fellow-countrymen, and it is upon his knowledge of that fact that Mr. Chamberlain has calculated in playing the game which has culminated in the Report and in the Debate. The self-respect of John Bull is outraged by the suggestion that a Minister from his place in Parliament could have played it so low down upon the House of Commons and upon his Sovereign as to enter into a long and tortuous conspiracy to conceal the truth. But “facts are chieftains that winna ding and daurna be disputed.”

Some months ago, while I was discussing the possibility of suppressing the cables with one of the Notables of the Empire, we had a serious difference of opinion. I maintained with the childlike optimism of my nature that it was absolutely impossible that a Committee of the House of Commons could be so hocused that evidence admitted to be material could be suppressed when once it was known that it was within reach. My friend shrugged his shoulders. “You think so,” he said, “but you are wrong. You know what Mr. Rhodes said about the unctuous rectitude of his countrymen. The phrase was cynical, but true, and Rhodes was right when he declared he would cut off his right hand rather than withdraw it. That unctuous rectitude will prevent this Committee ever producing the cablegrams. Besides,” he went on, “even if unctuous rectitude fails we can surely rely upon the cunning of our Englishmen. There are nine members of that Committee who are colleagues and political allies of Mr. Chamberlain. We know that both Mr. Chamberlain and the Attorney-General have seen the cablegrams, and it is perfectly well known that their production would be fatal to Mr. Chamberlain. By no possibility of chance could these cablegrams be published without resulting in the immediate downfall of the Colonial Secretary. Every member of the majority, more or less, is aware of that fact. Do you think for one moment that nine Unionists are going to allow their Colonial Secretary and Attorney-General to be destroyed merely because it is their duty to find out the truth? Dismiss all that nonsense from your mind! These Cables will never come out if that Committee can suppress them.”

My cynical friend went his way, and the result has justified his confidence in the determination of the Committee to subordinate their obligations to truth and the honour of Parliament to the paramount considerations of the partisan. That, of course, could have been understood. What is not to this day comprehensible is the extraordinary action of Sir William Harcourt and his Liberal colleagues. Cynics shrug their shoulders, and say that the Colonial Office under the Liberal Administration was so deeply involved in Lord Loch’s little scheme for utilising British forces for the protection of British lives and interests in case of an insurrection in Johannesburg, that they dare not insist upon turning the bull’s-eye of truth upon the negotiations of the Colonial Office in 1895.

That at least has the advantage of being an explanation of conduct that otherwise is absolutely inexplicable; but we naturally recoil from a hypothesis which, if admitted, would go far to justify the worst accusations brought by the Germans and French against the Machiavellian policy of our Colonial Office. Yet here we have Lord George Hamilton declaring to his Primrose friends of the Liberal members of the South Africa Committee: "They behaved as Englishmen always behave in positions of responsibility. They declined to push the inquiry to a point which would endanger the supremacy of British rule in South Africa!" Just so. But if Englishmen in positions of responsibility always stifle inquiry into facts which endanger British rule, can we marvel that, as Sir M. Hicks Beach phrased it, "With foreigners it is a cardinal and perpetual article of faith that this country is always perfidious"?

## II.—IS MR. CHAMBERLAIN A GEORGE WASHINGTON?

Every one knows the familiar story of how the youthful George Washington, after cutting down the cherry-tree, owned up magnanimously, declaring, "I cannot tell a lie." It is assumed, and even passionately asserted, by the Worshipful Company of Whitewashers that Mr. Chamberlain labours under the same constitutional disability that distinguished the Father of the American Republic. But is such a theory tenable? Is it antecedently impossible that the other hypothesis freely asserted when the Inquiry began, "You'll see Joe will lie himself out of it," may be much more in accordance with the facts; nay, that it is indeed the only hypothesis which fits the facts?

Before proceeding to deal with facts upon which disputants differ, let us try the thesis that Mr. Chamberlain, like Washington, could not lie by bringing into clear relief two facts which are beyond dispute. Mr. Chamberlain in his last speech in the House of Commons, referring to some anonymous assailants who had declared that his reputation stood sorely in need of further exculpation, said "My answer to these assailants is not what I can say; MY ANSWER IS WHAT I DO." Let us test the rival hypotheses by referring to two vital points in which Mr. Chamberlain's answer is written large in what Mr. Chamberlain did.

To clear the ground, let us admit that the question at issue on which there is no agreement is as to the assertion made by one party and denied by the other that Mr. Chamberlain and Mr. Rhodes were co-conspirators—one to a much greater extent than the other—in the preparations made on the frontier to secure the success of the insurrection at Johannesburg. It is now admitted by everybody that Mr. Rhodes was in the conspiracy, was the conspiracy in fact, that the Jameson plan—although not the Raid—was Mr. Rhodes's plan, and that he had not only placed Dr. Jameson on the frontier to assist the insurrection, but had represented to his subordinates that in so doing he was acting with the knowledge and approbation of the Colonial Office. He had on the authority of cablegrams from London made Dr. Jameson, Sir J. Willoughby, Sir Graham Bower, and Mr. Newton believe that Mr. Chamberlain was a co-conspirator with him against the Transvaal. Now let us see what Mr. Chamberlain did when Mr. Rhodes came home to "face the music."

I prefer to allow a partisan of Mr. Chamberlain to state what he did. The current number of the *Edinburgh*

*Review*, in an article entitled "Public Opinion and South Africa," says:—

Mr. Rhodes, it will be remembered, arrived in England a few weeks after the failure of his plans; and in February, 1896, had a lengthy conversation with Mr. Chamberlain, who almost immediately afterwards—viz., on February 13—stated in the House of Commons that "to the best of his knowledge and belief everybody—Mr. Rhodes, the Chartered Company, the Reform Committee of Johannesburg, and the High Commissioner—were all equally ignorant of the intention or action of Dr. Jameson; and that belief he expressed to the House after having carefully examined all the statements of all the parties concerned." Comment is unnecessary.

The obvious conclusion which the *Edinburgh Reviewer* draws from this Ministerial declaration is that which every one naturally drew at the time, and which the Minister who made it apparently intended they should draw. It is assumed as if it were self-evident that Mr. Rhodes must have lied to Mr. Chamberlain in the course of that lengthy conversation, otherwise Mr. Chamberlain could not have made so emphatic a statement as to Mr. Rhodes's entire ignorance of the whole business. No doubt there was lying somewhere. But it was not on the part of Mr. Rhodes.

It was confessed by Mr. Chamberlain ten months after date, that at the "lengthy conversation" at the Colonial Office, the question of Mr. Rhodes's complicity had never been discussed at all. Mr. Chamberlain did not confess that this was not by Mr. Rhodes's wish. When Mr. Rhodes arrived from the Cape at the beginning of 1896, it was his idea to admit publicly, as he did with the utmost frankness privately, his share in the whole of the miserable business. Mr. Chamberlain will not dare to assert that Mr. Rhodes ever made to him any statement denying the fact that he financed the insurrection or that he stationed Jameson on the frontier with a view to helping the insurgents. Mr. Rhodes in conversation everywhere when he was not peremptorily silenced by intimations that no confidences were wanted, spoke at the beginning of 1896 exactly as he afterwards spoke to the South Africa Committee in 1897; i.e. he admitted his share in the business, and was prepared to take the consequences of his acts.

But there is more positive evidence than this. It is admitted that the first thing he did on arriving in this country was to despatch Mr. Hawksley to the Colonial Office, not to deny his complicity in the affair, but to expressly affirm it, and to warn Mr. Chamberlain that in promoting this revolutionary conspiracy, he had used telegrams from London which conveyed the impression that his action was known and approved at the Colonial Office. It was on February 4th when Mr. Rhodes, through his solicitor, confessed and admitted to Mr. Fairfield that he had implicated the Colonial Office in his operations against the Transvaal. And yet, nine days later, after having pointedly refused to ask Mr. Rhodes a single question on the subject, Mr. Chamberlain publicly stated from his place in the House of Commons that to the best of his knowledge and belief, after having carefully examined all the statements of all the parties concerned, Mr. Rhodes, the Chartered Company, the Reform Committee, and the High Commissioner were all equally ignorant of the intention and action of Dr. Jameson!

This then was what Mr. Chamberlain did. He certainly deceived the House of Commons. Was that the action of a Washington?

Mr. Chamberlain knew well that the impression which he produced and apparently intended to produce was an absolutely false impression. Mr. Rhodes never

once made any statement whatever to Mr. Chamberlain that justified any such assertion as that which Mr. Chamberlain made.

That is the first piece of evidence as to what Mr. Chamberlain did. The second is even more significant. When the South Africa Committee drew up its Report, Sir William Harcourt proposed the insertion of a clause which asserted in the customary paraphrase natural to Parliamentary documents, that Mr. Rhodes was a liar and a blackmailer. The passages in question runs as follows:—

"Your Committee fully accept the statements of the Secretary of State for the Colonies and of the Under-Secretary, and entirely exonerate the officials of the Colonial Office of having been, in any sense, cognisant of the plans which led up to the incursion of Dr. Jameson's force into the South African Republic. It is clear from the evidence of Mr. Hawksley, and his letter of February 5, 1895, that the telegrams in question conveyed the impression that the action of Mr. Rhodes was known and approved at the Colonial Office. The fact that Mr. Rhodes (after having authorised that they should be shown to Mr. Chamberlain) has refused to allow them to be produced before the Committee leads to the conclusion that he is aware that any statements purporting to implicate the Colonial Office contained in them were unfounded, and the use made of them in support of his action in South Africa was not justified. It cannot reasonably be doubted, having regard to the use already made of these telegrams, that they would have been produced to your Committee if their contents could in any way have relieved Mr. Rhodes or his subordinates from the responsibility now attaching to them.

There is no mistaking the meaning of such a finding. It asserts as plainly as is possible in printed words that Mr. Rhodes having used those cablegrams to lure his subordinates into action for which they were severely punished, deliberately withheld the cablegrams from the Committee, because he knew that they did not justify the representations which he had based upon them. It is difficult to embody in words a more gross imputation upon the personal honour of any one. Treachery of the meanest kind, cowardice only possible to a lily-livered poltroon—such were the imputations which this clause casts upon Mr. Rhodes. Mr. Chamberlain signed the Report containing this imputation upon the personal honour of his co-conspirator, knowing perfectly well that it was false. Mr. Rhodes may be mistaken or he may not be mistaken as to the value of the evidence of the cablegrams, but Mr. Chamberlain knows only too well from the long series of communications which have passed between him and Mr. Rhodes's friends, that if Mr. Rhodes believes anything in the world, with an unhesitating and unswerving conviction, it is that these cablegrams rendered it impossible for him to form any other conclusion than that Mr. Chamberlain approved of what he was after on the frontiers of the Transvaal. It is because Mr. Rhodes believed that, and believes it so firmly, that he has faced every imputation upon his reputation rather than expose Mr. Chamberlain to the ruinous catastrophe which would overwhelm him if the cablegrams were produced. Mr. Chamberlain knows that perfectly well.

Of course I shall be angrily told that Mr. Chamberlain knew no such thing, and that his having signed the Report containing this explicit declaration that Mr. Rhodes was a liar and a blackmailer, is a conclusive demonstration that my assertion is a "malignant slander."

To which denunciation I reply by quoting Mr. Chamberlain's words: "My answer to these assailants is not what I can say. My answer is what I do." Now what did Mr. Chamberlain do in this case?

The Report of the South Africa Committee, to which Mr. Chamberlain had affixed his signature, solemnly told the world that Mr. Rhodes was a liar and a blackmailer. But no sooner does the Report come to be debated than Mr. Chamberlain stands up in his place in the House of Commons—after I know not what communications and warnings had passed between South Africa and London—and practically repudiates his own words! He astonished every one by declaring that while he accepted the report substantially—his own report, mark you, which he signed not substantially, but in its entirety—he went on to say, "But as to one thing I am perfectly convinced, and that is there is nothing been proved, and there exists nothing which affects Mr. Rhodes's personal character as a man of honour. . . . So far as I am concerned in considering the position of Mr. Rhodes, I dismiss absolutely these charges which affect his personal honour."

Now, was ever such a *volte face* witnessed in the long and shady records of Parliamentary intrigue? Under the pressure of his colleagues on the Committee who possibly may have threatened to have the whole matter gone into if he refused, Mr. Chamberlain accepts and indorses Sir William Harcourt's declaration that Mr. Rhodes is a liar and a blackmailer. But no sooner has he done so, almost before the ink of his signature is dry, than he stands up in his place in Parliament and repudiates the accusation, declaring in the most emphatic terms that nothing has been proved affecting Mr. Rhodes's personal character as a man of honour. Mr. Facing-both-ways was not in it compared with Mr. Chamberlain.

After these two conspicuous instances of the way in which Mr. Chamberlain can blow hot and cold with one mouth, and, as a matter of fact, did deceive Parliament, what are we to think of the claim gravely put forward by Mr. Chamberlain's whitewashers that he labours under the congenital inability to tell a lie which distinguished George Washington? I hope that even the most scornfully incredulous may consent to read over the following suggested substitute for the Report of the Select Committee, and ask themselves whether the universal verdict of foreign opinion is not justified in scouting the finding of this Committee and the Vote of the House of Commons as the most astounding manifestation of hypocritical bluff that has ever confronted the innocence and outraged the conscience of mankind.

### III.—HOW THE COMMITTEE OF NO INQUIRY HUSHED UP THE SCANDAL.

Far the most important passage in the Report, says the *National Review*, is the following clause:—"Neither the Secretary of State for the Colonies nor the Under-Secretaries received any information which made them, or should have made them, or any of them, aware of the plot then in progress of development." It must be so if Mr. Chamberlain is a George Washington, for he told the Committee that it was so, and that settles the matter. But as there is at least reason to doubt whether Mr. Chamberlain, who has admittedly deceived the House of Commons, would stick at misleading the South Africa Committee, it may be worth while to examine a little into the way in which the Committee arrived at this positive conclusion.

The *Quarterly Review* in its current issue saddles me with the responsibility for the meeting of the South Africa Committee. It was the publication, says the Reviewer, of the "History of the Mystery" which rendered it impossible for the Ministry to quash the Com-

mittee. The rumours and reports which I embodied in that story left Ministers no option but to order a Parliamentary Inquiry, which all the best authorities at home and in Africa strongly condemned. I have dealt with this absurd accusation on another page; but there is at least a sufficient element of truth in it to justify me in accepting the *Quarterly Review's* suggestion, that what the public expected and what the nation had a right to expect was that the South Africa Committee would thoroughly investigate down to the ground the various rumours and reports which were embodied in that narrative of facts thinly disguised under the form of fiction.

I will, therefore, in drawing up a suggested substitute for the Report of the Committee, deal with the subject from this standpoint

#### IV.—Text of a suggested

### REPORT

*From the South Africa Committee to the House of Commons.*

At the beginning of the Session of 1897, your Committee, consisting of Mr. Chamberlain and his legal adviser, the Attorney-General, assisted by two members of the Unionist Cabaret and five Unionist Members of Parliament, aided by two Members of the Front Opposition Bench, Mr. Sydney Buxton, Mr. Ellis, with Mr. Labouchere and Mr. Blake, were appointed for the purpose of ascertaining, among other things, whether there was any foundation, and if so what, for the rumours and reports more or less explicitly referred to in the Christmas number of the *REVIEW OF REVIEWS* as to the complicity of the Colonial Office and the Colonial Secretary in the conspiracy against the Transvaal of 1895.

#### I.—OFFICIAL DOCUMENTS WITHHELD.

In accordance with the invariable precedent and with the plainest and the most obvious dictates of common sense, it was expected that your Committee would, before hearing any witnesses, be supplied by the Colonial Office with all the documents bearing upon the question at issue, and with all the information in possession of the Colonial Secretary and his department. These documents may be roughly summarised as follows:—

1. A list with dates of, all the visits paid to the Colonial Office by emissaries, agents, or other representatives of Mr. Rhodes, together with memoranda of all the oral communications made to the Secretary or his representatives.

2. Copies of all letters which have passed, from Mr. Chamberlain's succession to office down to the date of the meeting of the Committee, between the Colonial Office and the representatives of Mr. Rhodes, which in any way related to the question at issue.

3. Copies of all the despatches sent and received between Mr. Chamberlain and Lord Rosmead from the first communication made by Mr. Rhodes to the Colonial Office down to Lord Rosmead's return.

It would also have been in accordance with the usage

of such committees for the Minister whose conduct was impugned to have himself presented the documents and information in possession of his department, and to have submitted himself at the same time to an exhaustive examination and cross-examination under oath as to all the circumstances described in the official memoranda and correspondence.

Your Committee, however, has to report to the House of Commons that no such documents have been presented by the Colonial Office, which from the first has displayed the most consistent reticence as to the information in its possession. The Committee received not one of the three classes of written evidence which was in the possession of the Colonial Office, and which would have thrown a flood of light upon the question under consideration.

Your Committee has to report further that Mr. Chamberlain did not deem it necessary to present himself for examination excepting by volunteering statements in the midst of the evidence of other witnesses, when it seemed expedient to explain away statements which implied his complicity in the conspiracy.

Your Committee has, therefore, been engaged for the most part in a game of Blind Man's Bluff rather than in the conducting of a judicial inquiry. Its eyes have been bandaged from the outset by the withholding of the official information in possession of the Colonial Office, but so thoroughly did your Committee enter into the spirit of the game that from the first to the last no member of the Committee deemed it desirable to ask that any of this official information should be laid before it.

Your Committee therefore has to report that it has not seen any of the official memoranda, correspondence or despatches which the Colonial Office has withheld from its knowledge, and which your Committee would not on any consideration consent to ask for. Therefore, being kept in the dark, and having made no effort whatever to let in the light upon this department of our inquiry, we have the utmost confidence in reporting that there is no truth whatever in any of the statements that have been made as to the complicity of the Colonial Office with the designs of Mr. Rhodes, and that, therefore, your Committee reports that Mr. Chamberlain shall be and hereby is officially whitewashed, a recommendation in which that right honourable gentleman heartily concurs.

#### II.—THE MOST IMPORTANT WITNESS SILENCED.

There was one witness whose evidence seemed likely to embarrass the Committee by forcing upon their attention a series of facts which are wholly inconsistent with the hypothesis which the Committee was appointed to confirm. This witness was Mr. Rhodes's solicitor, Mr. Hawksley. It appears that this gentleman has from the first been the trusted intermediary between Mr. Rhodes and all those emissaries of his who communicated with the Colonial Office. He had knowledge of all the communications which had taken place from the first to the last. He arranged and was present at the interview which took place between Dr. Harris and Mr. Fairfield, when Dr. Harris spoke openly with Mr. Fairfield as to the designs of

Mr. Rhodes. He has the custody of all the cablegrams which were passed between Mr. Rhodes and his agent in London. He was also the solicitor retained for the defence of Dr. Jameson and Sir John Willoughby and the officers concerned in the Jameson Raid. He was personally employed as intermediary between Mr. Rhodes and Mr. Fairfield, and it was through him all communications passed in the latter stages after Mr. Rhodes came to England in 1896. It was Mr. Hawksley also who conducted the correspondence with the Colonial Office on the subject of the cablegrams, and it was he who wrote the series of letters in connection with the cablegrams which were said distinctly to charge the Colonial Office with full antecedent knowledge of the preparations made on the frontier to secure the success of the insurrection in Johannesburg. Mr. Hawksley was also an intimate personal friend of Mr. Fairfield, with whom he seems to have been in close personal communication down to the day of his leaving England, on the journey from which he never returned. It was therefore obvious to every member of the Committee that if there had been any truth in the alleged complicity of the Colonial Office, Mr. Hawksley was the witness whose evidence would prove it. He was the pivot of the conspiracy, the very central point where all information was pooled. He could if he would have enabled your Committee to know the exact truth concerning all the subjects referred to them for inquiry. Your Committee therefore did their utmost to prevent him being called at all, and would undoubtedly have succeeded in preventing him being heard as a witness, but for the ill-considered insistence of one of their number, who by publicly demanding his production would have created a public scandal had it been denied. It was therefore necessary to acquiesce reluctantly in the appearance of Mr. Hawksley as a witness, but your Committee take credit to themselves for the fact that as soon as they discovered that Mr. Hawksley was not an unwilling witness, but was prepared honestly to communicate to the best of his knowledge and belief exactly as to what had taken place, and was in fact, as Mr. Chamberlain significantly remarked, actually volunteering information, than they promptly discontinued his evidence, refused to allow him to tender his testimony, and closed the inquiry without permitting him to complete his evidence-in-chief or to permit any cross-examination.

Your Committee having effectively silenced the chief witness, who might have proved the complicity of the Colonial Office, calmly but confidently asserts that there is no truth whatever in any of the calumnious statements which have been made reflecting upon the honour and reputation of the Colonial Secretary and his subordinates.

### III.—CABLEGRAMS SUPPRESSED.

This brings your Committee to the question of the cablegrams. It is a matter of public notoriety that eminent authorities to whom the cablegrams have been submitted have reported that when they are read in connection with the concurrent course of action taken

by the Colonial Office, they supply such uncontrovertible proof of the complicity of the Colonial Office that all doubt would be at an end. It is further well known to many members of your Committee that in the opinion of those who are most familiar with the contents of these cablegrams, there would be no hope whatever of saving the Colonial Secretary from destruction if they were published. This assertion has been so frequently made, that your Committee naturally could not avoid making some reference to the subject.

Your Committee however wishes to point out in extenuation of their conduct in referring to this painful subject at all that they studiously refrained from pressing Mr. Rhodes as to the nature of their contents, for they no sooner obtained from him the menacing information that their production would compromise third parties, than they incontinently refrained from making any further inquiries, and allowed him to depart for South Africa.

Both Mr. Chamberlain and his legal adviser, the Attorney-General, had read and commented upon these cablegrams. Mr. Chamberlain had entered into a correspondence concerning their nature, which correspondence was within his possession, and could have been produced. But we carefully abstained from requesting him to produce that correspondence, while the Attorney-General was permitted by us to question witnesses as if he had never seen the cablegrams in question, and was entirely innocent of all knowledge of their contents. The Attorney-General, who was well aware of the contents of these cablegrams, and especially of the extent to which they made Mr. Fairfield and Mr. Chamberlain responsible for "hurrying up" the insurrection, so far forgot himself as to declare that the cablegrams were "unquestionably material" to the inquiry. But although this inadvertent admission of his made the task of your Committee extremely difficult, it nevertheless was not insuperable, and your Committee have to report that they have triumphantly surmounted this obstacle by determining to consider the cablegrams as of no importance, and while ordering their production as a matter of form, they gladly acquiesced in Mr. Rhodes's refusal to betray the man who so openly was referred to as his confederate. We have, therefore, only seen a few cablegrams, but some of the worst of them have been ingeniously explained away by their sender, while the worst of the others have been suppressed. We therefore again repeat that there is no evidence that tends to throw even a shadow of doubt upon the stainless integrity of the Colonial Office, and specially of its chief, Mr. Chamberlain.

### IV.—IMPERIAL OFFICERS IMPLICATED.

1. Your Committee have to report that the late High Commissioner was so ill that it would endanger his life even to take his evidence by commission. Therefore, they declare he was entirely ignorant of all knowledge of a conspiracy in which his Prime Minister, his Secretary, and his Frontier Magistrate were engaged, and for the success of which his co-operation was vital.

2. Your Committee have to report that the conspiracy was engineered and financed throughout by Mr. Rhodes, Prime Minister of the Cape, Managing Director of the Chartered Company, and Privy Councillor of the Crown.

3. Your Committee regret to have to report that Sir Graham Bower, the Imperial Secretary at the Cape, who, owing to Lord Rosmead's illness, was virtually Acting High Commissioner, was fully cognisant of the conspiracy.

4. Your Committee have also to report that Mr. Newton, Imperial Magistrate and frontier authority, was also fully aware of the plot and connived at its execution.

5. Your Committee have also to report that Dr. Jameson, Administrator of the Chartered Company's territory under the Crown, was throughout the chief agent and directing spirit of the Plan and Raid which are known by his name.

6. Your Committee have also to report that Sir J. Wilmoughby and other officers of the Regular forces seconded for service in Charterland took part in the Raid and led across the frontier the Mounted Police of Matabeleland and of Bechuanaland, the latter having been handed over by the Colonial Office to the Chartered Company in time for use in the Raid.

7. Your Committee have to report that from letters written by Mr. Fairfield, one of the Under Secretaries at the Colonial Office, to Mr. Chamberlain and to Mr. Hawksley, as well as from the statements of other witnesses, it would appear that he was in confidential communication with the emissaries of Mr. Rhodes, who spoke openly to him; but, as he was deaf, your Committee report that he heard nothing that was said to him, and they do this more confidently because, as he is dead, he cannot contradict them.

8. Your Committee further report that Sir Robert Meade was one of the officials to whom communications were alleged to have been made by the emissaries of Mr. Rhodes, but as Sir Robert Meade is too ill to be able to answer any questions, he was not called as a witness.

It is therefore evident that there is no reason whatever for the malignant slander that the Imperial authorities were implicated in the conspiracy, seeing that of the eight concerned one is dead, two are too ill to be questioned, and of the other five, every one entered into the plot in the firm though of course mistaken belief that it was known to and approved by Mr. Chamberlain.

#### V.—A LETTER THAT CANNOT BE EXPLAINED AWAY.

Although your Committee was deliberately kept in the dark by the Colonial Office as to all the negotiations which had taken place between the emissaries of Mr. Rhodes, and the department, and its chief, your Committee have to report that to its very great regret the Colonial Secretary did on one occasion so far depart from the rule of withholding all documents in the possession of the Colonial Office and actually produced a letter written by Mr. Fairfield which your Committee is absolutely unable to explain away. That letter was written on November 4th, and was read by Mr. Chamber-

lain with an interpolation which was obviously introduced with the praiseworthy intention of misleading the public as to the obvious significance of "ugly row" to which Mr. Fairfield referred. ("That, of course," said Mr. Chamberlain, "referred to the Drifts.") But Mr. Fairfield's letter of November 4th, read to the Committee by Mr. Chamberlain, showed conclusively that Mr. Fairfield knew that the Chartered Company's troops were being brought down in connection with the Johannesburg discontent, for he urged that the Imperial troops in Bechuanaland should be got out of the way there in view of Mr. Rhodes's contemplated action, while at the same time it was proposed to bring Imperial troops to South Africa in connection with the Drifts question. What sense was there in removing Imperial troops from Bechuanaland and bringing Imperial troops from England to Cape Town if one and the same and only operation was intended? To that question your Committee have to admit that they can give no answer. But, falling back upon the famous saying of a Father of the Church, we piously exclaim "*Credo quia impossibile est*," and affirm more confidently than ever that, "Neither the Secretary of State for the Colonies nor the Under Secretaries received any information which made them, or should have made them, or any of them, aware of the plot then in progress of development."

#### VI.—QUESTIONS WHICH WERE NOT ASKED.

Mr. Rhodes' emissary, Dr. Harris, testified on oath that he had spoken openly to Mr. Fairfield, whom he assumed must have reported fully what was said to Mr. Chamberlain. Mr. Chamberlain admits that any such statement made to Mr. Fairfield would certainly have been communicated to him; but as he denies that any such communications were received by him, it follows of necessity they were never made to Mr. Fairfield. It is true that Dr. Harris swore that two other men, Mr. Beit and Mr. Maguire, whom he named, were aware from other sources that Mr. Fairfield knew; but your Committee scrupulously abstained from asking those men how they knew that Mr. Fairfield knew. Both were called as witnesses. But no questions were asked them upon this subject, for, had they been pressed, they might have confirmed the assertion which has been so freely made that the Colonial Office was kept informed step by step of all that was going on.

#### VII.—WHAT MR. CHAMBERLAIN DID.

When the accusation was made that Mr. Chamberlain was privy to the design to assist the insurrection in Johannesburg by the use of the mounted police on the frontier, he replied that his answer is to be found in what he did. The Committee has to report that what he did was first to refuse the concession of the strip and to postpone the handing over of the police for two years.

The Committee further reports that within two months he handed over the police and conceded just the strip of territory that was needed as a place for invading the Transvaal, at the suggestion of the High Commissioner, who admitted that he had been put in motion by Mr.

Rhodes, upon whose ingenuity and resource the Colonial Secretary appears to have relied throughout.

The reason for this sudden change of front on the part of the Colonial Secretary was alleged to have been due to certain menacing telegrams and communications received from South Africa, and communicated to the Colonial Office. Your Committee therefore abstained from asking any questions either from Mr. Rhodes or from Mr. Chamberlain as to the nature of those communications. The cablegrams that passed on this occasion are in existence, and could be produced if the Colonial Secretary would ask for them, but this the Colonial Secretary refuses to do; and therefore your Committee reports that there is no need for any further explanation. His reputation can take care of itself.

#### VIII.—THE QUESTION OF THE FLAG.

It is further alleged that during the autumn of 1895, Mr. Chamberlain made statements to certain persons who had the run of the Colonial Office, and were in communication with the conspirators as to the necessity for the insurrection taking place under the British flag. Intimations of the most emphatic kind, which were said to have emanated directly from the Colonial Secretary at the Colonial Office, were telegraphed out to South Africa, and had a potent influence on the course of events. Hence it is manifestly a question of the very first importance whether those persons who sent those cablegrams had or had not any warrant or justification for asserting as they did that Mr. Chamberlain made the question of the flag a *sine qua non*.

Your Committee has had before them several persons who were in communication with the Colonial Office, notably Miss Flora Shaw, Mr. Maguire, Mr. Beit, and Mr. Hawksley, but your Committee being appointed to inquire into the truth of these statements, deemed it undesirable to ask any questions on the subject whatever. Miss Flora Shaw admitted having had a long conversation on the Transvaal question with Mr. Chamberlain, but your Committee delicately refrained from pressing any questions as to what passed in that interview. Nor did your Committee deem it desirable to ascertain whether or not there was any truth in the rumour widely current that it was because of statements made by Mr. Chamberlain as to the importance of the flag, and the reduction of the Transvaal to the status of a British colony, that the telegram was sent to Mr. Rhodes, to which his reply appears in one of the few cablegrams produced by the telegraph company, and which are included in the evidence.

Your Committee therefore having asked no question on the subject, feels justified in asserting that there is no truth in the story.

#### IX.—THE HARD CASE OF THE OFFICERS.

A question was sprung upon the Committee as to the allegations made by Sir John Willoughby concerning the complicity of the Imperial authorities in the conspiracy. It seemed that Sir John Willoughby, in order to save his officers from losing their commissions, wrote to the War Office stating that he had taken

them across the frontier on the assurance that he had the approval of the Imperial authorities. The War Office finding its hand forced, produced the correspondence which ought to have been included in the official documents laid before the Committee at the beginning of its inquiry. Sir John Willoughby was called, and admitted that he had made the statement concerning the Imperial authorities on the word of Dr. Jameson. Dr. Jameson being recalled, explained that the phrase "Imperial authorities" had been used by Mr. Hawksley, who holds the cablegrams, and who had drafted the letter for signature presumably from his knowledge of their contents, and that he himself disapproved of the term. We scrupulously abstained from asking him what phrase he would have substituted for that of "Imperial authorities." Had we done so we might have learned that Dr. Jameson if pressed would have admitted he had wished Sir John Willoughby to substitute the name of Mr. Chamberlain for the phrase employed by Mr. Hawksley. But as a judicious reticence was observed by Dr. Jameson, and your Committee wisely abstained from any inquiry on this point, we have no hesitation in asserting that there is no foundation whatever for the assurance which Sir John Willoughby gave to his officers, nor, as a matter of fact, did Dr. Jameson or Sir John Willoughby believe that Mr. Chamberlain had in any way connived at the proceedings or sanctioned their action against the Transvaal.

As a proof of the thoroughness with which your Committee avoided every opportunity of acquiring information which might throw doubt upon this cardinal point, we may mention that although all the officers were within call, none of them were summoned to give any evidence as to the nature of the assurances given to them by Sir John Willoughby and Dr. Jameson.

#### X.—THE "HURRY UP" TELEGRAMS.

One of the allegations most conspicuously made in the narrative, whose allegations we have to inquire into, was that at the critical moment when the conspiracy was hanging in the balance, and there was hesitation as to whether or not it should be pressed forward, telegrams were received from London urging that the insurrection should be hurried forward. It was even alleged that these telegrams emanated from persons who were trusted by Mr. Rhodes with the duty of keeping him informed as to the wishes of his alleged co-conspirators in the Colonial Office, and were by him entrusted with the cypher for telegraphic purposes. We have had before us the senders of all those telegrams. The text of the "Hurry up" telegram sent by Miss Flora Shaw is before us. The text of the other "Hurry up" telegram we studiously abstained from acquiring. Both of these telegrams were sent by trusted friends, if not by confidential agents, of Mr. Rhodes, informing the conspirators in South Africa that Mr. Fairfield had wished them to hurry up because of the threatening aspect of affairs in Venezuela. One of these witnesses, with an engaging readiness to explain away the plain

meaning of her words, which cannot be too highly commended, fully convinced us that she had no authority whatever beyond a mere casual or chaffing remark of Mr. Fairfield's, to justify her in sending a cable to Mr. Rhodes, the obvious meaning of which was that the Colonial Office wished him to expel the affairs. The explanations of Miss Flora Shaw are recorded in our evidence, and your Committee feel that if no other result attended their labours, they have deserved well of mankind by bringing to light so perfect a statement as to the non-natural use of language as that to which Flora Shaw pleaded guilty. But it was obvious that after her ready explanations, that two and two do not make four, and that the most positive statements are to be interpreted by the rule of contrary, no further attention need be paid to her telegram; and as to the other one, it was never produced, and therefore may lawfully be considered as non-existent.

#### XI.—THE HONOUR OF MR. RHODES.

The refusal of Mr. Rhodes to produce the cablegrams affords your Committee an admirable opportunity of whitewashing Mr. Chamberlain by blacking Mr. Rhodes, who is absent and under a cloud. We find, however, that the dictates of justice and the instinct of chivalry demand that we should publicly charge him first with lying, as having used the cablegrams to deceive his subordinates, knowing that they did not bear the interpretation which had been put upon them, secondly, with not daring to produce his vouchers when challenged to do so, and thirdly, that if their production would have saved his own skin he would have produced them. To this damning charge against the personal honour of Mr. Rhodes we are glad to state we have obtained the signatures of Mr. Chamberlain and the Attorney-General.

#### XII.—QUOD ERAT DEMONSTRANDUM.

Your Committee therefore has to report to the House of Commons that, wherever they were unable to suppress documents, silence witnesses, and stifle inquiry, every rumour and report embodied in "The History of the Mystery" has, without a single exception, been proved to be well founded, but your Committee has, by great efforts, achieved so much success in hushing up all inconvenient facts, that they are able to declare with a clear conscience:—

(1) that Mr. Chamberlain is duly and completely whitewashed according to our instructions;

(2) That Mr. Rhodes is damned as a liar, and a black-mailer, and a traitor, who has involved his subordinates in ruin by the fraudulent use of telegrams which he dare not produce, and who was, moreover, the principal perpetrator of the crime for which his agents, Dr. Jameson, Sir John Willoughby, and others have been sent to prison.

We therefore recommend that no steps whatever should be taken to punish Mr. Rhodes for his breach of the law,

or for any of his high crimes and misdemeanours. Neither do we recommend that he should be removed from Her Majesty's Privy Council, and further, we reserve to each member of our Committee, and especially to Mr. Chamberlain, the right to repudiate absolutely every portion of this Report which reflects upon the personal honour of Mr. Rhodes.

It is in such terms as these that the Committee might well report the results of its "inquiry into the preliminaries of the Jameson raid." If there is one single article in the whole of this Report which is not amply justified by what the Committee has done, and what it has not done, I await correction. The above is merely a rough, rapid survey; but, imperfect though it is, is it not sufficient to justify the worst that can be said concerning British Pharisaism and British hypocrisy? One thing, however, must be admitted. It is the only plea which I venture to put in in mitigation of judgment. Considering the horrible botch which the Committee and the House of Commons have made of their whitewashing business, may we not at least claim that we in this country are novices at the odious business of hushing up a conspiracy, and of hiding the trail of high-placed conspirators? The ostrich which thrusts its silly head into the bush and leaves its other end a prey to the hunter, is a bird of wisdom compared with this goose of a Committee, whose foolish cackle has called attention to the very scandal it so clumsily attempted to conceal.

From the Westminster Gazette.

[July 26, 1897.]

#### REPORT AND RECOIL.

"Oh! What a beastly noise it makes! I wonder whether it will make Rhodes angry?"

# LEADING ARTICLES IN THE REVIEWS.

## A PLEA FOR THE PARTITION OF TURKEY.

BY AN ADVOCATE OF THE ANGLO-RUSSIAN ALLIANCE.

THERE is a very interesting article in the *Quarterly Review* entitled "The Crisis in the East," written by some one who is evidently much more familiar with the East than most persons who write even in the *Quarterly Review*. It is an article full of curious and unfamiliar side-lights on the Eastern Question, and should be read by all those who are interested in the solution of the great problem which is a constant menace to European peace.

### MORE MASSACRES IMPENDING.

This writer has no good news to tell us, and almost at the beginning of his article he warns us that the Sultan having prospered so much by massacring the Armenians, is now meditating the massacring of the people of Macedonia. The *Quarterly Reviewer* says, "there is unfortunately reason to believe that further massacres are in store."

It does not quite appear what ground he has for this lugubrious anticipation beyond the fact that the Armenian massacres were planned by the Sultan after he came under the influence of a certain Mollah, and that he has now passed under the influence of another man of the same type who has concentrated his attention on Macedonia:—

A man who is now a very important person in the Western provinces of the Turkish Empire, who is known as the Mollah Zéka, and is in character not unlike the dervish who has the special confidence of the Sultan. He was not long ago under detention in Constantinople, and when he returned to his own country he was received with frantic enthusiasm. M. Bérard, in his book on Macedonia, describes his triumphant return and how the Mollah Zéka remained apparently insensible to the homage of his people, as, with his turban forced down upon his brows, his eyes half-closed and fixed upon the ground, and his hands engaged in telling his beads, he passed through the crowds of his admirers. This man is destined to play a leading part in the massacres in Macedonia which, there is reason to believe, are even now in contemplation. The massacres in Armenia were organised by men like him, strange compounds of hypocrisy and fanaticism, who spent some time in Constantinople, then returned to their country, spoke to the people as they were gathered round the mosques, and communicated to them the wishes of the Master.

### WHAT, THEN, SHOULD BE DONE?

If more massacres are impending and no redress can be obtained from the Sultan, what should be done? To this question the Reviewer has an answer quite pat. The first thing that appears certain to him is that the favourite specific of Mr. Gladstone, the establishment of local autonomous institutions or principalities, is foredoomed to failure. Experience proves, he says, that this is so; and he briefly recapitulates the salient facts of the history of Bulgaria and of Greece in order to justify his assertion. The antagonism between the Hellene and Bulgarian, between the orthodox Greek and the Roman Catholic, and the low level of civilisation and education among the mass of the people, constitute, he thinks, insuperable obstacles in the way of a solution by local autonomy.

### THE ONE BRIGHT SPOT.

The only hope that he can see for the future of the East is occasioned by the brilliant success of Austria in Bosnia and Herzegovina:—

The splendid success of the Austrian administration strengthens the conviction which, we believe, will gradually be forced upon practical men, that the Eastern Question can best be solved by following the precedent of Poland. This policy was proposed twenty years ago by Count Andrassy, and the precedent is most applicable. There is a spurious patriotism, treachery, and corruption throughout the Balkan States, similar to that which existed in Poland in the days of Stanislaus Poniatowski. Bulgaria and Greece have both shown their incapacity for self-government. If civilisation is to spread and law to be established in the Peninsula, the work of government must be undertaken or supervised by others.

### WHAT WOULD RUSSIA SAY?

Our Reviewer is a sanguine man, for even ignoring the passionate, almost rancorous hostility with which Austria's work in the Balkans is regarded by Russians, he calmly asserts that Russia would not object to a further extension of Austrian influence in the Balkans:—

Events and interests in the far East have forced Russia to reconsider her position in South-Eastern Europe, and in the spring of the year negotiations for an understanding with Austria were opened and were brought to a successful issue a few weeks ago when the Emperor Francis Joseph was at St. Petersburg. The official declaration afterwards made in the Hungarian Parliament by Baron Banffy proves its completeness, and the manner in which it has been brought about indicates a momentous change in Russian policy. Austria has now a free hand to push forward gradually towards Salonica, and at the present moment she is doing all that is possible to extend and deepen her influence in Albania. She has the Roman Catholic clergy in Albania and Macedonia as her agents.

### ENGLAND'S SHARE IN THE PARTITION.

Of course if there is to be a partition, England would not be left out in the cold, and this the Reviewer fully recognises. His suggestion is that the policy of partition should be adopted by England in concert with Russia. He says:—

This policy can be best carried out by an arrangement with Russia, Austria, and France, which should be one of a comprehensive character, and involve an understanding, not merely with reference to the Balkan Peninsula and Egypt, but also as regards Syria, Persia, Central Asia, Tunis, and the far East. It may seem that the Russian Government is too much compromised by engagements with France to enter into cordial relations with Great Britain. But, in truth, Russian statesmen attach much less importance to the French Alliance than is often supposed.

According to his scheme, England would have Egypt as her share and Syria. What he thinks France would say if we were to hoist the Union Jack in Damascus we are not told. Apparently he relies upon Russia compelling the French to accept whatever was agreed upon between London and St. Petersburg.

### WHAT ABOUT GERMANY?

It does not contribute to the confidence with which we should enter upon such a policy, to know that in the opinion of its exponent we have to reckon upon the permanent hostility of Germany:—

Germany is driven towards the sea for her expansion, and considers that England is the Power which hinders her from founding colonies, to which she might direct her surplus population. She looks at no distant date to entering into the closest relations with Holland, and through Dutch influence to obtain supremacy at the Cape, and also a considerable position in the Malay Archipelago. This is the reason why William II. is so anxious to increase his navy. There is no

question, of course, of Germany measuring herself with England on the sea. William II. and his advisers are well aware that it would be madness to attempt it. They know that the only chance of overthrowing England is in concert with another great maritime Power. Hence an alliance with France is becoming the governing idea of the German mind, and is the necessary outcome of the policy of colonial extension. The idea of an understanding between France and Germany is also growing in the former country.

It is obvious that if Turkey is to be partitioned, and England is to reckon both Germany and France as allies, we shall have to pay through the nose for the support of Russia. The Reviewer does not say how much Russia is to have, but leaves it to be inferred that if Austria annexes the western half of the Balkans down to Athens, and England appropriates Egypt and Syria, Russia will be allowed to absorb all the rest, including Constantinople and the Dardanelles. The article, however, is full of suggestion and of information, and with its central principle, that of an Anglo-Russian alliance, I am, of course, heartily in accord. It may be noted as significant that the Reviewer concludes his article by suggesting that the Queen herself should take this matter in hand. He says:—

It would only be in keeping with the pacific character of the foreign policy of her reign if an arrangement were come to which would gradually solve the Eastern Question without war between civilised nations. We feel confident this can be done on the lines we have indicated.

## ENGLAND, FRANCE, AND RUSSIA.

### A PLEA FOR A NEW TRIPLE ALLIANCE.

M. PRESSENSÉ, the foreign editor of *Le Temps*, moralises in the *Nineteenth Century* over the significance of the Jubilee, and follows up his dissertation by a plea for the admission of England into the Franco-Russian Alliance. His observations about the significance of the Jubilee are thoughtful and well expressed.

### WHAT THE JUBILEE MEANT.

He is full of admiration for this great historical event—the rising above the horizon in its full-orbed majesty of the British Empire, and the simultaneous advent in the popular soul of the imperial feeling. What people most willingly glorify is themselves. They are the true heroes of all sincerely popular feasts. So it was the other day. They have solemnised in London a kind of semi-secular retrospect. They have passed with a proud contentment the review of sixty years of change—of radical, organic, thoroughgoing change—of revolution, political, social, and moral, which have been also sixty years of perfect internal order, peace, and prosperity. They have, above all, taken possession of a new fact—the Empire in all its greatness—and of a new feeling—Imperialism in all its intoxicating freshness. In fact, what remains of the Jubilee in the public mind, in the everyday preoccupations of the man in the street, is the advent of the Empire as a portent of the first order, as an immense force to be put to use, as a brand-new ideal to be gradually realised.

Taking this as his starting-point, he points out that the President of the French Republic is going to St. Petersburg, where there will also be great popular rejoicings. He says:—

What I want to show is how this tightening closer of the bonds of the Franco-Russian *entente* offers a new occasion for the drawing nearer of England.

### RUSSIA AND ENGLAND IN THE EAST.

M. Pressensé then preaches an excellent sermon upon the familiar text of the absurdity of Russophobia, and points out that it is both the duty and the interest of England to come to terms with the Russian Empire, which shares with her the sovereignty of Asia. In the

East he points out the familiar fact that in dealing with the Sultan the *roles* of the two Powers have been reversed. He says:—

The two Governments have literally taken one the place of the other, and, none the less, they continue to look on each other with a supreme, incurable diffidence. Such a misunderstanding is not to remain for ever, even if the present healthy habit of working in some kind of concert does not make away in the long run with such prepossessions. It is impossible for right-minded people to keep things upside down for ever. After all, England has no sufficient reason to suspect Russia because Russia is gradually coming to something like the point of view of England ten years ago, and *vice versa*. And what is more, both countries, if you look under the surface, are not so very distant the one from the other.

### THE GERMAN MENACE.

These considerations, he says, are powerfully reinforced by the fact that England is directly menaced by the growth of German ambition. He says:—

It has been more and more obvious that Germany—or at any rate her Imperial master—feels that the drift of the fates, between both countries, makes more and more for a rivalry, evidently not to be decided without the arbitrament of arms. The greatness of the British Empire, as set off by the Jubilee, importunes and plagues to death the soul of the modern Cæsar. He, too, wants a world-wide empire. He, too, wants a navy such as that which made such a splendid appearance in the roads of Portsmouth. He wants colonies. He wants a Germany beyond the sea as there is a Britain beyond the sea. Such day-dreams fill his mind. Even his internal policy is for the largest part determined by those loose, grand projects.

### A POSSIBLE ANTI-ENGLISH LEAGUE.

In the concluding passage of his article, he says that Germany is so bent upon humbling England that the holders of Alsace and Lorraine have even contemplated an alliance with France against the great sea power of the world:—

The hour is come to look in the face all these small difficulties and to make a choice between two ways. I have tried to show the drift of events between Germany and England, the gradual estrangement, the nearly unavoidable conflict of the future. I must not pass in silence over the counterpart of this antagonism; I mean the so striking, so oft-renewed, so newly emphasised advances and offers of goodwill the German Emperor is making all the while to France.

Nobody ignores the immense, the nearly insuperable difficulty which prevents the prompt acceptance of these flattering attentions. Between France and Germany there is not only the memory of the war, a ditch full of blood: there is the cry, the bitter cry of children brutally taken from their mother; there is the unconquerable protest of Alsace and Lorraine, that flesh of our flesh, that bone of our bone, against the cruel abuse of the law of the stronger. I believe from the bottom of my heart that, for a long time yet, a statesman in France who should deliberately accept the friendship of Germany and make gratuitous love to the Emperor, would be buried under public contempt. However, time flows; the years go by; the generations come and go. Circumstances may arise where France, where the Franco-Russian couple, would feel obliged to strike a bargain with the German tempter. For England this prospect is worthy of a moment of reflection. It is useless to entertain self-deception.

### ENGLAND'S CHOICE.

Just now England has or seems to have three ways open to her. She may either remain as she is, an erratic body, wandering through the paths of other constellations, or she may make a fourth in the Triple Alliance and follow suit to Germany, the leading State in this league; or she may contract with France and Russia one of those *mariages de raison* which are perhaps never perfectly delightful, according to La Rochefoucauld, but to which diplomacy, in allowing the happy

consorts to be three, gives a kind of additional zest. Only she must choose quickly. It is already too easy to see that the Sibyl does not intend to leave her offers a long time open or to renew them without some reduction.

### A PROPOSED ANGLO-RUSSIAN ENTENTE.

In the *National Review* for August an anonymous official propounds his specific for arranging an understanding between Russia and England:—

What Russia has been aiming at all along is not, I think, the occupation of Constantinople so much as control over the Sultan, so that no other Power may gain advantages in Turkey in Europe, and a free passage for her ships of war through the Dardanelles. I should be inclined to give her a perfectly free hand in Turkey in Europe, and I would ask her to stop the trouble in Armenia as well. She would not, I believe, make any effort to annex another foot of territory, but would be quite content to have us out of the way and the Turk under her thumb. All the nations of Europe, Germany included, have such large commercial relations with Constantinople that Russia could not occupy the place without drawing on herself the anger of them all—perhaps of France. We might even stipulate that she should not.

With regard to Central Asia, the first most necessary step would be to stop absolutely the Rulers of Afghanistan and Persia from playing us off against each other as they do now. Until that happens there can be no reconciliation between Russia and England. I would tell the Russian Government I was sick of all this nauseous intriguing, and proposed now that it should cease, and that we should so arrange matters that our interests should not clash, and that we might even mutually assist each other in future. Perhaps Russia, conciliated by our action with regard to Turkey in Europe, would be disposed to withdraw from Panjdeh and Sheikh Juneid (the outpost overlooking Herat), and then a strip of desert one hundred miles wide would separate Afghanistan on the north-west from Russia. I would then leave Northern Khorasan to her entirely. This would completely satisfy her. The point of my suggestion is to remove friction and to give her no cause to desire to advance, or to fear our doing the same. She has a regiment at Sarakhs and a handful of Cossacks at Pul-i-Khatun. The country about there is almost desert, and they do no harm. There should, however, be no Russian post in the close vicinity of Afghan cultivation or of an Afghan post, because then at any time a conflict might arise about a trifle. These details adjusted in consultation with Russia, there would be no further difficulty. Nature has placed a vast desert in the centre of Persia, and a line might be drawn on the map leaving within our sphere Hashatdan, Tabbas, Yazd, Isfahan, and Muhammarah. The Persian Gulf would then be secure. I cannot give an authoritative opinion as to what should happen in Turkey in Asia, but I should think that if Russia did not interfere with Bussorah and Baghdad and the coast to the north and to the east of Cyprus, we should want nothing more.

If we do not come to some such arrangement as that I have endeavoured to roughly sketch, Russia will soon perhaps reach the frontiers of India, and push down to the Persian Gulf as well, and then we shall each have to maintain bloated and costly armaments, both sides of the frontier will be seething with intrigue, uncertainty and restlessness will prevail, and it must all end in a very big fight. Russia does not want this to happen; she fears us every bit as much as we fear her. We are both terribly afraid of each other, and therein lies the danger.

BARRING the usual fiction, which is profuse, the Summer Number of the *Woman at Home* is chiefly noticeable for a sketch by Mrs. Tooley of "Royal Whipping-ham." As becomes the village residence of the woman who rules the British empire, many of the official posts are filled, it seems, by women. The station-master is a woman. The postmaster is a woman. Even the sexton is a woman. One almost expects to find that the resident clergyman is a woman, too.

### THE FRANCO-RUSSIAN ALLIANCE.

THE Hon. J. B. Eustis, the American Ambassador to France, contributes to the *North American Review* an article on the Franco-Russian Alliance, from which it is evident that this acute observer regards the position of the French Republic with the gravest apprehension, and a deep-seated distrust as to her future destiny. He reports that there is a wide-spread sense of insecurity arising from a gradual reaction against the Russian Alliance, which seems to them equivalent to a Russian Protectorate. France can no longer act independently as a Sovereign State, her foreign relations being controlled by Russia. France was forced by Russia to intervene against Japan, and was deluded into the belief that Russia would help her in Egypt. But the only thing that Russia has done was to inflict upon the British Ambassador at St. Petersburg a vehement harangue by Prince Lobanoff against England with reference to the Eastern question. When Sir Nicholas O'Connor wrote out a *précis* of Prince Lobanoff's remarks and submitted it to the Russian Foreign Office before sending it to England, Prince Lobanoff himself implored him not to send home any report of the conversation. And this unreported discourse of Prince Lobanoff's is all that France has got out of Russia so far as Egypt is concerned. The French also object to the alliance because it practically made them parties to the Armenian massacres, for Prince Lobanoff and M. Hanotaux agreed that nothing should be done to compel the Sultan to desist from massacring his Armenian subjects. Mr. Eustis says that the Sultan never smiles, but after he heard of the result of the conversation between Prince Lobanoff and M. Hanotaux, he never hears the word "reform" mentioned without bursting into a peal of laughter. This was the only topic that could excite the risibility of that sombre atribillious and sanguinary fanatic. Mr. Eustis evidently shares the views of those who hold that the national virility of France is being gradually extinguished by an unnecessary subservience to Russian authority and Russian political interests.

### THE RECORD OF THE EUROPEAN CONCERT.

PROFESSOR WOOLSEY, Professor of International Law at Yale University, writing on "The Powers and the Græco-Turkish War" in the *Forum* for July, explains carefully to American readers the absurdity of the contention that Greece was the independent Power with sovereign right to make war as she pleased. Greece is a protected State whose interests have always been in the hands of a committee of Powers known as the European Concert. The following observations concerning the record of the Concert are worth quoting:—

We may believe that the European Concert is governed by the lower as well as by the higher motives; by selfishness, distrust, and fear, as well as by the spirit of peace and goodwill to men. Nevertheless we cannot fail to see in it the dominating influence in Europe for nearly a century. It created Belgium and settled its international status. It neutralized Switzerland and Savoy, Luxemburg, and the Suez Canal. It has opened the rivers of Europe to commerce, has abolished privateering, has granted invaluable privileges to neutral trade, has twice checked Russian encroachment upon Turkey. And Greece, in particular, has been its ward, its beneficiary. At Navarino, in 1827, the Powers carved a Greek state out of Turkey, though leaving it under Turkish suzerainty. The line ran from the Gulf of Volo to that of Arta, through the mountain range of Othrys, where the Turkish advance was recently stopped by armistice. Thessaly and Epirus were expressly excluded and left in Turkish hands, because they had not earned freedom through insurrection.

In 1832, the Concert gave Greece independence and a king, under the guarantee of Great Britain, France, and Russia.

The Concert was interrupted, or tested, in 1856. But, though Russia was checked, and Turkey's integrity guaranteed, the former lost no territory; while the latter was constrained to grant equal rights to her Christian subjects, and to confirm the privileges of Moldavia, Wallachia, and Servia. When Greece showed signs of uneasiness during that war, the Powers "protected" and occupied her.

In 1863, by the Treaty of London, Great Britain ceded her rights in the Ionian Islands to Greece, the Concert authorising the annexation. That same year the Greeks demanded a new king; and the powers acquiesced in their second choice, Prince George of Denmark.

Six years later, Greece again became troublesome. Her Cretan neighbours and kinsmen had been massacred by their masters in thousands; and Greece could not but try to help and save them. But a solemn "Declaration of the Allied Powers relative to the obligations of Greece towards Turkey" forbade such conduct.

The next decade was a very troubled one in South-eastern Europe. Turkish atrocities in Bulgaria led to Russian intervention; and the Russian war profited the Danubian peoples. Greece, too, saw her opportunity, and, starting an outbreak in Thessaly, prepared to use it. With threats and with promises she was quieted. The dismemberment must not come too fast. At San Stefano Russia dictated terms to Turkey: but the other Powers had the last word.

## ENGLAND AND GREECE:

### LORD SALISBURY'S RECORD.

"DIPLOMATICUS," writing in the *Fortnightly* on "The Sultan and the Concert," maintains that Lord Salisbury by remaining within the Concert was able to assist the cause of the Greeks not a little. He says:—

During the whole of the Cretan trouble and the Greco-Turkish War Lord Salisbury was the only friend of the Greeks and Cretans within the Concert, and he managed to render them several very substantial services. Before the war—in the middle of last year—he succeeded in defeating the two Austrian proposals for the blockade of Crete, although all the other Powers were in favour of them. Again, the autonomy of Crete, when in the fulness of time it is realised, will be entirely due to Lord Salisbury. The landing of Colonel Vassos in the island provoked an outburst of violent wrath from the five Powers, and there was at once a chorus of demands for blockades and other forms of coercion. The Emperor of Germany harangued the Ambassadors at Berlin about the "felonious inactivity" of the Powers, and no doubt said severer things of the Greeks and Cretans. Lord Salisbury, however, refused to listen to anything until the destiny of the Cretans was settled, and he bluntly told Baron de Courcel that he would make no representations at Athens until he could assure the King that in no event would Crete be again allowed to be *au bon plaisir du Sultan*.

Another success of Lord Salisbury was the defeat of the unanimous schemes of the Powers for the blockade of the Piræus and Volo. In this case he would, perhaps, have been better advised had he consented to put Greece in a strait-jacket, as he afterwards phrased it, but it is incontestable, as he explained to the French Ambassador, that English public feeling was strongly opposed to using force against Greece, while Turkey was allowed to go unmolested in spite of her enormities in Armenia.

Supposing all this to be true, which there is no reason to doubt, it is not a record of which any one has reason to be proud. Considering how things have turned out, it would seem as if it would have been much better if Lord Salisbury had not checkmated the proposals of the Powers, possibly in relation to the blockade of Crete, certainly as to the blockade of the Piræus. If one thing is more certain than another, it is that the Greeks have

no reason to be grateful to the statesman who refuses to save them from committing suicide.

### "The Lion's Whelps."

THE new imperialism sounds with a rather truculent note in these lines on England's Allies, which Reginald Gourlay contributes to the July number of the *Canadian Magazine*:—

Britannia fronts the gathering blast,

Her look is proud and high;

She counts the despot's armies vast,

Hears Freedom's warning cry.

"Too great is England!" now's the word—

"And humbled must she be,

Whose speech in every land is heard,

Who rules the furthest sea."

Russia and France are selected—doubtless from traditional reasons—as the two chief foes she has to face:—

But not alone she fronts the storm,

But backed by stalwart ones,

Who gather round that warlike form,

Old England has her sons!

From the "true North" to India vast,

From every land and sea,—

The Saxon race will rally fast

Her "Sons of Liberty."

Ye banded nations, think again!

Lest haply ye may own,—

Blood-stained and torn, in grief and pain,—

"The lion's whelps have grown!"

### The New England Magazine.

THE *New England Magazine* for July contains a charming little reproduction of the Editor's petition to the Massachusetts General Court, illustrated by sketches of all the leather-petitioners. Most of the articles are local to New England, although two, "The Development of College Architecture in America," and "Girdling the Globe with Submarine Cables," are of more general interest. Hannah Parker Kimball's sonnet, "Christ in the Slums," deals also with a subject of only too general interest:—

If Thou stood'st in our midst to tell us, "Still

Possess your souls in patience," can it be

That we should listen, even, Lord, to Thee?

Nay, we should take Thee by the sleeve and, will

Or nil, should draw Thee hither. Here men ply

Such toil as shapes them, while fierce Mammon feeds

Upon their lives, and white-faced aqualor breeds

Sure-fanged disease till men curse God and die.

Wilt Thou say, "Patience," facing such a sight?—

Amid the tenements I see the Lord

Flame to a pity piercing like a sword,

Till misery is riddled through with light.

Yea, Lord, these men are victims horrors slay.

Smitten with death because such death pangs "pay."

THE origin of the Turks is further considered in the *English Historical Review* for July by Professor Bury, who tries to clear up the division of the north-western from the south-eastern Turks as occurring about 567 A.D., in regions now Chinese. Miss Maud Sellers' account of York in the sixteenth and seventeenth centuries is an interesting study in the causes that led to the decay of inland cities. There also appears a hitherto unpublished fragment of a work by Roger Bacon, which the Rev. F. A. Gasquet, who found it a few months ago in the Vatican Library in a copy of the *Opus Majus*, pronounces "a summary or introduction written by Bacon for his *Opus Majus*, the existence of which has hitherto not been suspected."

### THE QUARTERLY REVIEWS ON THE SOUTH AFRICAN SCANDAL.

I HAVE many sins to answer for, both of omission and commission, and that must be my excuse for vehemently repudiating all responsibility for a sin which I never committed. It is indeed a very grave responsibility which the *Quarterly Reviewer* attempts to throw upon my shoulders in making me responsible—me, of all men in the world!—for the appointment of the South African Committee, which has done so much to bring our Parliamentary machinery into contempt, and to bring odium upon the honesty and good faith of England. According to the *Quarterly Review*, there never would have been a South African Committee at all if I had not published "The History of the Mystery!"

"PLEASE, SIR, IT'S ALL THAT MR. STEAD!"

That I am not exaggerating in the least will be seen from the following quotation. After referring to the rumours, based upon Sir John Willoughby's letter to the War Office, that the Raid had been undertaken with the tacit approval or the knowledge of a leading member of the Ministry, the Reviewer proceeds as follows:—

These floating reports and rumours were seized upon by the sometime editor of the *Pall Mall Gazette* in the days of its crusade against the so-called Maiden Tribute, to create a new sensation in his REVIEW OF REVIEWS. We have no wish to say anything unkindly of Mr. Stead. He is a writer of considerable though crude ability; he is a sincere reformer, though his zeal is without knowledge; he is a genuine philanthropist, though his charity covers a multitude of errors. A *fin du siècle* Peter the Hermit, he preaches crusade after crusade, conducted with head-lines, leaded-type, sensational paragraphs, and all the artifices of latter-day journalistic advertisement. These artifices were all called into requisition in order to attract attention to Mr. Stead's "History of a Mystery," which was to form the Christmas Number of his REVIEW OF REVIEWS. In the inaugural advertisement Mr. Chamberlain was depicted on the frontispiece as cowering before a closet in which a skeleton was exposed. The article professing to contain the promised disclosures was found, on its publication, to contain nothing beyond vague insinuations unsupported by evidence. Its publication was excused on the plea that the object of the editor was to furnish Mr. Chamberlain with an opportunity of learning and contradicting the reports which were current as to his connection with the Raid. The excuse offered may have been seriously intended; but, if so, it only confirms our conviction that Mr. Stead, if formidable as an assailant, is still more formidable as a supporter. All we need say further on this subject is, that after the publication of the "History of a Mystery," the Government had no option except to insist on a Parliamentary Enquiry taking place in due form, whatever might be the consequences. The decision thus forced upon them was regrettable in the public interest.

Our own opinion is that if it had not been for the collateral issue, raised by the alleged complicity of the Colonial Office in the Raid, the Government would probably have coincided with the view which was entertained by almost all persons interested, either politically or financially, in South African affairs. Unfortunately the hands of the Government were tied. The rumours which had been circulated concerning the existence of documents implicating Mr. Chamberlain as an accomplice in the Raid, rendered it absolutely impossible for the Ministry to recede from their engagement to reappoint the Committee without laying themselves open to the suspicion, and still more certainly to the accusation, of having shirked the inquiry in order to screen a distinguished colleague. The Committee had indeed been appointed under a misapprehension. The whole truth about the Raid was practically known. The danger that the investigation would retard, instead of promoting, the restoration of amicable relations between the British and Dutch colonists in South Africa, was manifest to all. Yet notwithstanding these considerations, the Committee

had got to meet, because its non-reappointment would have been taken advantage of by the Opposition for party purposes.

From this it would appear that although everybody of importance in South Africa, and all the members of the Ministry, were firmly convinced that the interests of the Empire forbade the appointment of the South African Committee, all these eminent Imperial and Colonial authorities were paralysed and reduced to hopeless impotence by my Christmas number. From one point of view, such a compliment might well be coveted, but as I shall proceed in a moment to show, there is not a syllable of truth in the whole nonsensical fabrication.

#### PUTTING THE CART BEFORE THE HORSE.

Before I wrote a line of "The History of the Mystery," I made it my business to ascertain by personal inquiry from one of the most influential members of the Ministry whether there was even the remote possibility of a chance of avoiding the Inquiry into the Jameson Raid. I set forth as forcibly as I could the disastrous consequences which it seemed to me would necessarily follow any such attempt to probe into the secret history of the preparations which culminated irregularly in the crossing of the Transvaal frontier. I am free to admit, that while describing accurately enough the way in which the inquiry would redound to our discredit and damage the good name of our country, I did not even in my gloomiest moments anticipate that a Committee of the House of Commons could be a party to such a piece of organised hypocrisy as that which has insulted the common-sense, and outraged the conscience of the nation. But that depth of infamy was not revealed to any one, and it was assumed as a matter of course that if there was to be an Inquiry, it would be an honest one for the purpose of elucidating facts and not for stifling all attempts to ascertain the truth. But after I had said all that I could say as to the mischief that would follow the appointment of this Committee, I was assured positively that no power on earth could prevent the meeting of the Committee, that whatever happened it must be held, and that I must take this as absolute. There and then, I said, that if so, I would endeavour to break the force of the revelations which any real inquiry would produce by foreshadowing the disclosures in a more or less imaginary story.

I immediately set to work upon the narrative, but after it was completed it was represented to me that possibly, after all, the Committee might not be held. I said at once that if I had any assurance from any Minister that the Committee would be dropped, I would suppress the whole story without a murmur. But no such assurance was forthcoming. What then can be more absurd and unjust than to attempt to hold me responsible for a Committee, against whose appointment I protested from the first, merely because I endeavoured to mitigate the evil consequences that would follow from what seemed to be the inevitable exposure, by minimising and excusing, as far as possible, the part played by Mr. Chamberlain?

#### THE SKELETON IN BLASTUS'S CUPBOARD.

The *Quarterly Reviewer* practically does little more than repeat and adopt as his own the whole theory of Mr. Chamberlain's complicity which was put forward in "The History of the Mystery." All that I set forth was that Mr. Rhodes acted in good faith in believing that Mr. Chamberlain, whom he had sent his agents to consult, had acquiesced in and approved of the policy of making preparations on British territory to secure the success of the insurrection at Johannesburg. In the

chapter entitled "The Serpent in Eden," blacked out in the first edition, but published in the *Cape Times*, I put even more strongly than the *Quarterly Reviewer*, the hypothesis that Mr. Chamberlain might have been unintentionally misrepresented as being further "in it" than he actually was. The whole drift of "The History of the Mystery" was, not as the Reviewer says, "to furnish Mr. Chamberlain with an opportunity of learning and contradicting the reports which were current," so much as to give him a friendly lead as to the right way of meeting these charges, by taking courage to tell the truth, the whole truth, and nothing but the truth. As I said, the skeleton in Blastus's cupboard was not such a bad skeleton after all. But in order to conceal that skeleton we have had a policy of prevarication, of suppression, and of downright lying, which was a thousand times worse than the peccadillo which was adopted in order to conceal.

According to the *Quarterly Reviewer* Mr. Chamberlain was the authoritative exponent of a policy of benevolent neutrality towards our own people in South Africa—if Johannesburg rose and the insurgents commanded the active support of their fellow-countrymen in South Africa. That is to say, if Johannesburg rose and the British in Cape Colony and Charterland gave the insurgents active support, it was "hardly doubtful that they would enlist on their behalf the good wishes of the vast majority of their countrymen at home." If Mr. Chamberlain would but have admitted as much as his apologist, there would have been no need for the policy of Lie! Lie! Lie! Unfortunately, notwithstanding all the encouragement given him in advance, he flinched from the ordeal, with the result now before us.

#### THE QUESTION OF THE OFFICERS.

The question of the officers remains to be dealt with. It is certainly not settled by the finding of the Parliamentary Committee. The *Quarterly Reviewer* says:—

The prisoners convicted at the Trial at Bar practically offered no defence. Assuming the view of the law taken by the judges to be correct, there could be no question as to their legal guilt, and—contrary, as we believe, to the advice of their counsel—no attempt was made by them to extenuate the moral gravity of the offence of which they stood charged. This conduct was only consistent with the extraordinary loyalty all the parties to the Raid have displayed towards each other. The defence which most of the prisoners could have set up might to some extent have told against the others; but in the long run it might have been better if the whole facts had been made known at the time.

Unfortunately the whole facts were suppressed in the interests of Mr. Chamberlain, and the officers at their trial refused to put in a plea which would have effectually prevented their conviction. It was only when in addition to imprisonment they were threatened with loss of their commissions, that Sir John Willoughby wrote to the War Office stating what was perfectly true, that they had been assured that the enterprise on hand had the sanction of the Colonial Office. The *Quarterly Reviewer* says:—

If these statements in Sir John Willoughby's letter were correct, and if the "seconded" officers who acted under his orders were led to believe, whether justly or unjustly, that the Raid was undertaken with the knowledge of the Government at home, it is obvious that, from a military point of view, they had committed no offence for which they could fairly be deprived of their commission. To hold otherwise would be destructive of all military discipline. Whether Sir John made his statement in good faith, or whether he had adequate grounds for believing his own assertions, is of course a different question. But we are convinced any military authority would support us in saying that, even if the statement in

question had been a wilful and deliberate falsehood, the subalterns to whom it was made by their commanding officer committed no breach of discipline, if, on the faith of this statement, they took part in the Raid. So long as these officers were in prison for the commission of what, technically at any rate, was a criminal offence, it was impossible to reverse the decision by which they had been called upon to resign their commissions. Nor was it possible at the date of which this protest was made to institute the necessary inquiries into the evidence, on the strength of which Sir John Willoughby had declared to his brother officers that the Jameson Raid was undertaken with the knowledge, if not with the actual sanction, of Her Majesty's Government. This impossibility was due to the fact that a Parliamentary Committee had been appointed to examine into all the circumstances of the Raid. Any immediate action on the part of the War Office was therefore not called for. But the Minister for War felt it necessary to inform his colleagues of the protest made by Sir John Willoughby, and of the grounds upon which this protest was based.

#### WHY THEY WERE SACRIFICED.

"Mr. Chamberlain," says the Reviewer, "was communicated with by his colleagues on the subject, and replied forthwith that there was not a word of truth in the charge in so far as he himself was concerned, and that, to the best of his belief and knowledge, there was as little foundation for the charge as affecting any of the officials of the Department." Now here we have the appointment of the Parliamentary Committee adduced as an answer to the appeal of Sir John Willoughby months before "The History of the Mystery" was published. Of course, the impossibility of inquiry, because the Parliamentary Committee was appointed, was a mere subterfuge. Nothing could have been more easy than for the War Office to have held a private Departmental inquiry, before which all the evidence would have been laid, without creating any public scandal. Unfortunately, Mr. Chamberlain's emphatic denial—a denial which, it may be noted, was almost as emphatic as his declaration that Mr. Rhodes had nothing to do with the insurrection,—led the War Office to refuse to do this act of elementary justice to its own officers, and that although they knew Sir John Willoughby's statement as to the complicity of the Colonial Office was based upon Dr. Jameson's assurances, which were avowedly founded upon the telegrams received at Cape Town from persons in direct communication with Mr. Chamberlain. The Reviewer says:—

If Sir John Willoughby's statement had been capable of being confirmed by legal evidence, his demand that the dismissed officers ought by right to be re-instated in their military rank, would have been unanswerable.

#### ARE THEY TO BE REINSTATED?

Legal evidence enough would have been forthcoming if the War Office had instituted a private inquiry, for if the South African Committee had not hushed the matter up, the telegrams, which in Dr. Jameson's opinion justified him in making the statement, by virtue of which the officers followed Sir John Willoughby across the frontier, were in existence and could have been produced. They were handled, as a matter of fact, over to the War Office, but the officer in charge was too busy at the moment to examine them, and the opportunity passed. It may be said that these telegrams were no evidence as to what Mr. Chamberlain and Mr. Fairfield said, and that may be really admitted, excepting in so far as they tend to throw light upon what Mr. Chamberlain and Mr. Fairfield actually did. The question, therefore, for the War Office to decide, is not as to whether these telegrams correctly reported the opinion of the Colonial Office, but whether

any one could read them without coming to that conclusion. As the Reviewer says:—

It is quite possible that Dr. Jameson and Sir John Willoughby may have had adequate excuse for believing that the plan of campaign had received the practical, though not the official, approval of the Colonial Office, and yet to be at the same time convinced that neither Mr. Chamberlain nor his subordinate officials were aware that the plan of campaign was being organised and subsidised from Cape Town, and included amongst its arrangements the invasion of the Transvaal by an armed force, under the orders of the Chartered Company. It seems to us matter for regret that any difficulty should have been raised about the production of all the telegrams which passed between London and Cape Town during the period immediately antecedent to the Raid.

Now if this be correct, and the telegrams were rightly or wrongly used as is admitted to induce the officers to believe that the enterprise was sanctioned by the Colonial Office, why should their commissions not be restored? The only answer to that question is that as the Government has at every step throughout this South African muddle done the wrong thing and the unjust thing, they felt it necessary to be true to their evil precedent, and therefore they continue to treat the officers with an injustice which every soldier feels to be utterly indefensible.

From the *Westminster Gazette*.]

[July 15, 1897.

THE END OF THE GAME.

CHORUS (all except Mr. Blake and Mr. Labouchere): "Well, if we can't safely do anything else, we can all sit on Rhodes. That won't hurt any one." (Left sitting.)

#### MR. RHODES'S CONFIDANTS.

The *Edinburgh Review* publishes a rather weak and ineffective article which it calls "Public Opinion in South Africa." There are only two passages which need to be quoted: one is that in which it presses home an entirely fallacious point that Mr. Rhodes took action against the Transvaal without consulting anybody. Had he done so, he would certainly deserve the censure which is here passed upon him, but, as a matter of fact, before he did anything he sent a trusted emissary to consult the Colonial Secretary, and he kept the Colonial Office advised by telegrams forwarded through his agents and correspondents right down to the very day of the Raid itself. The *Edinburgh Review* says:—

Mr. Rhodes was a Privy Councillor of the Queen, Prime Minister of the Cape Colony, owing responsibility to the Empire at large, and confidence to the Queen's representative

at the Cape and to her Secretary of State in London. He was associated with colleagues who were entitled to share his responsibilities in matters affecting the welfare of Cape Colony. He had fellow-directors on the Board of the Chartered Company. Now all these persons were grossly deceived. The plot was hatched behind their backs. His confidants were chosen amongst those alone whose interests seemed to make it certain that personal loyalty to him and to the Company would outweigh every other consideration. To Dr. Rutherford Harris, to Mr. Beit, to Colonel Willoughby, to the American and English Reformers at Johannesburg, were revealed the schemes carefully concealed from Sir Hercules Robinson and Mr. Schreiner, from Mr. Chamberlain and the Colonial Office, from the Duke of Fife and the Duke of Abercorn. To these and others Mr. Rhodes paid the compliment of distrust. As distrusted they were kept very effectually in the dark.

Now, as a matter of fact, this is simply not true. Of Mr. Rhodes's fellow-directors on the Board, he communicated his intentions to Mr. Beit and Mr. Maguire. Full information was given to the Imperial Secretary, who was virtually Acting High Commissioner, owing to Lord Rosmead's age and infirmity. The plan, so far from being carefully concealed from Mr. Chamberlain and the Colonial Office, was so much a matter of common knowledge at the Colonial Office, that Mr. Chamberlain and Mr. Fairfield did not hesitate when the trouble in Venezuela became serious to intervene in order to hurry up the insurrection.

#### POOR SIMPLE SIMON!

So much for the first extract from the *Edinburgh Review*. The second is as follows:—

For our part we entirely accept, and we believe the vast majority of the public entirely accepts, the explicit statements made by Mr. Chamberlain and Lord Selborne as to their knowledge and their absence of knowledge of what was passing in South Africa. There is nothing in any evidence that has been produced to weaken in any degree the credit attaching to their testimony. It would have been well indeed if they, and indeed others also, had resented with greater warmth the deceptions which had been practised upon them, surely sufficiently apparent after the publication of the Cape Blue Book. Doubtless they considered that as an investigation was to be held in London, it was not for them to prejudge the trial they had asked for.

*Sancta simplicitas!* It is really asking too much of Mr. Chamberlain and Lord Selborne to make believe so far as this would come to, for there has been deception enough in this business, unfortunately, but it was not practised at the expense of Mr. Chamberlain and Lord Selborne.

#### ANOTHER MISCHIEF OF HUSHING UP.

The mischief which has been done by the action of the Committee in hushing up everything in order to whitewash Mr. Chamberlain is disagreeably illustrated by the comments which Mr. Wilson has deemed it right and proper to indulge in in the *Investors' Review* for August. Commenting upon the Committee's Report, he points out the worthlessness of its judgment as to there being no connection between the Raid and stock-jobbing. He then proceeds:—

Equally valueless is the Committee's exoneration of the Colonial Office and its political head—Mr. Chamberlain—from knowledge of or participation in the Raid. This, again, is a judgment unsupported by proof. A variety of small incidents point all the other way, and that so strongly, as to give full colour to the contention of the *Westminster Gazette*, Mr. Stead, and others, that the Secretary of State for the Colonies and the heads of his staff knew all about the plot. Mr. Chamberlain, moreover, as we have had more than once to point out,

allows his son to hold the post of director in the Bank of Africa, thus proclaiming his financial interest in the country. Could his son have been quite ignorant of what was afoot? All such small points do not amount to proof—and we pay no regard whatever to the Miss Shaw incidents, because the view appears probable that the officials of the Colonial Office were only “fooling” her—but they do constitute a ground of suspicion which demanded the fullest sifting.

Why was this sifting not entered upon? Why did Mr. Chamberlain, who is by no means a cowardly man, submit tamely to be whitewashed and not vindicated? We are disposed to think that he became thus meek beyond his wont partly because he knows himself innocent, partly because he has been compelled to screen some one else. The tongues of society have been busy all the time indicating who this some one is. Its language is shocking in light of the public professions of “loyalty,” and therefore it is not made public. Instead of telling the truth, the word has apparently gone forth to “abuse Chamberlain”; and the radical section of the press is but too eager to obey this command, the more shame to it, knowing what it must know as well as we do. On the whole, then, the probability is that the finding of the Committee is on this matter the right one. It fits in best with Mr. Chamberlain's public conduct, and is not so inconsistent as may seem with such evidence as was led. And most assuredly we are not going to swell the chorus of abuse now poured over him until the darker mystery behind is brought to the light of day. That will be when England recovers the courage to assert her manhood. The chief ambition of press and people now seems to be to excel in the art of crawling on all-fours.

The insinuation of course here is plain enough. Only the Queen or the Prince of Wales can be referred to as the “some one else” whom the Committee has been employed in screening Mr. Chamberlain. It is natural that people should fall into this error, for it is difficult to imagine how Sir William Harcourt and his Liberal colleagues could have been induced to palter with the public trust and disgust their own followers by consenting to hush up the inquiries merely for the sake of screening Mr. Chamberlain. But although Mr. Wilson's inference may be natural, it is none the less mistaken. If all the cablegrams were published in full to-morrow, with all the correspondence, there is not a syllable that would in the least degree compromise either the Queen or the Prince of Wales.

From the Westminster Gazette.]

[June, 1897.]

PRIVATE AND CONFIDENTIAL.

MR. JACKSON: "Come away, you naughty dog! Can't you see it's private?"

SIR R. WEBSTER: "What shocking inquisitiveness!"

### "MONUMENTAL INEPTITUDE."

The *National Review*, which has throughout taken the strongest line in support of Mr. Chamberlain, has this month been compelled to utter a word of protest against the monumental ineptitude of the South Africa Committee; but notwithstanding this monumental ineptitude, it maintains that the verdict whitewashing Mr. Chamberlain will finally set to rest the mendacious imputations and innuendoes of the Rhodes factions. Further comments are reserved till next month; and it will be interesting to note what Mr. Maxse has to say on the subject after he reads the emphatic panegyric which Mr. Chamberlain has pronounced upon the personal honour of Mr. Rhodes. There are none so blind as those who will not see; and it is of course conceivably possible that the *National Review* may still be unable to realise the true relations which exist between the Colonial Secretary, whom it worships, and Mr. Rhodes, whom it detests.

### GARIBALDI AND DR. JAMESON.

A PARALLEL FOR LORD LANSDOWNE.

A VERY interesting article by Mr. Haweis in the *Contemporary Review*, entitled "Conversations with General Türr in 1897," recalls a precedent which bears directly upon the fate of the officers' commissions. Lord Lansdowne has refused absolutely to restore the commissions to the officers, although not denying that they acted honestly in the belief that they were acting in accordance with the wishes of Mr. Chamberlain. How different was the way in which Victor Emmanuel dealt with the officer who was guilty of a similar breach of international law on the occasion of Garibaldi's expedition to Sicily! Mr. Haweis tells us that when Garibaldi was about to start for Sicily, he discovered to his dismay that his supplies of powder and shot had not come. It was necessary that he should obtain those supplies from the Government arsenal, and he therefore sent General Türr to the commandant of the fortress of Ortello assuring him that the munitions of war sent by the Government had not arrived. He must therefore ask the commandant to supply Garibaldi with the military stores in his possession. The officer replied that he could not do so without an official order from the Government. General Türr answered that he would willingly write for such an order, but five days would elapse before a reply could be received, and the delay would be fatal. "The fault, in that case," said General Türr, "will rest with those who have refused us ammunition, although I was in a position to assure them that we had left with the consent of the King and the Government. This, of course, was absolutely false; but," says General Türr:—

"With such arguments I belaboured the commandant, who at last said to me, 'Colonel Türr, you put me in a dreadful position; but if you can assure me that this adventure of yours is under the King's auspices, I will give you everything' in the arsenal."

Of course, General Türr gave him the assurances, although he had nothing like the justification which Mr. Rhodes possessed for giving similar assurances to Dr. Jameson. Garibaldi got the stores, and seized Sicily. After he had achieved the victory, General Türr bethought him of the commandant who had supplied him with the munitions of war:—

Passing through Turin I heard that the commandant of the fortress of Ortello had been arrested and shut up in the fortress of Alessandria. I instantly went to his Majesty King Victor Emmanuel, and said to him, "If any one deserved

imprisonment it was myself, for it was I who led the commandant into error, making him believe that we were acting under your Majesty's orders." The king said, with one of his short laughs, "Perfectly true; I have got to square accounts with you, for you have robbed one of my fortresses." But I answered, "We have given your Majesty the crown of Sicily, and presently will follow the crown of Naples!"

The king promised with a smile that no harm should come to the commandant. He then told me to speak to the War Minister, General Fanti. To him I gave an accurate description of the way we had got the ammunition, and I obtained from him the assurance that no proceedings whatever should be taken against General Giorgini.

It would be difficult to find a closer parallel than there is between the case of the commandant of Ortebello and that of Willoughby's officers. It only fails in one important particular—namely, that Garibaldi was successful, while Willoughby failed; but that in no sense affects the position of the officers. They did their duty according to the orders in a *bonâ fide* belief that the revolution was approved of by Mr. Chamberlain; and, what adds to the infamy of the injustice with which they are treated, is that, unlike Victor Emmanuel, Mr. Chamberlain was more or less privy to the revolutionary enterprise intended to restore the Transvaal to the British empire.

#### MR. LIONEL PHILLIPS ON THE RAID.

In the *Nineteenth Century* Mr. Lionel Phillips replies to Sir John Willoughby's paper in the July number. Mr. Phillips's paper is little more than a recapitulation of the evidence which he gave before the South African Committee. He brings out into clear relief that at Johannesburg they did not want Jameson to come in until they sent for him. They expected him to bring from 1200 to 1500 men with 100 spare rifles, and that the sheet-anchor of the Johannesburg plan of campaign was the surprise of the Pretoria arsenal, which was to be seized by 300 insurgents, who would have had no difficulty in overpowering the guard, which consisted of only 100 men, and possessing themselves of 10,000 rifles and a dozen field pieces, with any amount of ammunition. By Jameson's sudden plunge across the frontier with only 500 men all chance of this surprise was destroyed. The Boers had eight hours' notice earlier than Johannesburg, and nothing was done. Mr. Phillips is very positive that Johannesburg never contemplated sending any men out to join hands with Dr. Jameson. They had only 130 horses available for the purpose, and such a thing as the possibility of Jameson needing help never crossed their minds. He was coming to help them; they were not needed to help him.

"The Failure of Co-operation" is the title of a strong paper by Mr. Joseph Ackland, in the July number of the *Economic Review*. He supports his thesis by statements made by representative co-operators, and declares, "One after another the principles of co-operation have been abandoned, the forbidden fruit of profit has been tasted, capital has accumulated, the claims of labour have been rejected, and the organisation is rapidly becoming a great trading corporation like any other joint-stock company." He asks, in conclusion, how long is this system to be fostered by exemption from income tax? and who are to be the residuary legatees of the colossal organisations in control of these stores, which offer spoils more tempting to plunder than even London livery companies?

## THE COMING REVOLUTION IN THE NAVY.

BY ADMIRAL COLOMB.

THERE is an article in the *National Review* for August which is well calculated to give pause to those who have recently assumed that we may rest content with our admirable navy, only a section of which was reviewed at Spithead. In Admiral Colomb's opinion,

we are drawing close to a revulsion of naval opinion more violent and far-reaching than any we have yet seen.

This revolution, he anticipates, will be caused chiefly by naval officers realising the fact that the extraordinary speed of the torpedo-vessels will render it practically impossible for them to work together with battle-ships. He thus states the dilemma with which we are confronted:—

It follows that if we have two hostile mixed fleets of battle-ships and torpedo-vessels, they must either work for long range with their guns, or short range with their torpedoes. If they choose the former, the torpedo-vessels are, no use; if they choose the latter they are a work of supererogation, a danger, and an element of confusion.

If Admiral Colomb is right, the day of the great battle-ship will soon be over. The popular instinct on this matter is unquestionably in favour of Admiral Colomb's foreboding, but it is evident that our chief constructor at Whitehall, and the sea lords at his elbow, are by no means convinced that the naval battle of the future will be fought only by torpedo-vessels. They are laying down four new battle-ships, and four tremendous cruisers as large as battle-ships, none of which will be wanted if Admiral Colomb's theory is correct. The issue between monster battle-ships and swift torpedo-vessels is very clearly stated by Admiral Colomb in a comparison between the *Magnificent* and the *Hornet*. It is difficult to see what is the answer to this question. It would certainly seem to the ordinary man that the *Magnificent* would have no chance at all against twenty-six *Hornets*; even if she were able—which is doubtful—to sink twenty of them, the other six would be amply sufficient to send it to the bottom:—

The *Magnificent* was stated to cost £910,600, and the *Hornet* £34,300. That is to say, twenty-six *Hornets* could be put afloat for the cost of one *Magnificent*. The complement of the *Magnificent* was 757 men, and that of the *Hornet* 42. That is to say, it would take eighteen *Hornets* to expose the lives of as many men as were exposed in one *Magnificent*. The speed of the *Magnificent* was 17½ knots, that of the *Hornet* was 28 knots. The *Hornet* was to carry five torpedo-tubes. The *Magnificent* could bring perhaps twenty-three guns, small and great, to bear upon her at the same time, and as the excess of speed on the part of the *Hornet* was 9½ knots, it followed that, if the *Magnificent* was to avoid being torpedoed by the *Hornet* any fine day in broad daylight in the open sea, she must be able to stop her by gun-fire in less, perhaps, than seven minutes; because, if she turned her stern to the *Hornet* and ran with all her might, the *Hornet*, 2,000 yards distant at noon, would be alongside her at six minutes and eighteen seconds after noon. But then, no one would think of attacking a *Magnificent* with one *Hornet* when there would be financial gain and no more exposure of life in attacking her with eighteen. Would twenty-three guns stop eighteen *Hornets* in seven minutes? Would four guns stop three *Hornets* in seven minutes?

In the *University Magazine* for August there is only one article calling for attention, and that is Mr. Wallace's interesting account of what may be done in the way of preserving fruit and vegetables by drying them.

## IN PRAISE OF OUR NOBLE SELVES.

## A EULOGY OF THE BRITISH EMPIRE.

MR. C. DE THIERRY contributes an article to the *New Review* on Colonial Empires, which is so tremendous and thoroughgoing a eulogy of the British Empire as frequently to provoke a question in the reader's mind as to whether the author is not poking sarcastic fun at the public. On the whole, however, the balance of probability is that M. de Thierry is writing seriously, but whether writing sarcastically or seriously, he writes very well, and much that he says is well worth remembering. The fact that our transcendent virtues are not appreciated by our neighbours is, according to M. Thierry, capable of easy explanation:—

That the British Empire is founded on character and not on the genius of statesmen or the sagacity of diplomatists, is impossible for the average foreigner to conceive.

## NON-PUSHFUL DOWNING STREET.

Instead of being selfish, grasping, aggressive, the British Empire as represented by the British Government is the reverse of all this. The British Colonies have come into existence against the will of the Government:—

France and Germany have Colonies because they are resolved that Colonies they will have; England has Colonies because she cannot help herself. That is to say, Continental statesmanship encourages the growth of Empire, Downing Street restrains it. The civilised world must indeed have studied England to little purpose if it is still in ignorance of the true function of English diplomacy. That function is to act as a check on the triumphant progress of Anglo-Saxon dominion. It is a merciful dispensation of Providence for the profit of other nations less liberally endowed with the forces that make for pre-eminence. By its means England has lost an empire—perhaps the strongest evidence which can be advanced to prove her power and might. This sounds a paradox, but it is a truth. To Assyria, Persia, Rome, Spain, Holland, loss of territory meant loss of prestige. It was the unmistakable sign of decay. To England, alone, of the great Empires of the world, it bears no such sinister meaning. The possessions she has lost were given away by treaty, not wrested from her by war and rebellion. America is an exception. But, though the secession of the Thirteen Colonies was a great blow to the Mother Country, it left her as strong as she was before. So vast are the extent and resources of her world-wide dominion that the fair provinces she has lost have never cost her a pang.

## HOW WE RESTORE CONQUERED LANDS.

The fact that we have voluntarily given up territory at the close of victorious wars, when we might well have retained it, is brought into proper prominence by M. de Thierry. He says:—

From 1762 to 1815 the idea underlying the terms of every treaty takes the form of what is practically a reproof to English soldiers and sailors for robbing Spain, France, and Holland, of their colonies. Promptly returned on the declaration of peace, those colonies were as promptly retaken in war-time. In this way Senegal was captured and ceded three times; Guiana once; Guadeloupe three times; Pondicherry and the Minor East Indian Settlements four times; Martinique three times; and St. Pierre and Miquelon three times. After the Battle of Waterloo, which crowned her long and heroic struggle with Napoleon, England, alone of the nations, gained, practically, no territory by the Treaty of Paris. She was in a position to get anything she chose to ask, and she asked nothing. Is there so splendid an instance of self-abnegation in the whole domain of history? France, all broken and helpless as she was, regained Guadeloupe, Martinique, Senegal, Bourbon, Isle de France, Guiana, Pondicherry, and the minor settlements on the coast of India, all captured by Great Britain during the war.

## AMAZED AT OUR OWN MODERATION.

In thus dealing with France John Bull has but acted on the same principle with which he has dealt with all the other Powers:—

This England, then, whose perfidy and selfishness are so shocking to the high moral sense of Continental Powers, being in the proud position of mistress of the seas, and the triumphant conqueror of the greatest military genius of modern times, did of her own free will give back for the last time to the foe, whose efforts to ruin her had been unceasing for over a century and a half, the Colonies she had taken during the struggle, as fifty years earlier she had given back to Spain—which had wantonly taken part in the war with the certainty that England's day was done—Cuba and the Philippines. To Holland she restored Java, Celebes, the Moluccas, and part of Sumatra. Besides these, she has, at one time or another, ceded Tangier, Minorca, Corsica, the Ionian Islands, and Curaçao. To remember that at least half the present area of the British Empire is the result of peaceful occupation since 1815, is to form a certain idea of her generosity. To America she gave up the territory between the Ohio and the Mississippi, Washington territory, and part of Maine. Since '70 she has declined to annex Hawaii, Samoa, the New Hebrides, New Guinea, and tracts of country in Africa too numerous to mention. Among her strayed possessions are the Orange Free State, the Transvaal, Monte Video, and Buenos Ayres. Furthermore, she has made quite desperate efforts to restrain her adventurous sons from extending her boundaries. Can it be said of any other country in the world that it has suffered, or is suffering, in a similar way?

## THE GENEROSITY OF JOHN BULL.

England alone does such things. Her statesmen delight in playing Chuck Farthing with the provinces acquired by the valour of her sons:—

Even more significant is the attitude of a large proportion of the Press. Not only does it almost invariably take the side of the foreigner in a dispute involving British interests, but it strenuously denies that there can be another.

In her commercial relations with the world England is liberal to foolishness. At home she has abandoned all trade restrictions, except those imposed on her own people; elsewhere in the Empire she permits foreigners, without distinction, to enjoy the same privileges as herself.

In such circumstances it is passing strange how England comes by her almost universal reputation for selfishness. Surely no country ever deserved it less! Yet no foreigner can be induced to profess faith in English disinterestedness. For over three hundred years this little Isle has been the sheet-anchor of Europe: the light of the moral, social, and intellectual world. Here, alone, was the beacon of liberty kept burning, when all the Continental nations were groaning under a military despotism, and, by its steady glow, they were led to work out their own redemption. Since then England has been the foe of no country but Russia. On the contrary, she has showered benefits on every people except those luckless enough to be of her own flesh and blood. And herein lies the rock of her offence.

## UNSELFISHNESS INCARNATE.

That our reputation abroad is unmerited may be proved in a variety of ways. True once, perhaps, it is now a fiction of the imagination. To begin with, the British Government exists as much for the benefit of other countries as for its own. How it fulfils its dual responsibilities may be discovered in the history of the Empire during the past eighty years, and particularly since the death of Lord Palmerston. From practically giving territory away, as in the case of Delagoa Bay, to going fast asleep until just too late for decisive action, as in the case of the Cameroons, there is nothing it will not do to help our rivals to attain the summit of their ambition.

Not a single British Colony of any importance has ever fallen into the hands of an enemy in time of war, and the Empire has never sustained a loss of territory except through Downing Street.

## AS OTHERS SEE US.

AN AMERICAN JOHN BULL.

AFTER reading M. de Thierry's exposition of the transcendent virtues of John Bull, it is really necessary to seek for a corrective somewhere, and we have one ready to hand in Professor Thomas Davidson's essay in the *Forum*, for July, upon "Victorian Greater Britain and Its Future." After describing the brilliant achievements of the Victorian Reign, Professor Davidson lugubriously predicts that we have now reached our zenith, and are in great danger of dwindling into a secondary place among the nations of the world. He says:—

We must now turn to the future and ask what outlook it presents, what is likely to be the result for Great Britain and for the world of this unparalleled growth in territory, population and wealth, and what policy the British must pursue in order that their power and prosperity may continue. Indeed, it seems, at the present moment, as if, with all her wealth and territory, she were about to sink into the position of a second-rate Power, compelled to shape her policy in accordance with the good pleasure of her more powerful rivals. This is certainly a poor presage; and, if it were to be realised, not only Great Britain, but all the world would be the loser. They have no friends: no one—not even this nation, whose people may be said to be of their own flesh and blood—wishes to make common cause with them so deep is the dislike and distrust of them. If the British Empire were to be crushed to-morrow, all the world, with the exception of the few perspicacious persons who can see a wholesome kernel under a rude, cantankerous husk, would rejoice. Meanwhile, it would not be sorry to see circumstances arise that might bring about this event.

## WHY WE ARE NOT LOVED.

But although Professor Davidson thinks the decadence of Britain would be a disaster to the world, he asserts that the world in general would be of a very different opinion, for the English, he tells us, are not loved:—

There is no denying that the personal characteristics of the British, and especially of the English, are a serious drawback to them. Go where you will, in the Old World or the New, you will rarely hear a good word for them. They are unsympathetic, unsociable, and overbearing: such is their reputation; and unfortunately, it is, in the main, deserved. That deep human culture of intelligence, heart, and will, that true gentleness or gentlemanliness, which makes its possessor a benediction and a joy, inspiring sympathy, confidence, and goodwill, are almost unknown among Englishmen. Their really great virtues of frankness and justice are untempered by amenity and generosity.

Looking back upon what has been said of the various relations—internal and external—of Great Britain, as they have shaped themselves during the last sixty years, one cannot avoid the conclusion that, with all the enormous increase of territory and wealth which has fallen to her in that period, the close of Victoria's reign will find her in a position of great difficulty, and with a very gloomy outlook for the future. Isolated and alienated from the rest of the world, and unable to cope with its combined opposition, she bids fair to be stripped of many of her possessions, and, like Spain, once the mistress of so many lands, to sink into the position of a second-rate Power, with none so poor to do her reverence.

Though this is a consummation devoutly wished by most other nations and by the world in general, hardly any greater calamity could befall the world and the cause of human civilisation. For, with all her faults and errors, all her superciliousness and rapacity, she is to-day the chief bulwark of freedom and civilisation in Europe; the champion of liberty of thought, speech, action, and intercourse; the representative of healthy, vigorous, clean human life.

## THE WRATH TO COME AND HOW TO ESCAPE.

Let us take meekly this exposition of our faults, not even remembering that it proceeds from the countrymen

of Mr. Secretary Sherman, whose despatch about the seals can hardly be commended as an ideal of national amenity and generosity. Thanks to our general unpopularity, and to the fact that we have extended the Empire without at the same time increasing our naval and military resources in proportion to the area of population that requires defence, Professor Davidson says:—

If, then, she is to escape the doom prepared for her by her foes and those of liberty, it is evident that, setting aside all false vanity, and acknowledging—to herself, at least—her past errors, she must vigorously set herself to do four things: (1) to give her people a new education, including a training in gentlemanliness and thoughtfulness, an education guided by an ideal of universal freedom and culture; (2) to adopt a thorough democratic policy, putting herself at the head of the democratic movement in Europe, abolishing, on the one hand, all unjust privilege and all childish titles, and, on the other, taking a determined stand against socialism, that materialistic dry-rot of democracy; (3) to adopt strong and comprehensive measures for the defence of such dependencies as are calculated to add to her strength, and to part with those that are otherwise; (4) to consolidate her remaining empire by transforming it into a federation of sovereign states, each of which, being duly represented in Parliament, shall contribute its share to the national defence and to all national enterprises; at the same time abandoning her policy of selfish isolation, by entering into cordial relations with all the Powers whose faces are set in the same direction as hers. Thus strong and respected within and without, and animated and directed by a definite and noble ideal, she might hope to lead the hosts of freedom to victory over the hordes of despotism, in that great, decisive battle of Armageddon, which, sooner or later, must be fought between them, before Freedom and Peace can set up their universal kingdom on earth.

In order that we may flee from the wrath to come, our American tutor tells us what we must do to be saved. Alas! alas! if we can only be delivered on condition of making our whole population gentlemanly and thoughtful, we may well despair. Professor Davidson's paper, however, is a useful counterpoise to that of M. de Thierry's.

## Blackwood's Magazine.

*Blackwood's* for August is a very interesting number. Professor Knight's reminiscence of Tennyson claims separate notice. Dr. Louis Robinson contributes a study on the effect of places on faces. He tells a strange story of the way men about a great meat market assume the butcher type of face, even the telegraph clerks conforming to the dominant type. He leans to the conclusion that the country and climate are the decisive factors. The European American shows signs of conforming to the ancient Indian type, and the New Zealand settler to the Maori type. Dr. Robinson remarks on the ugly prospect this tendency holds out to colonists in Australia! Mr. J. Y. Simpson continues his description of Siberian prisons, and gives striking instances of great liberty granted to the gravest political criminals. "In its best features eminently worthy of imitation," but still too arbitrary, is his verdict on the system generally. Italian journalism as seen in fiction is shown to be in a very bad way indeed; the writer's only consolation being that Italians are at least aware of the depth to which the Press has sunk. Again, there are two articles on the Greek war. A better account is given of Greek valour than last month by both writers. Mr. W. B. Harris finds the whole motive of the war in a gambling venture of the King for a little popularity; the gambling spirit with its attendant vices having seized the Greek people. "A Son of the Marshes" contributes one of his sketches, "At Dawn of Day."

## THE BRITISH IN SOUTH AFRICA.

## AN AMERICAN TRIBUTE TO OUR RULE.

MR. POULTNEY BIGELOW, whose admirable series of papers on "The White Man's Flag" have been appearing for some time past in *Harper's*, contributes to the August number an article written after visiting the Transvaal, which concludes with a very striking tribute to English rule in South Africa. He declares that if South Africa is to realise the future which the other day seemed to be within its grasp—

there must be no question of Dutch, of English, German, or French, if that country is to prosper; all must unite, and there are none too many. The flag of Great Britain represents freedom of trade, freedom of thought, beyond that of any flag on the high seas, and in Africa, at least, it is the only flag strong enough and generous enough for our purposes. It guarantees life, liberty, and the pursuit of happiness to all within the sphere of its influence. It is, in short, the only flag which to-day makes possible our dream of a white man's flag.

Mr. Bigelow has little sympathy with the reactionary Boers. He says:—

I am writing from the standpoint of a Boer, and I know such who are educated, love their country, and at the same time are interested in its material development. These men are now completely cowed by the military Jingoism which rules in their government, and they hardly dare be civil to English-speaking people at the Pretoria Club. But in their hearts they are sick of a government that embodies the economic vices of the Middle Ages. We must have policemen nowadays to prevent thieves from robbing honest producers, and every Afrikaner is grateful to Great Britain for holding the seas with a fleet equal to all emergencies.

That the Boer should to-day hate the Englishman is as absurd as if Dutch and English should quarrel on the banks of the Hudson or Delaware. But the Dutchman of South Africa does not dislike the Englishman *per se* any more than he dislikes the American, the Frenchman, or the German. The bad feeling that has grown up in recent years can be traced directly or indirectly to the action of government officials in London, or men acting under their orders at the Cape. Boers have had no reason to complain of English administration in so far as it has been that of fellow-Afrikaners.

For English readers perhaps the most useful passages in Mr. Bigelow's articles are those in which he grinds to powder the absurd contention of those extraordinary publicists in this country who still persist in treating an infringement of the frontiers, or the promoting of a revolution in the Transvaal, as if it stood on the same moral plane as the getting up of an insurrection against Germany or Russia. Mr. Bigelow says:—

All there is of Boer history for the last eighty years is a struggle for personal liberty. The Boer is the embodiment of republicanism without a republic. The Boer ideal is to live upon a farm so big as to conceal from view his next neighbour, and to be exempt from all government interference, particularly that of the tax-collector. His constitution is framed on the theory that every Boer capable of bearing arms has a right to be heard in the national assembly, and if his view does not prevail it is in his tradition to secede and establish a government for himself, even in defiance of a popular majority. The history of the Boers is one-third war against England, one-third war with negroes, and one-third civil war. So natural is it that the Boer should take up arms against his own government that in past years the penalty for technical treason has been about the same as that for stealing a horse, or being drunk and disorderly overnight.

A law against treason was introduced into the Transvaal constitution, obviously because it sounded well, and was not

expected to injure any one. The Boers have been hatched in treason, have grown fat on it, and a charge of treason in the Transvaal is a mere figure of speech suggesting political disapproval. The word would never have appeared in the Boer constitution had not some of its framers conceived the notion that it would look rather well to incorporate a line or two of old Dutch law, just as your parliamentary wind bag throws in a Latin quotation now and then by way of proclaiming that he has enjoyed a gentleman's education. So idle was the charge of treason regarded that it was made punishable by a fine of thirty-seven pounds ten shillings—say the price of a horse.

Paul Kruger himself had been a traitor to the State, for treason in the Transvaal differed very little from constitutional opposition in more civilised countries. Mr. Bigelow again and again insists upon the immense difference there is between a highly organised State and the rude, primitive semi-anarchy which prevails in the Transvaal. He is equally strong in his condemnation of the principles on which Paul Kruger and Mr. Secretary Leyds are attempting to run the Government:—

The Boer Government to-day is applying to a complex modern community administrative principles fit only for a community of cattle-herders and teamsters. In order to succeed in the Transvaal one must be either a German or a Dutchman. While Germans are very much favoured, the Boer in general is not likely to favour a change which might substitute Prussian officials for the present nominal suzerainty of Queen Victoria.

The Boers tried to establish themselves in German Southwest Africa, but from what I heard in Pretoria they soon returned discouraged. Such of them as had formerly complained of English tyranny had no words with which to describe the administration of their friends the Germans.

This is a good satisfactory testimony from an independent impartial observer, and it is to be hoped that those of Mr. Bigelow's countrymen who have been writing on the subject from the plenitude of their own ignorance will modify their judgment in the light of his evidence.

## Municipalism in Britain and the States.

MR. C. E. CURTIS, of New Haven, Connecticut, contributed to a recent number of the *Yale Review* a valuable paper on "Street Railways in Relation to the Public." It gives full particulars concerning the working of municipal tramways, and others in the United Kingdom, and contrasts the English system with that which prevails in America. The Canadian, however, seems to him to combine the advantages of both systems. The Englishman, he says, secures a relative poor service at low cost, but pursues a policy which, while it may retard development, yet protects the interests of the public at large, and deters mere speculators from attempting the exploitation of the towns. The United States' system has rapidly developed its railway facilities, and obtained a good service at a high cost and with no end of abuses.

Mr. W. H. Tolman, Secretary of the Mayor's Committee on "Public Baths and Public Comfort Stations," contributed to the same review a report on "Public Baths or the Gospel of Cleanliness." He notes the shocking lack of public bath-houses in the United States, and it was not until 1895 that the City of New York was permitted to erect and maintain public baths. Mr. Tolman contrasts this state of things with that which prevails in England, and specially mentions that the baths of Marylebone were opened by the Duke and Duchess of York.

## THE REFERENDUM IN AUSTRALIA.

A WRITER in the *Contemporary Review* for August gives an interesting account of the effort that has been made to introduce the Referendum into the Australasian Colonies. He says:—

No less than five of the Colonial Parliaments were occupied in discussing Referendum Bills during the last parliamentary year. In four of them—New South Wales, South Australia, Tasmania and New Zealand—these Bills were Government measures, and in Victoria the Bill, though introduced by a private member, was supported by the Government. The great fact about the Australian referendum is that it is not an attempt to constitute the people sovereign, but to substitute their assent for that of the Upper House should the Upper House continue to reject a bill passed by the Lower House. The Government Bill, which aimed at establishing a system in New South Wales, was entitled "A Bill to provide means of Legislation in case of Disagreement between the Legislative Council and the Legislative Assembly," while the Victorian Bill went a step farther, and inserted a clause that bills submitted to the referendum, and accepted by the people, should bear the following style: "An Act passed by and with the advice and consent of the Legislative Assembly and with the approval of the People of Victoria." All mention of the Legislative Council is omitted. The New Zealand Bill, which was entitled "An Act to refer to the Electors of the Colony certain Motions or Bills for their Decision," had a wider scope, and provided not only for a referendum when the two Houses should disagree, but also that *both* Houses might by a resolution submit *any* motion or bill to the vote of the electors. All the bills provided that when a measure should have twice passed the Lower House and should have been twice rejected by the Upper House, or should have been amended in such a way as to amount to a virtual rejection, or if the other House should fail to pass or reject the bill within a certain time, then it was open to the Lower House to pass a resolution submitting the measure to the referendum. The Governor, on being notified, would publish the law in the official gazette and fix a date for the popular vote to be taken. Thus, provision was made for three debates in the Legislative Assembly before a bill should be submitted to the people—two debates on the bill and a debate on the resolution. In New South Wales, before the resolution could be carried, it had to be supported by an absolute majority of the members on the roll. The New South Wales Bill further provided that at least 100,000 valid votes must be recorded at the polls before the bill could become law. The number was afterwards reduced in committee to 80,000, but the clause is in itself interesting as an expedient to force people to vote.

Copies of the law were to be posted in all court-houses and post-offices and school-houses for at least a fortnight beforehand, and in New South Wales copies of the proposed bill would be given gratis to any applicant. The machinery brought into play in the case of a general election was applied to the referendum. There were the same writs, returning-officers, polling-places and penalties. The ballot papers were to contain the name of the bill and the words "For," and "Against." The voter, if he wished to support the bill, struck out the word "Against"; if he wished to veto the bill, he struck out the word "For."

It is generally provided that, if a bill be negatived at the polls, the question shall not be brought up again for three years; the New Zealand Bill, however, adds the qualifying clause, "unless 10,000 citizens should demand it." Should, however, a majority vote for the bill, it is then to be sent to the Governor for his assent, as if it had passed the Upper House in the regular course of events. The referendum in no way affects the Governor's right of *veto* except in New Zealand. There a bill accepted by the people is to become law on a date to be named by the Governor by proclamation. His assent seems to be unnecessary.

The New Zealand Bill further provided that *both* Houses might decide to refer a question to the people, in which case the same procedure was to be followed, but the people were only to be consulted on a general motion or resolution, not on

an Act of Parliament. Should the answer be an affirmative one, the duty of at once preparing a bill to give effect to such alteration or proposal devolves upon the Colonial Secretary, and must be brought in within ten days of the opening of the next session of Parliament.

## THE FUTURE OF OUR COLONIAL EMPIRE.

In the *Contemporary Review*, Mr. Percy A. Hurd, writing on the "New Imperialism," discusses the probable lines on which the Federation of the Empire will be evolved. He notices that all dreams of a British Zollverein have been banished by the visit of the Colonial Premiers. But he takes heart from the action of Canada in matters of tariff, and that of Australasia in the question of the navy:—

What is likely enough to be evolved in course of time—and why should we not recognise and quietly prepare for it?—is a supreme representative assembly, as Britons all the world over understand the phrase, in the election and deliberations of which every part of the Empire will take its proper share according to population, and by which will be decided the lines of Imperial policy, leaving to each colony the perfect sense of independence in local affairs which it now enjoys.

These periodical conferences between British and Colonial statesmen—the Conference of 1887, the Ottawa Conference of 1894, and the London Conference of 1897—tend in the direction of some such participation of the Colonies in the councils of the Empire. The High Commissioner for Canada and the Agents-General for the other Colonies are already a kind of informal committee of advice in close touch with the Colonial Office; and when Australasia and South Africa can each speak with one federal voice, as Canada now does, this informal committee may well be constituted into a permanent consultative council in which the Colonial Secretary, the Foreign Secretary, the First Lord of the Admiralty and the Secretary of War will have places. And so, proceeding step by step as the pressure of circumstances demands, and always with that "delicacy and reserve" upon which Mr. Chamberlain insisted the other day, and which the speeches of Mr. Reid and Mr. Kingston show to be essential, we must in course of time reach an end worthy of the genius of the British race.

## Fiscal Federation.

"The Financial Relations of the Empire: Can they be Improved?" is the question which Sir George Baden-Powell discusses at length in the July number of the *Journal of the Royal Colonial Institute*. He illustrates the anomalies which exist at present by showing that a British subject has to pay three income-taxes, if the income is made in Victoria, received in Tasmania, and spent in England, and that a Canadian vessel visiting Australia pays lighting dues, while an Australian vessel in Canadian waters pays nothing to keep up the light-house system. He pleads in general for greater uniformity, and no overlapping in regard to—

|                     |              |
|---------------------|--------------|
| Customs tariffs     | Death duties |
| Commercial treaties | Income-tax   |
| Bounties            | Public debts |
| Stamp duties        | Subsidies    |
| Shipping dues       | Statistics   |

He gladly welcomes the beginning made on his initiative in regard to the death duties, which so far as paid in the Colonies, are not required to be paid afresh in Great Britain. He claims that he has given the first comprehensive view of the immense and complicated problem.

UNDER the title of "The Fathers of the Churches," Mr. F. M. Holmes writes in the *Quiver* for August on the oldest ministers of the respective Evangelical denominations. The very oldest mentioned is Rev. Edward Allen, Anglican clergyman of Tiverton, Devon, who attained his hundredth year January 18th, 1897.

## THE AMERICAN POLICY OF CANNING.

THE *Quarterly Review* for July publishes an article which contains some unpublished letters of George Canning. The writer thus describes how those letters were discovered :—

A short time ago, while hunting in the depths of a large chest which had stood undisturbed for many years against the wall of a gentleman's library, the writer of this article discovered a number of letters. Among them were more than a hundred letters and notes written by George Canning to his lifelong friend, John Hookham Frere. Some fill two or three large sheets of paper—the stiff hand-made paper of those days; others are of the most trivial nature, invitations to dinner, and the like. They are too few in number and too fragmentary to make a book; but some extracts from them are here offered in the hope that they may serve as a foundation for a chapter in that ideal "Life of George Canning" which has yet to be written.

To the general public, apart from the historical student, there is not much to interest in these letters excepting on two points. The first is the revelation which now for the first time is afforded us of the importance of Mrs. Canning :—

From these letters to an intimate friend, we can gather some idea of what she was to her husband—a devoted helpmate, a loving companion, a sympathetic listener, a prudent adviser. She identified herself completely with his interests: "Joan and I think that"—"Joan and I are doing this"—are often-repeated phrases. But hers was not the blind submission of a weak mind to a strong one; she had the courage to take Pitt's part against her husband in the worst days of their estrangement.

That is the personal item of interest. The political fact of importance which is brought into clear relief by those letters is that Canning, so far from favouring the Monroe doctrine as a basis for an Anglo-American alliance for keeping Europe out of the Western hemisphere, had exactly the opposite motives. Here, for instance, is a very significant passage from one of his letters, in which he describes exactly why he recognised the Spanish-American Republics :—

I did, while I lay in bed at the Foreign Office, with the gout gnawing my great toe, draw the instructions for our agents in Mexico and Columbia which are to raise those States into the rank of nations. I did, the day after I rose from my bed, communicate to the foreign Ministers here (and first in order, as becometh, to those of the Holy Alliance) the purport of those instructions. The thing is done. They may turn me out if they will and if they can—

"Non tamen irritum  
Diffinget infectumque reddet"—

an act which will make a change in the face of the world, almost as great as that of the discovery of the Continent now set free. The Allies will fret; but they will venture no serious remonstrance. France will fidget; but it will be with a view of hastening after our example. The Yankees will shout in triumph; but it is they who lose most by our decision.

The great danger of the time—a danger which the policy of the European system would have fostered—was a division of the world into European and American, republican and monarchical; a league of worn-out governments on the one hand, and youthful and stirring nations, with the United States at their head, on the other. We slip in between, and plant ourselves in Mexico. The United States have gotten the start of us in vain; and we link once more America to Europe. Six months more—and the mischief would have been done.

This is certainly not the Monroe doctrine, but the very antithesis and antipodes of the doctrine. Canning takes credit to himself indeed for having once more linked America to Europe, which it is the object of the Monroeites to sever completely.

## AN ANGLO-AMERICAN ALLIANCE.

THE Anglo-American alliance, which has been the avowed aim and object of the *REVIEW OF REVIEWS* from its first foundation until now, has definitely taken its place as one of the ideals of the monarchical section of the English-speaking family. But although many from whom better things might have been expected have weakened in their devotion to this great ideal on the other side of the Atlantic, it is well to remember that the conception originated in the Western hemisphere. Mr. Percy A. Hurd reminds us of this at the close of his article in the *Contemporary Review* on the "New Imperialism," when he says :—

And is it too much to hope with Sir Wilfrid Laurier that when this day comes there may be established a bond of friendly emulation and mutual pride in our common race between ourselves and the other great section of the English-speaking world? Said Sam Slick in his "Wise Saws" half a century ago: "Now we are two great nations, the greatest by a long chalk of any in the world—speak the same language, have the same religion, and our constitution don't differ no great o'lds. We ought to draw closer than we do. We are big enough, equal enough, and strong enough not to be jealous of each other. United, we are more nor a match for all the other nations put together. Single, we couldn't stand against all, and if one was to fall, where would the other be? Mournin' over the grave that covers a relative whose place can never be filled. It is authors of silly books, editors of silly papers, and demagogues of silly parties that help to estrange us. I wish there was a gibbet high enough and strong enough to hang up all these enemies of mankind on." We have our Behring Sea wrangles and our Venezuelan scares, but to doubt that in the end this must prove a true prophecy is to doubt the sagacity and ruling power of our race.

## Across the Atlantic in Three Days!

THIS is the alluring prospect held out by Mr. P. T. McGrath in the *Canadian Magazine* for June. A railroad is now being completed which crosses Newfoundland from St. John's on the eastern extremity to Port aux Basques at the south-western extremity of the island. This line can be traversed in twenty-four hours. The sea-crossing of sixty miles from Port aux Basques to Cape Breton will be done in four hours. The Intercolonial railroad will be extended to Cape Breton, and will bring passengers thence to New York in thirty hours. From St. John's, Newfoundland, to Queenstown, Ireland, the distance is only 1,650 miles, which a "greyhound" like the *Lucania* would cover in three days. According to Mr. McGrath this would be the ideal route. St. John's is a splendid harbour, open winter as well as summer to the largest vessels afloat. The scenery of Newfoundland through which the new line passes is "equal to the finest in North America." Port aux Basques is "another splendid harbour." And, strange to say, Atlantic steamers going to St. John's escape the fogs which are popularly associated pre-eminently with Newfoundland. A Cape Breton ferryboat is being built to cope with the ice in winter and to steam eighteen knots an hour, at a cost of £52,000. The summary of the stages of the journey is :—

|                                |           |
|--------------------------------|-----------|
| New York to Cape Breton ..     | 30 hours. |
| Cape Breton to Newfoundland .. | 4 "       |
| Across Newfoundland ..         | 24 "      |
| St. John's to Liverpool ..     | 84 "      |
| Liverpool to London ..         | 4 "       |

146 hours.

or 6 days, 2 hours.

Present average voyage New York to London, 7 days, 7 hrs. There is thus a saving of twenty-nine hours on the whole journey, as well as four days of ocean voyage. The first through trip is announced for August

## THE AUSTRALIAN FEDERAL CONVENTION.

### WHAT IT HAS DONE AND LEFT UNDONE.

THE Australian Federal Convention, which ended its sittings on May 5th, will hold its second sitting in September. It is expected that the Convention will draw up a Bill for the federation of Australia, which will then be submitted to a *plébiscite* of the whole population. The *Australasian Review of Reviews* describes at some length what the Convention has done. Mr. Fitchett says that the Convention came up to expectations. The ablest public men of Australia met to discuss the whole future development of the seven colonies. Every one admires the ability, the sincerity, and the general temper of the general assembly, and each member would compare in knowledge and powers of debate and temper with any Parliament in the world. Mr. Fitchett anticipates that the chief debatable questions in the Bill, as drafted by the Convention, relate to the federal control of railways, rivers, and the federalisation of public debts. It seems probable that the Bill, as a whole, will emerge without many changes from the furnace of parliamentary criticism.

### THE FEDERAL TARIFF.

Mr. Higgins in his paper describing the decisions arrived at by the convention of trade and finance, says that all the Colonies are willing to leave the question of tariff to a Federal Parliament, and that every one took it for granted that the Federal Parliament would declare for protection at the start. New South Wales is the only Colony in favour of Free Trade, and there the sentiment is divided. West Australia is doubtful. All the other Colonies are strong for protection. The chief difficulty arose as to the division of the surplus revenue arising from the Federal tariff:—

In any case, the abolition of the border duties will cause considerable disturbance when uniform duties are imposed; the loss has been variously estimated at from £500,000 to £850,000 per annum. To allay all fears, two provisions have been adopted. The first is that during the first three years after the establishment of the Commonwealth, the yearly new expenditure shall not exceed £300,000, and the yearly expenditure in respect of transferred services shall not exceed £1,250,000. These amounts, we are told, leave a sufficient margin, except in the case of war, or some other national emergency—rather a serious exception, one would think. The second provision is that during the first five years after uniform duties the amount to be paid to each state each year is “not to be less than” the amount returned to the state during the year before uniform duties.

At present the customs of revenue for all the five Colonies is about equal to the interest of their public debts. As the Bill stands it provides that the Commonwealth is to have power to take over the whole or a rateable proportion according to the population of the public debts. If the Federal Parliament takes over the debts, it is probable that they may make terms as to the limits and conditions of future borrowing.

### THE RAILWAY QUESTION.

Two other questions which caused some friction at the Convention were those relating to the railways and to the rivers. With regard to the railways—

All that has been done is (1) to give the Commonwealth power, with the consent of any State, to purchase all or part of the railways of that State; and (2) to enable the Commonwealth to appoint an inter-State Commission (on American and English principles) to see that “the provisions of the Constitution with regard to trade and commerce” are carried out on the railways, as well as on rivers which are common to two or more States. How insufficient the powers of this

Commission are I shall show presently. With regard to uniformity of gauge, it may be possible, without much expense, to bring the Victorian gauge of 5 ft. 3 in. to the standard gauge of 4 ft. 8½ in., and to fit the existing rolling stock of Victoria to the new gauge. But to alter the 3 ft. 6 in. gauge of South Australia to the standard gauge would involve, it seems, not only a complete change of rolling stock, but the enlargement of tunnels and cuttings, and the alteration of curves. But whatever may be said as to uniformity of gauge, a thorough change in our system of competitive railway rates is urgently necessary. We are putting an end to an inter-colonial tariff war; we must put an end to the equally bitter, equally wasteful, even ruinous, war of railway rates.

### THE CONTROL OF THE RIVERS.

The chief difficulty about the rivers arose from the claim put forward by South Australia as the State holding the mouth of the River Murray, that that river and its tributaries should be made federal property, so as to secure the navigation shall be kept open. On the other hand, New South Wales and Victoria which held the tributaries of the Murray, claim a right to use the waters of these tributaries for irrigation or other purposes. There was a very tough fight, at the end of which South Australia had to be content with securing a clause giving the control and regulation of the navigation of the River Murray, and the use of the waters thereof to the Federal Parliament, only from where it first forms the boundary of Victoria and New South Wales. The situation is rather difficult in many ways, and it is not the less difficult that West Australia which is isolated and has fewer federal interests than any other Colony, is nevertheless the State which holds the balance of power in the Convention. The question of the equal representation of all the Colonies in the Senate is one upon which a split is by no means improbable. The older Colonies think that as time goes on the feeling against giving a Colony with a handful of population equal rights in the Senate to New South Wales and Victoria, will be condemned as manifestly unreasonable. Hence a tendency on the part of many to acquiesce in the failure of the Convention in the hope that if they go further they will fare better.

## The Treasure House of the World.

THE *Australasian Review of Reviews* calls attention to the immense mineral wealth of Queensland, a colony which has so far easily distanced all records as to the amount of precious metal brought to the surface per head of those employed in mining.

Taking all minerals put together, Queensland has added, in its brief history, nearly £46,000,000 to the world's wealth. Its total yield in gold alone is £39,188,859 10s.; and the miners of Queensland are spelling out only the first glittering syllables in the wonderful chapter of gold production in that colony.

If Queensland is the treasure house of the world, Mount Morgan seems to be one of its richest chambers. It is the apex and cone of the conglomerate dykes of Central Queensland.

How three brothers named Morgan stumbled on this blackened, scrub-clad peak, washed the sand from one of its tan-coloured streams, found gold so abundant that in their amazement they thought it must be “native copper,” and not gold, is a familiar tale. As a matter of fact, it was gold purer than that of minted sovereigns, and the actual stone, when assayed, yielded more than 3,700 ounces to the ton! More than £6,000,000 sterling worth of gold has been blasted, or distilled, out of that rugged little peak since that wet Saturday in 1882, when the three Morgans washed the first sample of gold from one of the rivulets on its flank.

## THE NATIONAL LIFEBOAT INSTITUTION.

### A VINDICATION BY SELECT COMMITTEE.

At the beginning of this year I called attention, in very emphatic terms, to the damning charges which were brought against the National Lifeboat Institution by Mr. Bailey, and insisted that no time must be lost in subjecting his indictment to a thorough public examination. Partly as the result of that article, a Select Committee was appointed by the House of Commons to examine into the question. This Committee, after having held twenty-five sittings and examined fifty witnesses, has now made its Report. Were it not that the scandalous misconduct of the South African Committee has brought discredit upon the reputation of all Select Committees as instruments for ascertaining the truth, the Report of the Lifeboat Committee would be accepted as finally disposing of the charges brought against the management of that Institution. It is, of course, illogical and unjust to argue that because one Parliamentary Committee has been guilty of a palpable breach of trust, and has converted an investigation, ordered for the purpose of ascertaining the truth, into an elaborate machinery for hushing up inconvenient facts and foisting into circulation absolute falsehoods, therefore the findings of every other Parliamentary Committee must be accepted with a grain of salt. But this is one of the many evil consequences which result from the whitewashing of Mr. Chamberlain.

### FACTS ABOUT OUR LIFEBOATS.

Apart from the natural suspicion which naturally attaches at present to any Report of a Select Committee of the House of Commons, the Lifeboat Report seems to be very satisfactory. This Institution has 303 lifeboats of various types stationed on the coast. It had an income in 1896 of £17,000, and investments of the net value of £604,000. The average price of an ordinary lifeboat is £710. A steam lifeboat costs £5,000 to build and £800 a year to maintain it. An ordinary lifeboat is worn out in from twelve to twenty years. In the last forty-four years they have saved 21,816 lives at an average loss of life to about one in nine hundred lifeboat men actually afloat.

### MR. BAILEY'S ACCUSATIONS: (1) FINANCE.

So much for the facts. Now for the indictment brought by Mr. Bailey against the management of the Institution.

Mr. Bailey's first count was that the Committee had grossly and wilfully represented the state of its finances for the purpose of systematically concealing instead of disclosing the fact that they had £38,000 per annum in addition to the £60,000 provided by public subscriptions and investments. The Committee report that the statement is absolutely unfounded, and that to charge the Institution with adopting a policy of concealment is wholly unjustified by the facts. The further allegation that certain legacies had been misappropriated, the Report says is completely disproved.

Mr. Bailey's second count was the extravagant cost of the administration. The Committee report that after having had full details placed before them, they are of opinion that the staff is not excessive in numbers nor too highly paid.

Mr. Bailey's third charge was that the men who actually saved life by manning the lifeboat were not adequately paid. On this point the Committee report that they are satisfied that the remuneration is adequate and satisfactory.

### (2) EFFICIENCY OF BOATS.

Leaving financial questions, Mr. Bailey attacked the lifeboats, and maintained that they were unfitted for their work. The Committee declare that in their opinion the boats are generally well adapted for the work they have to perform. Neither do the Committee advise any change in the present system. The further question as to how far steam lifeboats should be introduced, they declare that they leave with confidence to the consideration and judgment of the Institution.

### (3) CHARACTER OF THE CREWS.

Their verdict as to the crews is as emphatic as it is concerning the boats. They are satisfied that as far as the great majority of lifeboat crews are concerned, the charges of want of discipline, of delay or failure in going out to the work of rescue, are entirely groundless. The causes of delay or failure are very few, and in every case due to error of judgment and not to a mercenary hanging back until they could extort heavy sums from the endangered crews. They reject, therefore, the suggestion that the present crew should be superseded by the coastguards or by a permanent crew maintained expressly for the purpose. The cost of a permanent crew would be too great, and the coastguardsmen are not numerous enough.

Mr. Bailey demanded that the lifeboat service should be undertaken by the State. This suggestion the Committee rejected. They see no ground for recommending any such change, and they see many advantages in favour of maintaining things as they are.

The most serious charge of all brought against the lifeboat men was that the crews being underpaid compensated themselves by making as much profit as they could at the expense of persons saved. This the Committee declare to be a wholly unwarranted aspersion without any foundation or justification whatever. The only recommendation they make is that the Institution should only allow the use of the lifeboats for salvage purposes, on condition of the crews agreeing to such terms as to remuneration and arbitration in cases of dispute as the Institution may prescribe.

### (4) LIFEBOAT SATURDAY.

After approving of the Lifeboat Saturday Fund, the Committee conclude their Report by according the thanks of the whole community to the Lifeboat Institution, and expressing their regret that it is not in their power to suggest some further protection for charitable purposes against the attacks of irresponsible persons, which attacks may, as in the present instance, turn out to be unfounded and untrue.

It will be seen from this summary of the contents of the Report, that it would be difficult to frame a more comprehensive and emphatic certificate of good conduct, than that which has been awarded to the National Lifeboat Institution. With reference to the concluding passage in the Committee's Report, it is only necessary to point out that any charitable institution groundlessly assailed has the opportunity of putting its assailants in a public pillory if it will face the music and challenge inquiry. This, Mr. Waugh has just proved by the result of his appeal to Lord Hershell to report on the charges brought against the Society for the Protection of Children from Cruelty. No one would have paid any attention to the charges of Mr. Bailey if they had not been reiterated year after year without any attempt on the part of the assailed Institution to court the inquiry, which, as the result proves, would have afforded them the most conclusive answer to the criticism of their assailant.

## HOW DYNAMITE IS MADE.

THE principal article in *McClure's* for August is Mr. H. J. W. Dam's description of the great dynamite factory at Ardeer, in Scotland, which he styles not only the largest of its kind, but also one of the most picturesque places in the world. Nitro-glycerine was discovered, it appears, by an Italian, Sobrero, in 1846. In 1867 the late Alfred Nobel conceived the idea of mixing the dangerous oil with kieselsguhr, a silicious earth composed of the skeletons of mosses and diatoms, found as a slaty block peat in Scotland, Germany, and Italy. So compounded nitro-glycerine becomes the much safer dynamite. Cotton waste from Lancashire mills, mixed with nitric and sulphuric acids, becomes nitro-cotton, which, combined with nitro-glycerine in parts 7 to 93 becomes blasting gelatine, a yellow tough elastic paste. 40 per cent. nitro-cotton and 60 per cent. nitro-glycerine form cordite. 60 per cent. nitro-cotton and 40 per cent. nitro-glycerine form ballistite. This last, which comes out like thin elastic sheets of silky horn, is rapidly displacing all other smokeless powders, being perfectly smokeless and unaffected by heat or damp. It can be fired while soaked in water. All these explosives are manufactured at Ardeer, a desolate stretch of sand dunes on the sea coast, chosen by Mr. Nobel in 1871.

## A DANGEROUS BUSINESS.

The processes are summarily and humorously described at the outset thus:—

Nitroglycerin, a teaspoonful of which would blow you to fragments, surrounds you in hundreds and thousands of gallons. It is making itself in huge tanks, gurgling merrily along open leaden gutters, falling ten feet in brown waterfalls, so to speak, into tanks of soda solution, and bubbling so furiously in other cylinders, through the in-rush of cold air from below, that it seems to be boiling. It is being drawn off from large porcelain taps like ale, poured into boxes, and rattled along tramways. In the form of dynamite, it is being rubbed with great force through brass sieves, jammed into cartridges, and flung into boxes; and in the form of blasting gelatin, it is being torn by metal rods, forced through sausage machines, and cut, wrapped, and tossed into hoppers—all these processes proceeding as rapidly as if it were ordinary olive-oil instead of the deadliest explosive known to man.

All around you are big cotton mills and storehouses as full of fleecy, white cotton as ordinary cotton mills and storehouses, but every pinch of the cotton, still white and fleecy, has been nitrated into gun-cotton, and would suffice, if exploded, to cut you off in the beauty of your youth. Death, instantaneous and pulverising, encircles you, in fact, by the ton; but the man and the thermometer surround you also. The man's eyes never leave the instrument. Both are chosen for their perfect reliability; and endless precautions, innumerable rules, and the strictest discipline maintain Ardeer in a state of busy and peaceful security.

## ITS FREEDOM FROM ACCIDENTS.

On entering the "danger area" every one is searched, and all metallic objects such as watch, money, penknife, scarf-pin, keys, are removed. The girls are searched thrice a day by the matrons, and are never allowed to wear pins, hairpins, shoe-buttons, or metal shoe-pegs. A strange device is the putting the persons employed in the different processes in distinctive colours: the nitro-glycerine house man being in red, the carriers in dark blue, and so on. The importance of watching the thermometer, which rises out of a vat where nitric acid and glycerine are being mixed, lies in the fact that when the mixture reaches above 20° Centigrade an explosion is probable. The paradox of the business is that—

Despite the manufacture by the ton of all these deadly explosives, Ardeer is one of the safest factories that you could

possibly be in. In the whole period of its existence, about twenty-five years, the entire loss of life by accidents, including the sad occurrence of February 24, has been only twenty-one. This, compared with the number of people employed, is lower than the death-rate in any cotton-mill, woollen-mill, foundry, boiler-shop, shipyard, or other large manufactory. The main cause of this excellent showing is the admirable character of the discipline imposed and the firm and careful system of management. But the rigid, intelligent, and systematic way in which explosive factories are guarded by government regulations and government inspectors undoubtedly also plays a large part in this result.

## The Tsar on a Tramcar.

MISS WARREN writes pleasantly in the *Quiver* for August on "Sunday with the Czar and Czarina of Russia." She bears witness to the earnest interest shown by the Tsaritsa in the condition of the women and children of the poor, and speaks most hopefully of the Tsar's reforming zeal. The young couple trust their people and may often be seen walking quietly down the streets of the capital with perhaps only one attendant far in the rear. Miss Warren tells one story which will doubtless take its place among the moral anecdotes of the race:—

I have heard of the Emperor taking a ride in one of the public tramcars. This may not be his usual mode of conveyance, but on that particular occasion it was done with a purpose. There seems to be a very great deal of luxury and extravagance practised amongst the upper grades of the Russian army, this prevailing spirit making it exceedingly difficult for any young officer who does not happen to be rich to keep up the necessary dignity. One such had been seen riding in the tramcars, and his brother officers were much scandalised thereat; so he was subject to much snubbing in consequence, and an intimation was conveyed to him that his resignation was desirable. Somehow this reached the young Emperor's ears, and he determined on administering a rebuke that would not be forgotten. So he went out, and, taking a seat in one of the despised public conveyances, he rode down to the barracks at which this particular regiment was quartered. Quite unattended, he presented himself before the astonished officers with the following remarks: "Now, gentlemen, I hear that to ride in a tram is considered beneath the dignity of an officer of your regiment. I have just been riding in a tram, and I am your colonel; do you wish me to send in my papers?" Of course everybody immediately apologised, and the young lieutenant who had outraged the dignity of the regiment has since been left to choose his own conveyance.

THE Jubilee still lingers in the Quarterlies. The *London Quarterly Review* begins its July fare with a retrospect of the Victorian Era and ends it with a glance at the progress of our Colonial Empire during the record reign. "A Jacobite Archtraitor" is the title of an interesting study in historical psychology—Pickle the Spy. Miss Kingsley's adventures in West Africa and Jowett's life make their inevitable appearance. There is only one purely theological paper—that on Paulinism.

ADMIRERS of Dr. George Macdonald will be pleased to find in the July *Canadian* a warm eulogy of their hero from the not too complimentary pen of David Christie Murray. Dr. Macdonald wrote at a time when Scots were not so powerful on the press as now, else he would, in Mr. Murray's opinion, have been more extensively boomed than any of the Kailyard group. "These two," he says, "Dr. George Macdonald and Mr. J. M. Barrie, are the men who worthily carry on, in their separate and distinct fashions, the tradition which Sir Walter established," but Dr. Macdonald is the greater and more fental.

## TWO DAYS WITH COUNT TOLSTOY.

NOTES OF CONVERSATIONS IN 1894.

THE Hon. E. H. Crosby contributes to the *Progressive Review* for August a capital paper describing two days which he spent with Count Tolstoy at his country place in Toulà in 1894. Mr. Crosby's account of Count Tolstoy, the Countess, and the family, although much shorter, very closely follows the lines of the description of a visit which I paid to the Count in 1888, in "The Truth about Russia." Mr. Crosby's impressions in the main coincide with my own. It is evident he is a careful observer and capable of accurately recording what he hears and sees. I am sorry to learn from this article that the little boy, Vania, who was a baby in arms in 1888, died in 1895. A few other particulars are given as to the interesting family at Yasnia Poliana.

## THE FAMILY AND ITS MEMBERS.

In describing his conversation with Countess Tolstoy, Mr. Crosby says:—

She also told me of one of her sons who had conscientious scruples against serving in the army, and had been called upon to do so under the military law. His impulse had been to refuse, and in this his father sustained him. But his health was delicate, and the severe imprisonment which is always ordered in such cases would mean almost certain death. Madame Tolstoy could not bring herself to approve of the sacrifice, and on her account the young man joined his regiment. His health, however, had already suffered from the mental strain, and his colonel, a kind-hearted man, soon had him retired for physical disability. It seemed to me that the whole transaction reflected credit on all concerned, father, mother, son, and colonel.

The Countess evidently stands just where she did, full of helpfulness, but as far as ever from fully accepting her husband's doctrine. To put her children to peasant labour, she says, was to make beasts of burden of race-horses. Tolstoy's estates have been finally divided among the children; one of the daughters, however, refuses to accept her share of the land because she so fully shared her father's views. But notwithstanding the Countess's objections, Mr. Crosby mentions that:—

One of the young ladies had been engaged during the day planting potatoes with a peasant woman. The family always sits up, late in the country, as the mail arrives after eleven o'clock, and the Count's mail is indeed an event. He gets letters, books, and newspapers from all parts of the world. The Mormons and various other "peculiar people" in America had sent him their literature, and through this midnight mail he is kept informed of all that goes on in the outside world.

## WORK IN HAND.

The Countess in 1894 was "now engaged in translating Sabatier's 'S. François d'Assise' into Russian." The Count's daughter told Mr. Crosby that her father—

Was getting out a new book on "Patriotism"; that after the appearance of each book they are in doubt for a time as to whether they will be sent to Siberia or not. She said that the Tsar had read his last book, "The Kingdom of God is Within You," which is certainly pretty hard on rulers, and that he had forbidden his name to be mentioned at Court. When advised to have the Count arrested, he is reported to have said: "They consider him an apostle now; I shall not make him a martyr."

The Count is also engaged in the work of translation as well as his wife. Mr. Crosby says:—

After lunch Count Tolstoy came in from his study with several editions, English, French and German, of the works of the Chinese philosopher, Lao Tse, and he got me to read parts of the English translation to him. He speaks English well, and we always talked in that language. He had undertaken

to translate the Chinese writer into Russian, and was enthusiastic on the subject of his views.

## ON THE DEFINITION OF A CHURCH—

Mr. Crosby had long conversations with the Count, during which he seems to have discussed many things. Among others he asked the Count what he thought of the two formulas which are familiar enough to my readers:—

I asked him if he liked the definition of the Church as the "Union of all who love in the service of all who suffer." "Not at all," he replied. "It leaves out God, and Christ says that the first commandment is to love God."

I had inferred from some of his writings that he placed love for the neighbour before love for God in the chronological order of man's development, and I told him that it seemed so to me, but he denied it absolutely.

"You cannot have *approfondi votre sentiment*," he said, using a French locution, for the very good reason that there was no English one to take its place. "If you do not love God you have no reason for loving your neighbour. Why should you love your neighbour?"

"But," I retorted, "are we not told that 'he that loveth not his brother whom he hath seen, how can he love God, whom he hath not seen?'"

But the Count did not seem to think that this text had any bearing on the question.

## —AND OF A CHRISTIAN.

He was even more hostile to the other formula about "Be a Christ." Some peasants had asked Count Tolstoy as to his views on the immortality of the soul and the divinity of Christ. Mr. Crosby says:—

I asked him what he would tell them.

"I will tell them that true life is in its essence eternal," said he, "and that it can be nothing else."

As to Christ's divinity he thought it a great mistake to represent Jesus as absolute God, for by so doing we make his example impossible to follow.

He said that he had lately seen the statement made that we should all be "Christa."

"This is a new kind of cant," he exclaimed, "and quite as bad as the old."

Count Tolstoy is surely somewhat unnecessarily sweeping in this association. There is no formula which cannot be used as cant if it is used with insincerity, but to assert, as he does, that this formula is cant, is to pronounce judgment in a fashion that is singularly opposed to the precepts to which the Count professes to pay literal obedience.

## ON THINGS LITERARY AND POLITICAL.

In the course of conversation, the Count said he could not make anything out of Walt Whitman, but he was delighted with Edward Carpenter. He had little sympathy with Laurence Oliphant, owing to Tolstoy's absolute objection to everything in the shape of psychic phenomena. Speaking of political affairs, the Count told Mr. Crosby he had talked of the United States as a free country; that the remark was the result of ignorance, because the people did not see how the Government oppressed them by preserving the unjust state of society. Mr. Crosby, apparently unable to enter into the spirit of the Count's remark, made some apologetic observations in consideration of recent lynchings, whereupon the Count promptly told him, so far as he was concerned, he preferred lynching to capital punishment under the form of the law. The following extracts may be quoted as they stand:—

I told him that some two or three years earlier I had given up smoking, partly as a result of reading his article on the subject, but that I still frequently dreamt at night that I was indulging in a cigar, and was disgusted at myself for having broken my resolve.

"That is strange," said he. "In the same way I often dream that I am going to war, and I do not know what to make of it."

Speaking of a friend who was in bad health, he referred to the necessity of using such experiences for our spiritual improvement. Then, turning to me as we were walking along a forest path, he said, smiling: "You are young and rich, and in good health. You have every disadvantage."

"Women's duties are domestic," he told me; "but man has been in the wrong from time immemorial in forcing her to keep her place. Set her free, and she will come back and do voluntarily, and as an equal, the same work which she used to do as a slave and a drudge."

"IF I WERE TSAR."

Mr. Crosby adds in a footnote:—

In a letter written to me after my return to New York, Count Tolstoy says: "Henry George has sent me all his books; I knew some of them, but some others, as the 'Perplexed Philosopher' and others, were new to me. The more I know of him, the more I esteem him, and am astonished at the indifference of the civilised world to his work. If the new Tsar were to ask me what I should advise him to do, I would say to him: Use your autocratic power to abolish the landed property in Russia, and to introduce the single tax system, and then give up your power and give the people a liberal constitution."

On the whole, the Count seems to have impressed his visitor very favourably, for he declares that he found Count Tolstoy "one of the most sincere, earnest, yes, and one of the sanest men on earth."

## RELIGION IN ENGLAND IN 1897.

BY MR. G. E. W. RUSSELL.

MR. GEORGE RUSSELL, in the *Contemporary Review* for August, gives the address which he delivered before the Christian Conference at Sion College. The first page of the article is one of considerable autobiographical interest. Mr. Russell was brought up as a member of the Clapham Sect, but in his earlier manhood he succumbed to the attractions of Ritualism, and he is now what may be described an Evangelical Broad High Churchman. He says:—

It is a commonplace of superficial observation to remark that the Evangelical school has utterly perished. So it was said, after 1855, that the Peelite party had disappeared from politics. True, the party had disappeared, but its principles governed England. Similarly, the Evangelical school, as a separate institution, has practically perished, but the special truth which it was divinely commissioned to proclaim—the truth that "there is none other name under Heaven given to man, in whom and through whom we may receive health and salvation, but only the Name of our Lord Jesus Christ"—is now the doctrine of nearly every pulpit in the Church of England; and I have never heard it or seen it set forth with more emphatic clearness than in the sermons and ceremonials of Ritualistic churches, where every word and act is directed towards the one great end of exhibiting Christ crucified before the gaze of perishing sinners.

When the present Bishop of Durham left Harrow for Peterborough, he told the boys whom he had taught, that his prayer for them was that they might always have "a firm faith in criticism and a firm faith in God." And the prayer has certainly been granted, with conspicuous and far-reaching results, in the case of one of those for whom it was uttered—my friend and schoolfellow, Charles Gore.

The decrease of the Socinian spirit inside the Church of England is one of the most notable—and to me the most encouraging—of its later-day phenomena. And yet, just as the Evangelical theology saturated our preaching, and the sacramental theology transfigured the outward aspect of Church and worship, so the Liberal theology has profoundly

modified our authoritative exegesis and its relation to other branches of human thought and knowledge.

This question leads me to the confession of my very deepest religious conviction—the faith which lies at the very root of all that I believe, and hope, and expect. "He that hath the Son hath the life; and he that hath not the Son of God hath not the life." The solution of all difficulties, the regulation of all conduct, lies in the Incarnation of the Son of God. The *Lex orandi* is the *Lex credendi*. Now, as in the days of Pliny, they are Christians, who sing hymns to Christ as God. They are Christians, who can from their heart say (as Mr. Gladstone said in a letter to an inquirer in America), "All I write, and all I think, and all I hope is based upon the Divinity of our Lord, the one central hope of our poor wayward race." Between all those thronging multitudes of the great human family, however widely separated by race, or climate, or ecclesiastical differences, who really believe that the Lord Jesus Christ is Very and Eternal God, there is—there must be—a vital and essential unity. And between them, and those unhappy beings who have deliberately and consciously arrayed themselves in hostility to Christ, there is a difference too profound to be stated in words.

Mr. Russell will probably find, if he were to care to analyse what he means by the phrase "he that hath the Son," that a great many of those who are loudest in their declarations of devotion to the doctrine of the Incarnation are those in whom very often there is least of the real love and of sacrifice manifest in the life of the Son of Man.

## THE NEW SAYINGS OF CHRIST.

In the *Contemporary Review* Dr. M. R. James discusses the new sayings of Christ which have just been discovered in Egypt. He sets up the theory—

that this papyrus leaf is from a book of sayings of Christ, extracted from one or more Gospels, and I leave it to be dealt with by the critics as it deserves. The theory that they may be excerpts from one or more Gospels—such, for example, as the *Egyptian Gospel*—would serve well to explain the presence in them side by side of elements of various degrees of authenticity; for it is most probable that those early Gospels which the Church rejected contained an admixture of genuine matter along with some that was corrupt and some that was pure invention.

Discussing the sayings, Dr. James says of the third saying:—

It is the most immediately attractive of all.

"Jesus saith: I stood in the midst of the world, and in flesh was I seen of them: and I found all men drunken, and none found I athirst among them, and my soul grieveth over the sons of man, because they are blind in their heart."

As to the interpretation of this somewhat obscure passage, Dr. James says:—

It is not, certainly, often that our Lord refers to His coming upon earth as a past event; still, He does so refer to it; and I would submit that it is very possible that in this saying we have a reminiscence, perhaps garbled, but preserving a genuine element, of a parable or simile actually uttered by Christ. In any case, the saying is a very beautiful one.

His interpretation of the most remarkable of the sayings is stated by him as follows:—

The last of these *Logia* to which I can here refer is that puzzling sentence, "Raise up the stone, and there thou shalt find me; cleave the wood, and there am I." The emphasis is to be laid upon the hard and laborious character of the acts prescribed—the heaving up of the stone and the cleaving of the wood. We should then have a parallel to the precept, "Ask, and ye shall receive; seek, and ye shall find; knock, and it shall be opened unto you"; an utterance in which the command seems to me quite as important an element as the promise. Effort is necessary if the knowledge of Christ is to be won.

## TWO DAYS WITH TENNYSON.

BY PROFESSOR KNIGHT.

THE paper in *Blackwood* for August to which lovers of literature will probably turn first, is Professor Knight's Reminiscence of Tennyson, and of a two days' stay with him at Farringford in 1890. He was much impressed with his first sight of Lady Tennyson, "her graciousness and the radiant though fragile beauty of old age," along with "the inexpressible charm" of her voice.

## THE POET AS CONVERSATIONALIST.

Of the poet's talk he writes:—

The conversational power of Tennyson struck me quite as much as his poetry had done for forty years. To explain this I must compare it with that of some of his contemporaries. It was not like the meteoric flashes and fireworks of Carlyle's talk, which sometimes dazzled as much as it instructed; and it had not that torrent-rush in which Carlyle so often indulged. It was far more restrained. It had neither the continuousness nor the range of Browning's many-sided conversation; nor did it possess the charm of the ethereal visionariness of Newman's. It lacked the fulness and the consummate sweep of Mr. Ruskin's talk; and it had neither the historic range and brilliance of Dean Stanley's, nor the fascinating subtlety—the elevation and the depth combined—of that of the late F. D. Maurice. But it was clear as crystal, and calm as well as clear. It was terse and exact, precise and luminous. Not a word was wasted, and every phrase was suggestive.

## AS A LISTENER.

Tennyson did not monopolise conversation. He wished to know what other people thought, and therefore to hear them state it, that he might understand their position and ideas. But in all his talk on great problems, he at once got to their essence, sounding their depths with ease; or, to change the illustration, he seized the kernel, and let the shell and its fragments alone. There was a wonderful simplicity allied to his clear vision and his strength. He was more child-like than the majority of his contemporaries; and, along with this, there was—what I have already mentioned—a great reserve of power. His appreciation of other workers belonging to his time was remarkable.

## "FRAGMENTS OF HIS VOICE."

A few tit-bits out of the table-talk preserved by the Professor may be given here:—

He had no great liking, he said, for arranging the poets in a hierarchy. He found so much that surpassed him in different ways in all the great ones; but he thought that Homer, Æschylus, Sophocles, Virgil, Dante, Shakespeare and Goethe,—these seven,—were the greatest of the great, up to the year 1800. . . .

I told him of a poem which Wordsworth wrote when he lived at Alfoxden—an unworthy record of a revolting crime—which he had the good sense never to publish. I had not seen the original, but only a copy, which I threw in the fire as soon as I had read it. Tennyson was greatly pleased, and said, "It was the kindest thing you could have done."

## THE FIRSTBORN OF HIS MUSE IMMOLATED!

An incident which reveals the boy as father to the man offers much temptation to the curious:—

He told me—without the slightest touch of vanity—that, when he was between thirteen and fourteen years of age, he wrote an epic of several thousand lines. His father was proud of it, and said he thought "the author would yet be one of the great in English literature" (good prophet of the future, thought I); "but," he added, "I burned it when I read the earliest poems of Shelley."

What was the theme, one wonders?

## "SPIRIT MANIFESTATIONS."

Professor Knight mentions a fact which some pains have been taken to conceal,—the late Laureate's open-eyed interest in occult psychic phenomena:—

We then went on—I do not remember what the link of connection was—to talk of Spiritualism, and the Psychical Society, in which he was much interested, and also of the problems of Theism. He spoke of the great Realm of the Unknown which surrounds us as being *also known*, and having Intelligence at the heart of it; and he told more stories than one of spirit manifestations as authentic emanations from the unknown, and as proof that out of darkness light could reach us. . . .

He said he did not require argumentative proof of a future life, and referred me to "In Memoriam." He had nothing further to say; and, although his faith was not stated dogmatically in that poem, every one could see that he believed in the survival of the individual. "Annihilation was impossible and inconceivable. We are parts of the infinite Whole; and when we die, and our souls touch the great *Anima mundi*, who knows what new powers may spring to life within us, and old ones awaken from sleep, all due to that touch."

## BRIC-À-BRAC.

A young lady called wearing a hat with a spray of artificial lilac. "There was a lilac tree in bloom close at hand, and he said, 'What is that you are wearing? It's a flowery lie, it's a speaking mendacity.' He asked how she could wear such a thing in the month of May!"

He reckoned by the number of published verses sent him that he got a verse for every three minutes of his life. "He said he liked the *Spectator*. He did not always agree with its literary articles, but its philosophy was good." He confessed "that his chief work was done, not as Wordsworth's was in the open air, but in his library, in the evenings."

Professor Knight concludes that the poet "was not so much of a platonist as a Berkleyan, but faith in the great Kantian triad (God, Duty, Immortality) dominated his life—God being to him both personal and impersonal, Duty being continuous, unselfish devotion to the good of all, and Immortality the survival, not only of the race but of all the units in it."

## A People's Bank in London.

MR. J. E. CARVER, the chairman of the Finsbury Park Co-operative People's Bank, writes to me to report the excellent results that have followed the formation of the pioneer working men's bank, which was started by the Finsbury P. S. A. Society in January, 1895. Mr. Carver thinks that there is no more practical method of helping the poor than founding such banks. £200 is quite sufficient to begin with. The money would be invested in subscribing, and would soon be paid back. Any person who wishes to help in this excellent work should communicate with Mr. Carver, of 57, Lennox Road, Finsbury Park, N.

Mr. H. W. Wolff, whose "People's Banks" is the standard work upon this subject, kindly prepared rules upon the lines of Signor Luzzati's Banca Popolare in Milan. These were passed by the Registrar, and registered under the Industrial and Friendly Societies Act of 1893. We started with eight shareholders, who took up twenty-three shares upon which £12 was paid up. Since then we have been lending money in some cases to the poorest of the poor, in sums of 10s. and upwards. Amongst others, loans were granted to costers to buy goods; to a greengrocer, who, having lost his pony, was hiring one at 10s. a week—to this man we lent £10, which he has repaid in sums of 10s. per week, so that in twenty weeks, by paying the same amount that he had previously done for hire, the pony became his property; to a cabman to buy his cab; to a coal porter to buy a horse and waggon to start in business for himself; to cyclists to buy their machines; to a householder to pay his rates; to another householder to buy furniture. The expense incurred in starting the bank is being paid off by instalments.

## THE NOVELS OF GEORGE MEREDITH.

BY A "QUARTERLY" REVIEWER.

THE novels of Mr. George Meredith afford an inexhaustible theme for the thoughtful essayist in our quarterly reviews. The *Quarterly* for July publishes a very carefully written, painstaking appreciation of the contribution which Mr. Meredith has made to Victorian literature. It is impossible to do more than glance briefly at the observations of the Reviewer. But some of his remarks may be well attended to. Speaking of the distinctive features of Mr. Meredith's genius, he says—

that in his portraiture of women he is without a rival among English novelists. According to Mr. Meredith women are still creatures of the chase, preyed upon by primitive man. And for those who do not feel or who positively extract a pleasure from their subjection, as for those who are unconscious that they are in captivity, Mr. Meredith exhibits a frank contempt. To those women he turns "who have shame of their sex, who realise that they cannot take a step without becoming bond-women," to those whose wings beat against the bars of their prison-house, "who muse on actual life and fatigue with the exercise of their brains and traffic in ideas," to these "princesses of their kind and time, albeit foreign ones and speaking a language distinct from the mercantile," to these women Mr. Meredith turns for his heroines. The majority of them are either actually insubordinate or chafing. They are splendid wild creatures, not tamed, even untameable, and for this very reason dear to him: the true type of womanhood, spiritually free, and defying the mere primitive hunter from the inaccessible resorts of their own natures.

Of Mr. Meredith as an exponent of love, the Reviewer says:—

Perhaps in that love idyll, the chapter in "Richard Feverel," entitled "A Diversion, played on a Penny Whistle," the best that prose can do to blend in one unforgettable strain the full enchantment of summer and the golden joys of young hearts that love, has been done. Perhaps it would be difficult to find elsewhere the like sympathetic intensity of description, so marvellous a power of realising with so marvellous a power of rendering into words, in their prose order, the mingled flame and mystery and ecstasy that surround as with a shimmering magic haze the early hours of a great passion.

I quote two other sentences, and then pass on to quote his description of the stories of real life which are embodied in Mr. Meredith's novels:—

It is in the breadth of his humour and in the breadth of his characterisation that Mr. Meredith's greatness consists; in his intellectual penetration and his imaginative range. Not realist nor idealist, but both; a writer who appeals in his own fine phrase to "the conscience residing in thoughtfulness," who is on the side of unwearying, inextinguishable effort, whose ethics are the simple ethics of a faith in all heroic enterprises. "Vittoria," as has been noticed, reproduces the main incidents of the Italian insurrection of 1848; in "Beauchamp's Career," something of the political and social life of England at the time of the Crimean War is reproduced; in "Lord Ormont and his Aminta," the author has followed a part of the career of the famous Earl of Peterborough, who made his reputation as a soldier of genius at Valencia, but, found of too imperious a temper, was recalled in 1707, and in 1722 privately married a famous singer, Anastasia Robinson, who was not, however, acknowledged as Countess until shortly before the death of the Earl. In "The Tragic Comedians," Mr. Meredith is indebted for something more than the mere framework of his plot. It is, as the author entitles it, "a study in a well-known story"—the story of the loves of Ferdinand Lassalle, the German Social Democrat, and Helene von Dönniges, afterwards Frau von Racowitza. Mr. Meredith not only follows the incidents which, in real life as in the novel, lead to the tragic death of Lassalle, but is indebted

for the greater part of his dialogue to an account published by Frau von Racowitza of the episode of her life entitled "Meine Beziehungen zu Ferdinand Lassalle." More, public interest has been excited, however, in Mr. Meredith's reproduction, in "Diana of the Crossways," of the life and career of Caroline Norton, one of the three beautiful granddaughters of Sheridan, and sister of Lady Dufferin, mother of the present Marquis of Dufferin and Ava. Caroline Norton's marriage proved a most unhappy one, and her friendship with Lord Melbourne, then Prime Minister, led to an unsuccessful action for divorce brought against her by her husband. Famous not only in society for her beauty and her wit, Mrs. Norton was distinguished as one of the most popular poets and novelists of her time. Her writings were characterised by their enthusiastic advocacy of what we would now denominate the rights of women. The incident upon which the plot of Mr. Meredith's novel hinges was the unfounded story of Mrs. Norton's betrayal to Barnes, the editor of *The Times*, of the communication made to her in strict secrecy by one of her most ardent admirers, Sidney Herbert, to the effect that Sir Robert Peel and his Cabinet had resolved upon a repeal of the Corn Laws. The premature announcement of the determination came to by the Government led to a serious crisis, which resulted in the resignation of Lord Derby and the Duke of Richmond.

## OUR ANGLO-INDIAN NOVELIST.

INTERVIEW WITH MRS. F. A. STEEL.

THE *Young Woman* for August publishes an interview with Mrs. Steel, in which the interviewer extracted from this popular writer some particulars as to her birth and career. She was born, it seems, on a Good Friday, which leads her to make the following observation:—

There is an old Scotch saying that children born on that day see spirits. Perhaps that is why I have a leaning towards the occult, and have felt so much in sympathy with the East, its weird traditions and superstitions and the strange fancies of its population. And, curiously enough, when I opened my dispensary at Kussour, and attended eighty cases a day, my success with my patients lay in the fact that they believed I possessed what they called "a lucky hand."

As Inspectress of the Government schools in the Punjab, and Member of the Educational Committee, she had to award the Government grants.

"My first book was written in 1884, and entitled *Wife Awake*. In 1887 I published *A Complete Indian Cook and Housekeeper Guide*. This has been one of my most successful books; it has already run through three editions, and I believe will go through three more. I published it privately, and I have had innumerable letters at various times saying what a help it has been to young housekeepers in the East. I wrote the *Tales from the Punjab* when I was thirty-five.

"I was past thirty when I published my first volume of folk-tales, which has recently been reprinted. I have also written text-books on elementary physiology, hygiene, and domestic economy, which are used in the girls' schools of India, with which I was connected for twenty-five years; and I and my girls made all the embroideries which decorated the Prince of Wales's room when he visited India."

She went out to India, and made her name in a very different sphere from that of novel writer:—

My experience has taught me that if you would have the best of the world, you must give fully yourself, and then only will it repay you. And if you are always desirous of keeping your life "sun-rayed," you must learn to laugh, even though you can feel the strong pathos and see the pity of everyday circumstances, disillusion, and sorrows. I love Thackeray, and I understand his writings better than any I have ever read, for he was always capable of laughing when his heart was hurt, and he could also make his readers laugh at his own tears.

When asked about her religious views she said :—

"Personally, I have very broad views on religious subjects, and I feel we have no right to disturb any religion which enables those who belong to it to seek an ideal beyond the visible world. In my schools I have always allowed whatever Bible—whether the Shastra, the Holy Grunth, or the Koran—my scholars preferred. I feel that it matters little what compass we study provided it is fairly true to the Pole. I think missionaries do very good work among the lowest caste whose religion is very debased, whose position is degraded. I do not honestly think we have much right to thrust our nineteenth-century religion, with the civilisation which it has called into existence, down the throats of a nation which in many ways seems to me more moral than we are."

"That is not the general opinion."

"No, I suppose not; but that does not alter mine, and I am a great believer in the saying, 'The Truth and one make a majority.' I have always a prejudice against adopting other people's views on any subject I have personally studied."

The interviewed adds that in the mystery of manhood and womanhood lies the great social impetus of the coming generation, of which the woman of to-day is but the herald.

#### ADVICE TO THE COMMENCING AUTHOR.

A *Quarterly Reviewer* publishes an article founded on the collected volumes of the *Author*, in which the question of the qualifications and remuneration of a man of letters is debated in a somewhat sarcastic vein. Here, for instance, are some of the equipments which are required for the genuine literary career:—

The true man of letters, whether the form be that of the true rhythm-poet, of the true romancer, or, indeed, of the true dictionary-maker and pitiless compiler of infinite details, is he who has large rich qualities as a man, who can see comprehensively and luminously into masses of facts, and who, above all, has a detached, overmastering, loving disinterestedness about the future of mankind. Does he care intensely that the world shall progress, in more truthful and more humane paths, long after he is dead and gone? Is he prepared to do a great deal of work for a very little money in order that it may achieve such progress? Does he feel that this true progress of the world, along gentler and truer paths, is of intensely greater importance than his own personal career? Has he a tolerable assurance within himself, conceit apart, that he has sufficient stock-in-trade in the quality of his mind to be helpful in abstract things? Can he move over a hundred pages of varying subjects while his neighbour moves over twenty? If so, let him go on sturdily and even merrily, for merrily is part of the battle, and the man with no sense of fun is but a poor man of letters, though he be a dictionary-maker.

Alas! how many are there of authors who have not only commenced, but finished, who would stand the reviewer's test! The following anecdote of Mr. Carlyle I do not remember to have seen elsewhere:—

The late Professor Tyndall, in a very striking paper on Carlyle, published soon after the latter's death, drew a picture of his final visit to him which many would read with tears. He said that the old man was so weak that he (Tyndall) propped Carlyle's head against his shoulder and breast. He then asked Carlyle if he would give him some word of advice which he could remember. And Carlyle answered, "Give yourself royally," and stopped. It is simply inconceivable that Tyndall should have got what he wanted in a more perfect form. It is the only advice to be given to any real men of letters, whether their work be the collection of facts, or daily writing, or studying, or romantic imaginative work. That giving of the very self to the public is the only thing. And in this special vocation the wages are an entirely secondary consideration.

#### RUSKIN AMONG WORKING MEN.

UNDER the heading "A Memorable Art Class," Mr. Thomas Sulman contributes to *Good Words* for August fascinating memories of the art class at the Working Men's College in the early fifties. John Ruskin threw himself heartily into this art work in 1854. Looking back, the writer says:—

I cannot hope to describe the delights of those evenings. Twice a week John Ruskin positively beamed; he devoted himself to those who gave themselves sincerely to study. He taught each of us separately, studying the capacities of each student.

#### HIS WAY OF TEACHING.

We drew first a plaster of Paris ball, giving the intersecting shadows of a score of gas lights; then a small plaster cast of a natural leaf. After that he went to nature; a spray of dried laurel leaves, a feather, a bit of spar to show the lines of cleavage; every kind of natural structure. He soon encouraged us to try colour, warning us that gaslight altered all the values, but saying that colour was too delightful to be foregone. For one pupil he would put a cairngorm pebble or fluor-spar into a tumbler of water, and set him to trace their tangled veins of crimson and amethyst. For another he would bring lichen and fungi from Anerley Woods. Once, to fill us with despair of colour he brought a case of West Indian birds unstuffed, as the collector had stored them, all rubies and emeralds. Sometimes it was a fifteenth century Gothic missal when he set us counting the order of the coloured leaves in each spray of the MS. At other times it was a splendid Albert Dürer wood-cut that we might copy a square inch or two of herbage and identify the columbines and cyclamens. He talked much to the class, discursively but radiantly. I think I remember that in politics and religion he leaned to order rather than progress. . . . I have a delightful memory of an architectural evening, principally given to French Gothic, comparing Amiens, Rouen, and Beauvais. He reprinted for us a chapter from the "Seven Lamps," with all the illustrations—"Notes on Northern Gothic." On another night he introduced to us Alfred Rethel's work, especially the weird "Auch ein Todtentanz."

He was hard to please, I remember, in engraving. Etching he thought frivolous.

#### HIS MASTERS.

He told us if we got to like large, cross-hatched, finished prints after Correggio or Raphael we were lost, unless we forthwith sold, or better still, burned them. . . . But Albert Dürer was his favourite master. We copied bits of the great and smaller passions, the "St. Hubert" and the "St. Jerome." But of course the pole-star of his artistic heavens was Turner. One by one, he brought for us to examine his marvels of water-colour art from Denmark Hill. He would point out the subtleties and felicities in their composition, analysing on a blackboard their line schemes. Sometimes he would make us copy minute portions of a "Liber," some line of footsteps, or the handles of a plough. He would not allow us to copy Turner in colours, saying that would come years after, at present nothing of these but line.

#### "HIS GREATEST FAULT AS A TEACHER!"

On formal occasions he did not speak well. His style was over-elaborate and paradoxical, but on these evenings he talked divinely; we were carried away by the current of his enthusiasm. Often his subject was poetry, and then he was never tired of praising Scott. . . .

Although I have reason to think he was at this time privately suffering, he seemed delighted with his class. His face would light up when he saw a piece of honest or delicate work; it was, perhaps, his greatest fault as a teacher that he was sometimes too lavish of his praise.

Possibly to those who are only readers of the great art-critic this last seems the most astounding fact in the whole paper, full as it is of intense interest.

## "CHRISTIAN TELEPATHY."

BY "IAN MACLAREN.

In the *Sunday Magazine* for August the series which has in these pages been classed under "The Prayer Telephone" is continued by Rev. John Watson, M.A., D.D. His title of Christian telepathy is also his theory of explanation. His first story is of an aged minister with whom he had served as colleague, and who was taken dangerously ill:—

It was a great relief to learn, towards the end of a week, that the sickness had abated, and when, on Sunday morning, a letter came with strong and final assurance of recovery the strain was quite relaxed, and I did my duty at morning service with a light heart. During the afternoon my satisfaction began to fail, and I grew uneasy till, by evening service, the letter of the morning counted for nothing. After returning home my mind was torn with anxiety and became most miserable, fearing that this good man was still in danger and, it might be, near unto death. Gradually the conviction deepened and took hold of me that he was dying and that I would never see him again, till at last it was laid on me that if I hoped to receive his blessing I must make haste, and by-and-by that I had better go at once. It did not seem as if I had now any choice, and I certainly had no longer any doubt; so, having written to break two engagements for Monday, I left at midnight for Glasgow. . . . On arrival I drove rapidly to the well-known house, and was in no way astonished that the servant, who opened the door, should be weeping bitterly, for the fact that word had come from that very house that all was going well did not now weigh one grain against my own inward knowledge.

"He had a relapse yesterday afternoon, and he is . . . dying now."

No one in the room seemed surprised that I should have come, although they had not sent for me; and I held my reverend father's hand, till he fell asleep in about twenty minutes. He was beyond speech when I came, but, as we believed, recognised me and was content. My night's journey was a pious act, for which I thanked God, and my absolute conviction is that I was guided to its performance by a spiritual influence.

## "IAN" AS AUTOMATIC WRITER!

Who shall say there is anything uncanny in automatic writing when something so like it as this is confessed to by one who combines the several functions of Doctor of Divinity, popular preacher, and religious romancer?

Some years ago I was at work one forenoon in my study, and very busy, when my mind became distracted and I could not think out my sermon. Some short time before a brother minister, whom I knew well and greatly respected, had suffered from dissension in his congregation and had received our sincere sympathy. He had not, however, been in my mind that day, but now I found myself unable to think of anything else. My imagination began to work in the case till I seemed, in the midst of the circumstances, as if I were the sufferer. Very soon a suggestion arose and grew into a commandment, that I should offer to take a day's duty for my brother. At this point I pulled myself together and resisted what seemed a vagrant notion. So one turned to his manuscript to complete a broken sentence, but could only write "Dear A. B." Nothing remained but to submit to this mysterious dictation and compose a letter as best one could, till the question of date arose. There I paused and waited, when an exact day came up before my mind, and so I concluded the letter. It was, however, too absurd to send; and so, having rid myself of this irrelevancy, I threw the letter into the fire and set to work again; but all day I was haunted by the idea that my brother needed my help. In the evening a letter came from him, written that very forenoon, explaining that it would be a great service to him and his people if I could preach some Sunday soon in his church, and that, owing to certain circumstances, the service would be doubled if I could come on such and such a

day, and it was my date! My course was perfectly plain, and I at once accepted his invitation under a distinct sense of a special call, and my only regret was that I had not posted my letter first.

Dr. Watson tells of another instance in which he was moved by a sudden impulse to call on a family in a certain street. He found the family had removed to another house, the number of which he could not ascertain. After several inquiries he gave up the quest, somewhat ashamed of the time he had wasted on it:—

Next morning the head of that household I had yesterday sought in vain came into my study with such evident sorrow on his face that one hastened to meet him with anxious inquiries. "Yes, we are in great trouble; yesterday our little one (a young baby) took very ill and died in the afternoon. My wife was utterly overcome by the shock, and we would have sent for you at the time, but had no messenger. I wish you had been there—if you had only known!"

"And the time?"

"About half-past three."

So I had known, but had been too impatient.

After other kindred reminiscences Dr. Watson adds:—

Nor do I remember any case where, being inwardly moved to go after this fashion, it appeared in the end that I had been fooled.

## HIS EXPLANATIONS.

He offers three inferences:—

(1) That people may live in an atmosphere of sympathy which will be a communicating medium. The correspondence here is between heart and heart, and the medium through which the message passes is love.

(2) That this love is but another name for Christ, who is the head of the body; and here one falls back on St. Paul's profound and illuminating illustration. It is Christ who unites the whole race, and especially all Christian folk, by His Incarnation. Into Him are gathered all the fears, sorrows, pains, troubles of each member, so that He feels with all, and from Him flows the same feeling to other members of the body.

(3) That in proportion as one abides in Christ he will be in touch with his brethren. If it seem to one marvellous and almost incredible that any person should be affected by another's sorrow whom he does not at the moment see, is it not marvellous, although quite credible, that we are so often indifferent to sorrow which we do see? Is it not the case that one of a delicate soul will detect?

A very vivid account of a famine-camp in Burmah, by Mr. H. Fielding, is the principal feature in *Macmillan's* for August. He remarks on the fact that out of 8000 destitute people engaged on relief works for four months there had been but one instance of crime! Not one half of the people in the camp he supposes have ever laboured at such work before. The camp was full of those who live on the superfluities of others, theatrical performers, fortune-tellers, acrobats and the like, and women and children.

THERE are two ideas which deserve consideration in Miss Beale's retrospect and forecast of woman's educational work in *Longman's* for August. She suggests that three or four languages might be learned in the time now required for one. "Parallel grammars might be used, and only the varieties, the differentia in different languages, studied." She further asks "that women of wide culture should obtain the necessary qualifications for teaching in elementary schools, and bring 'sweetness and light' into schools suffering from the pressure of numbers, from the hard conditions of the teachers' lives and the depressing surroundings of the children; they might help to make the school what the name implies—a place of refreshment."

## A STUDY OF MARTIN LUTHER.

FROM A NON-THEOLOGICAL STANDPOINT.

THE first place in the *Quarterly Review* for July is devoted to a very careful study of Martin Luther. The author begins by stating:—

In this article we propose to attempt the task of surveying the career, and estimating the work, of Martin Luther.

He disclaims any theological prepossession or prejudice. He studies Luther as a great figure in history, not as a Lutheran or an opponent of Rome.

## A TYPICAL PEASANT—

His point of view may be gathered from the following passage:—

He has himself given us the true key to his character in his well-known boast that he was "a peasant and the son of a peasant." Yes; that is true. Luther was first and before all things a peasant: a German peasant—*Germanissimus*, we may say. From first to last his tone and temper are those of a peasant. He has the mind of a peasant, full of ardent and tumultuous passions, utterly undisciplined, coarse and material in its view of all things, human and divine. He has the virtues of a peasant: doggedness of purpose, indefatigable energy, bull-dog courage. He has the vices of a peasant: extravagance and excess, blind trust and incurable suspicion, boastful self-confidence, and the narrow-mindedness of intense subjectivity and most restricted intellectual vision. His speech is ever that of a peasant. His mind was quite uncritical. Grace of culture was utterly unknown to him. But he wielded with supreme dominion the High Dutch dialect spoken by his countrymen, and made of it the German language. And no less candid and conscientious controversialist than Luther ever lived. Caricature and calumny, rancorous invective and reckless misrepresentation, were his ordinary polemical weapons. Of all the stimulants to popular passion, abuse is the most potent. To Luther must be conceded the distinction of being *facile princeps* in the art of vituperation. No writer with whom we are acquainted comes within measurable distance of him in power of fierce flagellation and fetid foulness. A really astonishing amalgam of unmeasured violence and unrestrained vulgarity does duty with him for argument. To call names, the vilest and most virulent, is merely his method of signifying disagreement.

## BUT A TITAN—

Notwithstanding this defect of Luther's controversial method, the Reviewer cannot blind himself to the essential grandeur of the man. He says:—

All men were in expectation. And Luther appeared: one of the most dramatic figures ever seen on the world's stage: the predestined leader of the great revolution which was to shatter the vast fabric of Christendom and to introduce into the world a new era. Of the greatness, the Titanic greatness of the man, there can be no question. The greatness of the revolution wrought by him is manifest to all men. It is strictly accurate to ascribe to him the Protestant Reformation and all that came of it.

Nor was it only the Protestant Reformation which we owe to him. The true reformation, as Cardinal Manning used to be never weary of impressing upon us, was that which was accomplished by the Council of Trent, and the Reviewer lays stress upon the fact that but for Luther no such Council would have been held.

## WHO REFORMED ROME AND BEGOT THE REVOLUTION.

Luther, in fact, exercised an influence upon the Roman Church second only to that which he exerted on the Church which bears his name. The Reviewer says:—

Luther's Revolution served the cause of Roman Catholicism in another way. It imposed upon Roman Catholics the necessity of giving a rational account of the faith that was in them. It sent them back to a study of the sources of their

doctrines, long buried under a mass of sophisms and superstitions. It quickened into new life both their theology and their philosophy. Nor is this all. In religion, as elsewhere, perpetual combat is the law and the condition of vitality. Orthodox or Evangelical Protestantism, which is still a considerable power in the world, was Luther's creation. Nor is it only in the distinctly religious domain that Luther's teaching has been so influential and so far-reaching. The French Revolutionists, like the Anabaptists before them, merely applied in the sphere of politics the principles which Luther had laid down in the sphere of theology. They are debtors to Luther for that doctrine of the sovereignty of the individual which is the very foundation of Rousseau's "Contrat Social."

## THE REVERSE OF THE MEDAL.

Luther's influence thus operated in many directions, producing many results from which Luther himself would have recoiled in horror:—

If any fact of history is certain, it is this: that Luther's so-called "evangelical freedom" was the absolute destruction of all freedom of conscience. One immediate result, then, of the Lutheran Revolution was to rivet the spiritual slavery of the German people. Another was to fit them for that slavery by undermining such moral ideals as the indulgence-mongers had left among them. There is much evidence to show that one immediate consequence of his Revolution was a frightful increase of wickedness and vice. Luther's own testimony to the fact is copious, and would be conclusive, if we could be quite sure that it is not vitiated by his habitual exaggeration. He does not hesitate to say that the last state of the regions which had received his teaching was worse than the first; and he owns that his doctrine of justification, as popularly apprehended, or misapprehended, was largely responsible for this result. As his life draws to a close, so does his view of the moral effect of his work grow darker and darker. And here, no doubt, is one reason of the ever-increasing melancholy which characterises his later years. Again, the immediate influence of Lutheranism upon intellectual cultivation was such as to realise the worst fears of Erasmus.

## HIS CHIEF SERVICE.

Nevertheless, notwithstanding these mischiefs which Luther himself deplored as much as any one, the Reviewer concludes that on the whole Luther relieved the spirit of man from an intolerable bondage.

The principles in virtue of which Luther broke the yoke of indulgence-mongers are equally fatal—although Luther did not perceive it—to the yoke of Bibliolaters. And so we may, with Goethe, confess a debt to him in respect of that freedom from the fetters of spiritual narrowness—"von den Fesseln geistiger Borniertheit"—characteristic of this new age, which is of all liberties the most precious, which is the true foundation and the real safeguard of all.

THE *Church Quarterly* for July is a very full number. The first paper discusses the abstruse question of the relation between our Lord's divine and human knowledge, and suggests an explanatory analogy in the relation of memory to consciousness. As memory lies behind consciousness, and can at will be called on to supply former knowledge, so behind the human consciousness of Jesus lay Divine omniscience, from which particulars could be summoned at will. Next in value may be placed a sketch of St. Catharine of Genoa, with special stress on her theory of unconscious sanctification. The S.P.C.K. is energetically denounced for issuing a translation of Maspero's "*Mémoires des Peuples*," which is declared to be a deliberate falsification of much that Maspero wrote in order to make the English version square with S.P.C.K. orthodoxy. There is also an interesting sketch of Nicholas Breakspear, the one English Pope, and a keen appreciation of George Meredith's poetry.

## A TRIBUTE TO BISHOP COLENZO.

BY DEAN FARRAR.

IN the *Temple Magazine* for August, Dean Farrar pays a tribute to Bishop Colenso as one of the group of Bishops and Deans whom he has known well. The article is of exceptional interest owing to the evidence which it affords of the change in the theological perspective that has taken place in the last thirty years:—

The next Bishop whom I knew intimately was Bishop Colenso. I was grieved to see him universally treated as if he were a pariah. In his book on the "Pentateuch" he has referred to the fact that I had been asked to write the article on "Deluge" for Smith's "Dictionary of the Bible." I wrote it, but took the views about the non-universality of the Deluge which most inquirers now hold. The editor and publishers, alarmed at this deviation from stereotyped opinion, postponed the insertion of the article, and in vol. i. inserted "Deluge: see Flood." But even when they had got as far as "Flood," they had not made up their minds, and said "Flood: see Noah." My article was consequently sacrificed; for "Noah" had already been assigned to the present Bishop of Worcester. Yet after all, Dr. Perowne (as he then was) came to much the same conclusion as myself; for he wrote, "that even the language used with regard to the Flood itself—strong as it undoubtedly is—does not oblige us to suppose that the Deluge was universal." The Bishop of Natal had alluded to and commented on this fact, and wrote to me about it. Indignant at the utterly shameful treatment which he was receiving at all hands, and glad to show my humble sympathy with a noble-hearted man, conspicuous for the ardent and fearless sincerity of his love of truth, I wrote to ask him to stay with me at Harrow. He had himself in former days been a Harrow Master, and he intensely enjoyed one or two quiet and happy Sundays with us. In those days, if a Bishop happened to be present in Harrow School Chapel, it was the custom to ask him to pronounce the benediction. Bishop Colenso did so; and will it be believed that numbers of letters came from parents, objecting that their sons should be blessed by one whom, in their utter ignorance of all the merits of the questions involved, they chose with great injustice to stigmatise as a heretic! The burden of this disagreeable correspondence fell, not on me but on the headmaster; and consequently, when next the Bishop wrote to offer himself for a Sunday, I had with the deepest regret to ask him to come on a week-day instead. The persecution he incurred—which even went to the length of an impotent attempt to deprive him of his bishopric, and to reduce him to the condition of a pauper by robbing him of his income—was as incredible as it was infamous. I well remember his telling me that he found it by no means easy to get servants; and that his laundress had actually declined to wash for him any more, because by doing so she lost customers! I remember, too, that once when I had been preaching in a large West End church, the Bishop invited me to his house, and I walked out of the church with him, he taking my arm. As his tall form was seen amid the throng of worshippers, he was recognised as he left the church, and I heard audible and awestruck whispers, "He's walking with Bishop Colenso!" He faced this tornado of abuse, and these hurricanes of universal anathema, with the calmest dignity. He never once lost his temper; he never returned so much as one angry word to men who had heaped on him every species of abuse and contempt, and of whom many were incomparably his inferiors, not only in learning but in every grace. A touch of humour helped him. He told me how, once, seeing an English bishop at Euston Station, the bishop to his great surprise advanced most cordially to meet him, and gave him a warm shake of the hand, which Colenso as warmly returned. But, alas! the next moment the English prelate said, "The Bishop of Calcutta, I believe?" (or some other see). "No," replied Colenso, "the Bishop of Natal." The effect, he said, was electrical. The English bishop almost rebounded with an "Oh!" and left him with a much-alarmed and distant bow, as though after shaking hands with him he needed a purifying bath. Three of the greatest English bishops—

Archbishop Tait, Bishop Philpot, and Bishop Thirlwall—always held aloof from the combination of Colenso's persecutors. When questioned about the literal accuracy of parts of Scripture, which were perhaps never meant to be literally understood, "My heart," he says, "answered in the words of the prophet, Shall a man speak lies in the name of the Lord? I dared not do so." Future times will remember Bishop Colenso with honour and gratitude, when the names of nineteenth-century accusers have been buried in merciful oblivion. They will remember how, almost alone among Colonial bishops, he not only devoted nearly the whole of his years to the duties of his see until his death, but also, "with intense, indefatigable labour," mastered the Zulu language, and, in the cause of the oppressed, braved all hostile combinations. I only trust that his countless enemies and impugnors may have been enabled to meet their last hour with as much certainty of hearing the words, "Servant of God, well done!" as this Bishop, with his boundless self-sacrifice, his incorruptible veracity, the charm of his simple Christian dignity, the blameless tenor of his innocence, and the singular sweetness and serene magnanimity of a temper which ever returned good for evil, and blessing for unqualified abuse.

## The Kaiser's Consort.

THE *Lady's Realm* for August contains a sketch of the German Empress, written by a German Countess. From this it seems that the Kaiserin is by no means the mere hausfrau and hausmutter which some have depicted her. Says the writer:—

The Empress is above everything a strong Churchwoman; it is entirely through her that the Emperor now lays so much stress on the necessity of religious education and religious observances, both he and the Empress giving thousands every year towards the erection of new churches. Formerly there was much more freedom as regards religious views than is now the case in Germany, the strict view now taken as regards the Church being entirely owing to the influence of the present Empress.

Here is a characteristic domestic trait:—

The Empress is extremely economical as regards the clothing of her children, and the suits of the elder Princes are often cut down to fit their younger brothers, and when too old to be worn by them are given away to poor children.

## British Volcanoes.

"A TOUR of the British Volcanoes" strikes on the ear somewhat ominously, as though our "tight little island" had broken loose in a wild delirium of eruption. It is however only the harmless and edifying suggestion of Mr. Henry Walker, F.G.S., in the August *Leisure Hour*, that we should make tour of the spots in Britain where volcanoes were once active. There is much to see:—

In central England, the Leicestershire volcanoes, amid the crags of Ochnwood Forest, await us. In the heart of the Malvern Hills are the Worcestershire and Herefordshire volcanoes, the great central ridge loftily looming over the wide landscape. In picturesque Devonshire, amid the most placid and verdurous landscapes, as well as in Snowdonia; at Cader Idris, at Edinburgh, the Pentland Hills, and among the wonderful Western Isles, the successive volcanic ages have left memorials which astonish even the most hardened sightseer. In the Lake district of England, near Keswick, we shall find a stupendous volcanic accumulation of lava and ashes 8000 feet in thickness. In Derbyshire, from the picturesque country of the Peak southwards, the sight of the "toadstones" will give us pause. What is now the heart of England was once dotted with volcanic vents from which the "toadstones" were ejected.

BEYOND the bright paper on the great dynamite factory at Ardeer, which claims separate notice, the only important article in *McClure's* for August is the story of the meeting for the first time of Grant and Lincoln.

## A FRENCHWOMAN'S VISIT TO LADAK.

In the first July number of the *Revue des Deux Mondes* Madame Isabelle Massieu narrates in a very lively and interesting fashion the story of her visit to Ladak, in Thibet. This visit formed only a small part of this adventurous French lady's travels in British and Portuguese India, Afghanistan, etc. She was at Srinagar, the capital of Kashmir, intending to return to Europe by way of the Pamirs and Turkestan, when the British Foreign Office stopped her from taking the road to Gilgit and so over the "Roof of the World." She therefore decided to pay a visit to Leh, the capital of Ladak, in British Thibet.

Madame Massieu mentions with special gratitude the help given her by Sir Dennis FitzPatrick, Lieutenant-Governor of the Punjab. The town of Leh is fifteen days' journey to the east of Srinagar, and our traveller, whose caravan consisted of four chief servants with a crowd of coolies and other understrappers, makes a kind of diary of her experiences. She notes the great herds of goats, against whose destructive ravages the Indian Government carefully protect the forests of the Punjab. These goats are herded by a splendid race of men from Kangang. Their beauty is of the Greek type, with flashing eyes, beautiful black beards, and straight, good noses. Their women, dressed like themselves in blue, are not less beautiful in their way, with their magnificent turquoise necklaces, their fair white arms supporting the burdens which they bear on their heads, and their laughing eyes and general air of enjoying life. When Madame Massieu had said good-bye to the verdant country of Kashmir, she came to the curious caves of Ambarmath, where Hindu devotees of both sexes come amid bitter cold and snow to pray in ceremonial nakedness.

It is curious to observe how different were the social organisations which Madame Massieu met with in the course of her journey of a good deal less than a hundred miles. In Baltistan she found polygamy of the ordinary kind; but among the Thibetans, the Bhotis, polyandry prevails—that is to say, three or four brothers are married to one woman, who also has the right, which she freely exercises, of adding to the number of her husbands. This custom of polyandry is, after all, very natural, for the country is not at all fertile, and the inhabitants are afraid that if they had large families they would not be able to obtain sustenance for them. A remarkable feature of the Thibetan landscape is furnished by the *tschortens*—little Buddhist monuments, circular in shape, and placed outside the villages in the most deserted and perilous places. They are really mausoleums or cemeteries, both public and private, in which are arranged little cones like pastilles, made of the burnt ashes of the dead, mingled with earth, and fashioned into a rude resemblance of Buddha. Some specimens are as large as a fine pear. The surrounding walls are covered with prayers graven in the Sanscrit or Thibetan character. These prayers are considered to have been offered by every person who passes by them, provided that he or she goes to the right; passing to the left would have a disastrous effect, like that of saying the Lord's Prayer backwards in mediæval superstition. The whole idea is curiously like the praying wheels of China, which have only to be turned round in order to offer the prayers written on them. Madame Massieu was highly amused with that extraordinary beast the yak, as well

as with the still more singular animal obtained by crossing the yak with the mule. The women of Ladak are absolutely different from Mohammedan women. They dress in bright colours and wear a sort of châtelaine, from which hangs down a varied assortment of spoons, articles of toilet, keys, a purse, and so on, which clash and clatter as they walk. They have smiling faces and an air of confidence engendered by their experience in household management. Madame Massieu thought the old ones were ugly and the young ones agreeable without being exactly pretty. Madame Massieu speaks highly of Captain Trench, the Indian Government official, who shares with the Wazir sent by the Maharajah of Kashmir the jurisdiction of commercial affairs. The people of Leh are fond of *batchas*, or dancing youths, who perform in gauzy girls' clothes with very feminine grace. The women wear a *peyrak*, or band of turquoises, which runs over the forehead and down the back in the middle of their long black hair. These *peyraks* are handed down as heirlooms from mother to daughter. Mohammedanism is making great strides in Asia, and has practically converted the whole of Baltistan, which was formerly Buddhist. Madame Massieu has a poor opinion of the *lamas* or Buddhist priests, whom she stigmatises as ignorant and sensual.

## London's Defects as a Capital.

MR. H. H. STATHAM, the editor of the *Builder*, contributes to the *National Review* for June a paper on "London as a Jubilee City." He complains that the chief shortcomings of London as a capital is that it is almost entirely devoid of qualities of spaciousness and stateliness. It is not so much like a capital city as like a very large and overgrown provincial town. He compares Paris with London, very much to the detriment of London. Mr. Statham thinks that we have distinctly gone backward since the earlier part of the century. Regent Street was laid out early in the century, with one really fine building in it, Hanover Chapel, but by way of improving Regent Street we have pulled down the only piece of architecture in it. The Palace of Westminster is the one, in its general conception of plan and design, unquestionably the finest building for a legislative palace in the world. For once in our modern history we did a grand thing in the way of a public building, but the Government offices were a failure, and the new Admiralty Office a melancholy and humiliating spectacle. His survey of London as it is points out what might have been done, and deplores that everywhere procrastination and delay prevail, and anything that concerns beauty and amenity of London is allowed to wait till the Greek Kalends. Thirty years ago London made the Holborn Viaduct and the Thames Embankment, but since then little or nothing has been done that is worth doing. Even in bridges we have gone backward. The Tower Bridge is the most gigantic sham, and the most wretched piece of architectural falsehood and vulgarity that was ever perpetrated. He admits, however, that there is a better style of architecture coming into vogue in our street houses. He is much impressed that, of all the schemes suggested for celebrating the Jubilee, there is an entire absence of any suggestion for an artistic monument of the Queen's reign. In France all the leading artists of the country would have been set to work on a grand competition for the finest monument that could be produced to commemorate the occasion in a worthy and a glorious manner, but our dull minds rise to nothing more exhilarating than founding hospital wards.

## THE RETURN OF THE JEWS TO PALESTINE.

## A PROBABLE FULFILLING OF THE PROPHECIES.

THERE are few subjects which exercise so perennial a fascination over the mind of many good people as the possibility of such a magnificent fulfilling of the prophecies as would be involved in the return of the Jews to Palestine. Dr. Emil Reich contributes to the *Nineteenth Century* for August an article which will fill these good people with ecstatic delight, for he tells us that the Jews are actually moving back to the Holy Land, moving along into two distinct groups, to which he gives the names of the Religious and Political Zionists. The Religious Zionists are already in the field sending out colonists every year, so that they have already begun the re-peopling of the Holy Land by the Chosen People, but of much more interest is the action of the Political Zionists, who have started their movement as a kind of counterblast to Anti-Semitism.

The work of the political Zionists has been up to this writing one of open propaganda for the establishment of a new Jewish State proper. Dr. Herzl, in a pamphlet published last year in several languages, boldly advances the idea that whereas the condition of the Jews in Christian countries is at present one of unbearable humiliation; and whereas Antisemitism, or the engine of that general hatred and persecution of the modern Jews, is triumphant to a degree, so that no plausible means of stemming its tide can be, nor has been, suggested: be it resolved, that the Jews of all countries, who after all are nothing but Jews, and have never, nor will they ever, really assimilate with the nations among whom they live—that the Jews, the Doctor says, shall abandon the inhospitable fields of Europe, and, repairing to Palestine, there re-establish their ancient State. Nor is the great journalist at a loss as to the precise institutions, laws, constitution, etc., to be adopted by that new State.

A Congress is to be held in this very month of August in the town of Basle, in Switzerland, for the purpose of discussing this scheme:—

Dr. Herzl's proposal has met with great sympathy in nearly all large centres of Judaism; and the discussions and correspondence in reference to the new Jewish State have waxed to a prodigious mass. The Congress will be held; and for the first time since the sixties of the seventeenth century the question of a wholesale return of Jews to Palestine will be seriously discussed before Christian Europe.

Dr. Emil Reich, who describes this new and interesting development of the Jews, does not think that Zionism is likely to succeed at present, or on its present basis, simply because its Moses has not yet appeared. It must be admitted that Max Nordau is a very poor substitute for Moses. Dr. Emil Reich says:—

The religious Zionists, therefore, by suppressing the national element in the dual character of Judaism, place themselves in an altogether false position, and will never achieve what in their innermost hearts they ardently wish to realise. The political Zionists, of the type of Dr. Nordau and Dr. Herzl, commit the opposite mistake or false feint; they suppress and disregard the religious element in the dual character of Judaism, and will consequently achieve still less than their opponents. It is hopeless to appeal to purely utilitarian and opportunist motives in trying to move a complex of people whose great hope and central interest are of a religious character. An exodus of Jews cannot be brought about by a power propped up by considerations of mere nationalism. For in the first place there are no greater Antisemites than many of the Jews themselves. It is no exaggeration to say that nearly all modern Jews, who have received a genteel education at colleges and universities, are more inclined to Antisemitism than Christians of the same social status. It is mere folly to think that those antisemitic Jews who are amongst the best gifted and the most influ-

ential will associate themselves in a risky enterprise with the very people whom they inwardly detest. He who undertakes to unite men of so utterly divergent opinions and emotional tempers must needs have recourse to the one and solitary agency that can work such marvels—to religion. The two doctors, however, disregard religion; their enterprise is therefore divested of all chances of success. The exodus of the Jews of to-day from Europe can only be made in a manner in no way different from that in which was achieved their exodus from Egypt some 3000 years ago. A Moses is required; a man full of divine inspiration and an energy fraught with religious zeal. Religion is not, like feudalism or guilds, a mere phenomenon of the middle ages; it is an historic category, an indestructible factor of all national life, and, with the Jews, the factor of all the factors. The antisemitic Jews will keep aloof from Dr. Herzl's enterprise because they dislike the nationality which the doctor wants to perpetuate. The pious and loyal Jews will keep aloof from it because it disregards the religious element of Judaism.

## BARNEY BARNATO.

## HIS CAREER AND HIS PHILOSOPHY.

MR. HARRY RAYMOND contributes to the *Contemporary Review* some account of Mr. Barnato, with whom he seems to have been on terms of intimate friendship. Mr. Raymond says:—

His early education in the Aldgate Jewish Free School was most elementary; and there for his life his book-learning ended. He never read books, and only occasionally skimmed newspapers. Speaking of the South African papers, he said he knew all he wanted to know before the papers were published, and as for books, "It is cheaper for me to pay a man to pick out what I want than to waste time myself in looking for it." For art he cared nothing, and his only criticism of pictures was from the story-telling point of view.

Here is Mr. Barnato's philosophy of life as summarised by him in conversation with Mr. Raymond:—

"If you are going to fight," he said, "always get in first blow. If a man is going to hit you, hit him first and say, 'If you try that I'll hit you again.' It is no use your standing off and saying 'If you hit me I'll hit you back.' D'ye understand?" "Yes, I understand," I answered, "but you are quoting Kingsley in 'Westward Ho!'" "Who was Kingsley and 'Westward Ho!'" he sharply queried. After I had explained and quoted the passage from Drake's letter to Amyas Leigh, he said, "Ah! I did not know anything of Kingsley, but when he wrote that he knew what life was and he was right and I am right, though it is queer for me to get a supporter in one of your persons. If he was a true man he would also have to agree with our law of 'an eye for an eye and a tooth for a tooth,' but being a Christian of course he couldn't do that. Pah! never let a man wrong you without getting square, no matter how long you wait, and never wrong a man if you can help it, because he will wait his time to get back on you and at the worst possible moment. I don't care whether it is Jew or Gentile, it is all the same."

Mr. Raymond gives several interesting particulars as to the way in which Mr. Barnato made his fortune. He seems to have had an extraordinary capacity for mastering every detail of every business that he handled, and he speedily acquired a position which made him virtually master of the South African market. Mr. Raymond says:—

In every good thing that was floated he had therefore to be consulted and considered, and let in to secure his help. The result has been, as he himself frankly admitted, that he made more money by aiding or frustrating the plans of others, operations in which he never appeared at all, than by the long years of unremitting attention to his own projects. In this connection he achieved some remarkable deals, and the scale and apparent recklessness of his operations were such as

struck awe into more ordinary men. Yet having once planned out his course of action, he never after swerved from it, and less than twelve months ago he declared to the writer, "Worry! nonsense, I have never had a business worry since we began the Kimberley amalgamation when I had to plunge, win or lose all." It has before been said of men that all they touched turned to gold, and here was a man who for seventeen years had never had a plan miscarry.

Mr. Barnato was indeed a modern Midas, but although he amassed millions to an extent beyond the dreams of avarice, he was destined once more to prove the truth of the solemn saying, "What doth it profit a man if he gain the whole world and lose his own soul," for Barnato lost his life in the making of wealth. There is a tragic pathos in the following incident which Mr. Raymond reports as occurring one morning when they were watching some boxing:—

Suddenly Mr. Barnato turned to me and, gripping my arm fiercely, said, "D'ye know what would do me good? Twenty minutes with the gloves every morning. But I can't do it now. I have hardly time to live." A few days later, and with as sudden an interruption, he said, "D'ye know, there is one thing I don't like? I never felt my work too much for me before. I could come home, leave it all behind me, go to bed and forget it. I can't now. I go to bed with it, sleep with it, dream of it, and wake up with it. I don't like it, I tell you."

Seldom has the Nemesis which makes business success itself a vampire, turning the joy of life into ashes, been more simply described. It is one of the terrible things often witnessed in other professions besides that of the mere money maker, that too great concentration upon one object, although it attains success, nevertheless converts success itself into a kind of vampire which drains the lifeblood of the soul:

## IN QUEST OF A GHOST.

### THE TRUTH ABOUT BALLACHIN.

THE *Times* correspondent, who had spent two days in the country house of Ballachin, which was said to have been haunted, without experiencing any unusual phenomena, devoted himself in the month of June to an elaborate exposition of the absurdity of the story. It did not matter that several others who had devoted much longer time, and taken much greater pains than himself, had ample experience of phenomena inexplicable to any of the hypotheses which he had used; it was sufficient for him that he had seen nothing, or heard nothing, and, therefore, all those who had seen or heard or felt anything must be fools or knaves.

Now it so happened that the lady who acted as hostess at Ballachin was no other than Miss X., who is well known in connection both with the Psychical Research Society and *Borderland*. In the *Nineteenth Century* for August, without even so much as once naming the name Ballachin, she describes the result of her experience. Dealing incidentally with the Psychical Research Society, and the various absurdities of the *Times* correspondent, of her own qualifications as an observer she says:—

I have lived at different times in three houses with the same character, and have visited many others, in some cases with the satisfactory result of discovering the clue to the mystery, and laying the "ghost" for ever. I can only repeat that I can conceive of no sane person unwilling to occupy the house alone, or to visit its any and every corner in light or dark; I myself, and I think I may say most of our visitors, would willingly do so.

Of her guests she makes a special point of the fact that they were not asked as experts, nor were they brought together with the overpowering suggestion of ghostly

presences in the house. The idea was to take a house said to be haunted, bring together a number of guests just as if they were a country house party in a non-haunted house, and then to collect the evidence. Miss X. says:—

As a matter of fact, on the theory of the value of absence of self-consciousness in our observations, out of the thirty-four persons who visited the house four only (besides Colonel Taylor and myself) were members of the Society for Psychical Research, and all were personal friends except two or three who were introduced by other guests. About half-a-dozen other members were asked, but for various reasons were unable to come. Several among our visitors had more or less special interest in the inquiry, but others merely came for a country-house visit, or for sport, and some knew nothing whatever, till after their arrival, of any special interest alleged to attach to the house.

The visits of the ladies, three of whom came in succession to act as chaperon, were in most cases of some duration; those of the men, except of course Colonel Taylor, who stayed five weeks, ranged from three days to a fortnight. In three instances men who had paid one visit without any "experience" were rewarded for their perseverance on the occasion of a second. Analysing our list of guests, I find that there were eleven ladies, twenty-one gentlemen, and the *Times* correspondent. Of the gentlemen, three were soldiers, three lawyers, two were men of letters, one an artist, two were in business, four were clergy, one a physician (it was to my great regret that none of seven others invited, belonging to this busy profession, could come), and five, men of leisure. I don't know whether it is worth while to record that five of the eleven ladies were married.

Of the thirty-two guests, eighteen besides myself gave willing testimony to the occurrence of sounds which they found themselves unable to explain, and four to the hearing of noises which, not knowing the habits of the household or the structure of the house, they had regarded, possibly with justice, as normal.

The remaining eleven drew blanks.

The phenomena recorded in the journal may be dichotomised as (1) audile, (2) visual. The audile subdivide into (1) Footsteps. (2) Voices, more especially a voice as of a person reciting or reading. (3) Raps, which are not what Spiritualists call "intelligent," but simply of a person impatiently demanding entrance at a door. (4) and (5) Noises, which for lack of more descriptive terms we differentiate as (4) the "clang" and (5) the "thud." (6) A detonating noise, heard not very often by us, but reported with great emphasis by other visitors to the house during former years.

The visual phenomena were much more rare, and the evidence is supported by five witnesses only. The phenomena, which were of three kinds, were: (1) seen independently by three witnesses; (2) by two, again independently, the second, not having heard of the earlier experience; and (3) by two separately, but after the first incident had become known to the second seer. This, however, received later unexpected corroboration from the evidence of another visitor of some years ago.

As to the rubbishy hypotheses dwelt upon with such amusing complacency by the *Times* correspondent, she says:—

As the house was not engaged for an idiot asylum, though we were not scientific we exercised some common sense in exhausting, as far as we knew how, all the obvious hypotheses, as, no doubt, had earlier witnesses.

"THE Geography of Communications" is a fourth section of the science which Sir Henry Tyler, in the *Scottish Geographical Magazine* for July, would add to the recognised divisions of geography, physical, political, and mathematical. Lines of communication have been fixed, he says, by commerce, conquest, and conversion or pilgrimage.

## RECENT SOCIALISTIC EXPERIMENTS.

## IN ENGLAND AND ELSEWHERE.

THE other day it was announced that Count Tolstoy's friends are preparing to found a Socialistic or Communistic experimental settlement in Alderney, while others are engaged in making efforts in this direction in Essex. A recent number of the *Economic Review* mentions some colonisation schemes which have been established in this country, but which, however, unfortunately do not seem to be able to pay their way:—

1. The Free Communist and Co-operative Colony at Clousden Hill Farm, Forest Hill, Newcastle. Among the many highly desirable ideals which this Association sets before itself, the most characteristic is "to demonstrate the superiority of Free Communist Association as against the Competitive Production of to-day." Principle No. 8 states that "This Association being constituted on the principles of Liberty and Equality, we do not recognise any other authority but the one of reason, and no member or members shall have any other power than that of reasoning." Or, again, No. 13: "Except in cases of general agreement, no working time shall be fixed or limited, as we believe that, considering these new conditions, each one will do his best, and work according to his abilities, physically or otherwise."

Alas! this excellent society seems to suffer from the prevailing malady of all such idealistic projects. According to the last available balance-sheet, the receipts of the farm amounted to £81 for the half-year, while the outgoings amounted to £228. On this showing competitive production has not much to fear from the rivalry of free communistic institutions.

The second scheme described by the *Economic Review* is the Westmoreland Home Colonisation Experiment. Object: to provide work in English industrial villages for the able-bodied unemployed poor. There are two farms in connection with this scheme, on the first of which, that of Browhead, the last available balance-sheet shows a deficit of £93 excluding subscriptions; on the second the accounts nearly balance, but only with the aid of £359 with donations.

The third case mentioned by the *Economic Review* is that of the Landholders' Court, Winterslow, which seems to be financially very profitable:—

Corn milling and carpentry are the winter occupations; and market gardening and the making of peat moss litter are carried on in the summer. It is a sort of system of small holdings. "It is really," says Major Poore, "the restoration of the procedure of a manor." The only novelty about it, however, unless the allotment of five-shilling shares to the tenants is to be called such, is the establishment of a court, consisting of the directors, who try all cases in dispute. It is now the end of the fourth year of this experiment. At the outset Major Poore advanced £1,768 8s. 7d. for purchase of farms, etc. Since then, £50 has been advanced to members on mortgage, and yet, by July 31st, 1894, £1,832 17s. 8d. had been repaid, and there was a balance of £64 9s. 1d. This has swelled in the succeeding year to £237 3s. 5d. On February 5th, 1897, Major Poore writes, "I have as yet no arrears, nor has any tenant fallen out of line."

## COLONIAL SOCIALISM.

The *Australasian Review of Reviews* for February says:—

The Victorian Factories and Shops Act is being watched with keen interest all over the world as a political experiment of the most curious sort. The Act, for example, undertakes to fix a minimum wage for certain trades. It is an accepted doctrine of political economy that the selling price of any article determines the amount to be spent in its production. If it cannot be produced for the amount it commands in the market it must cease to be produced at all. The Victorian Act ignores that law; and, in certain trades, makes it a penal

offence to pay below a given wage. The Victorian Act makes it penal for any one in the trades affected to work, either for himself or for any one else, before 7 a.m. or after 5 p.m. In these particular trades to rise early or to work late—performances which a more primitive generation looked upon as virtues—are made crimes. Laundry work is covered by the Act, and every Chinaman who toils over a washtub is regarded as constituting in his single person an entire "factory," and has to be inspected and regulated from that point of view. In two cases a Chinaman found working at his washtub after 5 p.m. has been brought before a magistrate and fined. This is an aspect of the measure which, so far, only kindles the mirth of the light-minded.

## THE RAILWAY NATIONALISATION LEAGUE.

THE yoke of the railway is heavy upon the land. That, most wealthy Americans will tell you, is one cause of the astonishing although temporary enthusiasm which led to the nomination of Mr. Bryan for the American presidency. There is nothing like the same bitter feeling in this country against railways as that which exists in the United States west of Chicago, but the Railway Nationalisation League, whose offices are to be found at 47, Victoria Street, S.W., is steadily working up the agitation in favour of the nationalisation of our railway system. Their last issued manifesto sets forth under nineteen heads the reasons why they think railways should pass into the hands of the State. Here are a few of them:—

The monopoly of the chief means of transit is too important to be allowed to remain with private companies, who naturally prefer personal to public interests, and who practically charge their own fares and rates.

The telegraphs, under six directorates, afford an exact parallel to the railways, under about 250 directorates. In 1870 the Telegraph Companies had 3,000 stations, other places being ignored on the non-paying principle, and the average message cost 2s. 2d. In 1894, under the State, there were 10,000 stations, irrespective of profit, and the average cost per message was 7d. Instead of mileage charges, the rate was made uniform for one mile or 800 miles.

Central control and unification will save about £10,000,000 in working expenses yearly.

The high rates and fares defeat the object, i.e., dividends, because one penny per mile for third-class (the only remunerative passenger traffic) is prohibitive, hence the average passenger train runs with seven-eighths of empty seats. Excursion trains are run at from 2 to 3 miles per penny, and are highly profitable from the numbers carried. These trains are crowded from their fewness; but with such fares at all times, trains would be comfortably filled and profitable to both parties, for it pays to carry five for 2d. better than it does two for 2d. The 911,412,926 passengers of 1894 paid only £28,214,405, or 7½d. per head per annum.

The companies look upon the travelling public as a fixed number from whose pockets they must abstract as much as possible; but millions never travel, e.g., 13,000,000 of working men and women average 16s. weekly wages, many of whom when unemployed tramp the country looking for work. For every 14s. 1d. the London workman pays on rail to his work, the Brussels workman only pays 5s. 7d. Supposing that half this number cannot pay present fares, yet with farthing a mile fares or less, and an average of twenty journeys per head per annum, these workers might then travel and railway receipts be increased by the additional 130,000,000 fares.

The general Zone fare on the Austro-Hungary State Railways is 3 miles per penny; but on certain lines it is much less, e.g., from Buda-Pesth to Cronstadt, 457 miles, it is 6s. 8d.

State Railways would give cheapest possible fares and rates; the unemployed would find work from easy, cheap access to all parts; many slum-dwellers would remove to the country where agriculture would revive; improved health and surroundings would give a higher moral and physical nature; there would then be less workhouses and prisons, less taxation, less poverty, less vice.

## A NOVELTY IN MUNICIPAL REFORM.

BY MAYOR PINGREE.

THE Hon. H. E. Pingree, the Governor of Michigan, and many times the Mayor of Detroit, is the most notable Mayor and most remarkable municipal administrator in the United States. We therefore turned with much interest to the brief but pungent article in the *Arena* for April, in which he discusses the problem of municipal reform, and advocates the extraordinary novelty of letting contracts by Referendum! He complains somewhat sardonically at the beginning of his paper that the number of persons who are wielding pens and wagging tongues over the problem of municipal government is altogether out of proportion to the number of those who are doing any practical work; and the worst of it is that, when any one happens to grab a grub hoe and strikes out into a municipal field, all the essayists and preachers and orators come down upon him with a deluge of criticisms as to the size of his boots, the way in which he wields the hoe, or the fashion in which he sends the dirt flying; but, says the Governor, there is no elegant way of doing such work. Most cities in America, he says, are governed by a body of men hired by a special interest before or after election to steal contracts from the city. Almost all the bribes of serious importance in municipalities are given for contracts. Contracts, therefore—good fat contracts—furnish the chief problem in municipal government. Therefore Mr. Pingree, with characteristic daring and originality, proposes that all contracts of importance should be referred to the mass of voting people. The following table gives the gist of Mayor Pingree's proposal:—

Municipal ownership will provide the minimum of contracts of importance, and there is no reason why a city should not do all public work, like paving and sewer-construction, etc., by the day. The referendum would change all this as quickly as a ballot can be taken. The ballot is the ultimate system. All other systems are bolstered by private interests. All contracts of importance should be referred to the ballot for confirmation. So far as my experience goes, the standard of morality of a people is the best standard. But if the people desire to amuse themselves by cheating themselves, it is at their own cost expressed in taxes.

Class interests, he maintains, have taken the place of the old robber barons, and they are quite as self-destructive in their methods as their predecessors. Unlike the old robber barons, who met the blows of their opponents in the open field, the moderns lie in the daytime and stab in the dark.

## INSURANCE AGAINST NON-EMPLOYMENT.

WHAT HAS BEEN DONE FOR THE UNEMPLOYED.

THE want of regularity of employment is one of the greatest misfortunes which inflict the industrial community. The time lost when the bread-winner is out of work is a tolerably constant, although always irregular element, which must always be taken into account in regulating the economic position of comfort and discomfort of the working classes. In the *American Journal of Sociology* for May, Mr. Paul Monroe gives a very interesting account of what has been done up to the present time by way of insuring working men against loss occasioned by the lack of employment.

IN SWITZERLAND, GERMANY AND CHICAGO.

He says:—

The following six attempts, then, are all that have become known outside the limited efforts of trade societies to provide for their own unfortunate. These are attempts to provide for

the evil as an inherent one rather than as a temporary inconvenience. The city of Berne, Switzerland, took the initiative in January, 1893. This system, which, with some modifications, is still continued, is upon a voluntary basis. The city of St. Gall, Switzerland, established the second in June, 1895, in conformity with a law passed by the canton St. Gall the previous year. This was a compulsory State system, and was in operation for almost two years. By a plebiscite on November 15th, 1896, the system was abolished on and after January 1st, 1897. This perhaps is the most instructive instance. In the early part of 1896 a system similar to that of Berne was established in Cologne, Germany, to operate during the winter of 1896-7. This was initiated by private philanthropic agencies, but worked in connection with municipal agencies, and received a large municipal subvention. In May, 1896, under the auspices of the Bologna Savings Bank, a similar plan was adopted in Bologna, Italy, to become effective during the winter of 1896-7. In 1895 the grand council of the canton Bale, Switzerland, appointed a committee to investigate the subject and submit a plan. The committee reported the following year and elaborated a plan in greater detail than any previous one. Though the plan was approved it has not yet been made compulsory as a governmental institution. Zurich and Lucerne have also taken steps towards formulation of similar systems. Chicago enterprise, which began business with the current year, is the last of these, and is upon a radically different plan. It is a purely commercial venture similar to the many mutual-insurance companies of the United States.

## THE ACTION OF THE LOCAL GOVERNMENTS.

All these schemes differ in important details:—

The Swiss systems have the guarantee of the local governments, which take the initiative and bear the burden of the financial support. The Cologne system has the partial support of the local government and is entirely guaranteed by public organisation. The Bologna bank is the sole guarantor of that system and only to the extent specified. It is especially provided that the assistance is to continue forty days only in case of sufficient income from the funds appropriated. The Chicago company has the guarantee of the promoters of the enterprise based on private contract. That is, the association is a limited co-partnership.

## HOW THE SCHEME WORKS.

The following summary of payments and of benefits embody in concise form the chief heads of information contained in this article:—

|               | Dues.  | Benefits.  | Maximum duration of benefits. |
|---------------|--|--|-------------------------------|
| CHICAGO.      | \$1.00 per month<br>1.20 per month<br>1.30 per month<br>2.20 per month | \$15.00 per month<br>25.00 per month<br>30.00 per month<br>75.00 per month                           | 4 months out of 12            |
| COLOGNE.      | 25 pfennigs per week   | 2 marks for first 20 days; 1 mark for 28 days<br>1 mark 20 pf. for first 20 days, 60 pf. for 28 days | 8 weeks                       |
| BERNE 1893-5. | 40 centimes per week<br>1 1/2 fr. per day                              | 1 fr. per day<br>1 1/2 fr. per day   | 8 weeks                       |

## A PLEA FOR CHILDREN IN PRISONS.

BY ONE OF JAMESON'S OFFICERS.

THERE is no method of promoting prison reform so excellent as the locking-up in gaol of articulate men and women who have committed no real crime, and whose incarceration, instead of impairing, increases the respect with which what they have to say is listened to by the public. For some time I was rather afraid that the shutting-up of Jameson and his officers in Holloway Gaol was not going to bear the usual fruit of all such imprisonments; but this disappointment was premature. In the *Ninetenth Century* for August we have the firstfruits of this incarceration in a useful and well-informed article written by Major the Hon. Robert White "On the Prison Treatment of Juvenile Offenders." He says:—

I do not presume to speak with any authority on the prison system of this country, a subject for the proper understanding of which a long and practical experience with its various features would be necessary.

However, as one of the officers imprisoned after the Jameson trial in Holloway, I was enabled to obtain a practical personal knowledge of the interior of a prison.

During the seven months of my detention it was possible for me to form an opinion, at least with regard to one aspect of the prison system. I refer to the custody of juvenile offenders while on remand or awaiting trial.

Unconvicted prisoners receive special treatment. Under the existing law they are subjected to cellular treatment; that is to say, they are confined to their cells during the twenty-four hours, except that they are allowed one hour's exercise and spend some twenty minutes in chapel.

No injury may result from this system so far as adults are concerned, but I maintain that it is entirely inapplicable to juvenile offenders, and, indeed, contrary to humanity and common-sense. In the case of the young (i.e., boys under sixteen years of age), a differential system is urgently called for.

The mere fact of incarceration for twenty-four hours with closed doors in a prison cell has an injurious effect on young boys. I am most anxious to avoid any appeal to false sentiment, but it is no exaggeration to say that very few nights were spent in prison without our hearing the sobbing of children who were passing many solitary hours in the gloom and confinement of a prison cell. I am well aware that many of the more hardened offenders were quite capable of resorting to this means of exciting compassion, but I have reason to know that frequent cases occur of genuine terror being caused in youthful minds by the very severe ordeal of solitary confinement in the dark.

So impressed was I with the defects of the system—which I am glad to know from the above is being inquired into—that I made it my business to study the French system of dealing with juvenile offenders. It is well known that public opinion in France is very sensitive as to the treatment of criminal and vagabond children.

It may be of interest to publish the notes which I made in France as showing what attempts are made in other countries to find a solution of the difficulty of keeping children or young persons in safe custody without subjecting them to the moral danger and stigma of ordinary imprisonment as applied to adults.

To obtain a comprehensive view of the French system, I followed step by step the process of dealing with juveniles in Paris, from the moment of arrest until they are finally disposed of, by discharge, by a sentence of imprisonment, or by being placed in situations in the country or elsewhere, where they may obtain a fresh start in life.

I did not confine myself to visiting the various police-stations, houses of detention, depots, etc., where juvenile offenders are confined at the various stages. Through the kind assistance of Mr. Spearman, who is resident in Paris and thoroughly acquainted with the officials and working of many public

departments, I was enabled to interview the directors of these various establishments, and to be present at the examination by the *juges d'instruction* of boys and girls brought before them.

It is obvious that so far as Bobby White was concerned it has been a good thing for our criminally disposed youngsters that he should have been locked up in jail. His paper is too detailed to be summarised, but it is quite obvious that in dealing with juvenile offenders, they do those things better in France. If Major White will look into the treatment of criminous youth in the Australian Colonies, he will also find much to interest him, and if he has not seen the Rev. Benjamin Waugh's excellent little book, "The Jail Cradle, and Who Rocks It," he will do well to obtain a copy without delay.

## A CHILDREN'S REPUBLIC.

THE kindergarten method of teaching politics has long been made familiar by "local parliaments," but has probably never been given so large an experiment as in the "George Junior Republic," described by Mr. Wm. J. Hull in the *Annals of the American Academy* for July. It came strangely into existence. A little street boy in New York saw what he supposed was a dandelion growing in City Hall Park. He ran up to it with glee, and found to his dismay it was only a piece of orange-peel. His disappointment, reported in one of the evening papers (April, 1890), caught the attention of Wm. R. George, a philanthropic worker among the tenements. He resolved the gutter urchins should see the real country. For six years he took over two hundred children from the slums to the fields. In 1895 he changed his summer's camping party into a miniature Republic, near Freeville, in sight of Cornell University:—

The territory of the Republic is even smaller than that of San Marino, being only forty-eight acres in extent, and its buildings are few and simple. In the winter its inhabitants are only forty-four in number, twenty-seven boys and seventeen girls; and in the summer, when the tide of immigration rolls in, the population increases to two hundred and fifty, and tents are erected to supplement the few simple buildings. But within these simple environments transpire the political, industrial, educational, religious, and other social events which the name Republic implies.

There is a boy-president whose veto only a two-thirds vote of Congress can upset. Congress consists of the two houses and can only pass laws in harmony with the Federal and State Constitutions. Girls have votes—an improvement on the adult Republic. There is a police force, which it is always the slum-boy's dream to enter. The officers are in uniform and are generally unquestioningly obeyed. The judicial system is the State system in miniature. Judges, jury, attorneys are all supplied from the ranks of the ordinary citizen. There is a gaol, with thirty-two convicts in the first, and eight in the second half of the season. There is a militia comprising all boy citizens. As Mr. Hull says:—

The experiment is a most interesting one in the direction of applying the American idea of self-government to the control of boys and girls, many of whom have been pronounced incorrigible; and because the success met with in the enforcement of good conduct affords much encouragement to those who believe in the truth and efficiency of that idea.

As with politics so with industry, the dwarf proportions of the great world are reproduced. Wages are paid—in a special tin currency—and the jobs are let out to a contractor.

These "citizens" are put in Mr. George's care either by the magistrates or by their own parents.

## THE CHILDREN OF THE STATE.

FROM AN AMERICAN POINT OF VIEW.

DR. H. S. WILLIAMS contributed to a recent number of the *North American Review* an article in which he discusses what shall be done with dependent children. The problem, it would seem, is as urgent in the New World as it is in the Old. He says:—

As nearly as can be ascertained, there are about one hundred thousand children in the United States that are public charges. About one-fourth of these are classed as juvenile delinquents or as defectives, including the blind, deaf and dumb, and feeble-minded. The remaining seventy-five thousand are dependent not through any intrinsic defect, but through orphanage or desertion, or because their parents are incapable of caring for them, or have been adjudged unfit to do so. The community has, therefore, assumed guardianship over them, and cares for them in various institutions provided for the purpose. The cost of their maintenance in these institutions is, in round numbers, about ten millions of dollars a year.

After discussing the various methods by which the different cities deal with the charge, Dr. Williams thus sums up his conception of the duty which the modern State should recognise in relation to those helpless ones:—

No State can claim to have done its full duty by this class of its charges until it has fulfilled efficiently the following conditions:

1. The assumption of official charge of all dependent children of whatever class.
2. The removal of all such children over two years of age from almshouses.
3. The provision of separate institutions for each of the following classes: (a) feeble-minded, (b) epileptic, (c) deaf and dumb, (d) blind, (e) juvenile delinquents.
4. The provision of temporary homes in institutions or in private families for all other dependent children, and of permanent homes for them exclusively in private families, as expeditiously as may be practicable, and where necessary the payment of board for their maintenance during adolescence.
5. The provision of a proper corps of official inspectors to vigilantly guard the interests of the children during their entire period of dependence.

## THE CASE AGAINST BOARDING OUT.

In the *Westminster Review*, Mr. C. R. W. Offen, who has charge of the Sheffield Homes for pauper children, replied some months ago to an article published by Miss Hill in favour of boarding out, in which he sums up some of the arguments on the other side as follows:—

1. That there are some very real dangers in the boarding-out system.
2. That cruelty and neglect have been proved.
3. That the committees who are responsible for the children frequently shirk their duties.
4. That there is great difficulty in finding good homes for the 1,800 children now boarded out under the Poor-law.
5. That under boarding-out it would be almost if not quite impossible to provide suitable homes for the remaining 35,000 children chargeable to the guardians in England and Wales.
6. That it is unwise to board-out the older children.
7. That frequently boarding-out is carried on for mercenary ends.
8. That it frequently fails to provide a sufficient training for boys and girls, the love of the foster parents, or a permanent home.
9. That it has its limitations, and cannot serve as the only system for dealing with pauper children.
10. That it has done excellent work notwithstanding frequent and serious instances of abuse.
11. That the "cottage home," though not supplying real "home" life, does approximate to it, and offers an acceptable substitute.

12. That both systems are needed and capable of producing good results.

13. That finality or perfection has not been attained by any existing system for dealing with pauper children.

## THE EXPERIENCE OF FRANCE.

In the *New Review* for May Mr. E. H. Cooper describes the "Enfants Assistés of Paris." He says that the little disinherited ones are cared for in a way which does credit to French officialdom. A Department of the Senate has to account for 40,000 children in its annual report. The hospice for abandoned children is a huge place, accommodating 500 children. The expenditure represents a charge to the State of £200,000 a year. It is interesting to notice that, in the children's hospital, a bound volume of our English magazine *Chatterbox* was passed from cot to cot with great interest for the sake of its pictures.

## The Saga of the Eagle-King.

In *Tilskueren* there is a grim little saga of an eagle-king, which would delight the youngsters and even fascinate the grown-ups. It is written by Hans Kaarberg, and tells of the pride and fearlessness of the eagle, when one autumn day he felt strength in his black wings and wildness in his young blood, and swung himself down from the rocks right into the glorious sunshine, and, like a stone flung from the hand of a young giant, dashed down into the valley. And the people stood still, and pointing, said, "Look! The king is out!" Then he swung up, higher and higher—higher than ever before in his young life. And he had the storm under his wing, and rose and rose. And ever as he rose, it seemed to him his strength grew. In wild ecstasy he swung upwards, higher than human eye could reach. Far out he saw the sea; his heart yearned to be over it. And when the sun went down he sailed on outstretched wings through space, far, far away. When the dawn tinted the horizon, he beheld Denmark beneath him. Scattered about were villages and houses, and humans there were everywhere; they seemed to crawl about one another. He had never seen the like. But not a rock, or cliff, or one single high and lonely place where an eagle might rest was to be seen. And he drove his beak into the young lambs. He had never had so easy a hunt for food before. But at last he wearied of his deeds of blood and of his wild flights, and having nowhere else to rest, he sank down upon the ice and slept. And while he slept little freckled Fritz, the cobbler's son, called out by his father to see the great black bird, brought a gun and wounded the proud eagle-king in the wing, and brought him home wounded and sick, but alive and an eagle still! And for months he sat, bound with ropes and wretched, on a perch in the cobbler's ill-smelling shop, longing for the sweet fresh mountain air. Till one day he felt that his wounds were healed and strength was in his wings. Then hate and wild revenge came into his heart. One moonlight night, when he sat staring through the low window at the white clouds shining far away, shining like his own snow-capped mountain-home, a great strength was given to the captured eagle-king. And he spread out his wings and snapped the rotten ropes. And when he saw that he was free, he opened wide his awful eye. He sought the freckled Fritz who had taunted and tormented him in his helplessness and misery, and who lay, with snub nose upwards, snoring on his bench in the moonlight. And—he was an eagle still, and some other little Fritz may know hereafter from the horrible thing that happened then how to behave to an eagle-king when he has shot him and carried him home.

## THE MIRACLE OF INSTINCT.

## ANIMAL INTELLIGENCE AND REASON.

THE *Quarterly Review* for May publishes a very elaborate article on "The Human Mind and Animal Intelligence." It is based almost entirely upon the researches of Mr. Lloyd Morgan. It is too psychological for the average reader; but some idea of it may be obtained by the following extracts.

## IS INSTINCT DIVINE?

The reviewer maintains that instinct is an essentially divine miraculous power, the origin of which cannot be explained by any of the hypotheses favoured by materialist philosophers:—

How is it possible to explain by intelligence, or by accidental variations naturally selected, the instinctive phenomena displayed by insects and these yet lower creatures? How is it possible so to explain the instinctive actions of young animals (so many of which are excellently described in Mr. Lloyd Morgan's latest work), or indeed of the human infant, and some of those of even later life? Must we not rather have recourse to that wonderful and hidden agency which presides over inorganic phenomena, which our author has termed "selective synthesis," and which he, we believe rightly, seems to regard as the true cause of the origin of new species?

Instinct in the world of life, as also crystallisation and chemical synthesis in the inorganic world, proclaim to us in an especially emphatic manner, that throughout nature, from the most amorphous mineral to the highest of animals, all creation is orderly, determinate, and innate with definite purpose; that it is not a chance product in which disorder reigns, but one everywhere pervaded by a selective and directing energy, an energy the human mind, when at its best, most clearly apprehends as an Intelligence to which its own responses, recognising in it the Archetype in whose image its own being (however infinitely below it) has been rationally constituted.

## HOW ANIMALS LEARN.

No doubt there are some cases in which the animal intelligence is clearly the result of experience. Mr. Morgan, for instance, says:—

I have been much struck, as I watched the progress day by day of my families of chicks or ducklings, with the fact that although they bring with them into the world an inherited aptitude to perform certain activities, yet all experience, even of the performances of these activities, is a matter of individual acquisition. And further, that this experience is rendered of practical value through association. It is only as associations are established between impressions of sight and taste that the chick begins to learn what to eat and what to avoid. At first he picks up anything of convenient size that catches his observant eye. Every minute of the early hours and days of life he is establishing associations of eminently practical value for his life's guidance. The environment is simple and the associations direct and off-recurring. Hence at the end of a week or ten days he is a remarkably wide-awake little bird.

## DO ANIMALS PERCEIVE RELATIONS?

The following passages convey some idea of the general drift of the article:—

*Do animals perceive relations?* This is, in our opinion, the crucial question of comparative psychology. Mr. Lloyd Morgan's answer to it is as follows:—"We must reply that all the ordinary activities of animals can be explained on the supposition that they do not." (P. 260.) To this conclusion he has come as a result of a number of observations and experiments. We have only space to give the briefest account of one of his experiments. For three days he tried to make a fox-terrier bring a stick through a railing wherein one rail was wanting, leaving an aperture of about a foot. At the end of the many trials of his first day the dog only succeeded (after repeated trials and coaxings) in pushing his way through after many

abortive attempts, by holding his head on one side. The second day ended in complete failure. On the third day he had not in the least improved in bringing the stick through, but had learnt to shirk the difficulty by running round the railings. After some weeks the experiment was repeated with no better results. On a subsequent occasion his master prepared a short stick with a crook at one end. This caught in the rail, and, after many attempts, the dog dropped it. He was then induced to take it by one end and drag it after him, so that it might catch by the crook at the other end; he then tugged at it with energy as ridiculous as fruitless. The experiment was repeated many times, and Mr. Lloyd Morgan tells us, he "tried to show the dog how the difficulty could be overcome. But each time the crook caught he pulled it with all his strength. . . . At length he seized the crook itself, and with a wrench broke it off."

Various similar experiments were made with other dogs, all with like results. These facts do not, of course, lead our author to doubt that dogs might be taught to succeed, and to do much more complex tricks. But what he considers these experiments do show is that the dog's own way of dealing with such difficulties is the method of trial and error—the method of "sense-experience" and not any "perception of relations."

## THE EVOLUTION OF MIND.

We come now to the really essential question of Mr. Lloyd Morgan's Psychology—the question of the evolution of mind, as to which he asks, and answers, the following questions:—(1) Is there selective synthesis in mental development? (2) What is the condition of mental environment in mental development? (3) Is variation determinate or indeterminate? (4) Are there apparent breaches of continuity in mental development? He answers these questions as follows:—"In reply to the first . . . it appears to me the psychologist is bound to answer that there is. . . . I look up from my page and have an impression of a book at a certain distance from me. In psychological analysis it is found that the impression is the result of the coalescence of certain retinal sensations with certain motor sensations. . . . It appears to me obvious that no mere commingling of disparate sensations could give the out-there-ness of the impression, but that when the motor sensations coalesce with the retinal sensations they enter into a synthesis which has a new and determinate character. It would seem that just as the raw material of life is the product of selective synthesis, so too is the raw material of sentience dependent upon an analogous process." (P. 351.) In reply to the second question, he points out how important a part the environment plays in sentient life, death being the result if the feelings and imaginations of the organism do not respond with sufficient rapidity to the actions of its psychical surroundings. To the third question he replies doubtfully:—"Is genius," he asks, "the result of a fortunate commingling of inherited aptitudes, or is it a product of selective synthesis, a crystalline gem of rarest purity and symmetry? I am inclined to believe that the variations are determinate, the definite products of selective synthesis."

His answer to the fourth question, "Are there apparent breaches in continuity?" is the most important. He declares that "the step from sentience, or sense-experience, to reflection and thought certainly involves, in my judgment, such a new departure. The curve of the development of sense-experience and intelligence pursues a smooth upward course. But when the perception of relations is introduced there is a point of new departure. The curve takes a wholly new direction, and sweeps up to the highest products of rational thought."

He gives a diagram representing the curve of sense-experience, from which another curve diverges, at a sharp angle and in an opposite direction, to represent the introduction of reflection. Intending these diverging lines to denote graphically the difference between the lower animals and man, he tells us: "We may say that there is a breach of continuity of development at this stage of evolution analogous to the breach of continuity between the inorganic and organic phases of development. This is the view to which I myself incline."

### THE KING OF SIAM AND HIS KINGDOM.

MR. PERCY CROSS STANDING contributes to the *Cornhill Magazine* an interesting paper on "Siam and the King's Visit." He says that the Siamese royal family is at once the acme of Oriental antiquity and of Oriental modernity. The King of Siam, who is now making a tour through Europe, has been upon the throne for twenty-eight years. Mr. Standing says:—

He is a handsome man, of medium height and distinguished mien. He is by way of being a capital English scholar, and the reforms that he has from time to time introduced and carried out in his country have been essentially British—this being all the more interesting and instructive from the circumstance that not only are a large proportion of the European officials in Siamese employ of Danish and German nationality, but that the "General Adviser and Minister-Plenipotentiary" to the Court of Bangkok has been a Belgian, none other than the well-known publicist, M. Rolin-Jacquemyns. But the innovations and reforms are, as has been said, almost without exception British. This is only just. For the commerce of Siam with the outside world is in the startling ratio of about ninety-five per cent. British to five per cent. French.

The railways of Siam are British, the telegraphs and telephones are more British than otherwise, the police and prison-system have been re-modelled as much as possible after British patterns, and so, too, has the army. The navy (so-called) has been more at the mercy of a knot of Danish officers of varying degrees of knowledge and experience, at whose head has stood a gentleman bearing the extraordinary nomenclature—for a Dane—of *Commodore du Plessis de Richelieu*.

Mr. Standing shakes his head gloomily about the future of Siam, feeling that the French hold all the trumps in their own hands:—

By the Convention of last year, to which France and England were parties, it was agreed to indemnify Siam from the eventuality of interference by other Powers, while practically dividing between France and England the first-fruits of the former's territorial encroachments upon King Chulalongkorn's dominions. To the latter ruler now but remains Bangkok and the fertile country surrounding it; Luang Phrabang—part of which, be it observed, is situate upon either bank of the disputed Mekong River—is probably the finest and richest of the "spoils" garnered in by France.

Mr. Standing also contributes an article on the same subject to the *Nineteenth Century*, in which he refers to the curious story that Russian officers are about to attempt the training and drilling of a Siamese army of 35,000 men.

Miss B. A. Smith contributes to the *Contemporary Review* for June a brief and somewhat fragmentary sketch of our royal visitor. Miss Smith was one of the ladies who founded a school for ladies in Bangkok, and she speaks well of the support which she received from the King. She warns us that when the King arrives we shall find—

We have a "chiel amang us takin' notes" with the cautious and humorous observation of the clever Oriental. Very little of that which passes before him will escape the King's notice. Let those who surround him, European and Siamese, look to it that the King has at least a glimpse of the dark as well as of the bright side of European civilisation. If he could see by some flash of inspiration the degraded conditions under which so many millions live in civilised England, and realise how necessary an adjunct some of these conditions are to the dazzling polish of "society," would he be eager to transplant our customs to Siam, without counting the cost? Serfdom lingers openly in Siam; but there the poor man is never hungry and seldom discontented or vicious. Polygamy is legal; but no woman is outcast if faithful to her best feelings, and monstrous inhumanity to children is almost unknown. Alas! that all such evils should thickly crowd in the wake of much that is named "civilisation."

### "THE POETS' HISTORY OF ENGLAND."

AN OFFER OF £10 IN PRIZES FOR THE BEST LISTS OF POEMS.

I PROPOSE to offer three prizes, of £5, £3, and £2 respectively, for the first, second, and third best list of poems in the English language, covering the history of Britain from the earliest times down to the present day. Various efforts have been made, with varying success, to compile an anthology of poetry bearing more or less directly upon the history of the English people. "Poems of English Heroes" was a bright little essay in this direction. "Ballads of the Brave," edited by Frederick Langbridge, was a much more popular and effective contribution towards such a collection. Mr. Fletcher, in the *New Age*, has been publishing for some time past selections from English poetry, which, when completed, might meet the case. But it seemed to me that there will be few more acceptable Christmas books for the Jubilee year than a collection in one volume of all the poems of any merit, literary or historical, which relate to episodes in the history of England. I have been in communication with the Rev. Frederick Langbridge on the subject, and he has been good enough to promise me his cordial co-operation.

It is possible that a really comprehensive volume may be put together under the title "The Poets' History of England." But the more who are engaged in such a task of compilation, the better; and by way of enlisting the services of as many as possible of those who have made the poetic literature of their country the subject of study, I offer these small prizes, knowing that the pleasure and profit of making the compilation will far outweigh the value of any prize that might be offered. As this pleasure and profit will be shared by all who compete, the scruples which usually lead me to shrink from offering a prize, disappear. Those who enter for the competition are requested to notice the following conditions:—

1. The lists sent in for competition must be in my hands by September 15th.

2. The list must be drawn up with due regard to chronological order. Competitors are free to divide the history into as many sections as they please.

3. In all cases the number of lines in the poem, or section of the poem named in the list, should be appended.

4. Excepting when dealing with well-known poems, which are included in the collected works of our classic poets, references should be made to the work where the poem may be found, naming, if possible, the edition, and also stating whether, if such a copy of the poem be otherwise inaccessible, the competitor could supply the same on application.

5. For the purpose of eliminating elements which might lead to confusion, poems that are distinctly either Scotch or Irish, and have no bearing upon English history, should not be included.

6. In awarding the prizes, the judge will take into account, as contributing elements to excellence, the neatness of the MS. and the legibility of the handwriting. The award will be published, if possible, in the October number, for, as time presses, if the book is to be got out this year, it ought to be published not later than November.

Apart from the competition for these prizes, I specially invite communications from readers who are interested in the subject, with suggestions as to how best to make such a collection worthy its name.

# THE REVIEWS REVIEWED.

## THE FORTNIGHTLY REVIEW.

THE *Fortnightly* contains several articles which are interesting, but none of first-class importance.

### A MYSTICAL VIEW OF WOMEN.

Mrs. Virginia Crawford is getting on. Her article upon Maurice Maeterlinck in this number is about the best piece of literary work she has done. It is a study of the Flemish dramatist and mystic written not only with lucidity, which has always characterised her writing, but with a glow and an insight which have not before been conspicuously displayed in her contributions to the periodical press. It is an article which it is impossible to summarise, but I must quote the following passage concerning Maeterlinck's conception of the rôle of women in the world:—

His generous recognition of the spiritual supremacy of the female sex ought at once to give the Flemish dramatist a place in the ranks of the so-called "feminist" writers who are daily growing more numerous in France. Woman, Maeterlinck declares, is more amenable to Fate than man, and never fights sincerely against it. She dwells closer to the feet of the Inevitable, and knows better than man its familiar paths. She possesses, too, a nobler and fuller conception of Love. For her, ideal love is always eternal, and the most debased of prostitutes remain susceptible to its purifying influence, and may be lifted to marvellous heights of self-abnegation by a spark of the divine flame. Hence it is chiefly in communion with woman that the average man enjoys "a clear presentment of that life which does not always run on parallel lines with our visible life," and it is often a woman's kindly hand that unlocks for him the portals of mystical truth.

### CYCLING ON THE CONTINENT.

Mr. and Mrs. Pennell write a bright article summarising the results of their experience of twenty years of cycling. The Pennells were the pioneers of cycling on the Continent. They have gone through the experience of being mobbed from curiosity in nearly every town in Central Europe. Their article is full of what the Americans call "pointers" for those who contemplate tours on the Continent. They are very strong in condemnation of the dearness and badness of English inns, reserving their chief anathemas for Devonshire and Cornwall, the inhabitants of which are evidently regarded by them as standing lowest in the scale of civilisation in all Europe. To judge from their article, Devonshire and Cornwall are much more savage countries than the wildest regions of Eastern Europe. Their roads are horrible, their food is detestable, and the manners of the people are those of barbarians. The following passage embodies much good sense:—

The ideal journey, in France for example, would be to train to the centre of the country—the majority of Continental railroads do not charge for cycles—and start off with the wind behind you, and change your direction with it; whether any one ever had the sense to do this we do not know. But it might be borne in mind that in Europe, save in the Rhone Valley, the prevalent winds blow from the south. It is well, too, on a long tour, especially on the Continent, to study what physical geographers call "the lay of the land," that is, plan your tour so that you may have the hills with you and not against you; follow the longest river valleys down and not up. A push of one day up a mountain—and you can even hire a trap to carry your machine, or take a train; we are not above such aids—is better than a monotonous grind for two or three days on a gradual slope. Stop when you get tired; travel by rail when it is too hard work. There is no glory to be got

from hard work in cycling. You might as well amuse yourself.

### TORYISM AND TOIL.

The first place in the Review is given to an article professedly signed by the Hon. Claude G. Hay and Harold Hodge, who seek in a somewhat ineffective fashion to urge that the Tory party should rally to Lord Randolph's ideal of Tory Social Democracy. They say:—

The main lines of Toryism may be described as Aristocracy, Methods of Force, Imperialism, National Religion, and State Interference.

They argue that under each of those heads, the working-class is more in accord with the Tories than with the Liberals. They declare that:—

It is a plain historic fact that the Tories, as a party, looked to the community as the unit of action rather than to the individual; they turned to state interference as the best method of improving the lot of the citizens. So that a Tory will not, as such, recoil from the element of state or municipal interference, which characterises most of the labour proposals. How comes it, then, if there is nothing in the principles of Toryism out of sympathy with working-class progress, that so many of the Tories' successors are somewhat out of sympathy with working people? Why are they distrustful of trades-unionism, why do they look askance at state intervention on behalf of these classes? Much of the labour policy now called Progressive is really Tory in nature, but it is a policy which at present fails because of a blundering and needlessly-partisan application, which they, its natural guardians and only they, can make completely successful.

### BEMEDIES FOR FAMINE IN INDIA.

Mr. Romesh C. Dutt, writing on "Famines in India and the Remedy," makes the following three suggestions:—

Firstly, a contribution from the British Exchequer towards the military expenses of her Asiatic Empire and a reduction of "Home Charges"; secondly, a reform in the administration and the removal of certain causes which are palpably leading to the impoverishment of the cultivators; thirdly, a settlement in perpetuity of the revenues derived from the soil. The true remedies for famines, therefore, is some measure which will directly decrease expenditure, and will leave something more with the cultivator than he is now allowed to keep. No remedy can be generally efficacious which does not achieve these two objects—decrease in India's expenditure, and increase in the resources of the masses.

### HOW TO SPELL INDIAN NAMES.

St. John E. C. Hankin ridicules the pedantic fashion of spelling Indian names that is favoured by the Indian Government. The only true solution of this difficulty, he declares, is—

a thorough, impartial, and consistent phonetic system for Indian names. Let there be no more glaring exceptions to a general rule such as the Government of India authorities at present. Let there be no more compromises and hesitations. Let the system be resolutely phonetic throughout. The aim of the Government should be to reproduce in English letters in their ordinary usage the approximate *sound* of every Indian name. Until English people make up their minds to spell Brussels "Bruxelles" and Leghorn "Livorno," they had much better rest content with Anglicising their India names, and writing Bhowmugger and Bundelcund as their fathers did. It will at least be less trouble, and it may do less harm.

### SOME ILLUSIONS ABOUT THE ARMADA.

Major Martin Hume, in an article on "The Defeat of the Armada," declares that the British public labour

under gross delusions as to the overwhelming strength of the Spanish Armada:—

The Armada as it left Corunna was not, as most English historians have told us, immensely stronger than the English fleet. Materially, the fleets were not as unequal as they have been represented. It has already been remarked that the Spanish ships looked much the larger because of their immense castles and upper works, but this was a distinct disadvantage except at close quarters.

He does not think that the Spaniards when they reached the Channel had more than sixty-two ships of over 300 tons, while the English had forty-nine of over 200 tons. The Spanish had a few more fighting men, but the English ships had the advantage of being less cumbered with soldiers, and they had heavier armament and artillery. The Spanish flagship, for instance, only threw a broadside weighing 200 lbs., while the broadside on the English ship was 340 lbs. Major Hume says:—

At the time the Armada left Corunna, both Philip and his commanders were perfectly aware that the chances were against them. They knew (a) that the English ships were swifter and stronger, and that the English sailors were more skilful than theirs; (b) that their guns were heavier and better served; (c) that the English tactics, as usual, would be to avoid close quarters, and to cripple the foe at a distance, which the handiness of their craft would enable them to do; (d) that the whole success of the enterprise depended upon absolutely calm weather and fair wind allowing Parma to come out and cross, after the Straits had been cleared of enemies; (e) that the arrival of the Armada at all depended upon a favourable wind; and (f) that in case of any delay or reverse it would be exposed, with unwieldy ships and inexpert or unfaithful pilots, on a dangerous shoally coast, without any available port of refuge. Only by a combination of favourable circumstances not to be looked for could success by any possibility attend it.

#### DANTE AS A RELIGIOUS TEACHER.

The Rev. E. Moore gives us the first instalment of his essay on this theme. His object, he explains, is:—

First to point out the extraordinary variety of men and minds that nowadays recognise in Dante a religious or moral teacher, and to contrast this phenomenon with the equally extraordinary incapacity to appreciate him prevalent in the last century, and even later. Secondly (and chiefly), to vindicate his theological position as a sincere and orthodox Catholic. This is a subject on which the most erroneous views have prevailed, owing to the omission to note the vital distinction between denouncing abuses in discipline or practice and impugning errors of doctrine.

#### MRS. OLIPHANT.

Mrs. Harry Coghill pays a tribute to Mrs. Oliphant, who was certainly one of the most prolific and industrious of all modern writers. Mrs. Coghill says:—

She had laboured in almost every field of literature, winning every kind of success, and never, in all the fifty years (except perhaps for one moment in the early days of her widowhood), making a real failure. One day in the last week of her life she said, "Many times I have come to a corner which I could see no way round, but each time a way has been found for me." There have been, perhaps there are (and she herself would have been the first to say it with full belief), greater novelists, but who has ever achieved the same variety of literary work with anything like the same level of excellence? A great deal of her very best remains at present anonymous—biographical and critical papers, and others dealing with an extraordinary variety of subjects. But merely to divide her books into classes gives some little idea of the range of her powers. Her novels, long and short, can hardly number much less than a hundred, but these for a long time back were by no means her works of predilection: they were necessary pot-boilers, and in the three last sad years all fiction had been heavy labour to her.

#### THE KING OF THE JOURNALISTS.

Mr. Vandam writes a long gossip paper concerning Emile de Girardin, whose career he describes, without giving us a very clear idea as to his journalistic achievements. He pigeon-holed the speeches of Frenchmen and had the dossiers of all contemporary politicians accessible at a moment's notice, but otherwise it is difficult to see exactly wherein his royalty lay. Mr. Vandam says:—

It is no small thing to have the title of "King of the Journalists" bestowed upon one's self during one's life, to have the justness of this title admitted by some of the most eminent members of one's own craft, and to retain the title undisputedly after death. Yet this is unquestionably the case in this instance. No honest assailant of French journalism, whether fundamentally hostile to, critically indulgent of, or thoroughly sympathetic with Girardin's political programme, can afford to ignore his claim to one of the foremost niches in that gallery of men whose names have become household words among the educated of both hemispheres. "The power of a paper is not due to the talent of its writers, but to the influence of its subscribers," said Girardin, and he was right. So well was this policy observed that not only all of the writers on *La Presse*, remarkable to a man, but their director himself, were accessible to the humblest of the public. They were not dimly visible through a cloud; they were not seated on thrones attired in academical costumes, and laying down the law to the world at large in classical language; but they were ensconced in comfortable arm-chairs and dressed in becoming *négligé*, as distinct from *débrillé*. Their advice was often marked by great homeliness of form, like that of Abernethy to his patients.

#### THE LITERATURE OF THE CHASE.

Mr. Baillie-Grohman, writing on "The Shortcomings of Our Sporting Literature," lays his finger upon one department in which we conspicuously fail, although it is one in which we might have been expected to have as conspicuously excelled. He says:—

So far as the writer knows, there is in all Britain not a single representative collection of antlers and trophies of the chase in past centuries worthy of ranking with the least of the many great Continental *Sammlungen* that afford such an instructive field for research to the naturalist-sportsman. There is, so far as one can learn, not a single library deserving that name of which the shelves are exclusively devoted to the chase. There is not a single gallery or print collection where even the more important pictorial material illustrating our theme can be studied by the student. A rough list I have drawn up of authors who have written on the chase and falconry in six of the principal languages of Europe shows that up to the year 1885 upwards of 2,500 writers have penned one or more treatises on our theme. The number of books, especially if we count each new edition as a separate work, is, of course, much greater. Reckoning by the number of books, France (inclusive of Belgium), though it had only 913 writers, heads the list, Germany (inclusive of Austria), with 940 authors, taking second rank. English authors on home sport number but 168, while Spain with 121, the Netherlands with 101, and Italy with 68, bring up the rear.

The bulk of his article is devoted to a vehement attack upon the shortcomings of a writer in the *Badminton Magazine*, an exercise which seems somewhat out of place in the pages of the *Fortnightly*.

THE *Journal of the Royal United Service Institution* for July contains much of interest even to the civilian. Major-General Tulloch discusses the training of naval and military cadets, and reports that since the military education has become so severe, the number of candidates has greatly increased, and consequently better men have been selected. He argues that Latin and Scripture should be dropped out of the naval cadet's curriculum, and greater attention paid to modern languages.

## THE NINETEENTH CENTURY.

THE *Nineteenth Century* for August contains a number of capital articles, five of which are noticed elsewhere.

## WHY NOT TRY IRELAND?

The Earl of Mayo contributes a charming article entitled "The Tourist in Ireland," which can be commended respectfully to those who are in doubt as to where they shall spend their holiday this autumn. Lord Mayo in this article personally conducts the reader from one end of Ireland to the other, in order to tempt more of his fellow-countrymen to see for themselves the beauties of the Sister Isle. He says that in this article his chief object is—

to show those seeking for a new place where to spend a holiday that we Irishmen have improved our inns, hotels, and means of communication.

Not only have the hotels improved, but the Irish Tourist Association has been formed for the purpose of keeping everybody up to the mark. Lord Mayo says:—

When one has been badly treated at an inn either in respect of high prices, bad attendance, or dirty apartments, the Irish Tourist Association will put the matter before the Irish Hotel and Restaurant Keepers Association, and it will then be remedied. Both these bodies are respected and carry weight in Ireland. Being myself a Vice-President of the Tourist Association and very often presiding at our Council Meetings during the winter, such complaints would have my earnest consideration.

## THE REAL EUGENE ARAM.

Mr. H. B. Irving tells the true story of Eugene Aram, which dispels some of our most cherished illusions. It would seem that Eugene Aram, although a man of considerable culture, who rendered service to philology, was nevertheless a cold-blooded murderer and thief, who with a confederate induced a third rogue to fraudulently secure possession of money and valuables, and then murdered him in order that the booty might be shared between two instead of being divided fairly among three.

On the remorseful tortures of the Aram of "The Dream" history is silent. Such evidence as exists of Aram's bearing after the murder and during the time of his trial and punishment points, not to a man of intrinsically noble nature riven by the pangs of sorrow for a crime committed under the stress of a dire temptation, but to a cold and deliberate murderer justifying his act to himself by a kind of sentimental vanity which does not hesitate before slander and falsehood to accomplish its pitiful end. There is not in Aram's conduct, from the moment of his return to Knaresborough, a prisoner charged with murder, the slightest evidence of any feeling of remorse.

## THE SLAVERY OF THE CHILD.

Mrs. Hogg, in an article entitled "School Children as Wage Earners," describes the result of an elaborate inquiry made by the Committee of the Women's Industrial Council into the earnings of school children. After careful investigation of the cases of 16,000 boys and 10,000 girls attending 54 schools, they have ascertained that five per cent., or about 700 boys and girls, are working for wages besides going to school. She thus summarises her conclusions drawn from the facts thus brought to light:—

(1) That there are grievous cases of overwork among these children. (2) That the overwork does make it impossible to obtain the best educational results. (3) That it is sometimes extremely demoralising. (4) That the economic value of the work done is too small to be taken into account. (5) That further regulation of the employment of school children not under the Factory laws is desirable. (6) That the whole matter ought to be seriously taken up and thoroughly examined into

officially, with a view to obtaining a completeness and accuracy of information necessarily out of reach of any unofficial council or association.

## THE POSITION OF FOREIGNERS IN JAPAN.

Robert Young, writing on the case of the foreign residents in Japan, makes the following suggestion as to the change that ought to be made in the new treaty regulating the status of foreign residents:—

But, granting a real desire on the part of Japan to give foreigners a fair return for the privileges surrendered—and to suggest anything else would be to doubt the *bona fides* of Japanese assurances throughout the negotiations—there is yet time to repair the omissions and defects in both the important matters to which attention has been directed. A protocol could be drawn up providing safeguards on the lines suggested above in the matter of the imprisonment of foreigners; and at the same time the assent of the Japanese Government could be secured to the insertion of a definite term—say fifty years—for which leases between Japanese and foreigners would be recognised. If these amendments could be effected, the bulk of the opposition of British subjects to the new Treaties would, I believe, disappear, and the British Government would not only render a real service to its subjects in Japan, but would at the same time avoid many serious complications to which the Treaties as they now stand will be certain to give rise when they come into operation.

## OTHER ARTICLES.

Mr. E. Vincent Heward indulges in a retrospect of Elizabethan rejoicing as a parallel and a contrast to those of the recent Jubilee. Dr. Jessopp in a few characteristic pages pleads for the preservation of moles, the extermination of which has led to a disastrous plague of beetles. The Rev. Thomas Stebbing discourses about crabs and their kinsfolk in an article on the "Curiosities about Crustacea," and Mr. Warrender writes enthusiastically concerning tarpon fishing in Florida. Tarpon is a magnified herring which sometimes turns the scale at fourteen stone.

*Gentleman's*, with the August issue, reaches its two thousandth number, and supplies much excellent material. Rev. J. H. Crawford shows how nature lessons, carefully graded and disguised, awoke the dormant intellect of lads in a Scots Industrial School, and offers hints that teachers of all kinds should find of value. They will enjoy many a good laugh over Mr. F. Watson's account of Dr. James Talbot's "Christian Schoolmaster" (1707). Rev. Arthur Dimock investigates the Black Death, and by careful computations concludes that it swept off from one and a quarter to two millions out of the three millions then inhabiting England. This wholesale reduction of the population naturally formed a turning-point in our history, but one which has been too often neglected.

*Mind* for July contains a suggestive study of Aristotle's theory of incontinence by Mr. Fairbrother. The sin of the man without self-control is that he allows the concrete particular to move him instead of the not less "moving images" on the right side which Memory calls to view. Not rules or principles, but particular images, actually present or remembered, it is that stir the feeling which rouses the will to action. Says the writer, "There is sober fact as well as poetic metaphor in the expression 'Guardian Angel,' which grateful man so often applies to wife or sister. Common sense tells us, if we wish to help a weaker brother at a crisis, to avoid general principles and moral laws, and paint instead, with a few graphic touches, some 'stirring, moving' picture. But the man himself has ever at his side an unflinching friend, Memory, from whom, if he will listen, sufficient help will always be forthcoming."

## THE CONTEMPORARY REVIEW.

THE *Contemporary Review* for August is a good number. I notice several articles elsewhere.

## TURKEY AS A DERELICT FARM.

Professor Ramsey writes an article on what to do in the East. He cordially supports Patrick Geddes's paper as to the attention that ought to be paid to the material improvement of the people. He contends that the thing to be done is to treat Turkey as a derelict farm, capable of immense development if it were only properly taken in hand by agriculturists rather than by diplomats. He says:—

Agricultural education is an urgent need, and here is an opening whereby Britain can do something to repair the mischief that has been wrought in the Turkish lands during recent years. An agricultural training college established in Cyprus would prove an incalculable boon to the East, if conducted on sensible lines and not on the principle of despising all operations except those that are on a gigantic scale. What we have to do, what alone is worth doing, is to stimulate into activity the dormant vitality of the population.

## HOW THE COLONIAL MARKET IS SPOILED.

Mr. G. Lacy Hillier, writing on the cycle market and the present state of depression which prevails therein, incidentally calls attention to the damage that has been done to the cycle trade in the Colonies by shipping out bad machines. He says:—

Anything in the shape of a cycle is thought good enough for the Colonies by some cycle traders. Cases have come under my notice in which inferior goods have been sent there—machines without distinctive numbers, apparently experimentally constructed—which should never have passed the factory gate except for trial by trusted hands. The whole thing was illustratively summed up in a letter from an Australian town, in which the writer said that the only two cycles that ever reached it which were up to the standard he had been accustomed to at home were ordered from a prominent firm through a shipping agent for export to—Chicago! After receipt the address was changed, and these were the best machines ever seen in that part of Australia.

## MR. GISSING ON MR. KIPLING.

Mr. H. G. Wells, in an article which falls much below the standard of his own novels, devotes several pages to enthusiastic appreciation of the novels of Mr. George Gissing. The most interesting passage in the article is an extract from Mr. Gissing's "Whirlpool," in which the novelist expresses himself as follows concerning Mr. Kipling's "Barrack Room Ballads":—

"Here's the strong man made articulate," cried Rolfe at length. "It's no use; he stamps down one's prejudice. It's the voice of the reaction. Millions of men, natural men, revolting against the softness and sweetness of civilisation: men all over the world, hardly knowing what they want and what they don't want; and here comes one who speaks for them—speaks with a vengeance. But the brute savagery of it! The very lingo—how appropriate it is! The tongue of Whitechapel blaring lust of life in the track of English guns. He knows it; the man is a great artist; he smiles at the voice of his genius. It's a long time since the end of the Napoleonic wars. We must look to our physique, and make ourselves ready. . . . The Empire: that's beginning to mean something. The average Englishman has never grasped the fact that there was such a thing as a British Empire. By God! we are the British Empire, and we'll just show 'em what that means!"

## LAND BANKS FOR INDIA.

Professor Ghosh writes three pages on Rural Land Banks as a remedy for Indian famines. He says:—

It is proposed to open a bank in every large village in India, primarily with the object of constituting a savings bank for

its people, and of enabling them to obtain loans of small sums in cases of temporary difficulties—though, in the event of a successful result, its operations may be gradually extended to other financial purposes. That such a scheme will produce the most beneficial results is obvious. For, it will free the peasantry of India from the clutches of their money-lenders, who are at least one of the causes of their poverty; it will inspire a greater confidence in the minds of the people in the benevolence of their Government, a confidence which in their opinion is often put to too severe a test, and it will actually give them a stake in the permanence of that Government which they do not possess at present.

## THE NEW CENTURY.

THE *New Century Review* contains a brief symposium on "The Royal Academy: Its Functions and its Relation to Art," in which several writers take part, of whom the most conspicuous is Walter Crane. His brief paper suggests that the Arts and Crafts Exhibition Society is destined to succeed the Academy, as it has asserted a new principle in art exhibition. A real national institution should embrace all forms of design. Nor does he think that the holding of large annual picture shows is a proper or desirable work for an academy to undertake. Under present conditions the huge picture shows are somewhat barbarous both in conception and treatment, and certainly fatiguing. If there is to be a really representative national show of art every year, there should be a public building large enough to offer space to any artist or group of artists, where they could place their work before the public impartially. Mr. A. W. Hutton continues his survey of "The Present Position of the Vaccination Question." Mr. H. H. D'Egville pleads for "A Closer Union within the Empire." The Rev. Samuel Holmes explains how Liberal High Church theology has developed of late years, while Mr. C. J. Mead Allen on "Novelist v. Reviewer," puts in a plea for the reviewer whose assailants he says are chiefly authors who have failed. He admits, however, that there exists a small body of egotists, mostly very young men, adorned by an indulgent university with a very superficial education, who treat criticism as nothing but a series of pegs on which to hang cheap witticisms, pointless epigrams and borrowed paradoxes. They are not numerous and their work is of no interest to any one but themselves. Mr. Stanley Little, continuing his papers on "The Enemies of South Africa," deals chiefly with the native question. Mr. Little thinks Mr. Chamberlain did badly in giving back the Transvaal to the Boers, but that he has done much better than might have been expected since he came back to office.

THE *Scottish Review* for July is, as usual, of largely archaeological interest. James L. Caw reviews Victorian Art, and Judge O'Connor Morris praises Mahan's "Life of Nelson." One of the papers which most claims attention is that by John George Bourinot, C.M.G., LL.D., D.C.L., etc., who writes on literary culture in Canada. He thinks that "there have been enough good poems, histories and essays written and published in Canada for the last four or five decades to prove that there has been a steady intellectual growth on the part of our people, and that it has kept pace at all events with the mental growth in the pulpit, or in the legislative halls. I believe the intellectual faculties of Canadians only require larger opportunities for their exercise to bring forth a rich fruition." Oddly enough the first book on the list of Canadian works which the writer reviews is one by himself. Such self-review open and avowed is rare.

## THE EDINBURGH REVIEW.

THE *Edinburgh Review* for July is not to be compared to the *Quarterly*, although there is good solid reading in it.

## PROSPERITY AND POLITICS IN ITALY.

The first article is devoted to a careful and well-informed survey of the present political position in Italy. The writer evidently thinks there is very little prosperity and a great deal too much politics in the Italian Kingdom. He strongly inclines to a policy of retrenchment, especially in military expenditure, but this has been negated by the new Minister of War, who has been sustained in his refusal by the Chamber:—

And so seems to have vanished, for the present at least, all hope of real military retrenchment. In vain may Ministers strain their ears to hear the voice of discontent. Funds may rise and financiers may flourish again, but Italian industry, Italian land, and Italian peasants remain the most heavily burdened in the world.

But there is some excuse for the Chamber when we find the *Edinburgh* reviewer telling us that of all departments of the public service, the army is the only one which is a credit to the Kingdom:—

The tone and behaviour of the soldier of every degree in Italy is superior to that of any other class in the country. There is an admirable feeling between private and officer. The mill of discipline and the instruction given in the army schools do wonders for the intelligence, general handiness, self-reliance and self-respect of the peasants who pass through them. To the general cry of lamentation which Signor Villari heard all over Sicily, ministers, deputies, prefects, syndics, communal and provincial councils, Senate and Chamber being overwhelmed in the same flood of abuse, he notes one striking exception. In spite of popular risings having been suppressed by the troops, in spite of the ringleaders having been tried by military courts and sentenced to heavy penalties, no one had a word to say against the army. It had always done its duty without partisanship or favouritism.

## THE PROTECTION OF COMMONS AND VILLAGE GREENS.

The writer of the article on "The Commons and the Common Fields of England" traces the history of the movement for the protection of these playgrounds of the people from the encroaching hand of private greed. Much has been done; but he thinks something still remains to be done, which he thus describes:—

The principles on which the Metropolitan Commons Act is based should be further extended, so that at any rate within a specified distance of large towns the inclosure or regulation of commons should be possible if in the interests of the public they are desirable. Equally also with the growth of London and with the yearly increasing facilities given to the vast population of the metropolis to reach the countryside, is it necessary that the area covered by the Metropolitan Commons Act should be extended.

The law as to village greens does not seem to be quite as well understood as that relating to commons. The reviewer says:—

If a green is a common, then the law in regard to the preservation of commons becomes applicable to it. If it is a spot used only for the purposes of recreation, then should any attempt be made either to inclose it or prevent it from being used as a place of enjoyment, it is necessary only to prove distinctly a custom of recreation by the inhabitants of a particular locality. The creation of parish councils has brought into existence a body who cannot have a more important duty than to safeguard the village greens of rural England.

## THE NATIVE STATES OF INDIA.

The writer of this article explains somewhat carefully what the native States are and what part they play in

the Government of India. The gist of what he has to say is expressed in the following paragraph:—

The 688 so-called native sovereignties, in spite of their vast aggregate area and population, are neither a danger nor a menace to the Empire. On the contrary, they are friendly and too imitative. The great majority of them, the petty ones, cannot be said to have retained any appreciable individuality beyond what there is in British India, and even the more important ones, perhaps owing to excessive "protection," run the risk of losing it to a regrettable degree. This is a pity if the Empire is strengthened and not weakened by free growth in different directions, by diversity of views and interests, by conservatism as well as progress, by the links which natives possessing a large stake in the country form between us and the foreign masses we rule, by the existence of an influential class of men who are neither merchants nor clerks.

## SIR GEORGE AIREY, ASTRONOMER ROYAL.

In an article entitled "Two Recent Astronomers," we have an appreciative sketch of the life and work of two widely dissimilar men; Sir George Airey, Astronomer Royal, and Mr. J. C. Adams, the mathematician, who anticipated Le Verrier in the discovery of the unknown planet whose influence deflected the movements of Uranus. Sir George Airey seems to have been a man of inexhaustible energy. The Reviewer says:—

It is true that he originated little, and discovered nothing. "Scientific imagination" had been denied to him—had been denied so completely that he never suspected the deficiency.

But if he had no imagination, he had almost supernatural powers of application:—

Few men have used their powers so fitly and so entirely. They were turned to the fullest account, yet commanded with Hellenic sobriety. His great faculties were not allowed to ride roughshod over his life. Work and recreation alternated in strictly regulated proportions. The massiveness of his performance almost baffles comprehension. It implies an extraordinary quickness and agility of mental action. His literary productiveness alone was astonishing. The papers, great and small, published by him, number 518. The list does not include his separately published books.

## THE ORIGINS OF PRIMITIVE RELIGION.

This article is based on Miss Kingsley's travels, Mr. Jevons's "Introduction to the History of Religion," and Professor Max Müller's "Contributions to the Science of Mythology." The reviewer is very cautious in his observations and comes to the non-committal conclusion that—

All that can be done, for the most part, is to apprehend clearly the general course and character of prehistoric religion, to mark its outlines and prominent features, to catch its tone and colour, and so to preserve some true impression of social and intellectual states through which the foremost nations of the world have passed, and which still survive among many races for whose welfare the British people are directly responsible.

## OTHER ARTICLES.

Among the other articles in the *Review*, we have the inevitable but somewhat belated review of Captain Mahan's "Life of Nelson." An historical paper describing the earlier career of the great Duke of Brunswick, whose ill-fated invasion of France let loose the revolutionary tide which submerged Europe. There is a review of the recent books which have appeared on Mountaineering in the Alps of Europe and of New Zealand, and Mr. Freshfield's book on the Exploration of the Caucasus. The only other paper, with the exception of that on "Public Opinion and South Africa," which is noticed elsewhere, is devoted to a discussion of instinct in the animal and vegetable kingdoms.

## THE QUARTERLY REVIEW.

THE *Quarterly Review* contains several articles which I have noticed elsewhere. The July number contains so many excellent essays that only a very few are left for brief notice.

## NOTABLE AMERICAN WOMEN.

A pleasant out-of-the-way article is entitled "Two American Women," Margaret Winthrop and Mrs. Pinckney. Of Margaret Winthrop more is known in this country than of Mrs. Pinckney. The latter was a Carolinian heroine, whose maiden name was Eliza Lucas. She was the daughter of an English officer who was at one time the Governor of Antigua. She and her mother settled in South Carolina, and Miss Lucas, before she had completed her teens, found herself entrusted with the management of three plantations. She was evidently a very capable and energetic woman, who was so far from content with the beaten track that she was perpetually trying new experiments, some of which were remarkably successful. It was she who introduced the culture of indigo into South Carolina, an enterprise which proved a source of great wealth to the Colony:—

After many disappointments, she succeeded, for the first time, in establishing her crop, and mastering the secret of its preparation. Just before the Revolution, the annual value of the export of indigo was £1,107,650—no slight boon for a girl to have bestowed upon the province. "When," asks her biographer, with pardonable pride, "will any 'New Woman' do more for her country?"

## THE BURIED TREASURES OF ASIA MINOR.

In an article entitled "Asia Minor Re-discovered," a *Quarterly Reviewer* suggests that all that is wanted to secure the unearthing of the immense treasure in the shape of buried antiquities that exists in Asia Minor is the adoption of the Cyprus law on the subject:—

A modification of the Turkish law such as obtains in Cyprus, would, we believe, satisfy every one and lead to an active exploration of Asia Minor. According to the law there, the Government claims one-third of the antiquities discovered, another third belongs to the owner of the soil, the remaining third to the excavator, who, however, usually acquires the owner's rights before he begins, and thus becomes entitled to two-thirds. A Government inspector, whom the excavator has to pay, watches the proceedings and takes notes of the finds. One result is that the Museum of Nicosia, the chief town of the island, now contains a very fair representation of the various classes of antiquities which have been found since the English occupation, including indeed several objects of unique interest.

## OTHER ARTICLES.

There is a fine thoughtful paper on "Job and the 'Faust,'" written from the point of view of one who endeavours in all things to see affinities between philosophic sceptics and Christian believers. The bridge by which mortals passed from the seen to the unknown universe, according to Goethe, is repentance and the inner process of religious regeneration. He finds in "Faust" a gallant attempt to reconcile science with faith, culture with religion, practical views of life with the principles of Christian Eschatology, which culminates in the idea which is fast becoming the ruling idea of the most thoughtful men of our day, that science and faith are not intended to exclude, but to form the complement of each other. There is a pleasant gossip account of Bauff in a review of Dr. Cramond's "Annals of Bauff," which was published in 1893.

THE late Dr. Herber Evans is the subject of a sympathetic sketch by Rev. D. Burford Hooke in the *Sunday at Home* for August.

## CORNHILL.

THE August number has many good articles, readable and entertaining, but few of the first rank of importance.

## OUR AUSTRALASIAN EDITOR.

The anniversary study is concerned with the battle of Minden, which the Rev. W. H. Fitchett describes with characteristic colour and *verve*. The editor introduces Mr. Fitchett to his readers in these words:—

It is with great pleasure that we welcome to our pages a battle study by Mr. Fitchett. Mr. Fitchett is well known throughout the great English world of the Southern Hemisphere by his vigorous and picturesque interpretation of the heroic side of our history. His work, however, has as yet obtained little recognition in England—solely because it has not been published here. This is an omission which is, we are glad to hear, about to be repaired. We venture to predict that "Deeds that Won the Empire," when it does appear in this country, will be as much appreciated here as in Australia. Mr. Fitchett has the power of making history interesting, and may fairly claim to be the inheritor of Macaulay's tradition.

## DISCOVERY OF A NEW LITERARY ART.

Mr. George Paston maintains that whatever arts we of the nineteenth century may have lost, we have one of the first importance—of "the dignity of a tenth muse"—the art of pen portraiture. The earlier poets had been largely conventional or general: the new school began with Landor. Our greatest English prose portrait-painter is declared to be George Meredith. Thomas Hardy runs him close. But "to Tennyson, greater as a word-painter than as a poet, the art owes more than to any other modern singer."

The famous trial told afresh by Mr. J. B. Atlay is that of Burke, of the Burke-and-Hare notoriety. Mr. A. I. Shand depicts Lord Alvanley, a wit of the Regency, and Rev. John Vaughan recounts the chequered story of the French prisoners at Portchester.

THERE is little demanding special attention in the *Humanitarian* for August. Rev. James Adderley defends his philippic against the £1,000 gown from the attacks of the *Daily Telegraph*. St. George Mivart says that, according to the new mythology of science, "Death appears as the daughter of Love, and Love as the chance-child of the nymph Protoplasma, overpowered by the giant Peribolos (environment), himself the son of the all-embracing god Ouranos. But Love was impotent till aided by her rosy-fingered daughter Death." To Death we owe all the variety and beauty of life. Death, too, is the teacher of altruism. Love is a "relentless Fury, whose breath, fatal to all, is least so to those who most postpone their worship, though annihilation is the certain lot of the race which pays her none."

BALUCHISTAN, little as is yet known of it, has promised for it a great future by Major A. C. Yate, in the July number of the *Scottish Geographical Magazine*. "Baluchistan," says he, "is a land of promise; if Nature would but give it a forty- or fifty-inch rainfall—which it will not. All must depend on peace, growth of population, and extended irrigation. What British rule can do for it will be done. Its frontiers have now been fixed with Persia by Colonel Holdich, and with Afghanistan by Captain McMahon. Cultivation and manufactures will be developed as far as means admit. Trade-routes will be maintained and opened. It is on the cards that in years to come the through railway from Europe to India may thread the valleys of Makran. Certain it is that Baluchistan is a province which will play no unimportant part in the future history of our Indian Empire."

## THE NEW REVIEW.

I QUOTE on another page at some length from the most notable article in the *New Review*, that in which M. de Thierry describes the characteristics of the British Colonial Empire compared with those of her neighbours. The frontispiece is a coloured portrait of Lord Roberts, by Mr. W. Nicholson.

## PETER THE GREAT.

Mr. James Fitzmaurice Kelly, who writes the article on Peter the Great, is a writer who can write. It is first-class work, and no mistake. For the capacity of slinging ink—to use an American phrase—with vigour and effect there are very few living men who could excel the author of this article, in the course of which he describes Peter the Great as

hard, dissolute, drunken, brutal, with the manners of a gorilla, the heart of a tiger, and the morals of a he-goat.

Mr. Kelly keeps it up for a dozen pages, each of which is full of matter incisive, brutal perhaps, but all packed with power. No such portrait of Peter the Great has ever appeared before in the English language, but after sketching this demonic monster he explains:—

Who shall deny that Peter knew how to govern the Russian people, or that he was an imperial demagogue of the first magnitude, using vulgarity and excess as means of government? Himself a *moujik* of genius, he captured the people's sympathy as the incarnation of the Sausage-Seller on the throne. He was that; and he was more. What he accomplished might well have taken three hundred years; and he took but twenty! He redeemed his people by his sole endeavour. He was a ruffian, no doubt: but a supremely great one. His work endures and—one must repeat it—alone he did it.

## THE DECLINE OF WOMAN.

Mr. Frederick Boyle, in an article under this head, calls attention to the fact that it is too often ignored by the conceited moderns that woman occupied a much higher status in the earlier ages of the world than they do at present, even in the most advanced communities. Women received more honour in the dawn of Greek and Norse civilisation than they did afterwards. The Vedas show that women had equality in religious exercises, but her position was higher in the earliest civilisation, those of Accadia 4000 years before Christ and the Egyptian. Professor Sayce points out that in Accadia the wife ranked before the husband in all matters relating to the family, and in their books it is always women and men, not men and women. It was even prescribed that if a husband ill-treated his wife, so that she denied him conjugal rights, "in the river they should place him." Mr. Boyle laments the disappearance of the Accadian standard. Everywhere to-day throughout the savage world woman is more or less of a slave. How it came about that she fell from the high estate which she enjoyed 6000 years ago is buried in mystery.

## OTHER ARTICLES.

Mr. Henry Rew criticises Mr. William's "Foreigner in the Farmyard." Mr. Whibley describes Lucian as "An Ancient Critic," and a civil servant writes on the "Organisation of the Home Civil Service."

*Temple Bar*, under the title of "The Sponsor of Folk-Song," publishes a sympathetic appreciation of the German philosopher, Gottfried Herder.

THE architectural anatomy of sky-scrapers, their steel skeletons and fittings, internal and external, form the subject of well illustrated papers in the July numbers both of *Cassier's* and of the *Engineering Magazine*.

## THE NATIONAL REVIEW.

THE *National Review* for August contains, as usual, three carefully written chroniques on British, Greater British, and American affairs. I notice elsewhere three of the most important articles. Mrs. Alfred Lyttelton writes a sequel to Gibbon's love letters, which tell the story of the relations which subsequently existed between Gibbon and Madame Necker.

## THE USES OF HUMOUR.

Professor Sully, writing on the Uses of Humour, says:—

I am disposed to think that the surest preservative against a weak truckling to convention, a hypocritical hiding of our true self in order to curry favour with contemporaries, is a lively unslumbering sense of the drolleries of things. The same genial impulse of laughter which arms us against the excesses of self-assertion will most effectually aid us also in a proper maintenance of our individual integrity. It not merely gives a pleasant seasoning to the dish of life; it is its conservative salt. It carries on in our later sadder days the sweet refreshing offices of childish laughter. It is at once the outcome and the sustainer of a healthy vitality, of that attitude of quiet readiness which sentinels the wise man's life.

## IN PRAISE OF THE PRIZE RING.

Major Broadfoot, who wrote "The Life of Sayers" for the *Dictionary of National Biography*, discourses concerning pugilism. He says:—

The discipline of the ring has first regard to the relative powers of the combatants; they should be fairly equal, no weapons save nature's should be used, and no unfair advantage should be taken. When a man is knocked down his antagonist's assault ceases, and the combat is renewed on equal terms. This is more than just—it is generous beyond the practice of any other country—ancient or modern. Self-restraint even when under excitement is enforced, and all foul practices are abhorrent to fair boxing. To talk, therefore, of the brutality of boxing, is to talk ignorantly and without sense. Training for boxing, including obedience to the rules of the ring, modifies and minimizes what is brutal in fighting. It unquestionably teaches and enforces self-restraint, and plants successfully in soil not always the most promising the seeds of chivalry. The support given to glove contests seems to dispose of the assertion that the younger generation is indifferent to the glories of the ring; their taste has been developed to suit the exigencies of the present day; the sport is fundamentally the same as of old, but the manner of conducting it has altered.

## THE UNITED SERVICE MAGAZINE.

MR. J. S. HORNER, in an article on "Egypt, France, and England," shows how French influence has originated and grown up from the first beginnings. French claims, he thinks, rest mainly on a substantial foundation of solid British ignorance, and it has been his object to leaven this heavy mass with a little ferment of fact. Mr. D. P. Heatley, writing in an article entitled "Ships, Colonies, Commerce," compounds a scheme for a commercial union among the self-governing Colonies, giving preferential treatment to British goods on the understanding that as long as this preferential treatment continues, the United Kingdom shall continue to defray the cost of the Imperial Navy. Mr. H. G. Archer points out the advantages of armoured trains. Lieut. Wilson describes the "Invasions of Ireland," and there are various other papers dealing with subjects of interest from the *United Service*.

THE item of special interest in the *Leisure Hour* for August is Mr. W. J. Gordon's sketch of Crewe. He tells with characteristic vividness the story of its growth, works, and institutions.

## THE NORTH AMERICAN REVIEW.

THE *North American Review* for July contains an interesting article on "The Union Label," which claims notice later, and another on "The Franco-Russian Alliance" by the late American Ambassador in France; otherwise the number contains little of general interest to the non-American reader. It opens with a selection of some letters written by General Grant to his friend Washburne, who after serving him for a short time as Secretary of State, was sent to Paris as American Minister. General Grant was not a great letter writer, and his correspondence with Mr. Washburne will not be found of much interest outside the area of the United States. The article on "The Greenback and the Gold Standard" and "The Commercial Trend of China" are also of limited interest.

## EDUCATION IN THE SANDWICH ISLANDS.

Mr. Daniel Logan, writing on this subject, points out that:—

The Hawaiian public school system is essentially American. It employs American text-books almost exclusively, which, of course, include for the higher grades the cream of English classics. The only exceptions are Hawaiian geography and history. More than one-third of the teachers in all schools, public and independent, are American. It is no slight testimony to the efficiency of the system that Hawaiian and part Hawaiian teachers come next in number to American, and form but a little under one-third of the entire teaching staff.

## ARE AMERICAN PARENTS SELFISH?

"Yes, very," replies Elizabeth Bisland, who, although an American woman, judges the American parent from the standard of the European. American parents, she says, have not advanced beyond the bird theory of parenthood. They feed their young while they are in the nest, but as soon as they fly they leave them to fend for themselves as best they can. Miss Bisland says:—

From the moment of its birth the parent of Continental Europe begins to save, not only for the education and upbringing, but for the whole future existence, of the child. It is not alone the daughter who is dowered, but the son also has provision made for his married life, when, as his parents keenly realise, the greatest strain will be made upon his resources and capabilities. In America it is the custom—very nearly the universal custom—for the parents to spend upon the luxuries and pleasures of the family life the whole income. The children are educated according to this standard of expenditure, and are accustomed to all its privileges. No thought is taken of the time when they must set up households for themselves.

## IS FREE LODGING IN SIGHT?

In an article on "The Housing of the English Poor," Lord Monkswell describes the results of recent experiments in providing decent dwellings for the poor of London, and at the close of his paper he throws out the somewhat alarming suggestion that some day the local authorities or the State may undertake the housing of the poor to the exclusion of every other agency. Rent for these habitations may be light, or perhaps there may be none at all. In principle there is no very enormous difference between free education and free lodging. If for the general benefit we insist on people living decently against their will, they may urge that the expense should be borne by the community for whose convenience they are reluctantly compelled to turn out of their single tenement.

## THE STORING OF ATMOSPHERIC ELECTRICITY.

Mr. E. B. Durham writes a couple of pages for the purpose of expounding his theory that before long it will

not be necessary to generate electricity by dynamos, but that we shall gather and store atmospherical electricities. The air, he says, is so full of electricity that it needs but the best conductor to gather, and a proper receptacle to store, the electric fluid which constantly surrounds us:—

Several experimenters are already employed in devising a plan for gathering and storing atmospherical electricity, and I am confident from the progress already attained in this line that it will not be many years before atmospherical electricity can be properly stored and utilised, taking the place of all lighting, heating and motor power employed at the present day. The possibilities and uses to which this power may be applied are innumerable. I expect to see it used in every house in as simple a manner as gas or water, so that it shall be within the reach of the poor as well as the wealthy.

## OTHER ARTICLES.

A Doctor of Divinity discourses on "The Warfare of Science with Theology," Mr. Lucy continues his gossiping papers about "The Queen's Parliaments," and the Mexican Minister points out that the Spanish American Colonies secured their independence without any help from the United States.

## THE FORUM.

THE most interesting paper in the *Forum* from a British point of view is Professor Thomas Davidson's essay on "Victorian Greater Britain" and its future, which is noticed elsewhere, as also is Professor Woolsey's appreciation of the European Concert.

## THE CAPITULATIONS IN TURKEY.

Professor Hamlin explains the legal position of foreigners in the Ottoman Empire, and defends the arrangement by which foreigners are exempt from the criminal jurisdiction of Turks and free from arbitrary arrests and oppression. He says:—

The Capitulations are a necessity of the situation. Only by their protection is the resident foreigner enabled to live, travel, worship, and do business without fear of constant interference and oppression. As it is, his life is not free from worries. The Capitulations do not relieve him from the operation of local municipal and police regulations; and these are sufficiently oppressive and contradictory to make life burdensome.

## A PLEA FOR PARTY GOVERNMENT IN MUNICIPAL AFFAIRS.

Ex-Governor Flower has a thoughtful paper on the result of attempting to liberate municipal administration from party control. He thinks the effort is impossible, and whenever it is tried it is certain to break down. He concludes his article as follows:—

My suggestion, therefore, to those who deplore partisanship in municipal affairs, is to think carefully before they try to break down local political organisations, lest, in doing so, they invite from unseen sources graver dangers than have yet confronted us, and evils not so easily eradicated as those which might be due to corrupt party government. The more practical and useful effort is to build up, purify, and broaden political organisations, so that their great power may be more effectively wielded for good government, whether in the city, the State, or the nation. A constant watchful citizenship, yielding its support to the party which renders the best public service, can accomplish much more permanent good by working through an existing and well-developed organisation than by spasmodic efforts in methods which both experience and common sense indicate to be ineffective and uncertain.

Senator Pavey follows up ex-Governor Flower's article by another in the opposite sense. He maintains that

Mayor Strong's non-partisan government in New York has been a great success. Although it increased the expenditure, the money was well spent, and, therefore, appeals to the New Yorkers to give the non-partisan government another turn.

#### WHY SPAIN HAS FAILED IN CUBA.

Mr. T. G. Alvord, junior, throws some light upon the question as to why Spain, with 200,000 men, a greater number than has ever before been sent across the Atlantic, should have utterly failed to suppress an insurrection which has never put more than 30,000 rebels into the field. His explanation in brief is that General Weyler and the officers are making too good a thing out of the war to wish to bring it to a close. Their men seem to be good enough material, but the officers regard the insurrection as a means of increasing their perquisites:—

A four months' stay in Cuba, beginning in January and ending with April of this year, much of which time was passed in observing the forces in the field, has resulted in the conviction, on my part, that it has not been the purpose of General Weyler to end the rebellion. A vigorous campaign would end the war. It would likewise end "the harvest." The officers and soldiers would go back to Spain on a peace footing and less pay. The chances of promotion made easy by brilliant reports of battles never fought would disappear. A promotion carries with it not only honour, but a decoration, which increases the stipend of the wearer in active and retired service.

#### OTHER ARTICLES.

Most of the other articles are of little interest outside the United States. Professor Laughlin elaborately explains why it is that industrial distress has not disappeared with the installation of Mr. McKinley in Washington. Dr. Wiley writes on the influence of the Sugar Bounties. Frances M. Abbott gossips pleasantly enough concerning the social standards of modern Americans, and Mr. Peabody writes on William Wordsworth.

#### THE ARENA.

THE *Arena* for July is as strenuous and as weighted with great causes as ever. Its pages still surge with the ground swell of the storm of the Presidential election. The citadel of the money power, better known as Wall Street, is first defended by Henry Clews, and then attacked by the editor, Mr. Ridpath, in his warmest invective. A symposium on "Honest Money; or, a True Standard of Value," is led off by Mr. W. J. Bryan. Mr. Hugh Lusk, from New Zealand, writes glowingly of his Antipodean home as the place where the Single Tax is practically in operation. Dr. Randall Waite describes the American Institute of Civics, which, he says, aims at doing for the ordinary citizen, in view of the duties of ordinary citizenship, what the West Point Academy does for the military citizen. Mr. Flower takes John Ruskin as his type of twentieth century manhood. Tokicho Massao, M.L., D.C.L., describes the New Civil Code of Japan, adopted 1896. An earlier draft, in 1890, was rejected because it followed too slavishly the Code Napoleon. The present code is the result of the most careful selective comparison of the French, German and American systems of law. This effort of Japan to appropriate the best of the best that is in vogue among other nations—to make the civilisation of Japan a sort of REVIEW OF REVIEWS of the civilisation of the rest of the world—is a very interesting portent in the history of mankind.

#### HARPER'S MAGAZINE.

Harper's for August is an extremely good number, which has a frontispiece printed in colours. I deal elsewhere with Mr. Bigelow's concluding paper on "White Man's Africa." Mr. Stockton's story of "The Great Stone of Sardinia" describes how the North Pole was discovered by travellers in a submerged boat which planted the Stars and Stripes on a float exactly over the conical point of the North Pole, which they found to be submerged some fathoms deep beneath the water. Mr. Stockton says incidentally that in the twentieth century, the seven great countries of North America, Greenland, Canada, Norland, including the rest of the Dominion, and Alaska, the United States, Mexico, Central America, and the West Indies, were united under one federated government, with the one flag, containing seven great stars on a blue field with red and white stripes. There is a bright account of Budapest in a paper called "The Hungarian Millennium." The article by Dr. H. S. Williams on "The Century's Progress in Physics" deals with the Ether and Imponderable matter. One of the most interesting and out-of-the-way papers that have appeared for some time in any of the magazines is Mr. Osgood's account of the campaign which is waged by the State of Massachusetts against the gypsy caterpillar, which has devastated 220 square miles of that State since it was introduced in an evil moment by an ingenious Frenchman, who thought that it could be utilised in the silk industry. The account which Mr. Osgood gives of the spread of that caterpillar, and the elaborate means by which the small army is to be kept constantly on war footing for the purpose of keeping it within bounds, renders it one of the most interesting natural history papers I have seen for some time. A single pair of gypsy moths, if left to increase without restriction, would, it is calculated, in eight years devour the entire vegetation of the whole of the United States. It is an almost indestructible thing. A full grown caterpillar will eat twelve times as much arsenic in proportion to its weight as would kill a healthy man. It can live under water for three days, and can survive nine days' starvation. Its eggs are unaffected by cold or heat. They can be frozen in ice, and then hatch out, and they can actually be passed through fire without losing their vitality. Even when they are cremated under the intense flame of vapourised petroleum, some of the eggs hatch out, although the stones on which they were fixed were broken to pieces by the awful heat. Birds do not like to eat them, and nothing was left to be done excepting a deliberate campaign begun by the Government against the gypsy and its caterpillar and eggs in every shape and form. They have now reduced the area within which its devouring activity is manifested from two hundred and thirty to seventy square miles, and they hope to get rid of it in time altogether. In Russia, quite recently the gypsy caterpillar ravaged a territory as extensive as the Atlantic Coast States from Maine to Florida.

THE *Australian Review of Reviews* published a special Jubilee number of 144 pages in June. Dr. John Quick contributes an elaborate article concerning the next step in federation. Dr. Quick is a fervent advocate for federation, and maintains that the only reason for Australian backwardness, vacillation, and procrastination is the cursed spirit of parochialism and provincialism, which is only selfishness writ large. Mr. Fitchett's latest "Fight for the Flag" tells the story of Sir John Moore at Corunna.

## COSMOPOLIS.

THE August number of *Cosmopolis* reaches a high standard of interest.

## M. TAINE'S NOTES ON FRANCE.

In the German section, Ola Hansson gives a charming account of a posthumous work by the late M. Taine, which contains the notes he made while travelling from place to place as Government Inspector of Schools in 1864. The notes reveal his passionate love of nature and his keen judgment of his own countrymen. The first is illustrated by some delightful pen-landscapes; of the second a few examples may be given. A society is like a garden which may be made to grow oranges and pears or cabbages and carrots. French society is exclusively designed to produce cabbages and carrots! The comfort of the lower middle class,—for that France exists. Nothing has roots of its own: everything, from barracks to university, is new, artificial, like a false tooth. The life of the provinces is the life of animals in hybernation. He bewails the political subordination of the Southern, semi-Italian and more creative half of France to the cold methodic North. He is more and more convinced of the flatness of the French democracy, the very air of which is fatal to the whole man, the great man. His ideal is England or the ancient States. In France he sees only two parties—the Clericals and the Liberals. The priests are the true rulers of the provinces, and have been, whatever the nominal government may be. One remarkable fact he mentions is the superiority of the Clerical to the State schools, a superiority attributed to the fatherly and motherly affection shown to their charges by the monks and nuns. M. Taine acknowledges the merely exceptional character of the French folk who are free from the spell of the Church, the great mass of the people being its submissive children.

## THE RUSSIAN SPIRIT INCARNATE.

The charm of Russian literature is beautifully described by Lou Andréas-Salomé. Western literature, *blasé* and decadent, craves for the freshness and mystically deep childlikeness of the Slavonic race, while its own sadness delights in Slav sensitiveness and melancholy. This sweet *naïveté* of the Russian mind has its drawbacks; formlessness, unsatisfying, negligent technique is the almost invariable fault in Russian works. In Tolstoi the several traits of the national character are blended so as to form one colossal figure. Tolstoi's personality is everything. Its power lifts the artlessness of Russian fiction into genius. It reaches down to the roots of all personality. The last stadium of his life has become one long effort to rob death of his sting,—a Titan struggle, eye to eye, and breast to breast. Nothing brings him nearer modern humanity than his constant sense of death in life. So Russian literature personified in Tolstoi stands valiant and undismayed facing the eternal mystery. W. R. Morfill, in the English section, sums up the progress of Russia during the year by saying she has done the best work in history, poetry, and travel, the age of great novelists having ceased.

## OTHER ARTICLES.

Mr. Frederick Greenwood writes with brilliancy on Mr. Morley's Machiavelli, and argues in favour of the Machiavellian patriot as against the Machiavellian egotist. Statesmen have to do firstly with forces as forces, and little with their morality. The exigencies of State-life may become like the exigencies of war, in which morality is suspended. Mr. T. H. S. Escott discourses on the Turf as an international factor, and pronounces London, New

York, and Paris, for Turf purposes, sections of the same community. Rev. W. J. Scott waxes joyful over the prospect of mile-a-minute trains coming into vogue. Mr. Henry Norman warmly rebukes the American Government for its fishery despatch, and sounds a warning note of American designs on Nicaragua. He styles the South African Committee as a preposterous fiasco.

## THE INVESTORS' REVIEW.

THE *Investors' Review* for July has one article entitled "A Bad Quarter of an Hour," but it would do well if Mr. Wilson were to adopt the title of that article as the second title to his Review. We have never anything else but bad quarter of hours with Mr. Wilson. If ever any one feels disposed to look out with cheerful or genial optimism upon the world at large, let him beware of ever opening the *Investors' Review*, for on every page he will read the printed words of this prophet of impending doom. Nothing is right—not even the Bank of England. Whichever way he turns, he sees nothing but terrible forebodings of judgment to come. This number is certainly no exception. He exults believing that the Jubilee demonstration has resulted in nothing but the production of splurgy, philandering gibberish which is the note of hysterical unreasoning femininity. Nothing but the catastrophe which he is always predicting gives him any hope. When disaster overtakes us, and we lose our Colonies and India, when our ironclads have all gone to the bottom, and the Bank of England has gone bankrupt, then he thinks a little manliness will be put back into the English character. It does not matter where we turn—whether it is to Indian finance or to the South Africa Committee—it is all the same; the state of England in general, and of the Empire in particular, is one mass of wounds and bruises and putrefying sores. There is no help anywhere, from the crown of our head to the sole of our feet. Our only wonder is that there should be one righteous man left in such a putrefying compost who is capable of editing the *Investors' Review*.

## THE PROGRESSIVE REVIEW.

THE *Progressive Review* for August has actually got an interesting article, which I have quoted at some length elsewhere. It opens with a lamentation over the impotence of the Opposition, and suggests that Sir William Harcourt finds himself surrounded by disloyal colleagues. The article on "The Preservation of Footpaths" is sensible and useful. It sets forth the law on the question and explains exactly what should be done to protect the public footpaths for the people from the foot-path thief. The article on "The Agricultural Labourer" in England says that the Scotch farm-labourers have formulated a programme containing the following five heads:—Fifty-six hours of labour a week with a minimising of Sunday labour. A weekly half-holiday, better houses, weekly wages, and an alteration in the law between masters and servants. Mr. R. Wallace, M.P., laments over the decadence of the House of Commons. He pleads for the adoption of the referendum. Under a Parliamentary system he thinks that insincerity is fostered, and the interests of the nation are sacrificed. Mr. Clement Edwards pleads for nationalisation of our railways, maintaining that it would be a perfectly sound commercial undertaking. It would enable goods rates to be reduced 20 per cent., passenger fares 20 per cent., and still leave eight millions a year available for the improvement of the conditions of labour and a sinking fund.

## THE WESTMINSTER REVIEW.

THE *Westminster Review* for August opens with an article by Mr. Corbett on the increase of insanity, in which he hints, not obscurely, that the time may not be far distant when all persons with a hereditary insane taint will by surgical operation be rendered incapable of propagating the species:—

The hereditary transmission of mental diseases from parents to offspring being an established fact, the question naturally arises, What is the remedy? The question requires grave and serious consideration from competent authorities before a satisfactory answer can be given to it. It cannot be answered offhand. It has already been strongly urged that an international commission, or some form of conference, should be convened to consider the subject in all its bearings. Already in other countries a solution of the problem has been suggested of a very drastic character.

The elaborately learned article on the "History of the Week" is continued this time, dealing with the Week of the Moon Worshipers. There is an article on the responsibility of parents from a teacher's point of view; but the most interesting article in the magazine is that which gives a series of extracts from the diary of Lord Clonmell, who in the eighteenth century rose to the summit of his profession at the Irish Bar. He seems to have been a scoundrel, judging from his own maxims of conduct, but some of his observations are pregnant enough. Here, for instance, is the comparison which he draws between his countrymen and the Hottentots.

Irish government resembles extremely the stato of the Hottentots in Africa. The common Irish, divided, oppressed, pillaged, and abused as they are, are the Hottentots; the English Administration are the Dutch planters; the followers of lord-lieutenants are the bushmen, or spies, and swindlers; and their wild beasts—viz., lions, tigers, etc.—are the Irish satraps. The man who would live in this country, especially in public station, should, like Mons. Vaillant, the traveller guard himself hourly against serpents, tigers, hyenas, elephants, jackals, monkeys in human form, and against the planters and bushmen besides.

There is an article praising the Salisbury method of treating diseases by hot water and beef.

## THE ITALIAN REVIEWS.

UNDER the title "A Glorious Reign" the *Nuova Antologia* (July 1st) gives a very competent retrospect of the reign of Queen Victoria, inspired throughout by a feeling of cordial admiration and friendship which exists in Italy more commonly on our behalf than in any other European country. It is our administrative capacity and integrity which excite the author's most outspoken approval. Our lack of modern educational methods, and the cumbrous nature of our legal proceedings are the only blots on our political and social system that he indicates. The series of articles on Socialism in France, by G. Boglietti, would be of great service to any one wishing to master the rather squalid controversies which have torn the Socialist movement into a dozen impotent fractions. The mid-July number opens with a long physiological study of "Nervous Exhaustion," full of interesting details concerning the various ways in which brain fatigue shows itself in different subjects. The wonderful wireless telegraphy discovered by Signor Marconi is fully explained by E. Mancini, and the recent visit of Prince Ferdinand of Bulgaria to Rome is made the occasion of a very well-informed article by V. Mantegazza, on the rise of the Bulgarian nation, and the various causes, religious and political, which have contributed to place Greece and Bulgaria in an inevitable antagonism, although

both are engaged in fighting the battle of Christianity against the Turks.

The first number of a new and learned review, with the title *Rivista Italiana di Sociologia*, has reached us. It is excellently printed, contains 130 pages of matter, and promises to be of great value to all interested in the scientific study of sociological problems, which in Italy attract far greater attention than with us. The review professes not only to give the latest results of sociological observation in articles by distinguished writers, but also to afford an opportunity of co-ordinating results in order to arrive at a scientific synthesis of the laws of social evolution. The opening number contains two admirable articles: one by Prof. Loria of Padua on "Modern Theories of Population," and the other by Prof. Durkheim on "The Sociological Aspects of Suicide." It has also a very complete summary of recent publications, both Italian and foreign, bearing on social problems.

## Annals of the American Academy.

THE *Annals of the American Academy* for July is not nearly so abstruse as usual. Its contents are almost entirely intelligible and attractive to the average reader. Mr. William Hall's account of the children's republic claims separate notice. Mr. J. H. Senner, who has charge of the immigration department at New York, declares that under his administration of the new laws, immigration has practically ceased. He craves for legal compulsion for the educational test which he already imposes, and lays down as the principle to be followed:—

Exclude all undesirable, and at the same time see that the most desirable immigrants are properly distributed over the country. . . . Place the distribution of settlers as well as of labourers under the responsible management of a National Land and Labour Clearing House, in close connection with, and under full regulation by, the authorities charged with the enforcement of the immigration law.

Mr. Simon N. Patten writes on over-nutrition and its social consequences, what might be described as a sermon on the text "Woe unto you that are full." In place of the three stages of Darwin's Evolution—(1) the rapid multiplication of the species, (2) the struggle for existence, (3) the survival of the fittest—he would put six: (1) the rapid multiplication of the species, (2) the struggle for existence, (3) the survival of the well-fed, (4) the degeneration of the over-fed, (5) the modification of desires, (6) the survival of the fittest.

Among men the two restraints on variation giving stability to men's characters are under-nutrition and over-nutrition. By eliminating both extremes among men they tend to reduce men to a single type. There is a levelling up to the standard of this type by the destruction of the under-fed and a levelling down to this standard by the destruction of the over-fed. The net result is a uniformity of character and an equality of conditions. The farther this process is carried the more social men become.

Mr. C. H. Lincoln comes to the rescue of Rousseau from the implied charge that he desired the ideas set forth in his "Social Contract" to be immediately realised, —as the Revolutionists later supposed. He argues that Rousseau considered his Social Contract ideal to be realisable only by ideal citizens; and in his works on education he strove to show how the existing material might through the generations be slowly wrought up into ideal citizens.

CASES for Binding any Volume of the REVIEW OF REVIEWS may be obtained on application. Price 1s. 3d., by post 1s. 6d.

## THE NOUVELLE REVUE.

In the first July number the Duchess of Fitz-James continues her reminiscences of 1848. These slight notes, though they have but little historical value, are brightly written, and are amusing, in spite of the paucity of anecdote in them.

General Dragomirof contributes both to the first and second July numbers papers on Napoleon and Wellington, which really consist of semi-military criticisms of the notes of Proudhon found in his unpublished papers. In these notes we see Courtois painting for us Bonaparte as a little, ugly, yellow, flat-haired, dirty man, without anything to recommend him except his impudence, and speaking with an Italian accent so strong as to be barely intelligible. Even in 1815 he had not yet learned to speak French; in his family he always spoke Italian. Proudhon finds it strange that Napoleon had so firm a conviction of his own invincibility, whereas, in General Dragomirof's opinion, this conviction of success is the sole cause of military glory. The conviction of victory will overcome almost any defects of organisation and of armament, as is shown by the extraordinary career of Joan of Arc. General Dragomirof justly protests against the reaction from the exaggeration which Proudhon is guilty of in declaring that Napoleon made war like a savage beast.

M. Denais continues his interesting articles on fanaticism in Turkey. He begins as far back as he can, at the year 711, when the Mahomedans conquered Spain, and he brings forward enough historical details to establish in the mind of every candid person that in the past, at any rate, the Mahomedans have been not only tolerant, but also cultivated, enlightened, and chivalrous. Whether this eulogy will be any consolation to the Armenians in the nineteenth century M. Denais must decide. He certainly explains with considerable impressiveness the action of the Sultan in arousing what we must call the latent fanaticism of Islam. M. Denais's theory is that it is the Sultan who is thoroughly bad, and that in his demoniacal wiliness he plays upon the prejudices of his people to serve his own base ends. It was really in obedience to his orders that the idea was spread among the Turks that there was an Anglo-Armenian alliance, bent upon upsetting the dynasty of Osman and of uprooting the religion of Islam. The Armenian massacres were the answer of the Turkish people to this alliance, which existed only in the imagination of the Sultan. In conclusion, M. Denais claims that these crimes committed against the Armenians are not the natural result of fanaticism, but are the artificial product of the despotic constitution of Turkey.

M. Victor Dubled contributes an interesting article on the Comedy of Society in the Seventeenth Century. He traces from the earliest times the history of the troops of players who were attached to the households of great nobles. It is curious nowadays, when the actor is petted and spoiled, to look back upon comparatively recent times when he was an excommunicated vagabond who possessed few legal rights and, socially speaking, did not exist. M. Dubled shows us how greatly the Jesuits assisted in improving the status of the art of acting, and Cardinal Richelieu extended his powerful protection to the profession.

In the second July number M. Muntz deals with the invasions of 1814 and 1815, and the spoliation of the French museums and galleries.

M. Limousin has a curious article on the Kabbala of the West. The Kabbala is, or was, an occult science, the key to other occult sciences. According to the writer,

*Kabbala*, or rather *qubalah*, is a Hebrew word signifying "tradition"; but what has gradually come to be known as "kabbala" may be said to owe its origin to a Rabbi who lived at Jerusalem in the year 200 of the Christian era. This individual is now known to his disciples as Judas the Holy. He founded an occultists' school, which, even to this day, has doctors, disciples, and followers spread all over the East.

## LA REVUE DE PARIS.

To English readers probably the most interesting contribution to the July numbers of the *Revue* will be the correspondence, extending over forty-five years, between the late Ernest Renan and M. Berthelot. The two men, though utterly unlike, enjoyed a lifelong friendship, undisturbed by quarrels, or indeed any form of disunion. At a time when the future Minister first made the acquaintance of Renan the latter had just left the seminary, and their intimacy soon became very marked—the more so that after their marriages their wives followed the example set them, and elected each other to be their dearest friend. Perhaps what comes out most clearly from that portion of their correspondence here published is the early violent Republicanism of Renan. Even at the age of five and twenty he was a most advanced Radical, and he foresaw a time when the French nation would speak of "Our Holy Revolution." These sentiments are the more curious when it is considered how strangely he must have altered in the years that followed. There can be no doubt that if M. Berthelot pursues his intention of publishing anything like his friend's complete correspondence with him, there will be added to French literature a very valuable and curious piece of autobiography, for Renan was a voluminous letter-writer.

A place of honour is given to an article written by the late Jules Ferry in 1890, and which, though ordered by the *North American Review*, was never concluded. The views of such a man as the statesman who at one time exercised so great an influence on modern France are of course of interest; but at the time this article was written Boulangerism had only just ceased to be a living actuality, and M. Ferry devotes a considerable amount of space to demolishing the already extinguished bogie. *Apropos of le brave Général* and the enthusiasm provoked by him, he makes one very shrewd observation—namely, that in him the French nation hailed rather a Mahdi or a Messiah than a Cæsar or a Napoleon.

Another historical article of much human interest is that concerning the relations of Mme. Cornu and Napoleon III., as explained by the late Nassau Senior. The writer has simply translated a number of extracts from Senior's famous conversation; but considering that they are buried in the eight volumes published after Senior's death by Mrs. Simpson, those concerned with the social history of the two Empires will find these pages of considerable value.

A Russian of rank, who prefers to remain anonymous, describes his personal recollections at the Russian campaign of 1877-78. He points out that twice during this century—in 1828, and again exactly fifty years later—victorious Russia has found herself encamped before the gates of the Turkish capital, and the writer deplores greatly the fact that the Russian army did not occupy Constantinople in 1878. Curiously enough, he blames England—not, as is generally done, for the part played by Lord Beaconsfield, but because it was apparently believed in St. Petersburg that Great Britain would actually become Russia's faithful ally. More immediately he blames the grand Duke Nicholas, and he quotes a

letter written from Alexander II. to the Grand Duke in the March of that year:—"What will Russia—what will her glorious army say when they learn that thou hast not occupied Constantinople?"

"During the last ten centuries," concludes the writer, "the Russian people pursues its giant's march with eyes ever turned to the Bosphorus and Tsarigrad. Those who would wish to turn the nation from this road towards Seoul and Petchile are acting in a very foolish manner. They will never tear out of Russia's soul the bright image of the Cross set over St. Sophia; all they will achieve will be a deep cleft between the Tsar and his people."

#### REVUE DES DEUX MONDES.

In the first July number of the *Revue* Count E. Lefebvre de Béhaine continues his extremely interesting papers on the relations between Pope Leo XIII. and Prince Bismarck. In this instalment he deals with the mediation of the Pope in 1885 between Germany and Spain in the affair of the Caroline Islands and the end of the Culturkampf. Count de Béhaine traces carefully the development of friendly relations between the Vatican and the German Government. He attributes the profound peace and freedom which the Catholic Church now enjoys in Germany partly to the intestine quarrels which divide German Protestantism, and partly to the policy of the Holy See itself, which, he says, has been steadily directed to maintaining religious liberty and religious peace.

M. Paul Girard's article on the orators and public opinion in ancient Athens is an interesting summary of the influences exercised by the art of rhetoric in the great Imperial democracy of the ancient world. It is pleasant to trace once more both the good and the evil wrought by the mixed crowd of high-minded and patriotic statesmen and paltry, self-seeking demagogues who tickled the ears of Athens alike in her pride and her fall. M. Girard does not trouble us with references, but he is evidently steeped in the old authorities, not only Demosthenes and Isocrates, Thucydides and Xenophon, Plato and Aristotle, which many read with greater or less interest at school, but also in the great tragedians, and, above all, in the immortal pictures of demagogues drawn for all time by the master-hand of Aristophanes. M. Girard is also to be congratulated on the use which he makes of Lysias, an admirable orator, who is unfortunately not much read nowadays, though many of his speeches, written in beautifully pure Greek, have come down to us.

M. Cruppi concludes his somewhat long drawn-out series of papers on the Seine Assize Court with some practical suggestions for reform. He is naturally pleased that the Senate should have begun to attack the dangerous system of secret inquiries, against which M. Cruppi protested nearly two years ago. He feels strongly, however, that the day of piecemeal reform is passed, and the moment has come for a general reconstruction of the whole edifice of the French penal laws. Valuable materials lie scattered, so to speak, here and there on the ground, awaiting only the master-hand and master-mind which shall have the courage to rebuild them into a complete and harmonious whole. It is not necessary to describe M. Cruppi's proposed reforms in detail, as they are chiefly interesting to Frenchmen themselves, but it is gratifying to an Englishman's natural pride to note that he adapts to the special needs of his country principles of private and public rights which have for centuries formed part of English jurisprudence.

The clever lady who writes under the pseudonym of M. Arvède Barine has a careful study of the old and sad, yet ever fresh and interesting, story of that sombre genius—Edgar Allan Poe. The subject is so much a standing dish of literary controversy in the United States that the citizens of the great Republic might almost be divided into pro-Poe and anti-Poe, like Swift's Big-Endians and Little-Endians. It is a wonderful picture that M. Barine draws for us—Poe's private efforts to reform, the sincerity of his secret remorse, then public suspicion deepening into public shame, Poe lying wildly with the clumsiness of a criminal who has lost his head, swearing up to the last that he would be cured, and often believing himself saved, until he sank back to his ignoble end.

To the second July number M. Benoist contributes a curious study of the influence which the revolt in the Philippines has had on the political morality of Spain. The truth is that the government of the Philippines has not been changed since the sixteenth century—since Magellan, Elcano, and Legazpi. The islands are still ruled by a curious combination of soldiers and monks, a mixture of theocracy and militarism, the results of which have not proved particularly advantageous to the colony or to Spain herself. It follows naturally that, to the astonishment of spectators in other countries, the Archbishop of Manila takes it on himself quite naturally to criticise Marshal Blanco's plan of campaign, and altogether the Church in the colony enjoys an extent of power which she has scarcely attained even in Spain itself. Moreover the Church in the Philippines is confronted by a large and powerful body of Freemasons. The mixed population of the islands—Indians, Arabs, and Chinese, as well as Spaniards and half-breeds of various degrees of Spanish blood—are practically savages, the most civilised being scarcely further advanced than Europe was three or four centuries ago. On *à priori* grounds, therefore, it might be argued that the government by soldiers and monks, although it appear to be an absurd anachronism, is nevertheless after all well suited to the peculiar conditions of the Philippines. Unfortunately, the Spaniards have attempted to introduce into the colony their civil code, which is of course based on the principles, common to all civilised Western codes, of the absolute equality of everybody before the law. Admirable as this principle is in theory, it is a great deal too far advanced for the Philippines. It awakens no sort of sympathy and corresponds to no social or mental condition of the people to whom it has been forcibly applied. What the Philippines wanted was an absolute but benevolent despot, and instead Spain has sent there only shiploads of monks and generals. The monks study the interests of the Church, while the generals are either bigots and favour the monks outrageously, or Freemasons and favour the lodges outrageously. The colony is administered partly by laws which are too young, partly by morals which are too old.

M. D'Estournelles de Constant has a portentously long article of forty pages on modern competition and what are generally called "hard times." He has no sovereign remedy, no panacea for these morbid states of the body politic. As regards France the remedy rests with herself. Against the efforts of her rivals she must set her resources and her strength, but these resources must not be half strangled by an excess of routine and an outrageous burden of taxation.

Among other articles may be mentioned M. Sorel's paper on the Congress of Rastadt, and M. Guillaume's article on the ruins of Palmyra.

## ILLUSTRATED MAGAZINES.

**The Pall Mall Magazine.**

THERE are two splendid reproductions of pictures in the August *Pall Mall Magazine*, the first of "Good Luck" by Jules Denneulin, and the second of "La Belle Suisse," by von Eschenburg. Mr. A. J. Goodman's drawing from life of a captain in the New South Wales Mounted Rifles calls up pleasant Jubilee memories. The Marquis of Lorne describes Cliveden, and recalling Mr. Gladstone's visits, mentions that the great statesman could not look down from high parapets without turning dizzy. Lord Harris has a word to say of cricket as the sport of the month. Professor Forrest gives a very vivid portraiture of Bombay. Lord Ernest Hamilton supplies a "pseudo-Ingoldsby Lay" which has in it much fun and more nonsense.

**The Strand.**

As perhaps befits the hot season, the *Strand* grows more and more lightsome, not to say frivolous. "Side-shows," to quote the title of one of its characteristic sketches of odd exhibitions, threaten to occupy the whole ground. The most instructive article is the first of a series entitled "Glimpses of Nature," in which Mr. Grant Allen gives one of his charming and romantic scientific chats on the aphides, "the cows that ants milk," or "green flies" as they are often called. A single fly, it appears, can in its own short life become the progenitor of some billions of other flies, reproduction being both with and without a father's help. The "milk," for which the ant keeps the aphides in herds, is the excess of sugary matter absorbed by the greenfly in its quest after the rare nitrogenous compounds in the vegetable juices. Mr. Housley explains how a racing-boat is built. Mr. Schooling's method of diagrammatic statistics is used to set off the growth of Sir George Newnes's chief publications.

**The Windsor Magazine.**

MR. HALL CAINE's story of "The Christian" is drawing to a close, and will be published in a somewhat extended form in the course of this month. Mr. C. B. Fry gossips about Cricketers, and Mr. Gibson tells some Cricket yarns. There is a story entitled the "Obituary Specialist," based upon the familiar fact that there is no method of securing the recovery of any distinguished notability more certain than that of writing his obituary and putting it into type. There is the usual miscellany of light reading. Miss Dickens reports a talk with Val Prinsep.

**Scribner's.**

*Scribner* for August is a fiction number, with a gaudy cover and four coloured pictures illustrating a Rustic Calendar, but the experiment of colour-printing is not very successful. The most attractive article is Rudyard Kipling's "'007," the story of a locomotive engine, in which Kipling breaks new ground by giving as much individual standard and character to the locomotives on the metallized way as he did to the jungle boats in the Jungle Books. A series of papers on the "Unquiet Sex" is commenced by an essay on the Collegiate Woman, by Mrs. H. W. Moody. What promises to be rather a good tale, illustrating the real conditions of labour in the United States, is Walter A. Wyckoff's "The Workers," an experiment in reality. Mr. F. R. Stockton contributes a sketch of "Buller-Podington Compact."

**The Century.**

THE *Century* opens with a sketch of an article on the "Lordly Hudson," which is well illustrated. It is a strong number for travel papers, for we have a journey in Thessaly, an account of two days in Norway, and a paper on Java. Mrs. Pennell writes and Mr. Pennell illustrates an article on "London at Play," which is devoted to a description of Margate in the Season. There is an excellent picture of John Burroughs as a frontispiece, and Mr. H. W. Mabie contributes an essay upon his character and opinions. The humorous sketch, entitled "Up the Matterhorn in a boat," is continued, but the instalment is rather scanty. There is a more liberal allowance of Horace Porter's articles on "Campaigning with Grant." The other features of the magazine are well maintained.

**English Illustrated.**

THE *English Illustrated Magazine* for August discovers Mr. Andrew Lang in a new capacity as the chronicler of the exploits of "Mid-Century Cricketers." Mr. Edward Clodd writes of the "Scientific History and Progress during the Queen's Reign," but he has hardly space in which to do more than note the heads of his subject. The article describing an interview with Sir George Newnes is interesting as an account of the naive confidence with which the founder of *Tit-Bits* declares that there are no more fortunes to be made out of new publications. The market, he said, is overstocked, and for every man who makes a fortune, there are two men who lose. Sir George also mentions that his ownership of the *Westminster Gazette* lost him his seat for Newmarket, for its strong articles against gambling were circulated among his constituents with a statement that he was really at the bottom of the prosecution of the Jockey Club. The other miscellaneous features of the magazine are still maintained.

**The Ludgate.**

THE *Ludgate* for August contains several interesting articles. Robert Machray gives a vivid account of the penal servitude of the life-convict and of his Portland home. Another writer tells how a bicycle is made. Walter Wood describes how the lofty chimney that has become crooked can be made straight, and Mr. Roger Pocock says what he knows of the Atlantic cattleshop and the drovers on board. He remarks that the cattle come not from the great cattle ranges of Texas, but from the small farms of the West, and are consequently all but as tame as stock reared in Great Britain. The inevitable yachting article is by Mr. Clive Holland, who states that yachts cost to build about £50 a ton, and that a yacht of from 100 to 150 tons can be hired for from £500 to £850 for the twelve weeks of the season.

**Badminton.**

*Badminton* has plenty of odd incident and adventure in its August number. Mr. E. Anthony describes horse-racing at the Queen's Accession, and recalls the curious coincidence that "gate-money" meetings were first introduced in 1837. Mr. Harold Macfarlane tells the story of several whimsical modern wagers, and Lady Middleton gives a catalogue of "queer recoveries" of jewelry. Mr. A. Gibbs tells of a company of huntsmen counting up all the falls they had experienced, and finding them to average over 100 for twenty years. He counts 88 in twelve years. Miss Scott-Moncrieff reports that polo is fast becoming the most popular game in Argentina. It is the great Sunday sport on the Pampas.

# THE BOOK OF THE MONTH.

## THE REVOLT AGAINST THE RULE OF THE RICH; OR, AN AMERICAN SHORT CUT TO THE MILLENNIUM.\*

ONE of the Colonial Premiers, whose Colony is not on the American continent, looked in at the *sanctum* at Mowbray House the other day, and we fell a talking as to the probable development of the affairs of the world in the next few years. Speaking of the annexation of the Sandwich Islands and its possible results in launching the United States upon a career of Colonial extension, I asked would it bring trouble with Japan, or would the first great trial come from a collision with Spain? "No," said my visitor emphatically. "The great trouble ahead before the United States is not from Japan, is not from Spain—it is from within. It is the social revolution. The discontent, especially in the West, which found expression in Bryan's candidature, has not vanished, and it can only be dealt with by measures upon which the constitution places a veto in advance. Under those circumstances I see no way out but trouble, and great trouble, when the forces of monopoly and labour come into sharp collision."

The Premier in question may have been mistaken, as outsiders often are, but he was at least a keen and shrewd observer—a man accustomed to deal with the problems of government in a democratic State; and he was in a position to appreciate, at least as much as any living man, what can be done by legislation to give effect to the aspirations of the toiler for equality and justice. My visitor had not read Mr. Bellamy's new book; but if he is reading it now on his journey to the Antipodes, he would certainly find in its pages strong confirmation of his forebodings as to impending trouble in the great American Republic. For although Mr. Edward Bellamy prophesies that the revolution which is to terminate the rule of the rich and establish the reign of equality will be inaugurated without as much fighting as often goes on in a frontier war, the experience of mankind justifies no such optimist expectation as to the facility with which this latest birth of Time will be brought forth.

Far more serious and significant than his complacent speculations as to the ease with which the old order is to be disestablished and disendowed, is the passionate, painstaking elaboration of his indictment against the existing order of things.

### I.—A SOCIAL PORTENT.

Mr. Edward Bellamy is an American citizen, whose book "Looking Backward" was one of the half-dozen books which have attained of late years a circulation counted by the hundred thousand. He is perhaps, more than any living man, the accepted exponent of the hopes, wishes, and the antipathies of those who have lost all

faith in the existing social order, and who see no way out short of a radical reconstitution of society from the bottom up. It is easy of course to pooh-poo him as a Utopian dreamer, an idealist, and an impracticable theorist; but I can never forget what Chauncey Depew said to me little more than a year ago when he visited this country immediately after a tour through the middle States, where he had been, as his wont is, delivering popular lectures to immense and enthusiastic crowds. "Wherever I go," said he, "I find what I should call the intellectual class, the University people, all of one way of thinking. They are all Socialists in sentiment." Of course there is an enormous difference between Socialists in sentiment and being social revolutionists in practice, but the widespread prevalence of this deep-seated conviction must be taken into account in all estimates of the probable evolution of events in the United States of America.

It would no doubt be going much too far to assume that even those socialistically-

minded professors and University people accept Edward Bellamy as their prophet. For such is notoriously not the fact. It is never the function of a prophet to be universally accepted. He is always more or less in advance of the community to whom he prophesies, and in the olden times he was so much ahead that nothing short of beheading him would meet their sense of what was due to the outraged convention of conservatism which he affronted. But although he may be but a voice crying in the wilderness, he does, nevertheless, express articulately enough the growing sense of alarm and of indignation with which the intelligent American generally regards the rapid increase of enormous fortunes, the building up of vast monopolies, and the establishment, under the guise of a Republican democracy, of a gigantic system of plutocratic despotism. But even if Edward Bellamy did not represent the views of any great section of American people, this book of his is eminently calculated to promote the

EDWARD BELLAMY.

\* "Equality," by Edward Bellamy, author of "Looking Backward." William Heinemann.

growth and spread of the opinions which he professes. The *Spectator*, I notice, speaks of it as a dull book, and dull enough, no doubt, it is, but it is not so dull as Coin's "Financial School," or Henry George's "Progress and Poverty," or many other books that might be named. And Edward Bellamy is a painstaking gospeller indeed. The Rev. Boanerges Poundtext could not labour more diligently over his message in his pulpit than does Mr. Bellamy in the pages of his story. Mr. Bellamy's text is the declaration of the fundamental rights of man, which is to be found in the Declaration of Independence, a document which to many Americans is infinitely more sacred than the Decalogue or the Sermon on the Mount. He takes this text and he worries at it on this side and on that side, thrashes over it, twists it, turns it, and grinds it up bit by bit, until he has at last left the reader in no doubt whatever as to his meaning or the message which he has to deliver. He is a man who preaches in season and out of season, but he forgets to give us here a little and there a little, for it is always here a lot and there a lot, as much as he can cram into the pages of his book, full measure, heaped up and running over. But however he may vary the fashion of his remarks, the burden of his song is ever the same. The rule of the rich must cease and the great revolution must come.

The American correspondent of the *National Review* makes a reference to the popularity of Mr. Bellamy's book, which may be advantageously quoted here as a confirmation of the accuracy of Chauncey Depew's observations:—

In fact, this country is in a peculiar state of unrest at the present time. It is almost a seething volcanic mass of human passions, ready for an eruption at any moment. The book which is just now having the greatest sale, and is being more talked about than any other which has appeared for years, is Bellamy's "Equality," which carries to the extreme limits Socialism in its best and truest form, such as not even Debs would dare to dream of. The first edition of Bellamy's book was sold so rapidly that advance orders were not filled, and thousands of copies have since been sold, with the public demand yet unsatisfied. People are not reading this work because it is amusing, or simply to spend an idle hour. They read it because it expresses an unsatisfied longing. The Debes and their followers, men not only who ride in the cab of a locomotive, but those who luxuriate in the ornately gilded Pullman car which that locomotive pulls, believe that here is the solution, and have their imagination fired in gazing on the vision of the future, when Government, through its wisdom and charity, shall make hard times, and suffering, and strikes, an impossibility.

It is perhaps even more significant that the *Review of Reviews* of New York should have published this month a review of this book, in which the Reviewer declares:—

"The power of monopoly, of gigantic combinations of private capital, was then ominous (ten years ago, when "Looking Backward" was published). It has now become menacing in its arrogance, its usurpations of the Governmental functions, its irresistible might in legislative corruption. Witness the Senate at Washington, the Illinois Legislature, the Chicago City Council. All signs indicate that the time for concrete action is near. On the people's side the forces are gathering for a determined resistance to the new tyranny, and the great wave only waits for the impetus that will send it forward with overwhelming momentum."

A year or two ago the world was much interested in the marvellous achievements of Francis Schläter, the Western Healer. Last month I received a copy of a book published in Denver, entitled "The Life of the Harp," in the hand of the Harper, written by Schlatter, published in Denver in 1897. Schlatter may be an

inspired prophet, as some believe, or he may be a crank and lunatic; but whatever he is or was—for it is uncertain whether he is alive or dead—there is no doubt as to the burden of his message in this book. It is a vehement onslaught upon the social condition of things in the United States. This nation of the West, says Schlatter, is going down faster than any nation in all history. Look at its unparalleled opportunities. This nation ought to have no cold, no hungry, no down-trodden, but the governments to-day, national, state, and municipal, are corrupt through and through; from north to south, from ocean to ocean. No man who wants to do right has a chance, for he is soon trampled under; but there shall be no houseless, hungry, shoeless or unclothed when the Kingdom is come. To Schlatter London is the Modern Babylon mentioned in the Book of Revelations. The beast is the money power, and its coils will not be broken excepting after frightful bloodshed and almost universal war. "Cæsar's Column," says Schlatter, is nearer the truth than "Looking Backward." The world is under the dominion of the damnable dollar, and between God and Mammon there is war without truce to the bitter end.

## II.—THE STORY OF THE BOOK.

Mr. Bellamy is as little of a novelist as he is great as a preacher. He has supplied his sermon with the most elementary frame of fiction that ever enclosed a social and political treatise. "Equality" is the sequel of "Looking Backward." "Looking Backward" was a story which described the world as Mr. Bellamy thinks it will be in the year 2000, and in his new book, "Equality," he enters into detail and explains how it was that the great revolution was brought about which inaugurated the millennium described in "Looking Backward." For those who have not read "Looking Backward," Mr. Bellamy obligingly summarises the story of that book in outline in his preface, from which I make the following extracts:—

In the year 1887 Julian West was a rich young man living in Boston. He was soon to be married to a young lady of wealthy family, named Edith Bartlett, and meanwhile lived alone with his man-servant, Sawyer, in the family mansion. Being a sufferer from insomnia, he had caused a chamber to be built of stone beneath the foundation of the house, which he used for a sleeping-room. When even the silence and seclusion of this retreat failed to bring slumber, he sometimes called in a professional mesmeriser to put him into a hypnotic sleep, from which Sawyer knew how to arouse him at a fixed time.

One night, however, West's house was burnt down, and he was supposed to have perished in the ruin. He was, however, safe and sound in a hypnotic sleep in his underground chamber:—

One hundred and thirteen years later, in September, A.D. 2000, Dr. Leete, a physician of Boston on the retired list, was conducting excavations in his garden for the foundations of a private laboratory, when the workers came on a mass of masonry covered with ashes and charcoal. On opening it, a vault, luxuriously fitted up in the style of a nineteenth-century bed-chamber, was found, and on the bed the body of a young man looking as if he had just laid down to sleep. Although great trees had been growing above the vault, the unaccountable preservation of the youth's body tempted Dr. Leete to attempt resuscitation, and to his own astonishment his efforts proved successful. The sleeper returned to life, and after a short time to the full vigour of youth which his appearance had indicated.

Julian West, the resuscitated millionaire of 1887, who was thus miraculously preserved until the year 2000, describes his experience in "Looking Backward," and in "Equality" records various conversations and discus-

sions by which he was able to learn how it came about that the capitalist system of the nineteenth century gave place to the free Co-operative Brotherhood of the year 2000. Practically the whole book is made up of conversations between Julian West and Dr. Leete and Dr. Leete's daughter, Edith.

Edith Leete was no other than the great-granddaughter of Edith Bartlett, his betrothed, who, after long mourning her lost lover, had at last allowed herself to be consoled.

Of course Julian falls in love with Edith, and learns from her beautiful lips much of the wisdom which is embodied in the pages of this book.

Just before the story opens Julian West has a horrible dream:—

As he lay on his bed in Dr. Leete's house he was oppressed by a hideous nightmare. It seemed to him that he opened his eyes to find himself on his bed in the underground chamber where the mesmeriser had put him to sleep. Sawyer was just completing the passes used to break the hypnotic influence. He called for the morning paper, and read on the date line May 31, 1887. Then he knew that all this wonderful matter about the year 2000, its happy, care-free world of brothers and the fair girl he had met there, were fragments of a dream. His brain in a whirl, he went forth into the city. He saw everything with new eyes, contrasting it with what he had seen in the Boston of the year 2000. He felt like a sane man shut up by accident in a madhouse. After a day of this wandering he found himself at nightfall in a company of his former companions, who rallied him on his distraught appearance. He reasoned with them, showing how easy it would be, laying aside the suicidal folly of competition, by means of fraternal co-operation, to make the actual world as blessed as that he had dreamed of. At first they derided him, but, seeing his earnestness, grew angry, and denounced him as a pestilent fellow, an anarchist, an enemy of society, and drove him from them. Then it was that, in an agony of weeping, he awoke, this time awaking really, not falsely, and found himself in his bed in Dr. Leete's house, with the morning sun of the twentieth century shining in his eyes.

All this is told in the preface, and for the rest we have nearly four hundred pages of close type, describing the various arguments and narratives by which Edith and her father were able to inform him as to the change that had been effected, and its results on the moral and social amelioration of the race. Of course, there are many interesting and ingenious speculations as to the material changes that have been brought about by the social revolution. A few of these may be mentioned before we settle down to describe the real soul of the book.

### III.—SOME CHANGES THAT ARE TO COME.

First, it may be mentioned that in the millennium there will be no such things as petticoats. The divided skirt becomes the universal rule. Both men and women wear the dual garment. Women, with the adoption of rational dress, throw themselves energetically into gymnastics, with notable results on their physical development. Julian West is asked to observe an anatomical model of life size of the women of the nineteenth century and of the women of the twenty-first. His guide says:—

BELLAMY'S HOME AT CHICOPEE FALLS.

First, you will observe that the figure is over two inches taller than the other. Note their shoulders! They have gained two inches in width relative to the hips, as compared with the figure we have been examining. On the other hand, the girth at the hips is greater, showing more powerful muscular development. The chest is an inch-and-a-half deeper, while the abdominal measure is fully two inches deeper.

Women did all manner of work—in fact, the distinction of sex is abolished, so far as industry is concerned. Mr. Bellamy predicts that women will bear children without pain, and completely escape from the physical disability which at present periodically impairs the working force of so many. The effect which the revolution would have upon the relation of the sexes is somewhat difficult to understand. There is a dangerous suggestion that, when the social millennium arrives, with its equal freedom and economic equality, there will be no more marrying and giving in marriage, but that they will be—well, not exactly as the angels in Heaven. One result of this change in the sex relations has not usually been anticipated:—

The effect of economic equality of the sexes, and the consequent independence of women at all times as to maintenance upon men, is that women give much less thought to dress than in your day, and men considerably more.

Another change which Mr. Bellamy predicts would immensely increase the difficulty of nomenclature, for in the year 2000:—

Girls take the mother's last name with the father's as a middle name, while with boys it is just the reverse.

Of all the changes which he predicts, one of the most obvious results from the development of the phonograph and the telephone. They tell him, when speaking of life one hundred years hence:—

Practically speaking, handwriting has gone out of use. For correspondence, when we do not telephone, we send phonographs, and use the latter, indeed, for all purposes for which you employed handwriting.

The utilisation of electricity for the purpose of instant

communication with all parts of the world naturally affords Mr. Bellamy a fine field for the exercise of his imagination. His chief contribution to the speculation of what may be in this direction is limited to the account of the electroscope, by which he maintains it will be possible for anybody to see anything that is going on in any part of the world. Already the telephone has taught us that we can listen to a sermon or a play at a distance of hundreds of miles. He maintains it will be possible to adapt the same useful agent to the services of the eye, so that we shall be able to see as far as we can hear. The electroscope, as he describes it, is a prolonged optic nerve, with which it is possible without leaving one's chair to make a visual tour of the earth, or, while sitting in Boston, to watch the performance of a play in Honolulu:—

Not only the telephone and electroscope were always connected with a great number of regular stations commanding all scenes of special interest, but that whenever in any part of the world there occurred a spectacle or accident of particular interest, special connections were instantly made, so that all mankind could at once see what the situation was for themselves, without need of actual or alleged special artists on the spot.

One result of the combination of the telephone and the electroscope is that the habit of meeting together in public assembly, whether in theatres or in churches, or in Parliaments, goes out of fashion. Every private room could be converted at will into a private box switched on to any theatre in the world; and any public speaker or preacher would find his voice instantaneously audible in the ears of all the inhabitants of the planet.

When we assemble now we need no longer bring our bodies with us. It is a curious paradox that while the telephone and electroscope, by abolishing distance as a hindrance to sight and hearing, have brought mankind into a closeness of sympathetic and intellectual *rapprochement* never before imagined.

Of course, this presupposes the blotting out of dialects, and of many of the languages of the smaller peoples which have no literature of their own. The millennium brings with it, among other things, a kind of Volapuk or universal language, so that the dwellers on the planet one hundred years hence will only have to acquire two languages in order to talk to all the people in the world, namely, their own and the universal.

It is rather sad to learn that in the twenty-first century the horse will be as extinct as the dodo, his place having been taken by the electric motor. His disappearance also brings about an immediate improvement in the public roads:—

Thanks to the passing of the horse, it was possible to reduce the breadth of roadways by half or a third, to construct them of smooth concrete from grass to grass, leaving no soil to be disturbed by wind or water, and such ways once built, last like Roman roads, and can never be overgrown by vegetation.

Electricity has also replaced the horse in all agricultural operations. Julian West, taking an air-ship, sailed over the continent for the purpose of seeing the changes that had been brought about in the new area. This is a picture of the farm of the future:—

I saw a large field from which the crops had been cut. Over its surface was moving a row of great machines, behind which the earth surged up in brown and rigid billows. On each machine stood or sat in easy attitude a young man or woman with quite the air of persons on a pleasure excursion.

"Evidently," I said, "these are ploughs; but what drives them?"

"They are electric ploughs," replied the doctor. "Do you see that snake-like cord trailing away over the broken ground

behind each machine? That is the cable by which the force is supplied. Observe those posts at regular intervals about the field. It is only necessary to attach one of those cables to a post to have a power which, connected with any sort of agricultural machine, furnishes energy graduated from a man's strength to that of a hundred horses, and requiring for its guidance no other force than the fingers of a child can supply.

As it is in agriculture, so it is in all other kind of work:—

Almost no heavy work is done directly now, machines do all, and we need only to guide them, and the lighter the hand that guides, the better the work is done.

"With one of our shovels," said the doctor, "an intelligent boy can excavate a trench or dig a mile of potatoes quicker than a gang of men in your day, and with no more effort than he would use in wheeling a barrow."

Not only is everything done by machines, but Mr. Bellamy holds out a prospect of our being able to make machines without hands, by the direct exercise of our will power. Electricity as an omnipotent instrument delivers the race from any necessity of manual labour. In the millennium the great exodus takes place from the cities to the country, and the whole of the continent is converted into a park-like expanse in which almost every one lives under the shadow of his own trees. For the towns, no longer over-crowded, were replanted with trees, while in the country at large, West was told:—

There are said to be five or ten trees nowadays where there was one in your day, and a good part of those you see down there are from seventy-five to a hundred years old, dating from the reforestation.

Another change which is brought about is the universal discontinuance of the eating of flesh. The humanitarian impulse of the future is to extend to the animal world, and our descendants of the year 2000 will regard the eating of butcher's meat with exactly the same abhorrence as we regard cannibalism. The place of beef, mutton and pork is taken by an immense multitude of fresh food substances of infinite variety of flavour, which we are told will be far more nutritious than the viands they have superseded.

All the dresses of the future are to be made of paper. The craft of the laundry becomes a thing of the past, nor is it only for dress that paper is to be used. No stuffy carpets or wall hangings will survive. Everything is washed constantly, or when dirty worked up again into fresh material:—

When we clean out a room we turn the hose on ceiling, walls, and floor. The dishes you eat from are made of paper. We do our cooking in paper vessels on wooden stoves.

The tailor and the dressmaker are superseded by marvellous machines which turn out costumes of any shape, size or fashion, while you wait:—

Our paper garments, of course, are seamless, and made wholly by machinery. The apparatus being adjustable to any measure, you can have a costume turned out for you complete while you are looking over the machine.

I only mention that the force and power that is used to work the machines is obtained from the natural inequalities of temperature. Power, he says, with all its forms of light and heat and energy, is to be practically exhaustless and costless, and scarcely enters as an element in the economical calculation. The use of the tides, winds and waterfalls are too crude methods of drawing upon Nature's resources and strength compared with others that are employed, by which boundless power is developed from natural inequalities of temperature. The blizzards which freeze us have taken the

place of coal mines. The water from the Atlantic is laid on to public and private baths in all cities, for all public purposes. The tides lift the water, and not only lift the water to any level that is required, but warm it at the same time.

All this, however, is but the mere garnishing of the main thesis which constitute nine-tenths of this book, "Equality."

#### IV.—THE RULE OF THE RICH.

Nothing is more remarkable in Mr. Bellamy's book than the vivid and strongly marked contrast between his picture of the social system in the United States of to-day and the "Triumphant Democracy" of Andrew Carnegie's dream. While Mr. Andrew Carnegie bows down to worship the condition of things under which he has made his fortune, Mr. Bellamy asserts that it presents a spectacle of frenzied folly, the madness of which outrages his reason and makes his heart sick. The American Republic, instead of realising the ideas of democracy, is a spectacle of plutocratic despotism almost without parallel in the world. His picture of the social condition of the United States at this moment is serious indeed. Free competition in business has practically ceased to exist. From being a land of opportunities, America has become the land of monopolies. Every week, every day, sees some new branch of industry or commerce formerly open to individual enterprise captured by a combination of capitalists and turned into an entrenched camp of monopoly. He gives the date of the year 1873 as the point when the country first began to open its eyes to the irresistible conflict between the power of wealth and the equal right of all to liberty and happiness. From 1873 to 1896 six distinct business crises succeeded each other in rapid succession, accompanied by a rapid decline of general prosperity and content. Side by side with a steady increase of the economic distress of the masses, which was creating industrial war and making revolutionists of the previously most contented and prosperous agricultural population in history, the vastest private fortunes in the history of the world were being accumulated. The social safety valve was closed and the bar was weighted with money-bags when it was practically impossible for any one but a capitalist to obtain wealth. Possessors of the new and unexampled fortunes indulged in prodigal displays of extravagant luxury which mocked the popular discontent. The millionaires gradually encroached upon the government until the so-called Republic became a scarcely veiled Dictatorship. Swarms of agents were maintained at all places of government, and combined influences of intimidation and bribery made all public officials subservient to the monopolists. The following passage, written by a patriotic American concerning the present position of his country, is tolerably strong:—

In the chronicles of royal misdoings there have been many dark chapters recording how besotted kings sapped the welfare of their realm to enrich licentious favourites, but the darkest of those chapters is bright beside that which records the sale of the heritage and hopes of the American people to the highest bidder by the so-called democratic State, national and local governments, during the period of which we are speaking.

The millionaires, or as he called them, the Rich, having thus acquired a power to use the authority of government as its own, began to organise the militia for the purpose of suppressing strikes by the bullet. The national guard was turned into a capitalist guard. It was trained with special reference to the business of

shooting riotous working men; drill in street firing became a prominent test of efficiency. Stone and brick armouries, fortified against attack, loopholed for musketry, and mounted with guns to sweep the streets, were erected at the strategic points of the large cities. The troops formerly stationed on the Western plains to protect the white settlements from the Indians were brought East, and established in fortified camps, near the great cities, for the purpose of protecting the capitalists against the white settlements. In the year 1892, the militia of five States, aided by the regular troops, were simultaneously under arms against strikers, the aggregate forces probably making a larger body than General Washington ever commanded in the War of Independence. The industrial system of the United States has fast become a government by bayonets.

EDWARD BELLAMY IN 1889.

Mr. Bellamy then gives an array of statistics to prove that the wealth of the community is practically monopolised by a fractional percentage of the people. He quotes the statistics of three calculators, all of whom come to the same conclusion, namely, that less than two per cent. of the population own seventy per cent. of its total wealth. Fifty-five per cent. of the wealth of the United States is in the hands of one per cent. of the population. Millionaires, the rich, and the well-to-do constitute altogether nine per cent. of the nation, but they own forty-five billions of the total national valuation of sixty-two billions of dollars.

Great as this disparity is, he maintains things are rapidly becoming worse, and it is against this Rule of the Rich that the revolution, of which he is the prophet, is directed. The free and independent Republics federated as the United States of the American Union, instead of

presenting to the world the most glorious ideal of triumphant democracy, are, according to Mr. Bellamy, not in any sense popularly governed at all. They are merely masks for plutocracy. The Rich are the real irresponsible rulers. So bitterly does he feel this that although a Republican born and bred, he does not hesitate to cast a long regretful glance backwards to monarchy, for, he says, while the masses have always been the servants of the rich, the kings have been above the rich, and constitute a check upon their dominion.

The overthrow of the kings left no check at all on the power of the rich, which became supreme. The people, indeed, nominally were sovereigns; but as these sovereigns were individually, and as a class the economic serfs of the rich, and lived at their mercy, the so-called popular government became the mere stalking-horse of the capitalists.

Mr. Bellamy does not mince his words in speaking on this matter. He maintains that monarchy supplies the first condition of efficiency or stability in government better than a democracy, for the king, being as it were the proprietor of the country, felt a direct, constant, and supreme interest in the general welfare, whereas it has been the fatal weakness in democracies that they invariably, as inequality of wealth developed, became the most corrupt and worthless of all forms of government, and the most susceptible to misuse for selfish and class purposes.

#### V.—THE GERM OF EQUALITY.

If such are the deplorable results which are visible to all men, how comes it about that such a ghastly disappointment should have resulted from the birth of democracy. Mr. Bellamy maintains that the preamble of the American Declaration of Independence logically contains the entire statement of the doctrine of universal economic equality guaranteed by the nation collectively, to its members individually, but its realisation he thinks has been rendered abortive by the restriction of the refusal to permit the state to undertake the regulation of the economic system:—

It is the democratic idea that all human beings are peers in right and dignity, and that the sole just excuse and end of human governments is, therefore, the maintenance and furtherance of the common welfare on equal terms. This idea was the greatest social conception that the human mind had up to that time ever formed. But it was simply inconsistent with the limitations of the human intellect that the implications of an idea so prodigious should at once have been taken in. The idea must absolutely have time to grow.

His conception which the human mind was able to form of the mission of democracy was negative. To instal democracy you must oppose the king, but this negation failed to secure the equality demanded in the Declaration of Independence:—

The second phase in the evolution of the democratic idea began with the awakening of the people to the perception that the deposing of kings, instead of being the main end and mission of democracy, was merely preliminary to its real programme, which was the use of the collective social machinery for the indefinite promotion of the welfare of the people at large.

From this we advance at once to the doctrine which Mr. Bellamy formulates in a sentence which sums up quite simply the foundation of the whole Socialist scheme of government:—

Life itself, and everything that meanwhile makes life worth living, from the satisfaction of the most primary physical needs to the gratification of the most refined tastes, all that

belongs to the development of mind as well as body, depend first, last, and always on the manner in which the production and distribution of wealth is regulated.

Hence democracy, far from being triumphant, has been kept out of its proper heritage by the restrictions imposed by the founders of the American constitution. The last hundred years, he says:—

May be compared to that of the minority of a king, during which the royal power is abused by wicked stewards. The people had been proclaimed as sovereign, but they had not yet assumed the sceptre.

Democracy will assume the sceptre when it takes hold of the economic system, and regulates it on a basis of justice. At present the main business of government is to struggle helplessly with the social chaos, which results from its failure to do its first duty.

In the social millennium, in which Julian West woke up in the year 2000, the socialist idea has been realised, and every individual is credited at the beginning of the year with a balance at the state bank of a sum representing his share in the national wealth. The total value per head of the annual product of the United States in the year 2000 was ciphered out by the government statisticians at about £800, of purchasing capacity estimated by the valuers of the present day to be about £1200 or £1400. Every individual, therefore, starts the year with the credit equal to the purchasing value of £1200. He can draw this, and spend it as he pleases, but if it is not drawn by the end of the year, the balance is wiped out, and the individual's account with the nation is opened afresh on January 1. To accept this state credit is a matter of honour and of civic obligation. As a citizen accepts free education in order to enable him to fulfil worthily the duty of citizenship, so the citizen accepts the state credit in order to enable him to be in possession of economic independence, and to give him that stake in the country which is necessary in order that his interest may be identified with public interest.

The importance of having a stake in the country is much insisted upon by Mr. Bellamy. It is a pretty substantial stake with which he supplies his citizens, for they not only have their £1200 per annum of purchasing value, but—

A great variety of services and commodities are now supplied gratuitously on public accounts which formerly individuals had to pay for, as, for example, water, light, music, news, the theatre and opera, all sorts of postal and electrical communications, transportation, and other things too numerous to detail.

No sooner does Julian West find himself supplied with this credit at the bank, upon which he can live comfortably for a year, than he experiences the extraordinary sensation of wanting to go to work at once. Unfortunately, in this Mr. Bellamy strays into cloudland. The net effect of providing average mortals with an income of £1200 per year free of all charges is about the last prescription which any sane person would suggest for stimulating to work.

#### VI.—THE ORGANISATION OF LABOUR.

Mr. Julian West, having experienced this strange and unwonted desire to work, is promptly taken across to the Industrial Exchange, where there is explained to him the method in which the future co-operative commonwealth organises the labour of its citizens. Every one of either sex enters the public industrial service at the age of twenty-one, and after three years of a general apprenticeship in unclassified trades elects to follow a special occupation. Every year the Government draws up an estimate of the numbers of the workers which will be

required among the several occupations, in order to carry on the industrial service. Every youth who graduates from the unclassified service after his period of apprenticeship fills in a paper specifying what kind of work he would like to do, and the place where he would like to be employed. Every citizen has a right to have employment within his home district, but as the rapidity of locomotion has so much increased, the home district has a radius of over one hundred miles. Each one fills in one, two or three preferences as to occupations, and having filled in his preference form in June, he takes it to the local registrar, who stamps upon it his rank. This ranking—

is the figure which indicates his previous standing in the schools and during his service as an unclassified worker, and is supposed to give the best attainable criterion thus far of his relative intelligence, efficiency, and devotion to duty.

Where there is a glut of volunteers for any special occupation, the lowest in rank have to be content with the second or third preference. Those who have made home work imperative are first provided for, while the forms of those preferring work in other districts are forwarded to the National Bureau, and collated with those of other districts. If, however, any of the applicants find that they have got a billet that does not suit them, they can arrange exchanges. The conditions of labour he predicts will be ideal. The worst employment in the year 2000 would be regarded as a god-send to the most fortunately situated workman of to-day. It is the most constant study of the Administration so to bait the least attractive occupations with special conditions as to leisure and otherwise, as to keep the balance of preference between them as equally true as possible. If any occupation remained that was so distasteful as to attract no volunteer, its duty would be performed by all in rotation.

There is no attempt made to compel any one to work against his will by force, but if any one refuses to work, he is dealt with as follows:—

If an adult, being neither criminal nor insane, should deliberately and fixedly refuse to render his quota of service in any way, either in a chosen occupation, or, on failure to choose, in an assigned one, he would be furnished with such a collection of seeds and tools as he might choose, and turned loose on a reservation expressly prepared for such persons, corresponding a little perhaps with the reservations set apart for such Indians in your day as were unwilling to accept civilisation. There he would be left to work out a better solution of the problem of existence than our society offers, if he would do so.

Want, of course, is to be unknown. According to Mr. Bellamy's authority, in the days that are to come:—

The fact is, we are so squeamish that the knowledge that a single individual in the nation was in want would keep us all awake nights.

#### VII.—THE RIGHT TO LIVE.

One of the most interesting chapters in Mr. Bellamy's book is that in which he develops the doctrine that the Socialist State is a necessary outcome from the elementary conception of the first duty of Government, which is that of protecting its subjects from violent death. Governments are organised to protect frontiers and to avert massacre. Mr. Bellamy argues with much ingenuity and considerable force that the struggle for life which goes on in modern industrial conditions is one of far more deadly peril than the attack of any foreign foe. The Governments of to-day are built on the theory that it is only by club, knife, bullet, poison, or some other form of physical violence, that life can be endangered,

as if hunger, cold, and thirst—in a word, economic want—were not a far more constant and deadly peril than all the forces of violence together. Any amount of police, judicial, or military protection would not prevent us from perishing miserably if we had not enough to eat and to wear. In undertaking to secure the citizen in his right to live on the economic side, the new commonwealth will but steadily follow old precedents in safeguarding him from direct assault. Hence, in order to fulfil the first duty of society to its members, which it defined—

The duty of safeguarding the first and highest right of its members—the right of life. The State must evidently see to it that the means of life are not unduly appropriated by particular individuals, but are distributed so as to meet the needs of all.

Individual ownership in anything excepting the annual dividend, representing the result of the collective production of a nation, divided by the total number of individuals within its frontier, goes by the board; and in order to secure the right to life, the right to private property is denied.

#### VIII.—THE RIGHT TO LIBERTY

Mr. Bellamy maintains that the present system of so-called free labour is far more oppressive and intolerable than slavery. Slavery, indeed, or involuntary labour, flourishes all around, or at this day is in full force with many abuses from which the old slave system was free. He says:—

We read that in the United States every year at least two hundred thousand men, women, and children were done to death or maimed in the performance of their industrial duties, nearly forty thousand alone in the single branch of the steam railroad service. No estimate seems to have ever been attempted of the many times greater number who perished more indirectly through the injurious effects of bad industrial conditions. What chattel-slave system ever made a record of such wastefulness of human life as that?

There is a very ingenious chapter entitled "We look over our Collection of Harness." The harness in question consists of titles of ownerships in farms, factories, mines, and railways. The value of these securities depends solely upon the fact that they carry with them the right of virtual ownership of various groups of women, men, and children in different parts of the country.

But it is the men and women who went with the lands, the machines, and various other things, and were bound to them by their bodily necessities, which gave all the value to the possession of the things.

To use a plain illustration, these various sorts of so-called securities may be described as so many kinds of human harness by which the masses, broken and tamed by the pressure of want, were yoked and strapped to the chariots of the capitalists.

The mortgage harness, for instance, hitches in the agriculture class of the population, and compels the farmers in the Far West to toil from early morning to late at night in order to make money to fill the pockets of the capitalist sitting in his parlour at Boston, New York, or London. The Government bond is the harness of the whole nation, which is harnessed to the coach of its owner and driven by the Government itself. The capitalists organise industry, it is true; but they do so at the price of slavery. Julian West is told that:—

To the view of us moderns, therefore, the chattel slave was a more dignified and heroic figure than the hiring of your day who called himself a free worker.

Your whole industrial system seems in this point of view

best and most fitly described by a word which you oddly enough reserved to designate a particular phase of self-selling practised by women.

To be driven to work by the compulsion of hunger is, he maintains, quite as much a thralldom as to be driven to the plantation by the lasso of a driver. There was no possibility of running away under the system of so-called free labour, nor did their death involve any loss of their own class. There were always plenty more to take their places. The poor even fight with each other for the privilege of being the servants and underlings of those who have the money. It is in this chapter that Mr. Bellamy attains to a somewhat higher strain of fervour than what characterises the dull strenuousness of his general plea. This is the passage in which he describes the condition of society under the Parable of the Masters of the Bread. It begins in this way:—

Everywhere men, women, and children stood in the market-place crying to the Masters of the Bread to take them to be their servants, that they might have bread. The strong man said, "O Lords of the Bread, feel our thaws and sinews, our arms and our legs; see how strong we are: Take us and use us. Let us dig for you. Let us hew for you. Let us go down in the mine and delve for you. Let us freeze and starve in the forecastes of your ships. Send us into the hells of your steamship stokeholes. Do what you will with us, but let us serve you, that we may eat and not die!"

The learned men, the scribes, the lawyers, the priests, the levites, the women and the little children all clamoured for bread, and the Masters of the Bread, having taken for their use or pleasure such of the men, the women, and the little ones as they saw fit, passed by, and there was left a great multitude in the market-place for whom there was no bread. In the place of this slave system, which he describes as prostitution, the Revolution, for the first time in history, made Labour truly honourable by putting it on the basis of fraternal co-operation with common and equally shared result. Until then it was at best but a shameful necessity. It was as well that the Revolution came when it did, for—

If the Revolution had not come when it did, we cannot doubt that something like this universal plutocratic dynasty, or some highly-centred oligarchy, based upon the complete monopoly of all property by a small body, would long before this time have become the government of the world.

### IX.—THE RIGHT TO PROPERTY.

It is in accordance with the love of paradox which distinguishes most writers of his school that Mr. Bellamy maintains that the establishment of the socialist state was indispensably necessary in order to save private property from confiscation. The sacred right of property is, he maintains, a kind of boomerang, and a very dangerous sort of boomerang, for the sacred right of property first raised by the rich in the name of the few was re-echoed with overwhelming effect by the disinherited millions in the name of all. The socialist millennium effected a great redistribution of property, but it established the institution of private property in a collective non-inalienable form, and a much more positive, beneficial, permanent and general fashion than had ever been known before. As it is not necessary for the full possession and encouragement of private property that it should be in a separate parcel, or that the owner could exercise a direct and personal control over it, so the consolidation of a multitude of private interests

in a collective or National agency, does not impair but rather protect the property of those who are associated in the syndicate or trust.

What the people in the Revolution did with private property was simply to consolidate the property in the country previously held in separate parcels, and put the management of the business into the hands of a national agency charged with paying over the dividends to the stockholders for their individual use. So far, surely, it must be admitted, the Revolution did not involve any abolition of private property.

As for the right of the existing property-holders to their wealth, Mr. Bellamy denies it without phrase, in so far as it relates to the great majority. He says:—

If you took the aggregate of property held by the merely legal title of inheritance, and added to it all that had been obtained by means which public opinion held to be speculative, extortionate, fraudulent, or representing results in excess of services rendered, there would be little property left, and certainly none at all in considerable amounts.

He further maintains that the immense proportion of national wealth depends not upon the individual but upon the community at large, which renders their collective work of co-operation possible.

It is estimated, I believe, that the average daily product of a worker in America to-day is some fifty dollars. The product of the same men working in isolation would probably be highly estimated on the same basis of calculation if put at a quarter of a dollar. Now, tell me, to whom belongs the social organism, this vast machinery of human association?

Of course Julian answers that the share of the individual is to that of the community as a quarter of a dollar is to fifty dollars, or one to two hundred. This, which he calls by some stretch of metaphor, the unearned increment, was created by the social organism, and can be controlled by the social organism; but this brings us to discuss the ways and means by which the great Revolution was accomplished.

### X.—HOW THE REVOLUTION CAME ABOUT.

"Utopia's a pleasant place," sang Tom Hood. But how shall we get there? Mr. Bellamy not only describes Utopia, but tells us how to reach it. This is the most interesting part of his book. Not by war or bloodshed, or by armed revolution, with its guillotines and noyades. Nothing of the kind. The great exploitation was achieved quite peacefully. The capitalists were not even bought out, and yet they submitted like innocent lambs to the Socialist executioners. How was this miracle effected? Simply because they could not help themselves. They were outflanked, out-maneuvred, cornered, and done for. But now for the process!

The first step was to socialise the natural monopolies of service, towards which a good deal has been accomplished already, especially in the Old World:—

The first step in the programme of political action adopted by the opponents of private capitalism had been to induce the people to municipalise and nationalise various quasi public services, such as waterworks, lighting plants, ferries, local railroads, the telegraph and telephone systems, the general railroad systems, the coal mines and petroleum production, and the traffic in intoxicating liquors. The principal use which this partial process of nationalisation served was to prepare a body of public employees sufficiently large to furnish a nucleus of consumers when the Government should undertake the establishment of a general system of production and distribution on a non-profit basis.

By this means a body representing 5,000,000 persons was trained to regard the State as its natural employer. The dispossession of the vested interests necessary to carry out this socialisation of the natural monopolies was carried out in the first instance by purchase. When the railways came to be dealt with this was the machinery employed:—

Neither the railroads nor the mines were therefore purchased at all. It was their management, not their ownership, which had excited the public indignation, and created the demand for the nationalisation. It was their management, therefore, which was nationalised, their ownership remaining undisturbed. That is to say, the Government, on the high ground of public policy, and for the correction of grievances that had become intolerable, assumed the exclusive and perpetual management and operation of the railroad lines. An honest valuation of the plants having been made, the earnings, if any, up to a reasonable percentage, were paid over to the security holders.

Having thus managed to secure their trained 5,000,000 the Socialists went to the country for a mandate to carry out the economic revolution necessary to establish the millennium—and got it.

The first step of the revolutionary party when it came to power, with the mandate of a popular majority to bring in the new order, was to establish in all important centres public service stores, where public employees could procure at cost all provisions of necessity or luxury previously bought at private stores. But these substantial advantages were but a foretaste of prosperity to be enjoyed when the Government added the function of production to that of distribution, and proceeded as rapidly as possible to manufacture products instead of buying them of capitalists. Still further, not only did the public stores furnish the public employees with every kind of goods for consumption, but the Government likewise organised all sorts of needful services, such as cooking, laundry work, housework agencies, etc., for the exclusive benefit of public employees, all, of course, conducted absolutely at cost.

Ordinary money was not received in public stores, but a sort of scrip, cancelled on use, and good for a limited time only. The public employees had the right of exchanging the money they received for wages, at par, into this scrip. It thus became a currency which commanded 300, 400, and 500 per cent. premium over money which would buy the high priced and adulterated goods for sale in the remaining stores of capitalists.

Naturally every one wanted to be paid in the new paper currency, which was at a premium of three to five hundred per cent. —

As to land, the farmers by millions were only too glad to turn over their farms to the Government and accept employment on them, with the security of livelihood which they implied for them and theirs. The Government, moreover, took for cultivation all unoccupied lands that were convenient for the purpose, remitting the taxes for compensation. It was much the same with factories and shops, which the national system call for. They were standing idle by thousands in all parts of the country in the midst of starving populations of the unemployed. The Government took possession of idle shipping, building what it further needed, and went into foreign trade, exporting products of the public industries, and bringing home in exchange the needed foreign goods.

Day by day the number of the State employees increased until at last no one would work for any one but the State. And the millionaires were reduced to mumbling crusts in the corners of their empty palaces. After a time they acquiesced in the inevitable, and consented to share with the others at the common table of the State. There were, of course, many thieves and others who would not work.

With a good conscience, therefore, the new society

proceeded to deal with all vicious and criminal persons as morally insane, and to segregate them in places of confinement, there to spend their lives—not indeed under punishment or enduring hardship of any sort beyond enough labour for self-support, but wholly secluded from the world, and absolutely prevented from continuing their kind. Penal servitude and enforced celibacy for life were the penalties for disobedience to the Socialist State.

Mr. Bellamy tells us that when the Revolution was accomplished, the complete triumph was completed by a great holocaust of all securities:—

These it pleased the people—exalted, as you may well imagine, by the affluence of liberty—to collect in a vast mass on the site of the New York Exchange, the great altar of Plutus, whereon millions of human beings had been sacrificed to him, and there to make a bonfire of them. A great pillar stands on the spot to day, and from its summit a mighty torch of electric flame is always streaming in commemoration of that event, and as a testimony for ever to the ending of the parchment bondage that was heavier than the sceptres of kings. It is estimated that certificates of ownership in human beings, or, as you call them, titles to property, to the value of forty billion dollars, together with hundreds of millions of paper money, went up in that great blaze, which we devoutly consider must have been, of all the innumerable burnt sacrifices which have been offered up to God from the beginning, the one that pleased Him best.

Mr. Bellamy explains at length how absurd it is to think that mankind need to be driven to labour by the dread of starvation, or that liberty is possible unless every one is allowed an equal share all round in the wealth of the State. This notice is already too long for me to be able to quote his ingenious refutation of the stock argument of the Individualist, but I cannot close without quoting his mode of dealing with the oft-used argument that the Socialist State would be deprived of all incentive to excel.

The assumption that there would be no incentives to impel individuals to excel one another in industry merely because these incentives would not take a money form was absurd. Everyone is as directly and far more certainly the beneficiary of his own merits as in your day, save only that the reward is not in what you call "cash." As you know, the whole system of social and official rank and headship, together with the special honours of the State, are determined by the relative value of the economic and other services of individuals to the community. Compared with the emulation aroused by this system of nobility by merits, the incentives to effort offered under the old order of things must have been slight indeed.

Here also is his reply to the argument that, if the economic check were removed, mankind would multiply like the rabbits of Australia or the gypsy moths of Massachusetts. He says:—

Previous to the establishment of economic equality by the great Revolution, the non-child-bearing sex was the sex which determined the question of child-bearing, and the natural consequence was the possibility of a Malthus and his doctrine. Nature has provided in the distress and inconvenience of the maternal function a sufficient check upon its abuse, just as she has in regard to all other natural functions. But, in order that Nature's check should be properly operative, it is necessary that the women through whose wills it must operate, if at all, should be absolutely free agents in the disposition of themselves, and the necessary condition of that free agency is economic independence. That secured, while we may be sure that the maternal instinct will for ever prevent the race from dying out, the world will be equally little in danger of being recklessly overcrowded.

### XL.—WHAT WILL BE ITS NET EFFECT?

Such then is "The Book of the Month," which is likely enough to prove the book of the year in the United States. The eagerness with which Mr. Bellamy's speculations are received does not in the least prove that his proposals are practicable, but the reception of "Equality," and the admitted fact that millions of the keenest and most practical members of the human race are indulging in such day dreams, is a portent the significance of which ought not to be overlooked. The human race, especially in the United States, is too conservative for any considerable number of people to contemplate so drastic a revolution as that which Mr. Bellamy advocates, unless the existing state of things were filling them with despair. It is only when men become desperate they contemplate root and branch revolution. So long as there is any hope left, men of our race always prefer to tinker and to patch, to compromise and to mend. Not until the safety valve is screwed down tight beyond all hope of relief, is the bursting of the boiler so much as dreamed of. The question whether the safety valve in the United States is screwed down tight in this fashion, is not one which would ever have been raised by Englishmen, who are quite unable to emancipate themselves from the feeling that the American Republic is a free country. It is only American citizens like Dr. Washington Gladdon, who venture to assert that they are not living in a free country. Mr. Bellamy, it will be seen, asserts loudly that the corrupt and weakened democracy has given place to a ruthless plutocratic despotism, the like of which the world has never seen before. The news published last month that President Andrews has been compelled to resign his post at Brown University owing to the fact that he was a *persona ingratis* to the capitalists whom he had offended by his advocacy of free silver, is the latest of a long series of similar reminders that even the American University is becoming the thrall of the money power. From the press, there is even less hope of deliverance. Pessimist views, however, are usually wrong, and a very slight rise in the price of wheat in the English market would probably do more to restore prosperity and content to Western America, than any measure that the present Congress is likely to devise. If, however, the lugubrious forecasts of some desponding prophets of gloom are fulfilled, and the next winter sees three million men out of work in the United States, it is probable

that more and more of the thoughtful Americans will turn with interest to discuss the schemes of Mr. Bellamy, if only because he promises that when his collectivist millennium is established, the problem of unemployment will disappear. Then he tells us there would not be idle machinery equal to the power of other millions of men, idle land, idle capital of every sort, mocking the need of the people. "Now all at once there were not hands enough in the country, wheels enough in the machinery, power enough in the steam and electricity, hours enough in the day, days enough in the week, for the vast task of preparing the basis of a comfortable existence for all. For not until all were well-to-do, well housed, well clothed, well fed, might any be so under the new order of things."

There will be a good deal of preaching about this book, if only because of its bold assertion that it is only by the establishment of this economic equality, the principle of the golden rule can be made universally operative among mankind. Here are three passages which explain the way in which Mr. Bellamy links his millennium on to the Kingdom of Heaven:—

Would it not have startled the old economists to hear that the secret of the most efficient system of wealth production was conformity on a national scale to the ethical idea of equal treatment for all embodied by Jesus Christ in the golden rule?

The condition secured to all by our institutions is the moral atmosphere of serenity resulting from an absolute freedom of mind from disturbing anxieties and carking cares concerning our material welfare or that of those dear to us. Our economic system puts us in a position where we can follow Christ's maxim, so impossible for you, to "take no thought for the morrow."

You will observe, as you shall come to know more of our literature, that one respect in which it differs from yours is the total lack of the tragic note. This has very naturally followed, from a conception of our real life, as having an inaccessible security, "hid in God," as Paul said, whereby the accidents and vicissitudes of the personality are reduced to relative triviality.

A world in which the tragic note is absent, in which there is neither care for the future or want in the present—for the certainty of realising such an ideal, who is there that would not be willing to risk all? Nay, for even an off-chance of winning this terrestrial Heaven, many even of the well-to-do would risk much? As for the others who have nothing to risk, who can say what results might follow such an apocalyptic vision as this?

# SOME NOTABLE BOOKS OF THE MONTH.

## THE RECLAIMING OF AFRICA.

By SIR H. H. JOHNSTON.

Now that Sir H. H. Johnston has accomplished the work he undertook in British Central Africa some years ago, he has summed up his experiences and observations in a book which was published last month by Messrs. Methuen and Co. (30s.). It is a remarkable story he has to tell, and one of which we, as a nation, may well be proud. In a few years our Consul-General, by his energy and perseverance, has changed a slave-raiding, ignorant, and hostile country into something which at any rate resembles a civilised state. The founding and development of the British Central African Protectorate is a splendid example of what can be done by a handful of white men.

### EVOLUTION BACKWARDS.

The most startling statement in the book is Sir H. H. Johnston's assertion that in the case of the African negro the evolutionary process has been reversed. The negro of South Central Africa has been slowly but surely retrograding to a type no longer human. Sir H. H. Johnston says:—

He is a fine animal, but in his wild state exhibits a stunted mind and a dull content with his surroundings which induces mental stagnation, cessation of all upward progress, and even of retrogression towards the brute. In some respects I think the tendency of the negro for several centuries past has been an actually retrograde one. As we come to read the unwritten history of Africa, by researches into languages, manners, customs, traditions, we seem to see a backward rather than a forward movement going on for some thousand years past—a return towards the savage and even the brute. I can believe it possible that had Africa been more isolated from contact with the rest of the world, and cut off from the immigration of the Arab and the European, the purely negroid races left to themselves, so far from advancing towards a higher type of humanity, might actually have reverted by degrees to a type no longer human. . . . Fortunately for the black man in all his varieties, but two or three of the most retrograde, he is not too far gone for recovery and for an upward turn along the evolutionary path—a turn which if resolutely followed, may with steady strides bring him upon a level at some future day with the white and yellow species of man.

### THE WORK ACCOMPLISHED.

To give the negro this upward turn has been the work of the British Central African Administration. It has been a hard and dangerous task, as any one who reads Sir H. H. Johnston's book will learn. With a mere handful of Indian troops, officered by Europeans, and supported by more or less doubtful native allies, the Consul-General had to reduce slave raiders and hostile chiefs to submission. By six years of almost constant punitive expeditions the slave trade, and still more slave-raiding, has been put a stop to. Slavery has never been recognised by the Administration, but where it exists apart from the slave trade it has not been interfered with. If a slave runs away to a settled part of the Protectorate he is never surrendered, and when a district comes under direct administration, all slaves are informed that they are slaves no longer, and are free to do as they choose. Out of the chaos which existed six years ago a somewhat rough and ready cosmos has been evolved. The European population has increased from 57 in 1891 to over 300 in 1896; a regular system of trading has been established; 390 miles of roadway have been constructed;

the navigation of the Shire has been improved, and a regular service of steamers started. The administration of justice has been put on a firm basis, and, generally, the foundations of a civilised State have been laid.

### THE EXTREMES OF SELFISHNESS AND SENTIMENT.

All this has not been accomplished without an infinite amount of labour. A great many difficulties had to be overcome, and Sir H. H. Johnston frequently had to work in opposition to the white population, both missionaries and settlers. An impartial Administration has to adopt a mean course between the extreme of sentiment and the extreme of selfishness. Sir H. H. Johnston says:—

The ideal of the average European trader and planter in Tropical Africa would be a country where the black millions toil unremittingly for the benefit of the white man. They would see that the negroes were well fed and not treated with harshness, but anything like free will as to whether they went to work or not, or any attempt of competing with the white man as regards education or skilled labour would not be tolerated. As a set-off against this extreme is the almost equally unreasonable opinion entertained by the missionaries of a now fast-disappearing type, that Tropical Africa was to be developed with English money and at the cost of English lives solely and only for the benefit of the black man, who, as in many mission stations, was to lead an agreeable idle life, receiving food and clothes gratis, and not being required to do much in exchange but make a more or less hypocritical profession of Christianity.

### THE MISSIONARY LEAVEN.

Sir H. H. Johnston praises very highly the work of the missions, but he has not much admiration for the missionary of the olden time. He mentions two causes for this feeling; first, the cant which by some unaccountable fatality seems to be inseparably connected with missionary work, and secondly, the arrogant demeanour often assumed by missionaries towards men who are not of their manner of thought and practice, though not necessarily men of evil life. Nevertheless, the missionary has done excellent work:—

The great service that Christian missions have rendered to Africa has been to act as the counterpoise to the possibly selfish policy of the irresponsible white pioneer, in whose eyes the native was merely a chattel, a more or less useful animal, but with no rights and very little feelings.

This is high praise indeed, for it amounts to this, that the missions render our rule a benevolent despotism, instead of a money-grabbing tyranny.

### ALMOST AN EARTHLY PARADISE.

Sir H. H. Johnston gives a wonderfully vivid picture of the country he governed. His first chapter, "What the Country Looks Like," is an admirably written sketch of a land which is almost an earthly paradise. It would be one altogether but for malarial fever, for which, as yet, medical science has found no antidote. This first chapter and the imaginary letters of a coffee planter are among the best descriptions of African scenery and life that have been penned. The following is a description of a mountain climb:—

First there are the low foothills to surmount. The soil is red and hard, the grass is scattered in yellow wisps, and the many wild flowers are drooping, for it is the end of the dry season. The trees are in foliage though the rains have not yet fallen, and the young leaves at this stage are seldom green, but the most beautiful shades of carmine, pink and

pinkish yellow, of greenish mauve and even inky purple. Here and there sprays of foliage are in a more advanced development, and are green with a bluish bloom or of the brightest emerald. But the height of the trees is not great, and their leaves though large are scattered in a tufty growth that yields but a feeble patchwork of shade from the hot sun; the branches are coarse and thick and seldom straight, they look just like the branches of trees drawn from imagination by amateur water-colour artists. In many places the bark is still black and sooty with the scorching of recent bush fires. The general impression of all this vegetation, though one is forced to admire the individual tints of the newly opened leaves, is disappointing. It is scrubby. The landscape has not the dignity of a blasted heath, or the simplicity of a sandy desert; its succession of undulations of low scattered forest of such a harlequin variation of tints is such as to produce no general effect of definite form and settled colour on the eye.

Compare with this the following description of a backwater on the Shiré river:—

Over the water side hang thick bushes overgrown with such a drapery of wild convolvulus creepers that the foliage of the bush is almost hidden. This green lace work is beautifully lit up by large mauve flowers. Above the bushes rise the heads of the wild date palm, and amid the fronds of this wild date here and there a cluster of its small orange fruit peeps out. These palms rise over masses of foliage and occasionally top the higher trees, growing within their canopy in almost parasitic fashion. This cluster of tropical vegetation will be here and there scooped out into fairy bowers by the irregularities of the bank. Sometimes the trees will overhang the stream where the bank has been washed away. Tiny kingfishers of purple-blue and chestnut-orange flit through the dark network of gnarled trunks, and deep in this recess of shade small night herons and bitterns stand bolt upright, so confident of their assumed invisibility against a background of brown and grey, that they do not move even when the steamer passes so close to them as to brush against the tangle of convolvulus, and knock down sycamore figs from the glossy-leaved, many-rooted fig trees.

Besides the more popular chapters there are carefully compiled accounts of the botany and zoology of the district. Sir H. H. Johnston has studied the natives closely, and his description of them and their customs is a valuable addition to the book. The volume is excellently printed and profusely illustrated with photographs, sketches, and maps.

### NEW SAYINGS OF CHRIST.

It is a curious coincidence, not without significance, that last month should have been made memorable by the announcement of two notable discoveries. The topics which absorbed public attention were the discovery of gold in the desolate wilds of northern America, and the recovery of a heap of papyri from one of the ruined cities of Egypt. These two events have each impressed the public imagination in its own way, but the attraction to the common man is, in both cases, much the same. It is the possibility of the discovery of the unexpected, the chance that something out of the common may happen. Although we are not likely to witness a rush to Egypt such as has taken place at Klondyke, there is no doubt that the probability of finding forgotten papyri will give a stimulus to Egyptian exploration. Egypt has always been a land of mystery, and has had a strange attraction for men of all time. Its fascination is not likely to be diminished by the discovery of a fragment of the "Sayings of Our Lord" by Mr. Grenfell and Mr. Hunt. Many finds of ancient Greek classics have been made in recent years; but to

the average man Greek classics do not appeal. They may be interesting or they may be worthless, but they do not affect him. He regards them as he does the first small finds of gold dust in Alaska. But the possibility of recovering forgotten sayings of Christ strikes the imagination of even the man in the street. Hence the interest which has been excited in the fragment of papyrus discovered on the edge of the Lybian desert, 120 miles south of Cairo. The fragment itself only measures 5½ by 3½ inches, and is unfortunately broken at the bottom. It is evidently a leaf from a book, and the editors believe its date to be about 200 A.D. The sayings themselves are interesting, but they are important as indicating the probability of the existence of further fragments.

### THE NEW LOGIA.

Six sayings are decipherable, while two are so mutilated that the words cannot be traced. Several of the Logia or Sayings have clear parallels in the Gospels. These are the first, fifth, sixth and seventh. They are similar to texts in Matthew and Luke, although with some interesting variations. Of the influence of St. Mark's Gospel there is no trace, nor is there any direct connection with St. John's; but two of the new Logia, in their general tenor, agree with the fourth gospel. The first saying, which is mutilated, is the familiar one about "casting out the mote from thy brother's eye." The second is new in phraseology although the sense is old enough: "Except ye fast to the world, ye shall in no wise find the kingdom of God; and except ye keep the Sabbath ye shall not see the Father." The third saying tells how Jesus stood in the midst of the world and found "all men drunken, and none found I athirst among them, and My soul grieveth over the sons of men, because they are blind in their heart." A portion of the fifth logia constitutes the chief difficulty of the fragment. The first part has a resemblance to the verse in Matthew, "For where two or three are gathered together there shall I be in the midst of them." There is an addition, however, which seems to imply the presence of Christ in all things: "Raise the stone and there thou shalt find Me, cleave the wood and there am I." The other two logia are interesting variations of "A prophet is not without honour in his own country," and "A city set on a hill cannot be hid."

### THEIR SIGNIFICANCE.

These sayings, no doubt, have some interest in themselves, but it is chiefly because they are a clue to something more that they attract attention. A fragment of papyrus is a small foundation on which to base many theories. This does not deter the editors from discussing several which are chiefly of interest to students. Their most interesting theory is based on the resemblance and variations of the logia to corresponding verses in St. Luke's Gospel. The editors hint at the possibility that the fragment did not borrow from St. Luke, but that both drew from a common source, or at least were influenced by the same body of tradition.

Should such a view be held to be probable here, it would have an important bearing upon the whole question of the independence of St. Luke's gospel. Secondly, since we have in any case to assume a source other than the gospels for the Logia which are entirely new, is it not simpler to regard this as the source of the whole collection?

The booklet, which is published for the Egypt Exploration Fund by Henry Frowde (6d. net), is illustrated with photographic reproductions of the fragments.

## REFORM BY NEWSPAPER.

## THE WORK OF THE FOUNDER OF THE "LANCET."

It is curious to read the biography of a reformer of the early years of the reign. Events have moved so quickly, innovations have been proposed, opposed, carried and become part of the common life in such rapid succession, that the reader hardly realises the fierce struggle which was necessary to bring these changes about. Reforms which at the time were denounced as the forerunners of sure destruction have become so much a part of the accepted order of things, that not even the most hide-bound Tory would wish them repealed. In this rapid evolution the newspaper has undoubtedly played a very great part—how great it would be difficult to say. A striking example of this power of the press is to be found in "The Life of Thomas Wakley," by Dr. S. Squire Sprigge (Longmans, 18s.).

## THE POWER OF THE PRESS.

Thomas Wakley, although trained to be a doctor, was a born journalist. He was a reformer first, but it was by journalism that he accomplished his reforms, and it was to the newspaper that he always turned in case of need. He found the medical profession in a condition which it is almost impossible to realise to-day. He turned the light of day upon all dark places. That was all; but it was sufficient. The following extract from a letter by Sir John Eric Erichsen sums up Dr. Wakley's work for the medical profession:—

The present generation of medical men know little of him, and are for the most part ignorant how much they owe to him for exposing and fearlessly attacking the manifold abuses that existed in every department of the profession in the colleges, hospitals and medical schools in the first third of this century. Corruption, jobbery, nepotism, promotion by purchase were rife in the colleges and hospitals, and medical education was at a low ebb when Wakley entered on his career as a journalist. By his outspoken and fearless denunciation of these abuses he brought about their reform, and so cleared the road to fame and fortune for those members of the profession who had to rely solely on their own ability and power to work. It was, in fact, Mr. Wakley who made a William Jenner or an Andrew Clark possible.

## HIS MISSION.

The *Lancet* was the instrument by which Wakley worked this transformation. He founded it in 1823, and at once made it a power in the profession. The first ten years of its existence were very exciting, and the young editor had his hands full. He let in the light of publicity upon the "family intrigues and foolish nepotism that swayed the elections to lucrative posts in the metropolitan hospitals and medical corporations." As can be imagined, he was cordially hated by all the privileged classes. Dr. Sprigge says:—

He considered himself to be under a mandate from the profession at large not only to keep them well posted in the scientific side of their work, but to see that the rights of the general body of practitioners were not infringed by a particular set of persons. This attitude it was that prompted him to violent attacks upon individuals; this it was that made him so intolerant to the contemporary medical press, which was written to please the eminent few rather than the profession at large; and this it was that was responsible for all the good that arose, directly or indirectly, from the founding of the *Lancet*, as it was responsible for certain errors of taste and judgment which marked the early career of the paper.... The harm it did was small, and recoiled chiefly upon Wakley, who was never afraid to meet his liabilities, while the value of his fearlessness and ardour to the cause of reform was incalculable.

## A PRACTICAL ENTHUSIAST.

Wakley was a man who clearly saw the object he wished to attain. He was impetuous and rash possibly, but he always had a clear sense of what was practical. Wherever he saw an abuse he denounced it, but he was always careful to have his facts well in hand.

For some time Wakley represented Finsbury in Parliament, primarily in the interests of the profession, but at the same time he was the champion of all causes which were for the benefit of the masses of the people:—

He followed a very clear and well-defined policy of the Radical sort, moulding his actions upon the notions of useful reform that had been developed in him by his early intolerance of the hapless condition of the medical profession when he first joined it. As then all his plans and movements were designed to help the rank and file against the oppression of their rulers, so later in Parliament every public act or word of his had for its object the betterment of all classes who were unable to better themselves. Grievance-hunter he might be called, agitator he certainly was, but in general and medical politics alike he was always on the side of those whom he conceived to be oppressed, while his methods for their relief at the same time displayed enthusiasm and sincerity, tempered with good sense, knowledge of the world and general sympathy.

In 1839 Wakley was elected coroner for West Middlesex. As was to be expected he at once began making reforms, which were bitterly opposed by the old-established authorities. The first few years of his coronership were stormy indeed, but he proved too much for his opponents.

Whatever might be the object Wakley worked for, he always relied on the *Lancet* as his chief weapon of offence and defence. The number of abuses he attacked and the shams he exposed were numberless. One of the most useful agitations he undertook was that in favour of pure food. He opened a careful inquiry in the columns of the *Lancet* into the food-stuffs of the nation. So thorough and uncompromising was the investigation, that it frightened individual evil-doers into better behaviour, and opened the eyes of Parliament to the absolute necessity for State interference.

## THE SECRET OF SUCCESS.

The secret of Wakley's success was the whole-hearted way with which he threw himself into anything he had to do:—

It was his habit to write, speak, and act as if nothing on earth mattered to him save the question under discussion, and more, as if the man to whom any other question might appear as of even comparative importance, was convicted of foolishness.... Consequently, Wakley's audience was never neutral, but always for him or against him, and his name was always associated by friend or foe with the particular subject his treatment of which had either compelled admiration or provoked animosity.

It is impossible to do justice to such a man during his lifetime, nor until many years after his death. His interests are so numerous, and his decisions so rapid, that it is almost impossible for his contemporaries to discern the purpose and aim which connects all his actions. Wakley did as much as any one to show that the press is an immense power for good when directed by a man of energy and convictions. Reform by newspaper may be sneered at, but it is not pleasant to think of the position of the medical profession had it not been compelled to reform its ways by the fear of the *Lancet*. Dr. Sprigge set himself a difficult task in writing "The Life of Thomas Wakley," but he has succeeded in bringing vividly before the mind of the reader the personality of one who contributed not a little to the progress of the Victorian era.

### THE TURK AS A FIGHTING MAN.

By A WAR CORRESPONDENT.

MR. CLIVE BIGHAM is the first in the field with his account of the Turkish-Grecian War. Mr. Bigham acted as correspondent of the *Times* with the Turkish army, and followed its victorious march from the declaration of war to the conclusion of the armistice. "With the Turkish Army in Thessaly" (Macmillan, 6s. 6d.) is, however, rather a disappointing book. It is absolutely devoid of any "purple patches," and confines itself strictly to a matter-of-fact statement of the movement of the troops. The most interesting portion of the book is Mr. Bigham's observations on the behaviour of the Turk as a soldier. The war was of the very simplest description, no tactical skill being displayed on either side. Mr. Bigham seems to have enjoyed "a very interesting ten weeks' excursion," that was all.

#### THE PROGRESS OF THE TURKISH ARMY.

To Mr. Bigham the whole war seemed a game, the real centre of interest being not at the headquarters of the armies in the field, but in the intrigues at Yildiz Kiosk and at Athens. These would afford a far more interesting study than the warlike operations. Mr. Bigham agrees with the Russian view of the Turkish successes, that they were nothing very brilliant, and were wholly due to German training. The Turkish tactics were extremely simple. They banged away at the enemy till they beat him. On one or two occasions some elementary movements, such as flank attacks, and once an envelopment, were evolved from the commanders' brains, but they never got much further, and had little result to show. German training has developed the Turkish army into a fairly reliable fighting machine, but it has not penetrated much beyond the battalion. The divisional commanders were poor, and hardly ever made good use of their cavalry or artillery. The chief achievement of the Turks was the rapidity with which they brought ammunition to the front. This was very necessary, for during the first week some three million cartridges were fired. The following summing up of the Turkish campaign is interesting in view of the extravagant claims which have been advanced by their admirers:—

The strategy of the Turks was essentially dilatory; but, though apparently always over-cautious, they failed to show a just appreciation of the real dangers of war. They entirely ignored the true object of attack, the enemy's base, and advanced with a strong right instead of a strong left wing. They omitted to push home their advantages, and even the little cavalry they had was rarely employed. Immensely strong in artillery, they hardly ever made use of this arm in great masses; and having only to fear one thing, the cutting of their lines of communication, they left these during the first part of the campaign almost unprotected and in no way organised. On the other hand, they never made rash movements, they always concentrated a force superior to the enemy's before giving battle, and they evidently understood, though they did not always apply, the lessons taught by the Russo-Turkish war as regards the thousand and one non-combatant services which go to make up the backbone of an army.

The Greek campaign was mismanaged from beginning to end, although on the whole their strategy was reasonable.

#### THE TURKISH SOLDIER.

Mr. Bigham was immensely impressed with the individual Turk as a fighting man. He absolutely does not know what fear means. As a matter of fact, Mr. Bigham thinks the word courage is not strictly applicable to the Turk; he is, as far as he can make out, men-

tally impervious to any sensation of fear, and what passes with us for the most wonderful daring is rather a positive lack of any appreciation of danger. He is absolutely imperturbable, advancing without hesitation in the teeth of the most murderous fire.

The Turk, unless ordered, is incapable of running away, and when he has got an order he will observe it, *ruat cælum*. His courage and his calm and silent advance beggar description, and there is little doubt that when the Turkish army is really trained up to a high European standard it will be invincible. . . . The Turks are, to start with, good fighters, they are very enduring, they have immense marching powers, they carry nothing but their rifle, ammunition, and water-bottle (at a pinch they will dispense with this last), they are contented with the hardest life, they neither need nor want stimulants nor pleasure, and they enjoy battle. Add to this, if you can, really capable and acceptable officers, increase the organisation to the utmost pitch of proficiency (this is merely a mechanical matter—*vide* the progress of the Russians), impart a thorough moral and physical training to the ranks, and you will have the most exceptionally strong army that has ever been let loose on earth.

This means that were the Turkish army officered and disciplined by Europeans, we might see it revolutionised, but not unless. The initiative and energising force will have to be supplied from outside.

#### THE GREEK DEFEAT, AND ITS CAUSE.

Does a democracy make a good fighting machine? If we are to accept the Turkish-Grecian War as evidence the answer would be decidedly in the negative. Some light is thrown on this question by Mr. W. K. Rose's description of the recent campaign, entitled "With the Greeks in Thessaly" (Methuen, 6s.). Mr. Rose has compiled a very readable and interesting account of the events which he witnessed as Reuter's Special Correspondent in Greece. The Greeks, he says, carried the democratic idea so far that all sense of discipline in the army was lost. Every one had his own plan of campaign, so there was no cohesion and no working for a common purpose. The bare possibility of an invasion of Thessaly by the Turkish army never entered the heads of the Greek commanders. The individual Greeks formed very good material for an efficient army, but they were a mass of men without any discipline to speak of.

This whole-hearted acceptance of the principle of equality seems to have had unfortunate results. The men were anxious to do their duty so far as it accorded with their notions of discipline, but

There was no real sense of military discipline. The drill was left mainly to non-commissioned officers, and the officers were not at drill in sufficiently close contact with the men. There was no habit of implicit obedience to orders, and I have actually seen an officer approach a private and implore him as a favour to do what he had been told by his non-commissioned drill-instructor. On another occasion when a smart shower of rain came on during drill a battalion simply melted away to seek the shelter of the nearest trees.

The Greeks do not seem to have mastered the lesson that an effective army cannot be run on a free-and-easy, do-as-you-like basis:—

On the street and in the cafés, privates mixed on a footing of perfect equality with their superior officers, and debated with freedom military subjects. The intense democratic feeling throughout Greece was sometimes made the excuse for the admittedly loose discipline, and for the familiarity subsisting between officers and men.

The Greek commanders seem to have been practically without any plan of campaign. Not so the common soldier. Mr. Rose says:—

As every Greek civilian is a politician, firmly believing that he is quite fit to direct the destinies of his country as Prime Minister, so every Greek soldier is a strategist. Whether officer or private, he carried with him in his pocket a map of the frontier of Macedonia, which he would on the slightest provocation draw forth, spread on his knees, or on the ground, and discuss his plan of campaign.

### NATIONALISM V. INDIVIDUALISM.

"NOTES on Political Economy" (Macmillan, 4s. 6d.), by a New Zealand Colonist, is a thoughtful little book. It emphasises the fact, which is daily becoming more and more plain, of the revolt against the old political economy with its devotion to individualism. The new political economy, the New Zealand Colonist maintains, will not be based on the individual, but on the nation. To the individualist the man and his personal interests are the primary element; to the Socialist, or, as he would prefer to call him, the Nationalist, the nation is the supreme consideration, and the man is only an atom soon to yield his place to a successor. The nation, like the man, is a living organism having an existence connected with, yet distinct from, the individual atoms of which it is composed. Men die, and their places know them no more; but the nation lives for ever. These two views of looking at what constitutes a nation lead to widely different methods of action. The guiding star of the Nationalist is the health and strength of the nation. Whatever saps its vitality is a nuisance which must be removed. The New Zealander says:—

The ideal society would be that in which all have the opportunity to provide for themselves and for those whom they hold most dear, by a reasonable amount of labour whether mental or manual. The perfect attainment of this ideal is impracticable in our present state of civilisation. None the less it is well to keep the ideal in mind and to seek its attainment step by step, as the conditions of life and the state of public opinion may permit. Much has been gained in the past. None can doubt that more will be gained as knowledge spreads, and as men's minds become impressed with the insignificance of the individual in face of the grandeur of the nation to whose labours and protecting care he owes all that makes life worth living.

This ideal is not to be attained by revolution, but by education. Revolution begets reaction, but education begets progress. Free education and free government will destroy the old economist's theories, and the principle that interests are to rule and men are to be a secondary consideration will be banished for ever. The New Zealand Colonist deals, from this point of view, with the creation of national wealth, capital and credit, joint stock companies, value and price and exchange.

## LEARNING LANGUAGE BY LETTER-WRITING.

THE *Bibliothèque Universelle* of Lausanne has published an appeal to its readers, some idea of which may be obtained from the following extract. After alluding to the origin of the "international correspondence," M. Tallichet continues:—"The number of young French girls desirous of entering into correspondence is inferior to that of the English girls, and we are therefore asked to help find girl correspondents in our Swiss schools. We have thought it a duty to comply with this request: first, because such a means of promoting union amongst the nations should be encouraged; next, because our young lady readers will doubtless be very glad to perfect themselves thus in the study of English. But the scheme extends beyond the school, and to our readers of every nationality, age, sex, and profession we offer to act as intermediary with the REVIEW or REVIEWS if they desire to find English correspondents." The warm co-operation of the Swiss review is very welcome. Much of the educational value of the scheme depends of course upon the interest taken in the matter by the teacher—and here, I think, the French teachers are, on the whole, more ready than our own. One boy writes to an English comrade: "Je désire que votre professeur de Français vous soit aussi sympathique que l'est pour nous, notre professeur d'Anglais. Je pourrais ajouter que la plupart d'entre eux sont pour nous, non seulement d'excellents professeurs, mais de véritables amis." Our teachers are equally anxious to be "friends" with their pupils, but in the playground, more than in the schoolroom; and as a rule our boys do not "love" their French professors.

One of the masters in an important English school has sent me a charming essay, one of a number contributed by the boys of his class. In this essay, after speaking of what he supposes Nelson would do, if told that one of his nieces or nephews had become the bosom friend of a native of France, he tells about the long hours of work in French schools, wonders at the way in which a French boy takes it as a matter of course that his English friend is reading for a B.A. degree; and remarks jokingly that as they have correspondents in the school from many parts of France, and each writer describes his native place as being one of the most charming spots on the face of the earth, it must be assumed that France is second to no other country as regards scenery. I wish it were possible to give this essay *in extenso*; perhaps other masters might find this plan a good one.

In Germany "Internationale Schülerbriefwechsel" has been regarded with great favour, and the Sächsischen Neuphilologen-Verband has already sent us lists of German boys through Professor Martin Hartmann of Leipzig. He laments that so few English boys desire to correspond with German boys, and begs all teachers to send in as many names as they can gather. A list of adults has also been sent, but, at the time of going to press, the response had not been received.

The schools being now closed for the long vacation, names cannot be published in the *Revue Universitaire*, or the *Bibliothèque Universelle*, but names may be sent to this office just the same.

The adult correspondence is flourishing, more than 250 English people have been "introduced" to those of other countries, and as Mr. Scheurmier, the Editor of the *Practical Teacher*, has put large numbers of teachers in communication with French teachers, this does not represent the total. Many of our adult applicants ask how the correspondence is to be managed. There

can be no rule, but, generally speaking, the introductory letter should be in the writer's own language as allowing more freedom of expression, the next in the foreign language, the third in his own language again, both as a model letter for the foreign friend, and as being the best medium for the correction of that friend's fault. There is a great difference observable in the correction of an English person's French letter and a Frenchman's English letter. The former letter will probably need much setting right as regards gender, number, and accent, as well as the turn of the sentences. The Frenchman's English letter will probably be correctly spelt, but obscurely expressed. Underneath is one such letter with its corrections:—

Dear Sir,—I come to read in the REVIEW of REVIEWS that a person signing L. P. wishes to converse by French letters. Applying myself since some time to the study of English, for the purpose to travel later in the world, I have the greatest desire of knowing well that language. Thus, you see, I know of it very little. It is self the right, which have my done hesitate before to write you, but I have told myself, that you would be kind enough for not be sorry on it, and that the good will which animates me, shall me may progress enough to write more becomingly. For what regards the subjects, about it I should be able to give you informations of our commerce, and our old town. As a set off, I should be happy to receive such informations from you. If whilst I hoped it, my propositions agree you, etc., etc.

Such a letter almost needs rewriting, or it might be corrected thus:—

| Do not say  | but | Say.  |
|---|-----|---|
| 1. I come to read.  |     | 1. I have just read.                                  |
| 2. Applying myself since some time.   |     | 2. Having applied myself for some time.               |
| 3. For the purpose to travel in the world.                                  |     | 3. For the purpose of travelling about the world.     |
| 4. Of knowing well.   |     | 4. To know thoroughly.                                |
| 5. I know of it very little.  |     | 5. I know very little of it.                          |
| 6. It is self the right which have my done hesitate before to write to you. |     | 6. It is that which made me hesitate to write to you. |

Rightly speaking, a corresponding French letter written by an Englishman should have been given, but such a corrected letter with its careful red ink crosses is a sight to see, but could scarcely be printed.

Will our adult applicants kindly remember that when they wish to write on some definite subject, the delay is necessarily greater and cannot always be avoided? The stamps are not necessary for those under school age.

A French lady with two little daughters writes that she would be glad to "exchange" for a little time with the children of an English lady living near London; and an Englishman would gladly give a Frenchman a lodging in his house (Northumberland) for the benefit of his conversation.

Our foreign friends are also asked to notice that English solicitors, accountants, bank clerks, civil servants, etc., desire French correspondents of their own professions or occupations.

Two English ladies, one in England and one in Russia, desire to write to ladies in Paris. These ladies are married.

An English doctor wishes to correspond with a Portuguese and a clerk with a Spaniard.

A Frenchman engaged in manufacture of gold fringe, etc., desires to write about his work.

Teachers are earnestly asked to respond to the appeal of the many French teachers who are eager to discuss professional questions.

# LIST OF THE LEADING CONTENTS OF CURRENT PERIODICALS.

## ENGLISH AND AMERICAN.

**American Historical Review.**—(Quarterly.) Macmillan. 1 dollar.  
July.

## KAISER AND TSAR

WITNESSING THE MILITARY MANOEUVRES AT KRASNOE SELO.

# THE PROGRESS OF THE WORLD.

LONDON, August 31st, 1897.

The  
Federation  
of  
Europe.

The suggestion made in the REVIEW OF REVIEWS some couple of months ago that the United States of Europe were in sight, although it has been derided by some, has nevertheless been received with an unusual degree of enthusiasm in very different quarters. Arrangements are on foot for reprinting the article and circulating it, in French and German translations, throughout the Continent. But that, however, is a mere straw showing how the wind blows. What is much more significant is the extraordinary spectacle which last month was witnessed at St. Petersburg, when the Russian Emperor, avowedly because he was the declared advocate of peace, received in state the Rulers of Germany and of France. For the last twenty-five years Germany and France have been the two great antagonists whose irreconcilable interests have been a perpetual menace to the tranquillity of the Continent. At any time since 1871, if the advocates of peace ventured to indulge in a timorous hope that humanity might be spared a great Continental war, they were always crushed by reference to the deadly hostility which prevailed between the French and Germans. As long as Elsass-Lothringen remained under the German flag, so long, we were assured, there could be no expectation that the European nations would agree to work together in a semi-federal sense. The proceedings at St. Petersburg in the month of August have gone far towards dissipating that belief.

A Ménage  
à Trois.

Nothing could be more dramatic or more calculated to drive home to the mind of Europe the significant change that has come over the spirit of France's dream, than the immediate juxtaposition of the reception of the Emperor of Germany and the President of the French Republic by the Tsar of Russia. Not so many years ago it would have been impossible for the President of the French Republic to have put his foot inside the Imperial palace which had just been vacated by the German Emperor. The Tsar spent the first half of last month publicly embracing and kissing the Kaiser, and the second half expressing, with even greater effusion, his devotion to France. The exclusive jealousy which is so often the distinctive note of a feminine attachment seems to be conspicuously absent from France

to-day. Instead of insisting that nothing—no, nothing—will content her but a strictly monogamous union, the French Republic appears to have reconciled itself with the best grace in the world to form one of a *ménage à trois*. And what renders it all the more remarkable is that this *ménage* has as its fundamental principle the denial of French aspiration for the recovery of her lost provinces.

The German Emperor arrived at Cronstadt, accompanied by a stately escort of German and Russian ironclads, on August 7th. He quitted Russian waters in the same state four days later. In the course of his visit the Tsar and the Kaiser kissed each other an indefinite number of times, drank each other's healths, and exchanged compliments concerning their armies and navies. The Tsar, as his manner is, spoke briefly but very much to the point. At the State dinner at Peterhof he thanked the Emperor for his visit as "a fresh manifestation of the traditional bonds which unite us, and of the good relations so happily established between our two neighbouring Empires, and at the same time as a precious guarantee for the maintenance of general peace, which forms the object of our constant efforts and our most fervent wishes." The Kaiser, who always talks through a speaking-trumpet and prints all he says in capitals, declared that his appointment as a Russian Admiral was "a fresh proof of the continuance of our traditional and intimate relations founded upon an unshakable basis." He then went on to make the following declaration, which is very much in the style of Mr. Hugh Price Hughes:—

Your Majesty's unalterable resolution to keep your people in peace in the future as in the past finds in me also the gladdest echo, and thus we will pursue the same paths and strive unitedly under the blessing of peace to guide the intellectual development of our peoples. I can, with full confidence, lay this promise anew in the hands of your Majesty—and I know that I have the support of my whole people—that I stand by your Majesty's side with my whole strength in this great work of preserving the peace of the nations, and I will give your Majesty my strongest support against any one who may attempt to disturb or break this peace.

After this there was more kissing and embracing, and when at last the visit terminated the Germans were delighted with the unexpected cordiality of the sovereign who inherited from his father the rôle of the Peace Keeper of Europe.

By L. Bonnat.—From the Salon.]

PRESIDENT FÉLIX FAURE.

The  
French  
President.

Hardly had the thunder of the salutes to the German Emperor died away, before the citizens of St. Petersburg set about decorating their streets in honour of the expected visit of President Faure. M. Faure, accompanied by his Foreign Minister, and escorted by some of the best ships in the French navy, arrived at Cronstadt within a fortnight of the Kaiser's departure. His reception by the Emperor was marked with the same cordiality which had been shown to his predecessor, it being left to the populace in the streets to manifest by the exuberance of their enthusiasm the difference between the popularity of their two visitors. The visit passed off without a hitch, and everything was done to convince the French of the enthusiastic affection with which they are regarded by their Russian friends. There was not so much kissing in the palace as at the Kaiser's visit, but the speeches were even more significant, and the expressions of friendship were carefully, and, apparently, intentionally accentuated towards the close of the visit, when, after a prolonged interview between the Emperor, the President, and their Foreign Ministers, it was found possible for the Tsar to refer to Russia and France as "two friendly and allied nations." For years past the French have been longing to hear the word "alliance" pronounced by the Tsar. They have not even now been permitted the full ecstasy of such Imperial utterance; but it must be admitted that, in referring to Russia and France as "allied nations," the Tsar has gone as near to proclaim the alliance as it was possible for him to do without absolutely uttering the mystic word. Of course, we only need to refer to the phraseology of the Queen's speeches to know that the phrase, "an allied nation," or an "ally," is very different from the declaration of a formal alliance. All the European Powers are Her Majesty's allies, every European nation is in one sense an allied nation, but that is a very different thing from entering into an offensive and defensive alliance such as that of which the French have been dreaming for years past. Still, to be declared "a friendly and allied nation" has satisfied the French for the moment, and it would be cruel to grudge them this gratification.

Now for the bearing of all this upon the great ideal of the Federation of Europe. President Faure, in his speech at the banquet given to the Tsar on board the French flagship, made use of an expression which is very significant. After speaking

of the intimate friendship of France and Russia and of the part played by the French and Russian navies in the events which founded the intimate friendship of France and Russia, he said :—" They have drawn nearer, hands stretched out towards one another, and have enabled our two friendly and allied nations, guided by a common ideal of civilisation, right and justice, to unite fraternally in the most sincere and loyal union." Now is it not true that this phrase concerning the common ideal of civilisation, right and justice, might be used with at least as much truth concerning any other European nation as it could be about Russia? It would indeed be nearer the mark to say that between the autocratic orthodox Russian Empire, and the democratic free-thinking or Catholic French Republic, there was a greater difference of ideals as to "civilisation, right and justice" than between France and any other State in Europe? Yet notwithstanding the widely divergent ideals, we find this "loyal and sincere union" proclaimed aloud in the hearing of all men in the very place where but a fortnight before the air had been thunderous with cheers and salutes for the German Emperor. Is not this a good omen for "the loyal and sincere union" of all the European States in the federation of the future?

—And  
our Common  
Enemy.

It will be replied that the union of France is possible only because they have a common enemy or rival in Germany. Have not all the European Powers an enemy which is far more dangerous to their vital interests than Germany can ever be to the French Republic? I admitted frankly enough in my article on "The United States of Europe" that the devil is an indispensable factor in the bringing of the millennium. But has Europe not got a sufficiently formidable fiend to serve its purpose in the militarism which is the millstone of our civilisation and the nightmare of our life? These meetings at Petersburg have been encouraged by the Tsar for the purpose of exorcising the dread of war which haunts the imagination and paralyses the energies of the European peoples. And no greater proof can be afforded of the potency of this grisly terror than the fact that the Tsar has been able to induce the French people to hail with semi-delirious enthusiasm the conclusion of an arrangement which sounds the death knell of their hopes about their lost provinces, and virtually guarantees to Germany the uninterrupted possession of Elsass-Lothringen. That is a great exploit, and one about which the Russians have good reason to be proud.

Its Bearing  
in  
England.

We are not greatly concerned here in England to notice the efforts that have been made to represent the *rapprochement* of Russia to France and Germany as marking the beginning of the organisation of Europe on a common basis of hostility to Great Britain. Some harebrained scribes in the Old World and in the New appear to believe that when Tsar, Kaiser and President were all swearing by high Heaven their unalterable resolve to support each other to maintain the peace of Europe, they were in reality concocting an infernally clever plot for the purpose of launching the Continent of Europe into a predatory war against John Bull. People who can believe that can believe anything. Those persons who imagine that it is easy to organise a great Continental coalition for the purpose of dividing up the possessions of another Power, should study the history of the Eastern Question for the last hundred years. For a century and more the most coveted city in the world, and some of the richest provinces in Europe and Asia, have been practically advertised as free to be looted the moment three or four of the great Powers could agree as to the division of the spoil. It is hardly too much to say that even if two of them, Austria and Russia, could have come to terms, the possessions of the Sick Man would have been divided up long ago without any serious fighting. But so incompatible are the ambitions of the various Powers, so hopeless is the attempt to secure the harmonious adjustment of their respective claims, that to this day the moribund Empire of the Sultan continues to disgrace the world and outrage the moral sense of humanity. Yet with this object-lesson before them, these lunatics of the press expect us to believe that Russia, Germany and France are entering with a light heart upon the dividing up of the British Empire, not one step towards which could be taken until the greatest sea power in the world, and the richest and most energetic of all the Imperial races, had been beaten to the ground. In future let them tell that story to the marines.

The insuperable difficulty of harmonising the real or imaginary interests of the Powers east of Europe has this month been emphasised in many ways.

It is fifteen weeks now since the Powers began to negotiate with the Sultan for the conclusion of a definite treaty of peace with Greece. On this occasion there is no territorial question to inflame international jealousies, but notwithstanding this, the time

From the Figaro.]

[August 2, 1907.]

SOLVING THE EASTERN QUESTION!

has passed without a settlement, and even now it is impossible to say when the Turks will leave Thessaly. The hitch has arisen concerning the question of indemnity. The Powers have agreed that the Turks are entitled to an indemnity which is at present fixed at about £4,000,000 sterling; but as Greece has not 4,000,000 piastres in its treasury, the Turks naturally suggest that they should have some solid guarantee for the payment awarded them by Europe. Their idea naturally was to remain in occupation of Thessaly, holding the province as a pledge for the payment of the indemnity. All the Powers agreed to this, with the exception of England, and the action of Lord Salisbury in the matter may be commended to those hostile critics who are always accusing him of timidity and irresolution and hostility to the cause of freedom in the East. Lord Salisbury held that the proposal of the Powers was equivalent to establishing the Turks indefinitely in possession of the province from which they had been banished nearly twenty years ago by the public conscience of Europe, and therefore he refused his assent to a proposal pressed by Turkey and supported by every other Power of Europe. Of course, there have been great mutterings of anger on the Continent, where Lord Salisbury is described as the marplot who for some sinister motive is preventing the conclusion of peace. Lord Salisbury's own proposal is that Russia, France, and England, the three Powers which have stood from the first in more intimate relations to Greece than any of the other Powers, should jointly guarantee the payment of the indemnity, allowing the other Powers to come in as they please. The fate of that proposal was not settled at the moment of writing, but its adoption is doubtful.

Another element in the complicated web of Eastern politics has been afforded by the visit of Prince Ferdinand of Bulgaria to Constantinople.

It was but the other day that it was currently rumoured that the Bulgarian Government intended to proclaim the Independence of the Principality on August 14th, the tenth anniversary of the Prince's accession. Instead of doing so, Prince Ferdinand astonished everybody by suddenly appearing at Constantinople as the honoured guest of the Sultan. All kinds of rumours have been current in Europe as to the cause for this singular *volte-face*, of which the best authenticated appear to be that Prince Ferdinand, feeling that neither Russia nor Austria would support him, decided to make the best terms he could with the Sultan. As Dr. Stoiloff, Prime Minister, says the Prince prefers to kiss the hand of the Sultan rather than humble himself before the Ministers of the European Powers. The meaning of this must be sought in the hubbub that was raised in Austria by an extremely offensive, and subsequently abusive, interview, which a German paper published with Dr. Stoiloff, in which that Minister, replying to various taunts of the Austrians at Bulgarian scandals, borrowed a hint from the familiar apologue of the pot and the kettle, and said that Austria need not talk when the tragedy of the Archduke Rudolf's death had never been explained. The Austrian Government, furious at this reference to the sore in the family history of the Hapsburgs, recalled its agent from Sofia, and insisted, and at last secured, a tardy refutation from Dr. Stoiloff of the accuracy of his remarks. In the midst of all that is obscure, one thing stands out clearly—namely, that Abdul the Damned, assassin though he be, has so far succeeded in establishing his position as to convince the Bulgarians that it is better to be friends with the Sick Man than to spend all their energies in preparing to grab his inheritance.

From Kladderadatsch.]

FREDINAND OF BULGARIA: "A Crown is worth a kiss of the hand."

**Armenia  
once more.**

Last month brought a slight revival of the Armenian Question, owing to the publication of a revolutionary manifesto by the Armenians, which threatened the execution of a project far more terrible than that of the Great Assassin, "a project the idea of which fills us with terror." The appearance of this manifesto was emphasised by the explosion of bombs of dynamite in Constantinople. No great harm was done, although the bomb which burst in the Grand Vizier's department of the Court on August 18th killed one man and injured several others. The attempt to explode bombs at the Ottoman and the Galata banks at Pera had no result on this occasion. The throwing of the bombs was not used by the Sultan as a pretext for further massacres of the Armenian population in the capital; but the work of extermination seems to be going on continuously in the Armenian provinces, where the Kurds, in their district of Salmas, are reported to have destroyed two Armenian villages and massacred two hundred prisoners.

**The Revival  
of  
Islam.**

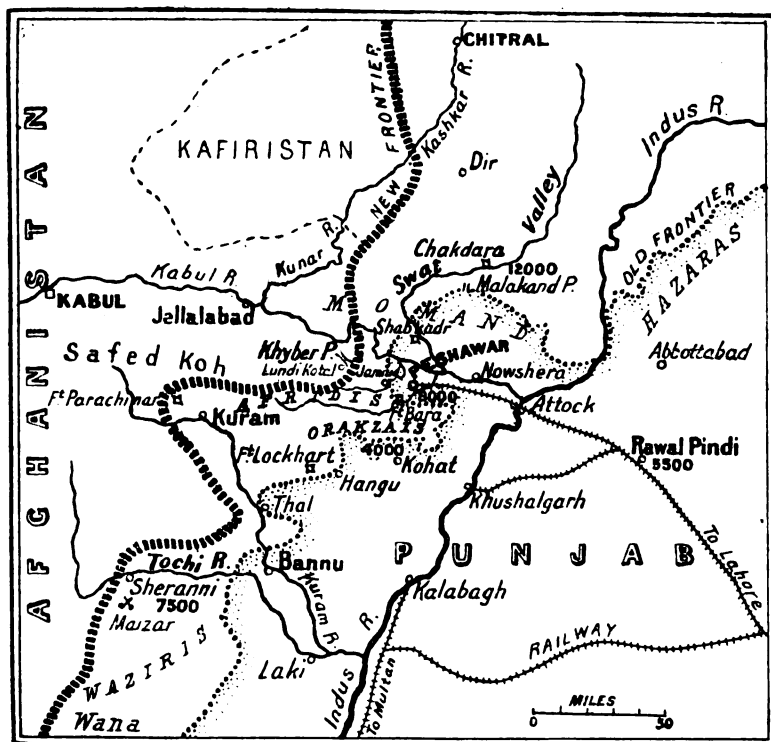

"May your shadow never grow less" is a familiar form of Oriental benediction, and the shadow of the Shadow of God at Constantinople certainly does not appear to have dwindled of late months. Mussulmans, of course, regard this as the clearest possible demonstration of the fact that the Commander of the Faithful is being rewarded by Allah for the fidelity with which he is enforcing the sacred law against the Infidel, and it must be admitted that the Faithful have now something to say for their theory. In Crete the Sultan's representative is more to the front than ever. Not a soldier has been withdrawn from Thessaly. Nothing has been done to avenge the Armenian massacres. Bulgaria has wheeled into line, preferring to be an ally rather than an enemy. Still more signal proof is afforded of the far-reaching influence of the Caliph by the serious news from India, where, according to the best authorities, we are now engaged in confronting the most serious state of affairs that we have had to confront since the Mutiny. It is, of course, possible that there may be some exaggeration in the stories current as to the influence of the revival of the Sultan's prestige upon his co-religionists on the Indian frontier. But unless all reports are false, the effect of the Turkish revival has been unmistakably felt in the bleak uplands of Afghanistan.

**The Flame  
on  
the North-West  
Frontier.**

It is impossible for the man in the street in London to appreciate or even imperfectly to realise the significance of the telegrams which rain in upon him from all quarters of the North-West frontier, but the net effect of these telegrams may be summarised in a sentence. One after another the whole of the frontier tribes occupying the territory included in the Indian Empire by Lord Salisbury's Government, in direct reversal of the policy of Lord Rosebery's Administration, are up in arms against us. The accompanying map will show how wide is the range over which we have to face the hillmen in arms. From Maizar, in the Tochi Valley, in the south, to Chakdara and Chitral in the north, all the tribes have risen, necessitating the concentration of nearly half the Indian army on the extreme North-West frontier, while the Afridis have succeeded in seizing all the outposts by which we maintain the main high road to Afghanistan through the Khyber Pass, and closing the Pass against us as effectively for the time being as if the mountains had come together by a convulsion of nature. Our troops seem to have behaved with their usual gallantry, but on one occasion at Shabkadar, fifteen miles from Peshawur, a British force of 1,200 men was narrowly saved from a defeat by 6,000 Mohmands by the opportune arrival of a more capable officer with a company of Sikhs. In the Swat Valley, on the route to Chitral, we succeeded in beating out the insurrection, but not before we had 12,000 fighting men in the field. The surprise at Maizar, in the Tochi Valley, was summarily avenged, but that punitive operation necessitated the employment of 7,500 men.

**Who  
is to blame?**

The Khyber Pass was only held by native levies, who appear to have evacuated their positions, after making a fair show of fighting, with due regard for their own skins. The reopening of the communication with Afghanistan is a task which will involve the use of many thousands of troops and the expenditure of millions of rupees, and it may be of millions of pounds. If these reverses had befallen us in any other circumstances than the present we might have borne them with a philosophic equanimity as a part of the troublesome and expensive incidents of Empire; but each successive telegram of bloodshed and expenditure provokes an ever-increasing irritation when we remember that all this ghastly and costly business was due to the headstrong blunder of Lord George Hamilton and Lord Roberts, who, in defiance of all that was best

NORTH-WEST FRONTIER OF INDIA.

in Anglo-Indian opinion, persisted in abandoning the old frontier and establishing the outposts of British authority far beyond the line where it could be effectively and economically defended. The duty of withdrawal within our own frontier, after the relief of Chitral, was almost the only important question upon which the late Liberal Cabinet was absolutely unanimous. But in face of every protest, Lord George Hamilton and Lord Roberts persisted in drawing this advance line across the hills, thereby threatening the independence of the most fanatical independent tribes of Highland men to be found outside Montenegro. The Indian telegrams of last month have indeed supplied ample vindication of the sound statesmanship of the Liberal Administration on this question.

#### The Liberal Eclipse.

This is one small crumb of comfort for those of us who by heredity, tradition, and party ties, still call ourselves Liberals; for anything more hopelessly dispiriting than the present position of the Liberal Party in this country it would be difficult to imagine. The other day, when talking to one of the most distinguished of the administrators of our Colonial Empire, I was asked who were the

coming men of the Liberal Party? I had reluctantly to admit that there were no coming men of the Liberal Party, and that the old leaders were practically extinct. Lord Rosebery wantonly committed political *felo de se* at the very moment when the Liberal Party stood in most urgent need of the strenuous leadership which he alone could have afforded us on the subject of Foreign Policy. Sir William Harcourt has not only committed *felo de se*, but has, one might say, had himself buried at three cross-roads with the Report of the South Africa Committee thrust through his vitals. He is the man who, when England's honour and the reputation of his country were at stake, sold the pass, to quote a picturesque Irish phrase, in order to whitewash Mr. Chamberlain. In that act of apostasy, promptly revenged by Mr. Chamberlain's significant repudiation of the charge against his confederate, Mr. Rhodes,

to which, as if in mockery, he had just affixed his signature, Sir William Harcourt dragged down Sir H. Campbell-Bannerman, who at one time was regarded as a possible W. H. Smith for the

THE KHYBER PASS.

BRIGADIER-GENERAL SIR BINDON BLOOD, K.C.B.

Liberal Party. Mr. Mundella is dead, and Mr. Bryce and Mr. Morley alone remain a forlorn and meagre remnant to represent those who used to be the leaders of a Party which, until but the other day, included one-half of the English people, with a large majority of those upon whose energy, faith, and enterprise the progress of the nation depends.

As if to emphasise the parlous state to which the Liberals have been reduced, we had last month the by-election at Brightside, Sheffield, and the political manifesto of the committee of the National Liberal Club. Brightside was a Sheffield constituency which had been for the last twenty years almost the pocket borough of Mr. Mundella. The Conservatives never before polled more than 3,661 votes in Brightside, and on one occasion—in 1892—Mr. Mundella polled 4,938. The Liberal majority, therefore, was 1,277 five years ago. Last month Mr. Maddison, a Liberal who combined the support of both the Liberal and Labour parties in the constituency, only succeeded in keeping the seat by the majority of 183 votes, the Conservatives polling 4,106. Even after all allowances have been made for the difference between Mr. Mundella's and Mr. Maddison's hold upon the constituency, this is a poor showing, and not calculated to put fresh heart into the Liberal Party. The political manifesto of Mr. Labouchere and his friends at the National Liberal Club under those circumstances is a cruel addition to the tribulations of the Party. It is issued, as it were, in derision by a mocking spirit, out of *schadenfreude*, proclaiming his desire to focus the energies of the Party on certain clear and specific

issues, and then, by way of contributing to this, suggesting half-a-dozen measures on which agreement is impossible. A national council for England, Scotland, Ireland and Wales respectively is introduced incidentally as a substitute for the recognised policy of Home Rule for Ireland. The Liberal Party is much too sick to be restored to life and vigour by the administration of the bolus of Mr. Labouchere.

The Parliamentary Session closed on August 6th with a reading of the Queen's Speech. Queen's Speech, which announced the conclusion of a treaty of commerce and friendship with the Emperor of Abyssinia, and that the cordiality of our relations with foreign Powers remained unchanged. The denunciation of the treaties of commerce with Belgium and Germany forms the subject of a special paragraph. If, however, the truth were told, it would probably be found that although there is no outward break in the conventional good relations which exist between Berlin and London, the denunciation of the commercial treaty has created feelings the reverse of amicable on the part of our pushing neighbours. It is not so much what was done, as the sudden, abrupt fashion in which it was carried out, that has offended German susceptibilities. Such dissatisfaction, however, as here exists has not yet found official expression, and the action taken by the Government has been disliked rather because of what it suggested might remain behind than from any special desire to preserve the objectionable clause which hampered the commercial freedom of our Colonies.

*Photo by A. T. Osbourne, Hull.]*

MR. F. MADDISON,

New M.P. for the Brightside Division of Sheffield.

of two miles per day, will reach a point in November from which Sir Herbert Kitchener will be able to attack either Berber or Khartoum. The best news about all this miserable business in the Soudan is that the railway is being largely constructed by the Dervishes who were in arms against us last autumn, but who are now only too willing to earn an honest penny by laying the sleepers across the desert. Another item of good news is that our engineers have succeeded in striking water by sinking wells in the desert. If they can do this frequently, and the wells are practically inexhaustible, then the road to Khartoum will be easy enough.

The Murder of Señor Canovas. The only European sensation of last month, apart from the visit to St.

Petersburg, was the assassination of Señor Canovas, the Prime Minister of Spain, by an Anarchist Italian, who shot the Premier as he was at the Baths of Santa Aqueda, on Sunday afternoon, August 8th. Angiolillo was an Anarchist of the familiar type, who conceived that he had a right to avenge on the Prime Minister of Spain the cruelties perpetrated on the Anarchists, several of whom found refuge last month in London. The assassin was promptly arrested, and privately garroted. A meeting of sympathy with the Anarchists was held in Trafalgar Square, that free meeting-ground for impecunious discontents, and it required the utmost efforts of the police to secure a fair hearing from the audience. The crowd would sing "God Save the Queen" and other ditties, but the police did their duty manfully in the cause of Free Speech. The killing of Señor Canovas was an unfortunate event; but it is a great mistake to exaggerate the significance of such an episode. Anarchism, like enteric disease, every now and then claims a victim, but on the whole it is much less

deadly to the statesman than typhoid fever. Note by the way that the President of Uruguay in South America was also assassinated. If things go on at this rate the insurance officer will have to make some slight addition to the premium on the lives of Presidents and Prime Ministers.

Sir Wilfrid Laurier has returned to Canada, and has been accorded a splendid reception by his countrymen. He deserves it for having secured a denunciation of the treaties with Germany and Belgium, and for having advanced Canada, as he told his friends on his return, one step towards the status of the full rights of an independent nation. He was also in a position to assure the Canadians that as the net result of his visit to Europe, both France and England were likely to turn their attention more and more to the development of the resources of the Dominion. It is interesting to note that the three personalities of the world whose character filled the Canadian Premier with admiration, which he could not express in words, were the Queen of England, the Pope of Rome, and Mr. Gladstone. Our younger men appeared to have left him untouched. The Canadian bows in homage before the sublime spectacle of extreme age combined with supreme genius.

**The Royal Commission on Agricultural Depression.** The whole question of commercial freedom, and its results on the welfare of nations, has been brought to the front, not merely by the action of the Cobden Club in presenting a gold medal to Sir Wilfrid Laurier for his distinguished services in the cause of Free Trade, but still more by the Report of the Royal Commission on Agricultural Depression. This Commission has been taking evidence for a long time, and its Report is certainly not calculated to reassure those who take a rosy view of the position of our farmers. The Commissioners calculate that the value of British agricultural land has fallen by nearly 1,000 millions in the last twenty years. They report that the capital value of land in the last twenty years, on the basis of the income-tax assessment, shows a decrease of 834 millions sterling, or 50 per cent. This represents a decrease in the revenue of English and Scotch landlords of nearly 13 millions a year. The Commissioners report that great as the fall has been, there is no promise in the near future that there will be any material relaxation of the pressure of the foreign competition to which it is due. Several Commissioners recommend an international arrangement for the restora-

tion of silver, either wholly or partially, to the position it filled prior to 1875. This, they think, would check a long-continued fall in prices, and after the remonetisation of silver, prices would go up rather than down. Mr. Channing recommends that rents should be still further reduced, and the Commissioners themselves make some score of recommendations all tending to give greater freedom of action in dealing with the land to improving and energetic tenants. They make various recommendations as to the amendment of the Agricultural Holdings Act, and urge that the Government should facilitate the carriage of agricultural produce by a Parcel Post at cheaper rates. They recommend improved education, more co-operation, increased security to tenants, and the provision by the State of cheap money whereby landowners should carry out the permanent improvement of their property. The Commissioners frankly recognise that a time may come when the cultivation of land in England will cease to be possible. On the whole, their Report is a document which, if it could have been foreseen at the time of the repeal of the Corn Laws, would have added materially to the difficulties of Mr. Cobden. That probably is the reason why it was concealed from our sight.

**The Royal Visit to Ireland.** The visit of the Duke and Duchess of York to Ireland has been one long, unbroken success; whether in Dublin or in Killarney, it was all the same. They were received with all the enthusiasm and loyalty that our brave and chivalrous Irish fellow-subjects know so well how to display. If the management of Ireland had been left more to Princes than to politicians, things would probably have gone much more smoothly. Unfortunately, the politicians cannot be got to see what a political resource we have in our Royalties, especially in dealing with people in whom the instinct of personal devotion is so strongly developed.

**A Month of Conferences.** August, as usual, was a great month for Congresses. The British Association, the greatest of all the autumnal assemblies, met this year in Toronto. There also the British Medical Association has held its meeting. It is well to see great scientific associations treating the Empire as a whole and considering Toronto to be as much a British town as Liverpool or Leeds. The Co-operative Congress had its annual meeting at the Crystal Palace, and reported as usual with unflinching faith as to the customary moderate but substantial progress towards the realisation of

*Photo by Elliott and Fry.]*

SIR JOHN EVANS, K.C.M.G.  
President of the British Association.

its ideals. The most interesting of all these Conferences, however, is that which Dr. Nordau, and another Israelite like himself, have summoned at Basle. This was the Conference of the Zionists, a Congress looked at askance by the orthodox and official organisations of Jewish opinion, but nevertheless started by many of the cleverest Jews of the time. These Zionists of Basle propose to raise funds to buy Palestine from the infidel, so as to afford the persecuted Israelites a local habitation and a national status in the world. The stricter Jews regard this as a kind of profane tampering with the prophecies. If the Jews are to go back they must be led thither by the outstretched arm of Jehovah, not by the shekels of Dr. Nordau and his friends. The more spiritual Jews are equally revolted at the idea of attempting to found the Temple of the new Jerusalem by the re-establishment of a petty kingdom in a Turkish villayet. Their new Jerusalem is nothing less than the estab-

lishment of universal religion, Christian in all but name, the area of whose dominion will be co-extensive with that of the planet. A cynical Gentile, however, would rejoice exceedingly if the Semites went back to the land of Canaan under the leadership of Dr. Nordau.

**Who Rules  
In  
India?** A petition signed by more than 60,000 women has been presented to the Government, protesting against any return to the Regulation system in

dealing with contagious disease in India. There is reason to believe that the Indian Government at home is not a little alarmed at the insolence, to use no milder word, with which the military authorities in India have treated the very clear and explicit interdict placed by Lord George Hamilton in the name of the Home Government upon any attempt to return to the evil system of past days. Lord George Hamilton, it will be remembered, in his despatch explicitly declared by way of preamble that while the Indian Government might deal with contagious disease as it already had power to deal with infectious maladies, it was peremptorily forbidden to do anything that would give any occasion to anybody to say that they licensed, legalised, regulated or otherwise sanctioned officially the practice of prostitution. Judging from the legislation which the Indian Government introduced by virtue of this permission, Lord George Hamilton's "Thou Shalt Nots" have been treated with sovereign contempt. The 60,000 women memorialists will probably find their best line of action in supporting Lord George Hamilton's veto against the insubordination of Indian authority.

**Mr. Chaplin's  
Bad  
Precedent.**

We are perpetually being told that women have no grievances to complain of in the shape of being debarred from work which they are well qualified to perform. The recent decision of our Local Government Board, for which Mr. Chaplin deserves to be thoroughly well castigated, affords a striking illustration of the fact that sex is still regarded as a disqualification for the discharge of public duties. A local Board of Guardians recently had to consider the question of the appointment of a Relieving Officer, their late officer having died after a long illness, during which his duties were most thoroughly performed by his wife. After his death, the local Board of Guardians decided that, in the interest of the poor and the efficiency of the public service, they could not do better than instal the widow in her husband's place. Unfortun-

nately, Mr. Chaplin's consent was necessary before the widow could accept the post. After considerable hesitation the Local Government Board decided to overrule the decision of the Local Board of Guardians, and decided from the plenitude of their masculine infallibility that the most competent person must give way because of her sex to one who was less competent. Mr. Chaplin had no precedent to guide him, so he made a precedent for himself, and a very bad one it is, which will be remembered against him not for righteousness for the rest of his natural life.

5½d., 3½d. and 2d., and the following are specimens (third class fares):—

THE UNIVERSITY OF TORONTO.  
Where the British Association met, August 13th.

**The Nationalisation of Railways.** Mr. Wilson, of the Railway Nationalisation League, sends me a letter concerning the progress of the movement for the nationalisation of railways, of which the following is an extract:—

I suppose you have heard that the Swiss have issued a Blue Book on the proposed purchase of railways. They will pay twenty-five years' purchase on the net average profits calculated over the nine years ending 1895, making the total 964,000,000 francs. This is in response to the will of the people expressed through the Referendum, and the cost is to be paid, not by loans or taxes, but by the creation of a Government Stock, which will extinguish the Railway Stock.

The Great Western Railway Company has swallowed up about fifty little companies, and the *modus operandi* is creating fresh stock in payment of the little companies' extinguished stock. Why then should the Government follow any other course than pay out Railway Stock with Consols?

Following hard on the Swiss, the Danish Government, stimulated by Austro-Hungarian and Russian example and experience, has intimated the abolition of present fares and the adoption of the zone system. Minimum fares will be

#### The Rise in Wheat.

Notwithstanding the lugubrious conclusions of the Royal Commission, the hearts of our farmers are to-day filled with a fresh hope, owing to the sudden and sustained rise in the price of wheat. The American farmer has once more achieved the goal of his ambition. "Dollar wheat" last month was sold freely at Chicago and New York, while in this country the astonished agriculturist has seen wheat once more quoted at 40s. a quarter. The difference between wheat at 27s. 6d. and at 40s. means all the difference between prosperity and blank ruin. Bread is, as a consequence, a little dearer, but the general boom in rural prosperity following an increase of prices will probably be regarded as a compensation for the fact that the cheap loaf is no longer quite so cheap. It is this fact which gives their chief argument to the Protectionists. If a rise in prices, due to the

rise of the market, is to be hailed as a boon, why should a rise in prices, provided for by tariff, be regarded as a hideous disaster? The answer, I suppose, is, that the tariff-makers cannot be relied upon to do justice; and, even if they did, they would but be like the farmer who, being allowed by Jove to regulate the weather according to what he imagined would be the interests of his fields, had at harvest time the worst crop of the countryside.

**The End of two Labour Disputes.** August has witnessed the close of two famous industrial disputes—the different issues of which illustrate very forcibly the contrast between the rival advantages of peace and war. After nearly a year's obstinate fighting Lord Penrhyn and his quarrymen have adjusted their differences. The settlement is claimed by both sides as a substantial and moral victory. But it is not for me to decide between the *Times* and the *Daily Chronicle*, each of which is in ecstasy over the notable triumph of each of the two antagonists. What is certain is that if either of them would have accepted the present settlement twelve months ago, then there would have been no lock-out, and further, that if Lord Penrhyn had consented to allow the intervention of an arbitrator, any sensible impartial man would have had no difficulty in drawing up some such settlement as has now been declared to be acceptable to both sides. The quarrymen have got their right to act collectively recognised on condition they do not obtrude the name of their Union, and to this condition they very wisely assent. Contrast this tardy settlement, effected after nearly a year of warfare, with the settlement of the dispute between the North Eastern Railway Company and their workers, which was brought to a peaceful close without a day's suspension of industry by the award of Lord James!

**The Rights of Railway Men.** Lord James's award, which has been cheerfully accepted and acted upon by the North Eastern Railway, may be regarded as a sort of Magna Charta of railway employes, for its provisions will naturally

come to be regarded as representing the natural rights of all the members of the vast industrial army which operate our railway traffic. Apart from the question of wages, which, although important, is not of general or universal interest, the award of Lord James affects the general conditions of railway service in the following important points:—

1. Overtime to be paid at rate and a quarter.
2. Sunday work to be paid at rate and a half.
3. Each shift to stand by itself in calculating overtime.
4. Each shift, no matter how short, to be reckoned at least as a full day.
5. No cleaner shall be appointed under the age of sixteen.
6. Special Sunday work by gangmen and lengthmen to be paid double rate.

There were dozens of other detailed provisions for the removal of discontent and the securing of justice, but the above are the leading general rules laid down. What a pity it is that Lord James was not allowed to frame a similar award for the settlement of the Engineers' dispute, which still drags on its weary way, entailing a weekly subsidy from the strike funds of £30,000, and a loss to the trade of the country of which this is but the merest fraction.

**Sunday Labour.** One of the most notable signs of the times has been the defeat of the English Social Democratic delegates at the Socialist Congress at Zurich,

where their opposition to a proposal to make Sunday the universal Rest Day was voted down by the European delegates. There were two propositions before the Congress, both insisting on one day's rest in seven, but the English Socialists objected to the stipulation that this day must be Sunday. Their Continental brethren—owing largely to the influence and numbers of the Catholic Socialists—would have no other day but Sunday, and after an animated debate, voted down the English opposition by a large majority. This was well done! If the Rest Day is to be generally observed, there must be a general agreement as to what day it shall be. That is why, from the general humanitarian point of view, the Seventh Day Adventists, etc., have always seemed to me to be among the most pernicious of Protestant sects.

# DIARY FOR AUGUST.

## EVENTS OF THE MONTH.

- August 2. King of Siam visited Westminster Abbey and St. Paul's.  
Lambeth Conference concluded.  
Dr. G. F. Browne appointed Bishop of Bristol.  
The National Artillery Association began its Annual Meeting at Shoeburyness.  
Social Democratic Federation concluded Annual Conference at Nottingham.  
Chak'lara Fort relieved.  
Sir Wilfrid Laurier entertained at a farewell dinner in Paris.  
The editor and printer of the *Kesaria* committed for trial at Bombay.  
Emperor William started for St. Petersburg.  
National Eisteddfod of Wales opened at Newport.  
Conference on the rinderpest opened at Pretoria.  
3. King of Siam visited the Houses of Parliament.  
The Iron and Steel Institute met at Cardiff.  
4. Inquiry into the administration of the National Society for the Prevention of Cruelty to Children terminated.  
Editor of the *Kesaria* liberated on bail.  
Final Report of the Royal Commission on Agriculture issued.  
King of Siam visits the Queen at Osborne.  
5. Lord Londonderry's letter to Mr. Appleby published.  
Greek Citizens petition the King to resist the proposed International control.  
Japanese Government agreed to Arbitration in the Hawaiian question.  
6. Prorogation of Parliament.  
The Tennyson Beacon unveiled at Freshwater.  
Shoeburyness Meeting concluded.  
Resignation of Major Lothaire.  
The Report of the Industrial Commission of the Transvaal presented to the Volksraad.  
7. Assassination of the Spanish Premier, Señor Canovas del Castillo.  
Arrival of the German Emperor and Empress at St. Petersburg.  
International Conference for promoting arbitration opened at Brussels.  
9. Review of troops at Krasnoe Selo in honour of the German Emperor.  
Abu-Hamed captured.  
Arbitrator's Decision between the North-Eastern Railway Company and their men published.  
Postmaster-General issued his memorandum on the dispute with the Telegraph and other Departments of the Service.  
Colliery explosion at Ravensthorpe, near Dewsbury.  
Manifesto issued by the Engineers in reply to the Federated Employers.

Photo by Russell, Baker Street.]

### THE LATE BISHOP OF WAKEFIELD.

10. The Fifty-eighth Annual Meeting of the Royal Botanic Society.  
11. Murad Bey, leader of the Young Turkey Party, returned to Constantinople.  
12. Grouse shooting began.  
Funeral of Bishop How of Wakefield.  
Prince Ferdinand left Constantinople.  
Prince Henry of Orleans returned to Paris.  
Conference on the training of pupil-teachers at Oxford.  
Grand Hotel at Baden-by-Zürich destroyed by fire.  
13. Mass Meeting of the Postal Telegraph Clerks' Association at the Memorial Hall.  
Funeral of Señor Canovas in Madrid.  
Count of Turin arrived in Paris.  
14. Return of the German Emperor and Empress to Kiel.  
Duke of Connaught inspected the troops at Aldershot.  
15. Duel fought between Prince Henri d'Orléans and the Count of Turin at Paris.  
16. Sir Wilfrid Laurier presented with the Gold Medal of the Cobden Club.  
The steamship *Belgica* started from Antwerp to explore the South Polar regions.  
The Tate Gallery of British Art opened.  
The Ameer of Afghanistan issued a firman forbidding his subjects to join the rising under the Mullah of Herat.  
The International Colonial Congress opened at Brussels.  
Co-operative Festival opened at the Crystal Palace.  
18. Arrival of the Duke and Duchess of York in Dublin.  
President Faure left Paris for Russia.  
The British Association opened at Toronto.  
International Review in Crete.  
19. The Duke and Duchess of York opened Textile Exhibition in Dublin.  
20. Collision of the *Phaeton* (cruiser) and the *Thrasher*.  
Execution of Angiolillo at Vergara.  
21. King of Siam left England for Germany.  
The Penrhyn Quarry Strike ended.  
22. Protest in Trafalgar Square against torture in Spanish prisons.  
23. President Faure met at Cronstadt by the Tsar.  
Strike at Budapest in the building trade.  
International Workmen's Congress opened at Zurich.  
24. The Paris bazaar disaster investigation concluded.  
25. Banquet at Toronto in honour of eminent scientists.

25. Duke and Duchess of York at Dublin Horse Show.  
Presentation to Rev. B. Waugh by the staff of the N.S.P.C.C.  
Lundil Kotal taken by the Afridis.  
26. President Faure entertained the Tsar and Tsarina on board the *Potemkin*.  
Captain Henry Arkwright's body found on Mont Blanc after thirty-one years in the ice.  
27. Dr. George Rodney Eden appointed to the Bishopric of Wakefield.  
Marriage of Prince Charles of Sweden to Princess Ingeborg of Denmark.  
Sir Evelyn Wood appointed Adjutant-General.  
28. Sir Wilfrid Laurier arrived at Quebec.  
Zürich Labour Congress ended.  
29. Engineers' Eight-hours Demonstration in Hyde Park.  
30. The editor and publisher of *Mahrani* convicted of sedition at Satara.  
31. Return of President Faure to Paris.

### BY-ELECTION.

August 7. Sheffield (Brightside).—  
By the death of Mr. Mundella a by-election was held, with the following result:—

|                   |    |    |       |
|-------------------|----|----|-------|
| Maddison (Labour) | .. | .. | 4,289 |
| Hope (Tory)       | .. | .. | 4,108 |

Labour Majority .. .. 183

1886: Lib. Maj. 876; 1892: Lib. Maj. 1,277;  
1895: Lib. Unopposed.

### SPEECHES.

- August 2. Mr. Gladstone, at Hawarden, on the Cultivation of Fruit and Flowers.  
5. Sir W. Harcourt, at the Welsh Eisteddfod, on the Welsh People's Love of Education.  
10. The Home Secretary, at Blackpool, on the Report of the Commission on Agriculture.  
15. Sir Louis Davies, on Canadian Tariff and Klondyke.  
Lord Farrer, at the Hotel Cecil, on the Cobden Club.  
Sir W. Laurier, at the Hotel Cecil, on Canada and Free Trade.  
20. Captain Preston, at the Crystal Palace, on the Co-operative Agricultural and Horticultural Association.  
24. Mr. Arthur Balfour, at Dumfries, on Burns, Carlyle, Scott, and Stephenson.  
25. Sir Michael-Hicks Beach, at Seaham Harbour, on Stock-rearing.  
Mr. Dillon, at Dublin, on the Irish Parliamentary Party.

Photo by J. C. Schaarwächter, Berlin.]

### THE COUNT OF TURIN.

Photo by Nadarz, Paris.]

### PRINCE HENRY OF ORLEANS.

25. President Kruger, at Pretoria, on the Suzerainty of Great Britain.  
Mr. Bryce, at Toronto, on Amity Between Great Britain and the United States.
26. Duke of Devonshire, at Skipton, on Agriculture and Stock.
30. Duke of Devonshire, at Bradford, on Hospitals.

## BRITISH ASSOCIATION.

18. British Association opened at Toronto. Present, 1500; 400 from Great Britain.  
The President, Sir John Evans, on the Antiquity of Man in the Palaeolithic and Neolithic Periods.
39. Professor William Ramsay, on the Existence of an Undiscovered Element.  
Dr. G. M. Dawson, on the Ancient Rocks of America.  
Professor C. L. Miall, on the Study of Live Animals.  
Mr. Scott Keltie, on the Geography of the Future.  
Mr. F. F. Deacon, on the Mechanical Science of the Last Sixty Years.  
Professor Michael Foster, on the Study and Future Development of Physiology.
20. Professor A. R. Forsyth, on Mathematics in Relation to Other Branches of Science.  
Lord Kelvin, on the Earth's Supply of Fuel and Air.  
Professor Sir William Turner, on Some Distinctive Characters of Human Structure.  
Professor H. Marshall Ward, on Specialisation in Botany.  
Professor Roberts-Austin, on Canada's Metals, with experimental illustrations.
21. Dr. J. W. Spencer, on the Continental Elevation of the Glacial Epoch.  
Mr. E. G. Ravenstein, on the Congo and Cape of Good Hope.  
Professor Gilman, on Recent Aspects of Profit-Sharing.
23. Mr. John Hopkinson, on Annual Rainfall in British Empire.  
Dr. Vaujeh-Evorsel, on the Temperature of Europe.  
Professors Meslans, Moissan and Dewar on the Properties of Fluorine.  
Professor Ramsay, on the Spectra of Helium and Argon.  
Professor John Milne, on Earthquakes and Volcanoes.  
Mr. Edwin Connaught, on National Policy and International Trade.  
Mr. James Bryce, M.P., on Free Trade.
24. Mr. Selous, on the Economic Geography of Rhodesia.  
Mr. J. Shutt, on Canadian Virgin Soils.  
Professor W. A. Herdmann, on Deep-Sea Life.  
Mr. J. B. Tyrrell, on the Barren Lands of Canada.
25. Professor Oliver Lodge, on the effect of Magnetism on Spectral Lines.  
Mr. J. P. Macdonald, on the Workmen's Compensation Bill.  
Mr. R. M. Bowker, on Reactions against Economic Freedom in the United States of America.

25. Hon. Carroll D. Wright, on the Relation of the Employment of Women and Children to that of Men.  
Mr. William Saunders, on Cross-Fertilising of Plants.

## PARLIAMENTARY.

## HOUSE OF LORDS.

- August 2. Lord Salisbury made a statement on the subject of Turkey and Crete.  
Second Reading of the Congested District (Scotland) Bill; the Licensing (Scotland) Acts Amendment Bill; the Metropolitan Water Companies Bill; the Prison-Made Goods Bill; the Military Manoeuvres Bill; the Public Works Loans Bill; the Expiring Laws Continuance Bill.
2. Third Reading of the Naval Works Bill and the Outdoor Relief (Ireland) Bill.
  3. Commons' Amendments to Lords' Amendments in Workmen's Compensation Bill agreed to.  
Second Reading of the Public Health (Scotland) Bill; the Post Office (Sites) Bill; the Education (Scotland) Bill.  
Third Reading of the Post Office and Telegraphs (Facilities and Pensions) Bill; the Metropolitan Police (Borrowing Powers) Bill; the Foreign Prison-Made Goods Bill; the Metropolitan Water Companies Bill; the Military Manoeuvres Bill; the Public Works Loans Bill, and the Expiring Laws Continuance Bill.
  4. Second Reading of the Supreme Court of Judicature (Ireland) Bill.  
Third Reading of Public Health (Scotland) Bill; the Education (Scotland) Bill; the Parish Councils (Scotland) Bill and the Licensing (Scotland) Acts Amendment Bill passed their final stages.  
The Commons' Amendments to the Land Transfer Bill agreed to with the exception of Clause 20.
  5. Third Reading of the Post Office (Sites) Bill, and the Supreme Court of Judicature (Ireland) Bill.
  6. The Consolidated Fund Appropriation Bill passed all its stages.  
Prorogation of the House by Royal Commission till October 23rd.

## HOUSE OF COMMONS.

- August 2. London University Bill dropped.  
Irish Estimates discussed. Government proposals agreed to by 136 votes against 48.  
Second Reading of the Constabulary (Ireland) Bill.  
Third Reading of the Supreme Court of Judicature (Ireland) Bill.
3. Supply, Report of July 19. August 2, July 29 July 27, July 23 agreed to.  
Discussion about Turkey and Crete on the Foreign Office Vote.  
First Reading of the Consolidated Fund (Appropriation) Bill.  
Third Reading of the Merchant Shipping (Exemption from Pilotage) Bill.  
A further amendment of the Lords to the Workmen's (Compensation for Accidents) Bill agreed to, also amendment of the Lords to Foreign Prison-Made Goods Bill.

4. Lords' amendments to Metropolitan Water Companies Bill considered and agreed to.  
Report on the Land Transfer Bill.  
Second Reading of the Appropriation Bill.
5. The Admirals and the Turkish Fleet; statement by Mr. Goschen.  
The Indian Budget; speeches by Lord George Hamilton, Sir C. Dilke, Sir W. Wedderburn, and Mr. Dillon.
6. The Consolidated Fund (Appropriation) Bill read a third time.  
Prorogation of the House by Royal Commission.

## OBITUARY.

- August 2. Major-General C. A. Sim, 68.  
Alfred Ritter von Arneith, President Academy of Science at Vienna, 78.  
Herr Johann Trenwald, Professor in the Academy of Fine Arts at Vienna, 73.  
Adam Acnyk, Polish poet, 59.
5. Bishop Edward Bickersteth, of South Tokio, 47.  
Colonel Sir George G. Walker.  
Major-General Edward N. Perkins, 73.  
Count Goto (a late Japanese Minister).
  6. Samuel Laing, 86.
  7. Señor Canovas.
  9. Sir Jos. Tholozan, chief physician to the Shah of Persia.  
Major-General Holmes, 75.
  10. Dr. How, Bishop of Wakefield, 73.
  13. Sir Isaac Holden, 91.  
Ponk Wang Soh, Korean representative at Diamond Jubilee.
  15. Signor Costa, Italian Minister of Justice.
  17. General Sir William Jervois, 76.
  18. Dr. Sousa Martins, President Portuguese Sanitary Conference.
  19. George Palmer, of Reading, 89.  
Dr. James Wilson, 86.
  20. Hon. Sir Charles Lilley, late Premier of Queensland, 69.
  23. Prince Hugo Hohenlohe, Duke of Ujest, 81.
  25. Count Mutsu, late Minister Foreign Affairs, Japan.  
Sir George Osborne Morgan, 71.
  26. The Maharanee Surnomoyl of Cassimbazar.
  29. The Marquis Conyngham, 41.

## DEATHS ANNOUNCED.

Death is also announced of Surgeon Lieut.-Col. George B. Stuart; Professor Victor Meyer, chemist at Heidelberg; Major H. M. Sidney; Rev. Edward Simms; Alfred Sutton; Dr. Jakob Burckhardt, at Bale; Albert Marth, astronomer; Colonel Eveleigh; Captain Nelson; Thomas H. Cowie, Q.C.; Francis Francia, banker, Gibraltar; Colonel G. E. Reade; Lieutenant R. T. Greaves, Lieutenant Hector MacLean; Lady Frances Lindsay; General Holroyd; Colonel Lamb; Surgeon-General W. H. Muschamp; Lieut.-Colonel Tabuteau; Dowager Lady Bazley; Dr. Jules Bernard-Luys; Lord Inverurie; Lady Jane Dundas; Lady Leeds; Mr. Ogden Goellet; Sir William G. Anderson; Rev. Washbourne West.

# CHARACTER SKETCHES.

## I.—SIR ISAAC HOLDEN.

**L**ITTLE can be said to West Riding folks about Sir Isaac Holden that they do not know already. He lived in a glass house among them since 1833,

giving an example of what a well-directed will, acting through a fine mind, can do. In a time when the evening papers live on sport, and muscular development is thought the great object of life, a character sketch of Sir Isaac Holden may have remedial use. It will appeal to those who have high principles, high morals, a high, sweet, charitable and persevering spirit in conduct. Grosser mortals will be interested in Sir Isaac Holden's material success. They will be glad to hear something about a man who kept himself in perfect health up to the age of ninety, and left the largest industrial plant of its kind on the face of the earth.

The ordinary English conception of success is too often low. Mere personal advancement in life; mere money-getting and title-getting, and living in a palatial house, and riding in a fine carriage, and sailing in a fine yacht, and being visited by Royalty, and cutting up well when one dies, will do.

If Dives throws crumbs to Lazarus in the form of cheques duly announced in the papers, he is lauded as a benefactor of his species. The one thing that redeems this low conception of success is a liking for what is plucky. Now as a plucky person Sir Isaac Holden was a match for Jack the Giant-killer, and every whit as resourceful. I am sorry I have not the pen of a Plutarch to bring out this and other rare points of his personality.

Sir Isaac was what Louis Quatorzo failed to be—a hero to his valet. I had the privilege of being on visits at Sir Isaac's beautiful place on the moors above Keighley

and at his flat in Queen Anne's Mansions. I can speak of his demeanour towards his servants, who were really treated as his friends. I never saw more excellent people; they were devoted to "the master." The valet, Mr. Berry, had at the time of his death served him twenty-three years. He never in all that time noticed a shade of ill humour on his face, or heard an impatient word cross his lips.

Fortune is said to be blind, a reason perhaps why Sir Isaac never trusted her. He worked by wit and not by witchcraft. He was a shrewd, patient and amused searcher into natural law. It was fun to Sir Isaac to turn a seemingly harsh and threatening law of nature into a good servant. He took as much interest in a task of this sort as vulgar people do in solving a conundrum. His fancy was fed with science, his mind was at once strong and delicate, serious and playful. It was in ready sympathy with

every mind, however uncultured, that was groping its way to light. It was in full communion with minds that were in the light. Sir Isaac had none of the defects of old age, but all its peculiar virtues. He had the mellowness of that November season, peculiar, I believe, to France, which the French call St. Martin's summer. It is the afterglow of bright autumn days, but without the mournful something that fills the air in autumnal evenings. Serene and cheerful almost to the

*Photo by Russell and Sons.]*

THE LATE SIR ISAAC HOLDEN.

last, his mind retained its flexibility and openness. His intellectual interests were still fresh and lively, the sympathetic side of his nature without callosity. His last act was to send £500 to the Keighley Hospital Fund in a letter to the mayor expressing his regret that the long and agreeable relations between himself and the Keighley people should come to an end "through the ordinance of nature."

Sir Isaac's name is to be added to the roll of little great men, embracing Plato, Pepin the Short, Henri IV., Sir Isaac Newton, Napoleon, Thiers, Guizot, Lord John Russell.

Sir Isaac Holden at no time could have held much dross. His forbears would have eliminated it. He had little in himself to struggle against. The fights were chiefly with the outer world. All the giants to be slain were material. His arms were purely moral and intellectual. The sense of duty was innate and strong; he found in it his guardian angel. From youth to age his strength lay in a clear unimpassioned perception of the truth. No bias warped his singularly lucid mind. He saw well what he ought to do, and was not long in learning how to do it. A sweet and even temper stood him in good stead. So did the modesty that kept him from standing in his own light.

Sir Isaac was born, brought up, lived, and died in the Wesleyan Methodist Connexion, in which he was for thirty years a local preacher. He never felt drawn towards any other Church. His grandparents were converted by Wesley, whom his father remembered. Sir Isaac Holden owed a good deal to the moral support of Methodist ministers, and was twice deterred by poor health from entering the ministry. He was, however, what is known in the Methodist Church as an "accepted candidate for the ministry."

Who were Sir Isaac Holden's forbears? He told me that the name of Holden or Olden is Norse, and that probably he was of Scandinavian descent. He had heard that his people some generations back were yeomen, but they came down in the world in the last century. His father had a small farm, but had to eke out its profits by working in a lead mine at Nenthead near Alston. The vein being exhausted early in this century, he moved to Scotland, his wife's country, to seek employment. She and four children joined him near Glasgow, where he obtained what he sought in a colliery. He bettered himself later by going to the Wellington Pit at Nithill. There he was engaged as head man. A cottage was rented at Hurler, an adjacent village. It was in this cottage that Sir Isaac drew his first breath on the 7th of May, 1807.

It was not a good time apparently for a collier's weakly child to come into the world. Napoleon was going on conquering and to conquer; the Continental blockade was in full force, and every branch of British trade was depressed. Chatham had conquered avowedly to push British trade. He had adopted a military policy to serve a nation of manufacturers and shopkeepers. The fat kine flourished for a while, but the lean kine, under the herding of Napoleon, ate them up. Farm rents rose by leaps and bounds; food was almost at famine price; Royal Dukes grew of unwieldy fatness on Admiralty *droits*, naval prizes that George III. claimed for himself and was allowed to take. Wages were low, employment precarious, and the outlook gloomy for the working class. It was a nice time for princes, landowners, loanmongers, and army contractors, but a fearful time for manufacturers and operatives. Sir Isaac told me that his father left Cumberland because the rent of the little farm was doubled, and that the landlord intended to treble it. "There never was a less patriotic class than those land-

owners who, the Royal family aiding, had plunged England into war to defend the king and aristocracy of France, and had fomented and helped to a successful issue the war of American Independence." Sir Isaac, but without bitterness, thought of all this when he so steadily supported Sir William Harcourt's budget, and voted for the Death Duties. His father and mother spoke of the period in England that followed the French Revolution as indeed, a black time. They were educated and intelligent enough to understand in what way Continental events bore upon it. When Napoleon made himself Emperor, and put away his wife to marry an Austrian princess, despair took hold on employers. They feared the power of the usurper had a long lease to run. This success would have the effect of tightening the Continental blockade. Many English manufacturers closed their works. Though Paris was then a long way from Glasgow, trade languished in Clydesdale. I was taught long ago that the kick of a fly reached to America; it reaches everywhere.

Sir Isaac attributed his small stature and delicate health to the bad time in which his lot in childhood was cast. His father often had not daily work. Sometimes he only worked twice a week. The war of 1812 gave a dreadful shock to trade. Still, as the Scotch mother said: "Where there was the grace of God there was enough." Her and her husband's faith must have been sorely tried. But it came through the trial. The husband, when not toiling, was cheering, "converting," helping in every way he could, his fellow villagers. He preached to them, read to them, and set up a night school, where he taught for some years. He then went to live at some distance and started another school, where Isaac received his first lessons. When work fell off at one pit the family moved to another at some distance. Thus, they went to Kilbarchan, where there was a grammar school, to which the youngest boy was sent. He thought it a great piece of luck to be born in Scotland at a time when the English working classes had no schools nor mechanics' institutes. But he could not at Kilbarchan go to school as often as his father wished. Day about he was employed as a draw boy at a weaver's, and at his lessons. The wage was slender, but with food at famine prices every little was of value. As a draw boy his mind was first drawn to study machinery. This was the initial stage of his career as an inventor.

Napoleon at length fell. Trade revived, but the prices of food were kept up by protective laws. The poor were thus kept in hard bondage by the landowners. Sir Isaac heard with wonder the captain of a vessel that traded with Odessa tell how there was spare wheat enough in Odessa to bring white bread down to sixpence a loaf. But high duties kept it out of the British islands.

The Cumberland miner moved from Kilbarchan to Johnstone. Isaac was longing to be helpful, and refused to go to school. His father yielded to his desire to work in a factory at fair wages, and where there were new machines to study. But the evenings were spent at a night school. When he had well got the machinery into his head the father insisted on his quitting the factory and attending a school kept by a Mr. Fraser. His schoolmaster, Sir Isaac told me, knew Burns. He still burned with anger at his dismissal from the situation of gauger for writing "A man's a man for a' that." Fraser was nicknamed "Old Radical." He had at his own expense that poem printed as a placard and pasted on cardboards for the boys to learn by heart. They parsed it; the master commented on it; he wanted

what was best in Burns to live in his pupils, and he hoped hereafter they would gladly incur dismissal for any good cause. This was education, and the best.

But Johnstone became in time used up. In 1829, "the year George III. died," there was another change of residence. Isaac "minded" going to say good-bye to Old Radical, who gave him the news of the king's death, and of George IV.'s accession. He added, "If you want to study the new king read Suetonius and Petronius. You will find his counterparts in their works." Isaac was philosopher enough to say, "'The kings of the earth take counsel together,' but what is true and just must live in spite of them."

From Johnstone to Paisley was not a great distance. At Paisley there were relatives on the maternal side. Isaac was apprenticed to an uncle, a shawl weaver, but his feeble health prevented his staying long with him. He wanted to be a minister. This was found

I know her sister, Miss Jessie Love, of Dunoon, a hearty, friendly, earnest and intellectual Scotchwoman, as young in feeling as a girl of twenty.

Filial affection, and the other sentiment, urged Isaac Holden to seek employment as mathematical teacher in an Academy at Leeds. But his Methodism did not meet the Principal's approval, and he soon left. Another similar situation at the Slaithwaite Grammar School was given up for the same reason. A third place as French teacher was found at Mr. Greathead's school at Reading. The struggling tutor formed the mechanics' institute there. Indeed mechanics' institutes were his college until he was over forty. At that of Reading he gave lectures on natural philosophy and chemistry. A demonstration at a chemical lecture was destined to make a mark in the world. It was to show on the end of a stick how sulphur and phosphorus could ignite. An attentive lad went home and related the experiment to his father. They

(From photographs taken in 1875.)

impossible; Wesley wanted strong men for the ministry. The father advised him, since he could not serve God in the pulpit, to consecrate his mind to Him, and render the gift as beautiful as he could. There was an excellent teacher near, a Mr. Kennedy, a good classical and French scholar. Isaac placed himself under his tuition, and remained his pupil over two years, studying Greek, Latin, French, mathematics and natural history. He was able to read the character sketches that Old Radical thought applicable to George IV. in Latin, and Plutarch's Lives in Greek. Kennedy, like Prince Kropotkin, told him that a language could not be taught; it had to be learned. That was why learning a language was the best mental drill going.

But Isaac's father died in 1826—a year of great distress. The widow "greeted sair," but allowed religious friends around to cheer her. They spoke of a good Providence for all who honour Him in their lives, of the cloud by day and the pillar of fire by night. Isaac felt that he must help his mother, and he was drawn towards a Scotch girl, the daughter of Mr. Angus Love.

repeated it, with the result that the father patented the lucifer match!

Isaac Holden was mildly obstinate. He found his health improved at Reading, and went back to Scotland to enter the ministry. But he relapsed, and opened a school, to give it up six months later. A place as book-keeper at Cullingworth, near Keighley, was offered by Messrs. Townend and Brothers, manufacturers. But the candidate for the situation stipulated that he was to have an hour daily for a walk after his early dinner. On that condition alone could he keep health. If the business was found to suffer in consequence he would give an hour more in the evening. In any case he would ask no holiday. By this time he was married to Miss Love. From book-keeper he mounted to the post of manager, and then was made a partner with a fifteenth part of the profits. The last rise was in consequence of improvements he had made in the machinery. The Townends were yarn manufacturers, and had an obstinate dislike to patents. Why, it would be hard to say. Acting on their partner Holden's advice

*Photo by Poulton and Son.]*

OAKWORTH HALL AND WESLEYAN METHODIST CHAPEL.

they bought seven wool-combing machines — rude ones all — for him to experiment on. Up to that time all fine yarns were hand spun, and could not be singed and scoured. Sir Isaac found a way of overcoming difficulties, and by cheapening the Genappe yarn gave a lift to the poplin business. The process was extremely valuable; but the Townends would not hear of it being patented. Millions could have been made out of it by that firm had they been guided by the inventor, who next turned his attention to wool-combing. One thing at a time was his rule when he was keen on a mechanical appliance. He thought only at this phase of his life of inventing a comb with a square action to imitate the motion of the hands. He succeeded, but brought on from mental strain an illness that nearly cost him his life. When he recovered he sought another partner and gave the Townends notice, but stayed another year to educate a staff for the Genappe work. This brought him into the year 1847, when he became the partner of the present Lord Masham, then Mr. Samuel Lister.

Sir Isaac married for his second wife a Keighley lady of substance, the daughter of Mr. Sugden. She was an excellent woman, a little older than himself. He once expressed to me the opinion that English widowers with children are too apt to marry young women. The marriage of a widower with a family and a girl likely to have a lot of children must be a source of bitterness of heart to all. He thought it for that reason immoral. In France the widower could only give a child's portion to a second wife. That was moral. French widowers generally made reasonable matches and thought more about the welfare of their

children than of their own gratification. The second Mrs. Holden was a true North-country woman, true in all respects, unaffected and free from pride. In her old age, when I knew her, she was an active and efficient housekeeper and very hospitable. Her carriages were used to drive out poor Methodists. Her Keighley neighbours loved her. So did Sir Isaac, who, I think, was never reconciled to losing her. She died at the age of eighty-six. He often said with a sigh, "Had she only followed strictly my dietetic rules, she would be still alive. I always told her she would, through her carelessness in choosing her food, die before her time!" He was offered a baronetcy in her lifetime. She showed so little relish for the title of lady that he declined it. After her death the offer was renewed and he accepted it, but entirely for the sake of his family.

The Holden-Lister firm began by opening a wool-combing factory at St. Denis in 1849. It prospered. At the end of ten years Mr. Lister was bought out with £85,000. The cotton famine ensuing on the civil war in America gave a mighty stimulus to the wool business. Muslins and dressy cottons were in the sixties replaced by grenadines, étamines, alpacas, light delaines, lamas, nun's veil cloth, soft cashmeres, and soft twilled flannels; the clear-starched exquisitely ironed *jupon* or petticoat, flounced up to the knees with small flounces, was replaced by light mohair. That flounced petticoat that Sir Isaac helped to kill and bury was the pride of the Paris laundress. It cost from ten to fifteen shillings to "get it up." When it was well out of the ironer's hand it was carried home suspended from the

top of a pole. In streets where there were many laundresses there were daily petticoat processions. The cotton famine also put an end to those delicious muslin *canazons* to which Victor Hugo devoted a chapter in "*Les Misérables*." It may be said to have suppressed the muslin dress in France. French ladies discovered that light woollens were cooler, kept cleaner, and were safer to wear in the chill of the evening than muslin or cotton. Between the square motion comb and cotton famine, the growing call for woollen stuffs, the Holden works at Bradford took a prodigious extension. They now comb upwards of 60,000,000 lbs. of tops a year. Other works were set up in Rheims and Roubaix. The old Coronation City rapidly increased by more than a third in population. Roubaix shot up from a burg of 6,000 to a town of 275,000. Mrs. Holden, inheriting moorland property and a small house on it above Keighley, she and her husband went to live there. The habitation was a roadside stone house with a central passage, between a dining-room and parlour, a return building, and four upstairs rooms. It was draughty and uncomfortable, but Mrs. Holden was attached to it. Sir Isaac, who would not for the world have thwarted her, almost tricked her into letting Oakworth House be built on the same site. He had to take the architect into his confidence, and begin by first pulling down one bit, then finding the wall was rotten, and continuing to demolish until a whole room was down. She was then persuaded that the whole house must follow. But she insisted on the site not being changed. Sir Isaac

consented. When his magnificent but not pretentious residence was built, he obtained leave from the Corporation to remove the road to some distance from his hall door. This he did at his own expense; the new road being on a gentler grade and a short cut, was a public benefit.

The original estimate of Oakworth House was £5,000. But to make it a spacious healthery, it was brought up to £80,000, and £120,000 for a winter garden, where Mrs. Holden could exercise in bad weather. All the basement story was devoted to hot and cold air pipes. Sir Isaac would never, if he could help it, let a servant work in a basement. There were two great square towers—blast furnaces—connected with the pipes, and a system of such perfect ventilation established that all the air in the house was changed every fifteen minutes. One arose refreshed from one's bed in the morning, and so fit for the work of the day. Sir Isaac was fond of heat, and thought it wholesome. The temperature of each room could be raised or lowered at will. There were twenty-eight bedrooms, but they were not nearly enough, as he had fifty descendants on the fiftieth anniversary of his first wife's death. I saw a family gathering of all the partners, the sons, daughters, and grandchildren, numbering in all twenty-five. They seemed to dine in state in a magnificent dining-room, though not *showy*. I never saw such a display of fruit on any table. It all came from the forcing houses and kitchen gardens. Apart from the winter garden—a quarter of an acre in extent—there were four acres under glass.

Photo by Poulton and Son.]

OAKWORTH HALL.

The winter garden was on a level with the noble library, billiard-room, dining-room, and drawing-room. A moorland brook flowed through it, spreading into broads. The floor was made by Italian workmen; the rest by French. A natural rock was, instead of being blasted away, turned to decorative purpose. Every Saturday this winter garden was open to trippers; the grounds used to be thrown wide. But the uneducated Anglo-Saxon is destructive. He is rough and rampageous on an outing. Sir Isaac was persuaded that no West Riding neighbour would trample down turf and tear down young pine woods. He therefore, while excluding the general public, gave a key to every decently conducted neighbour. All such had the use of seven miles of well-drained walks among pine woods.

I saw Sir Isaac at a conclave of the firm held in his library. With what deference and attention the tall powerful men listened to his observations! They were made in a serene tone, weighty and lucid. One could detect no wish to be the Pope of the party; no aiming at infallibility. Indeed, this Nestor did not care a straw for his own opinion as such.

Sir Isaac Holden's conversation was charming. He did not talk to listen to himself, but to draw out others, and enter into sympathetic relations with them. He liked to smoke as he chatted. But the pipe or cigar was often removed from his mouth. He generally enjoyed a friendly chat between midnight and one in the morning in busy Parliamentary times. One found him then taking a glass of hot toddy prepared by his granddaughter Clara, now Mrs. Robertson Lawson. She was his housekeeper at the Mansions after she left St. Thomas's Hospital. There, with "grandfather's" approval, she spent four years as a nurse. She was very glad she gave herself such a wide education. It was an education for eye, mind, hand and heart—an education which enlarged the sympathies and strengthened the judgment and the will. "Without a will no man or woman is worth anything," said to me Sir Isaac. But an ill-directed will is bad for every one. Young people should therefore be brought up in the light and taught to value a fair, open mind, and to look well before they leap.

Sir Isaac was always keen on the pursuit of knowledge. When at St. Denis he found time to attend scientific lectures at the Sorbonne. It was there he heard Flourens lecture on physiology and the means to ensure health and long life. He had already learned a good deal of what Flourens taught in Wesley's "Natural Philosophy"—a book lent him at Johnstone by a Methodist minister—a well regulated mind and desires, the sparing use, when old, of food containing phosphates of lime, such as bread, and of meat, unless one had to do heavy muscular work. Game, beef, and mutton was hardly to be eaten. When one took fish one should abstain from fowl. Strong emotions should be avoided, and the philosophical faculties cultivated. Religion, when it cheered and inspired good hopes, was a sweetener of old age and prolonged life. The experience of the

old was most valuable. Nature, by diminishing their material needs, relieved the young from the temptation of wishing them dead. Sir Isaac found in the course of his scientific studies that there was solar potentiality in ripe fruit. In sucking a ripe orange, grape, peach, apricot, or in eating a tomato or a slice of melon, one assimilated the strength conveyed to these fruits by sunbeams. He often sucked an orange. It was his favourite fruit, and he did not see why oranges might not become as cheap as potatoes. If they were, what a good time it would be for the aged poor, whose capillary arteries are silted like a "furred" boiler from eating too much bread! Bread is the staff of life for growing human beings and prospective or nursing mothers, but poison for the elderly.

I have spoken of Sir Isaac's personal attendant being with him twenty-three years. The coachman was thirty-six, and the table attendant twenty-one years in his service. The first chamber-maid had almost grown old in the house, which was a patriarchal establishment. Every one in Sir Isaac and Mrs. Holden's employment was treated with kind consideration. Sir Isaac and Mrs. Holden were charitable, and generous in their charities. He had public spirit and was always ready to subscribe handsomely to a West Riding institute, public library, hospital, or other useful institution. The Methodist chapel he and his wife attended was almost under their roof. They entered it from Oakworth House by a private door. Mr. Christien, the minister, was to a great degree Sir Isaac's almoner. Sir Isaac was not a man to parade his good deeds or publish the cheques he sent to distressed brethren or sisters. He paraded nothing. I was a week in his house before I knew it contained a room the walls of which were covered with silver trowels, pickaxes, spades, shovels, memorials of the laying of foundation-stones, turning of first sods and so on. I discovered this room by accident. If I drew Sir Isaac to speak of his past life he did so as if he were talking of another man, and with delightful impartiality.

Sir Isaac looked forward, though not in his time, to profound industrial changes in the world, and perhaps transfers of industrial strength from the British Empire to other parts of the world. The manufacturing supremacy was gone and never to come back again. The aristocracy, particularly after the Revolution, kept England and Ireland too in the condition of the image that Nebuchadnezzar dreamt of. The feet were mirey clay. The poor of most other nations were more intellectual. Sir Isaac made an exception in favour of the poor who took early to Methodism. They learned to speak, and often with eloquence, at class meetings and as local preachers. He enjoyed good sight and hearing to the last. When I last saw him his step was springy, and his voice still good. It was his way when ill to nurse strength by keeping silence. The law which governed his whole life was, "Do well and faithfully whatever duty comes to hand."

EMILY CRAWFORD.

## II.—CANOVAS DEL CASTILLO: "EL GRAN ESPAÑOL."

THE following tribute to the memory of the assassinated Spanish Prime Minister is from one of the few journalists whom he honoured with his friendship. Mrs. Hart, who for some time represented the *New York Herald* as correspondent at Madrid, had the good fortune to be on the most friendly terms with Señor Canovas. It was a terrible blow to her when the news arrived in this country of the crime which cut short the Prime Minister's long and illustrious career, and I am glad to be able to avail myself of the accident of her presence in London in order to obtain from her a brief, personal appreciation of the statesman whose commanding figure disappeared so tragically from the European stage.

**T**ERRIBLE and cruel has been the tragedy which in this past month has so ruthlessly cut off in the zenith of a noble career "El Gran Español," the

illustrious statesman, the erudite and profound historian, the charming poet, the splendid orator, when the well-beloved, genial Prime Minister, Canovas del Castillo, was stricken down by the blind fury of fanaticism.

Antonio Canovas del Castillo was born in Malaga in the year 1828, and was educated at Madrid, where he studied law, and joined the ranks of journalism. At sixteen he had already made his mark in this field, and at twenty-six he was elected to Parliament for his native city. In this period were produced the first two literary works of the young author—a volume of charming poems, and a celebrated romance founded upon the historical and tragic legend "La Campana de Huesca," a model in style, individuality, and realism.

*Apropos* of this romance, a sentence occurs therein worthy of note. "The enthusiasm of the multitude is oftener than otherwise mere idle curiosity, for the same is evidenced at the coronation of a king and at the execution of a notorious criminal."

Being sent as Chargé d'Affairs to Rome two years later, the brilliant diplomatic talents and tact of Don Antonio were strikingly evidenced in the negotiations resulting in the Concordat between the Vatican and Spain.

At the age of thirty-six, Canovas entered the Cabinet as Under-Secretary for Foreign Affairs, and three years later became in the Mon Cabinet Minister of Home Affairs; this portfolio he exchanged later on in the

O'Donnell government for that of the Colonies, when to his honour be it recorded he brought in the bill proposed in the Spanish Cortes, which was to abolish slavery. It

was in this epoch that Canovas convoked to Madrid the representatives of Cuba in order that the distracted affairs of that Colony might be calmly and thoroughly discussed and sifted, an evolution unique in Colonial government. Banished for his opinions immediately after the disturbances of 1866, Canovas only returned in 1869, when his eloquence in defence of his opinions and party gave rise to a long series of triumphs to the Conservatives, of whom he was the life, soul, and centre. True to his traditions and ideal, Canovas upon the advent of King Amadeo—who would gladly and at any price have secured so able a Minister—frankly gave vent to his opinions, and dissolving the group which acknowledged him as Chief, he held himself free to act as best his country should require. The abdication of Amadeo and the proclamation of the Republic brought things to a crisis, and then it was that the resources of the statesman came into clear relief. From that hour

DON ANTONIO CANOVAS DEL CASTILLO.

Assassinated August 8th.

he worked incessantly and, as it proved, victoriously for the restoration of the Monarchy and the Bourbons. From his position as President of the Regency Ministry he brought about the return of Alfonso. By the end of the year he was made Prime Minister (1875), the next year finding him again with his hands full in the second Carlist war and first Cuban revolt. The attitude of General Martinez Campos in this insurrection obliged the Prime Minister to recall him, yet it was Canovas himself who begged the King to confer upon this General the supreme power in

1879, and so give him the opportunity of settling to his own satisfaction the Cuban question. The opposition to this new Minister, however, obliged him to resign when Canovas again took his old place at the helm, only to retire soon after owing to the coalition of the Republicans headed by Castelar, and the manoeuvres of Sagasta and Martinez Campos. Three years later the Liberals split up, and Canovas, having been requested to form a Cabinet, dissolved the Cortes, wishing to prove the true opinion of the people, and as he anticipated, the elections, by a vast majority, sent his party into power.

Upon the death of the late King, Canovas, with the delicacy of the great minded, retired with the entire Conservative Cabinet, thus giving to the Queen Regent liberty of action in the choice of a Ministry. That same day Canovas was elected President of the Cortes. The year 1891 found Canovas again Premier with a revised form of Conservative constitution adapted to meet the growth of Liberalism. A crisis taking place soon after, Don Antonio was begged to form a new Ministry.

In the last month of 1892 he resigned, and was succeeded by Senor Sagasta, Canovas with his usual brilliancy leading the Opposition till 1895, when for the last time he accepted the post where he found a martyr's tomb. The patriot's farewell words "Viva España," appropriately closed a career spent in the service of his country. That so distinguished a statesman could have existed without creating enemies would have been an impossible phenomenon. But yet even those who were jealous of him were forced to confess "Where Canovas is there is the head."

One of Spain's cleverest and most impartial writers, commenting on the wonderful gifts of his great compatriot, says, "Canovas when he speaks is Napoleon à cheval." Enemies and friends, opponents and partisans are spellbound, while the calm sonorous voice pours forth in all the beauty of cultured eloquence the truths, the ideal theories of the honest statesman and patriot, until, as he finishes the lofty "artesonando" of the Cortes rings out and re-echoes to the long-continued applause, spontaneous and sincere—for the moment. Canovas had read deeply, his one absorbing relaxation was to read; his cruel assassin was unnoticed, so utterly was the victim wrapped up even when on the threshold of eternity in his dearest occupation. The one luxury of his life was books; his magnificent library remains to attest the fact—an exquisite retreat, rotund in form, with grand bay windows, through whose open lattices force themselves in all the luxuriance of summer beauty the most fragrant southern flowers and creeping plants, meet satellites on the rich treasures reposing within, treasures garnered with loving ecstasy and sound judgment by the master whose paradise is now laid waste. The writer of these lines had the honour and happiness of knowing well this princely habitation, only comparable to the exquisite library of Chantilly, which fate has also deprived so lately of its royal owner. The collection of volumes possessed by Senor Canovas exceeded 30,000 volumes, rare manuscripts, first editions, whose intrinsic value may be reckoned at 500,000 francs.

In the intervals when not Prime Minister, eight hours at the least were given each day to study. With one glance he could tell, in turning over the leaves of a book, what was contained therein, this privileged intelligence discovering in a few seconds what took ordinary mortals as many hours. His expenditure monthly in books amounted at the lowest calculation to 1,000 francs. Numbers of his books possess, on the first page, annotations always made with a No. 4 indelible pencil,

and generally referring to page or chapter in which the phrase or subject desired could be found. Canovas was a passionate lover of art—a love engendered by his early residence in Rome—and his collection of paintings, engravings, ceramics, coins, medallions, etc., forms a costly collection at his late residence in Madrid, "The Huerta," the "sweet home" he loved so dearly. Singularly simple in all his habits, Canovas, although always invested with the superior *cachet* which distinction gives to elegance, had none of the elements of the fop.

Canovas always wore black, one of his favourite postures especially in the tribune being that of inserting his right hand into the lapels of his coat. The Premier possessed a rare and valuable collection of walking sticks; he never used other than a plain black iron-topped wooden cane, and jewels never obtruded their vulgarity on the person of Canovas del Castillo.

The Premier rarely entered a theatre and then only the Italian Opera; went to no clubs nor casinos, and never smoked. He liked to see his friends at his table; he never drank aught but Bordeaux, and that at meals only. It was in the intervals of those delightful re-unions that Canovas would throw off for a time all the worries and cares of state, entrancing by his transcendent gifts as a conversationalist the privileged guests and friends who had the honour and happiness of his society.

Senor Canovas was invested with the order of the Toison d'or, the highest distinction in the gift of royalty. He was president of the Royal Academy of History, to whose services he faithfully attended, and where he will be sadly missed by those with whom he collaborated for many years, his devoted admirers all. He was also a Royal Academician (*de la lengua*), and a member of the Academy of Painting. Ex-president of the Athenæum, his discourses to that institute may be said to be a complete history of the contemporaneous events of this century.

Canovas has been compared to Cicero, who was at once orator, juriconsult, poet, and statesman, and, to quote again, "None have interpreted the laws in their true sublimity as Canovas, the original rapid interpretation of genius and conscience." He recounts the story of the battle-fields as Thiers, and criticises with the judgment of an eye-witness. "The books explained and criticised by Canovas are like the copies of Dominiquino les Carnacci Quido Rene, more beautiful than the originals." Such are the remarks from the pen of one of Spain's writers.

In the period just preceding the restoration of the Bourbons, the salons of Madrid, presided over by such distinguished women as the Countess de Montijo, became the debatable ground upon which the destinies of the country were resolved, and there, too, Canovas was found inspiring, commanding, seducing with the power and grace of his loyal eloquence. And now, ere closing, one word to the honour of the noble lady bowed down by the heart-rending woe of this awful tragedy. Cæsar's wife in all its grand signification, the partner of the joys and sorrows, triumphs, and glories of her husband, worthy of the immense love he showered on one who was perhaps the one woman in the universe whose standard in all things fitted her to be the queen, the idol, the friend of Canovas del Castillo. The grand sacrifice offered up as a last tribute of love to this adored one ere his remains were for ever borne from his home, the forgiveness of the wretch who desolated her life and the entire country, is the noblest testimony to the greatness of the Señora de Canovas.

# THE TOPIC OF THE MONTH.

## THE RUSH TO THE KLONDYKE GOLD-FIELDS.

THE news of the discovery of a gold-field of immense wealth on the rim of the Arctic circle has thrilled the Old World and the New with a touch of the delirium which raged so fiercely in the veins of the Europeans in the sixteenth century. "Westward Ho!" that marvellous historical romance of Kingsley, which has this year fallen out of copyright, and has been issued in the Penny Novels of the Masterpiece Library, recalls somewhat of the fascination which led so many Englishmen in the days of Good Queen Bess to abandon home and country in the search for El Dorado, that golden land which the Spanish adventurers had discovered in the New World. This time the golden magnet is situated in the other extremity of the Western continent. It is no longer in Mexico or Peru, in regions baked and blistered by the tropical sun, that the precious metal has been unearthed, but far away at the other extreme, in the North-west territory of the Canadian Dominion, within one hundred miles of the border of what used to be Russian America before the Tsar sold his American backyard to the Government of the United States. But cold or heat makes no difference. The attraction of gold is proof against the utmost severity of the climatic extremes, and the rush to Klondyke has not been in the least tempered by the fact that the miners must spend their lives in a region where the thermometer ranges 60 or 70 degrees below zero in winter, which lasts eight months of the year.

One of the questions with which the Americans amuse themselves by putting to the visitor from Europe is, What is the name of the city which lies nearest the centre of the possessions of the United States on the American continent? Most Englishmen will guess at anything between Chicago and Denver, but the right answer is San Francisco. This, paradoxical though it seems, is geographically correct; and the fact serves to bring into clear relief the immense western extension of the American possessions due to the purchase of Russian America. If two lines are drawn between the extreme eastern and the extreme western points of the American continent, over which floats the Stars and Stripes, the middle line will be found to pass not very far from the capital of the Pacific Slope. Hitherto this little joke has been one of the few assets which the Americans had to show for their investment in that north land of desolation.

The discovery of gold has, however, in the Alaskan region changed everything, and made that forlorn wilderness the centre of public interest. For some time past gold mines producing as much as a million dollars a year in gold have been worked on the Alaskan side of the

boundary. The famous Treadwell Mine was but one among many whose yield attracted attention to the auriferous deposits of those remote lands. Klondyke, the scene of the latest gold rush, although lying a clear hundred miles within British territory, nevertheless belongs to the same auriferous region; and it is quite possible that, when the country comes to be properly prospected and surveyed, gold-fields rivalling those of Klondyke may be discovered on American territory. At present, however, the centre of attraction is in the North-west territory of Canada. In this case, fortunately, there is no frontier dispute, as in the case of the gold-fields of British Columbia, which lie further south. The latter dispute, however, is now in a fair way of being settled by arbitration, so that we have at least the consolation of hoping that the gold of the far West will not

From the *New York Journal*.]

OFF TO KLONDYKE.

add to the difficulties that threaten the good relations of the Empire and the Republic. If any difficulty should arise, it is more likely that it will proceed from the influx of the great American contingent which may make Dawson City an American Johannesburg, but there is no fear of the Canadian Government playing the part of Oom Paul. So far the Americans, with few exceptions, appear to be full of admiration at the way in which the Canadian Government has dealt out thoroughly even-handed justice at this remote extremity of the Dominion. There is difficulty enough in the task where the executive power has to rely on policemen, whose normal salary is a dollar a day, with which they are expected to be content,

while any man worth his salt is able to make ten or twenty times as much as that by hiring himself out in the mining country. Still, notwithstanding this difficulty with which the Colonial authorities in Australia have often been confronted, the Canadian Government has done, and is doing, its best to maintain law and order, and to uphold civilised authority in the midst of the wild and stormy passions which abound in every mining camp.

Gambling, says a recent visitor, is rife in Klondyke, but gambling has always been the best test of the prosperity of a mining camp. Such a community, composed of the most energetic and self-reliant pioneers encamped far away from the range of all the appliances of modern civilisation, without one woman per hundred in the whole crowd, without even daylight for more than three hours a day for half a year, can hardly be regarded as a hotbed of human virtue. If the Canadian Government can succeed in maintaining law and order amongst the miners, it will have done more than the United States Government ever succeeded in doing in the great days when the mineral wealth of the

## THE WORLD'S OUTPUT OF GOLD.

COMPILED FOR THE "REVIEW OF REVIEWS" BY THE COMPARATIVE SYNOPTICAL CHART CO., LIMITED.

THE KLONDYKE GOLD-FIELD.

Rockies was first displayed to bewilder and intoxicate the world. Even to-day Cripple Creek in Colorado, where there is but a small community of five thousand persons, has a record for homicide which need not shrink from comparison with that of any of the camps founded by the 'Forty-Niners. According to the recent statement of the Coroner, Cripple Creek with its scattered population has furnished material for seventy inquests per annum on victims to violence during the last four years. So far the Canadian Government appears to have enforced the same conditions as at the mines at British Columbia, and has relieved all new-comers of their rifles and revolvers. The temptation to shoot is always stronger when you have shooting-irons handy, and the confiscation of all firearms undoubtedly tends to diminish the risk of murder.

All witnesses agree in two things: first, that the Canadian Government does its work admirably, disarming the miners, and dispensing even-handed justice between man and man; and secondly, that the general character of the miners is immensely superior to that of the Argonauts of 1849. Joaquin Miller, indeed, who is now on his way to Klondyke, as one of the representatives of the *New York Journal*, maintains that, as a loyal American, he must give the credit for the good behaviour of the miners not to the Canadian Government but to the character of the American with whom the authorities had to deal. As Joaquin Miller at the moment of expressing this opinion had not been to Klondyke—for he was writing on board a steamer filled with miners en route to the gold-fields—this must be taken as a natural expression of American patriotism rather than as the utterance of a competent authority. He says:—

There is a wide difference, both in bearing and dress, between the gold hunters of old and those on this boat. For

example, I have not seen a single pistol yet. I have counted some twenty rifles and shotguns, and speaking to a friend about the absence of guns, I think from what I can gather that most of the gold-seekers aboard have no more arms than myself, although my friend hints darkly that "all may be armed to the teeth." All I can say is, you do not see any display of arms, as of old. A miner of to-day looks more like a bicyclist than a booted and crimson-shirted Argonaut. And there seems to be no drinking. I have not as yet heard an oath or bad language of any sort, not even bad grammar. But the adventurers are all young men as of old. I, in the middle fifties, am perhaps the oldest man by some years in all our "four hundred."

The steamer which carried Joaquin Miller took with it also an ex-Governor of California and many other notable men who were going north to try their luck, but it is idle to hope that all contingents of pioneers will be up to this standard. Every mining camp attracts, as an irresistible loadstone, its fair share of that Lost Legion of which Mr. Rudyard Kipling sings in the ballad dedicated "To the legion of the lost ones, to the cohort of the damned," that wholly unauthorised horde—

"There's a Legion that never was 'listed,  
That carries no colours or crest,  
But, split in a thousand detachments,  
Is breaking the road for the rest."

But among those who rush to Klondyke, it cannot be said that there are many "who have done with hope and honour, who are lost to love and truth, who are dropping down the ladder rung by rung"; for although all this may be true enough of the gentleman ranker, in one respect at least it does not apply to the men who are rushing to Klondyke, for however they may fail in honour, love, and truth, hope glows within them inextinguishably, even through the gloom of the Arctic nights. It is hope, hope of making a great pile, and then being able to live ever afterwards without working, which fires the heart of those adventurous migrants. As "Tompkins," the bard whose Cockney muse so often enlivens the columns of the *Daily Chronicle*, has sung:—

Come ter the plice where they've got it right, come where the treasure's 'id,  
Where a 'at-full of mud is a five-pun note, and the clod on yer 'eel is a quid,  
Where yer scratches the soil and it tumbles art, as much as yer 'ands can 'old,  
Where the 'ills above and the plines beneath is bulgin' an' crackin' with gold.  
Klondike! Klondike! Libel yer luggidgo Klondike!  
Theer's no chawne in the street ter-dye,  
Theer's no luck darn Shoreditch wye,  
Pack up yer traps an' be orf, I sye,  
An' orf an' awoye ter Klondike!

Lots o' chaps they 'as stawtid small, and awterwuds struck it rich,  
Barght their kerridges, siled their yachts—nutthink's too good fur sich—

Awmics o' servants, miles o' land, cuttin' the toppical art,  
Braunoo paliss to knook Park-linc, then . . . whart was I thinkin' abart?

Klondike! Klondike! chinge the subjo' ter Klondike! etc.

Lots o' chaps they 'as stawtid small, and finished it smaller yet.  
 An' the gold as yer warnts aia't got fur nix twixt 'ere an' 'ell,  
 yer bet;  
 Froze ter death, or stawved ter death, or shot in yer tracks  
 yer'll lie,  
 Fur one 'ull pick an' come 'ome agen, but twenty 'ull pick  
 an' die.

Klondike! Klondike! It sticks ter its own, does Klondike!  
 etc.

## II.—HOW THE GOLD-FIELD WAS DISCOVERED.

It is an old story that there was gold in Ala ka. The Russians worked mines in their American territory a century since, working them as they work those in Siberia to-day, with fair success, but without making much fuss over their finds or advertising their discoveries in such a way as to attract intruders. When the United States Government bought this vast wilderness of snow and ice from the Russian Government in 1867 for £1,500,000, they of course got the gold-fields thrown in with the rest of the undeveloped wealth of Alaska. After a time they began mining, and met with considerable success. It was, however, not till a year or two back that the rich gold-fields were proved to exist on the British side of the boundary. For more than a dozen years their existence was suspected. It is not easy prospecting for gold in regions where three-fourths of the year there is midnight darkness for more than three-fourths of the day; but the hunger for gold kept the pioneers of mining industry prowling up and down the River Yukon and its tributaries in the constantly deferred hope that some time somewhere they might strike gold.

Among these adventurous men, Scotchmen, whether of North Britain or of Nova Scotia, appear to have been well to the front. When the North Pole is discovered, a Scotchman will be found squatted on the top of it; and it is thoroughly in keeping with the national character that the latest great gold-field should have been discovered by a Scotchman, George McCormack by name, who entered into and completed the prior discovery of a Nova Scotian, Robert Henderson. According to the story of Joseph Ladue, the man who owns the ground-rents of the city of Dawson, the capital of Klondyke, which is confirmed by the report of William Ogilvie, chief of the Canadian International Boundary Survey, the first claim was located in Bonanza Creek by McCormack in August, 1896. The original discovery was due to reports made by Indians as to the gold deposits in the Klondyke country, who, it is well to note, report that still richer deposits are to be found further up. They say that there is a creek up country where the gold is thicker than the gravel, and they have appropriately named it "Too-much-gold Creek"; but that creek has not yet been explored. Ladue's story of the discovery of the Klondyke field is as follows:—

It was on August 24th, 1896, when Robert Henderson, of Nova Scotia, who had been prospecting for four years in Indian Creek, a tributary of the Yukon, found himself in another little stream bed known as Gold Bottom, near the Yukon, the high water having driven him out of Indian Creek. He was prospecting around, hoping to find something as good. After a time he panned out a little gold and put in a sluice box or two. In a very short time he ran out of supplies and went back to Fort Ogilvie, where I was stationed, and reported the find to me. I lost no time getting myself in

readiness to proceed to the spot at once, and by August 28th I had two men and four horses in Gold Bottom. In the meantime, Henderson drifted down to the mouth of the Klondike in a small boat, and found George McCormack, an old friend of his, who was fishing for salmon. Hunting up his friends when there was anything in sight seemed to be one of Henderson's best traits. He got McCormack up to Gold Bottom, where he located a claim, prospected around a while, and started back across country for the mouth of the Klondike River, a distance of twenty miles.

That trip was destined to play an important part in the events which followed, for through it occurred one of the big finds. McCormack took with him two Chilkat Indians, and the three men went off in the direction of Bonanza Creek, where the white man struck gravel that went \$2.50 to the pan. According to our mining laws in Canadian possessions, the discoverer can locate an extra claim for himself as a reward for making the find. So McCormack took up two locations and the Indians one each. They set to work at once, and took out 120 dols. in gold in three days with little else than a pan. Then they came down to Fort Ogilvie and reported the find.

That report, which was spread by McCormack, had the immediate effect of sending a thrill of excitement along the Yukon, from the headquarters down to Forty Mile and Circle City. As though by magic, the trails were sprinkled with pack mules, and the river was dotted with small craft coming up or going down to the new diggings, as the case may be. In less than ten days there were about one hundred and fifty miners at work on new claims.

Mr. Ogilvie says:—

McCormack located his claim late in August, but had to cut some logs for the mill here to get a few pounds of provisions to enable him to begin work on his claim. He returned with a few weeks' provisions for himself, wife and brother-in-law (Indians) in the last of August, and immediately set about working his claim. The gravel itself he had to carry in a box on his back from thirty to one hundred feet. Notwithstanding this, three men working very irregularly, washed out 1200 dols. in eight days.

After this the rest was easy. If it were known that gold lay in heaps under the North Pole, the Pole itself would be colonised in twelve months. The great magnet began to draw first from the other side of the Yukon, and then from all the territory round about. This year it swept within range all the population of the Pacific Slope, and in the years which are to come there is no territory, no matter how distant, which will not feel the pull of the great golden loadstone. The Americans are naturally first to take advantage of the discovery that has been made almost at their doors. Bret Harte, in his "Arctic Vision," predicts that the "awful Yankee," whom he hails as "the real northern Thor," will expectorate his tobacco juice on the drifted snow that covers the gold deposits of Klondyke:—

Where the short legged Esquimaux  
 Waddles in the ice and snow.  
 And the playful polar bear  
 Nips the hunter unaware.  
 Where by day they track the ermine  
 And by night another vermin.  
 Segment of the Frigid Zone  
 Where the temperature alone  
 Warms on St. Elias' cone;  
 Polar dock, where Nature slips  
 From the ways her icy ships,  
 Let the news that flying goes  
 Thrill through all your Arctic floes,  
 Till the tidings circling round  
 Every bay of Norton Sound,  
 Throw the vocal tide-wave back.

A NUGGET FROM EL DORADO CREEK.

[The white indicates the gold.]

### III.—HOW THE GOLD GOT THERE.

The geologists have been busy explaining how it is that there is gold in the valleys of the Klondyke creeks. The Klondyke river is marked on some maps Tondak and this is nearer to the right pronunciation of the Indian name. The Indians called the river the Thron Duick, or Plenty of Fish; for the Klondyke, like many other streams in the far north-west, is famous for its salmon. The Klondyke enters the Yukon from the east, and its tributaries drain the region that lies north of Mount Elias, a famous landmark in the wilderness of mountains which has been the starting-point of the great glaciers which flowed north to the Yukon and south to British Columbia. Somewhere between the south side of Mount Elias and the Yukon there must lie the original mother lode of gold, stored up in the quartz rock, of which the gold found in placer deposits is but as the dust on the fringe. To locate the mother lode will be for years to come the modern nineteenth century Western world substitute for the search for the Holy Grail. It is there where the heart of the gold miner finds its goal. All these nuggets in the placer deposits are mere samples of the original treasure-house of the hills.

The deposit of gold dust and of gold nuggets in the bed of the Klondyke creeks is due to the operation of very simple causes. Man in his mining but follows the processes of nature. By hydraulics he pours a blast of water upon the rocky mountain side, breaking away the auriferous stone which, when it is washed down, he pounds fine with stamping mills, and then extracts the gold by passing the powdered produce through streams of water, which carry off the lighter earth, allowing the heavy particles of gold to fall to the bottom. All this which man does in his restless hurrying fashion in the

course of a day, Nature does calmly and continuously in the course of ages. Her mill never stops. The storm-wind, the snowstorm, the driving rain, the forked lightning, are her machinery by which she detaches the rocks from the hills, and hurls them down to her stamping mills. These mills, the glaciers, grind slowly indeed, so slowly that their motion is imperceptible; but though with patience God stands waiting, with exactness grinds He all. The glaciers, with a weight of millions upon millions of tons of viscous ice, grind the rocks to powder as they move slowly down the valleys, and not content with doing so, they carry the remains of their milling down to the foot of the hills. It is not travelling by express speed—rather à *petite vitesse* indeed, this system of transport by glacier; but Nature, who is never economical, is never in a hurry, and in due season the pounded, comminuted, pulverised fragments of the auriferous rocks torn from the mother-lode hundreds of miles away are dumped into the streams which act as sub-distributors of the gold. When Nature wishes to carry gold any distance she packs it on the back of a glacier, for when it is trusted to the swifter transport of the stream and the torrent, its weight causes

ONE PAN = £110.

Actual size of bottle.

Panned by W. Ogilvie.

the gold to drop through the fingers of her carriers and accumulate in pockets in the river bed. There in time, after ages and ages, Nature seals it up in her treasure chest, converting the gold deposit and the sand in which it lies and the pebbles and gravel of the river bottom into solid stone, conglomerate or pudding stone, which occupies an intermediate place between the dust and nuggets in the placers and the mother-lode.

But as the world is ever in the making, and Creation never stops, the streams are still dropping gold-dust from their heedless fingers into the pockets of their channels, and still the heavy gold nugget, glacier crushed, sinks down into the gravelly bottom, awaiting such time as Nature will seal it up again in her mighty safe of petrified conglomerate. In the placer deposits on the Klondyke man has tapped the gold stores before they have been, by the slow process of the ages, locked up in Nature's pudding-stone safe. They are comparatively recent, and represent the most modern results of the constant milling and mining which Nature carries on in the hills and valleys that stretch in rocky chaos from the snow-clad summit of Mount Elias to the broad waters of the Yukon.

#### IV.—HOW MUCH GOLD IS THERE IN KLONDYKE?

All you miners wide awake!  
Go to the Klondyke; make your stake.  
Get out your pick, your pan, your pack,  
Go to the Klondyke; don't come back.  
Ho, for the Klondyke, ho!

There's gold enough for you and me  
On the hills and the plain, wherever you be,  
And it's yellow, and rich, and heavy as lead,  
But half of the truth has never been said.  
Ho, for the Klondyke, ho!

No man there has ever been broke,  
And there's gold enough for the women folk  
And the nights are short when the days are long;  
So pack your tools and sing this song:  
Ho, for the Klondyke, ho!

*Chorus.*

Ho, for the Klondyke,  
Ho, for the Klondyke,  
Ho, for the Klondyke, ho!

Put on your pack  
And don't come back  
Till you fill your sack  
On the Northwest track.

Ho, ho, for the Klondyke, ho!—*New York Journal.*

The yield of last season at Klondyke is estimated at a million sterling. This year the Canadian authorities estimate it at double that sum, and as yet the gold-field has but been scratched. This year a single vessel brought down a ton of gold dust. The miners returning with sacks of gold dust, and cans full of nuggets, brought back stories of a gold-field three hundred miles long, out of which they had only been able to glean samples of its wealth. The effect on the popular imagination was, however, due rather to the reports of individual fortunes than to the imposing totals of miles or millions. Here are a few of the tales which sent the Pacific coast crazy:—

A miner by the name of Alex MacDonald took out £19,000 from a forty-foot patch of ground only two feet thick. He employed four men to do the work and consumed but twenty-eight days. That gravel went £50 to the pan, and was in claim No. 30, El Dorado Creek.

Different men have cleaned up from £35,000 to £10,000 in fine gold, and all of it was done during three months of the

past winter. Out of El Dorado alone came £800,000, and at least £200,000 from Bonanza Creek. How much more there is in it is impossible to say, but to all appearances the whole district is full of gold waiting to be taken out.

A man last winter was discharged as a deck-hand from a steamer on Puget Sound. He made his way to the Klondyke, worked seven months in the summer, and returned to civilisation with £30,000 in gold.

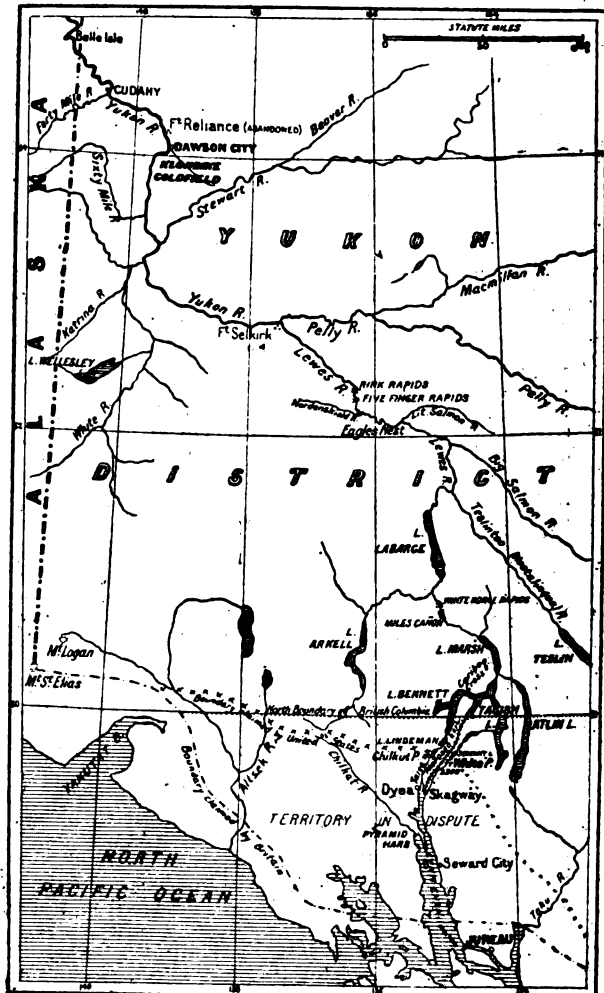

A grey-haired old newsagent who had no money and no prospect of getting any in his business in Seattle, left for the goldfields. He was as "great a greeny," to use his own phrase, as ever set foot in the country. After some months' hardship, he took up claims on El Dorado Creek in September, and by spring had taken £23,000 out of two holes which, in his opinion, still contain half a million.

Mrs. Boyce who went on her honeymoon to the Klondyke would go out to the dumps and poke about for gold. She found £1200 in less than a year.

These stories of fortunes won by greenhorns made the Klondyke appear like a kind of Tom Tiddler's ground, where any one could pick up gold all day long.

Here are some of the reports brought down by the lucky miners:—

"This is probably the richest placer known in the world. They took it out so fast, and so much of it, that they did not

THE ROUTE TO KLONDYKE.

have time to weigh it with gold scales. They took steelyards, and all the syrup cans were filled."

"I believe there is gold in every creek in Alaska. Certainly on the Klondyke the claims are not spotted. One seems to be as good as another. It's gold, gold, gold all over. It's yards wide and yards deep. I say so, because I have been there, and have the gold to show for it. All you have to do is to run a hole down, and there you find plenty of gold dust. I would say that our pans on the El Dorado claims will average 3 dols.—some go as high as 150 dols.—and, believe me, when I say that in five pans I have taken out as high as 750 dols., and sometimes more. I did not pick the pans, but simply put them against my breast and scooped the dirt off the bed rock."

"The country is enormously rich. The present gold diggings are only a very small part of it, and there is little doubt that there are millions only waiting for miners to come and dig out."

"I realise that you will perhaps doubt all I say of the richness of the paystreak, but here is what I actually saw. At the bottom of one cave I counted five five-gallon cans filled with coarse gold and nuggets. This was the work of two men during the winter, and the pay dirt on the dumps was but half worked through."

"Two million has been washed out to date, and many of the dumps are not being touched now, their owners finding it difficult to get men to work them for wages at 15 dols. per day."

"Some of the saloons here take in 300 dols. per day in dust and nuggets. Beer is 50 cents per drink. I have quit drinking."

These things read like the story of Aladdin, but fiction is not at all in it with facts at Klondyke.

Men with only £3,000 were spoken of as poor fellows who were down on their luck.

Five policemen who left the force for the mines have just returned with an average of £8,000 apiece.

There's millions in it!—millions on millions; and so every one is off to grab a share of the millions before the precious hoard is exhausted. For this is not, as in the Transvaal, or in other mines where the private adventurer can do nothing because of the heavy cost of mining plant. Here the private adventurer can do everything—find the gold, work it, and bring it away. The value of the placer gold in the Klondyke cannot be estimated. But experts speak of £14,000,000 as being practically within sight.

 Best time to start—April 15:

The above is from the *New York Journal*,—which has despatched a special expedition to Klondyke,—with the dollars and cents converted into £ s. d.

Any one going to Klondyke may choose his route. He can go either by the American lines to Seattle, or by the Canadian-Pacific to Vancouver. After having reached the Pacific, he

has no choice of alternative route until he reaches Juneau. He can get out at Juneau if he pleases and travel overland, crossing the Chilkoot Pass and following the line of the rivers and lakes northward to Klondyke; or he can go round about 2,500 miles to St. Michael, and entering the Yukon river, make his way by steamer to within a comparatively short distance of the goldfield. Mr. Harry de Windt described the route from Juneau in the *Times* as follows:—

The difficulties of this voyage are only realised at Dyea, 100 miles from Juneau, where the land journey commences and where a bad anchorage frequently compels the traveller to wade knee-deep for a considerable distance before landing. Dyea consists of a rude log store and a movable town of tents occupied by diggers bound for the goldfields. A delay of several days occurs here while Indians are procured to carry

STEAMER LEAVING SAN FRANCISCO FOR KLONDYKE.

From the *Chicago Inter-Ocean*.]

## CANADA'S IDEA OF GETTING THERE.

tents and baggage to the lakes 24 miles distant over the Chilkoot Pass, nearly 4,000 feet high. Provisions must be brought from Juneau, for there is nothing to be had here, or indeed anywhere this side of Forty Mile City, 600 miles away.

The Chilkoot Pass is difficult, even dangerous, to those not possessed of steady nerves. Towards the summit there is a sheer ascent of 1,000 feet, where a slip would certainly be fatal. At this point a dense mist overtook us, but we reached Lake Lindemann—the first of a series of five lakes—in safety after a fatiguing tramp of fourteen consecutive hours through half-melted snow. Here we had to build our own boat, first felling the timber for the purpose. The journey down the lakes occupied ten days, four of which were passed in camp on Lake Bennett during a violent storm which raised a heavy sea. The rapids followed. One of these latter, the "Grand Cañon," is a mile long, and dashes through walls of rock from 50 to 100 feet high. Six miles below are the "White Horse Rapids," a name which many fatal accidents have converted into the "Miner's Grave." But snags and rocks are everywhere a fruitful source of danger on this river, and from this rapid, downward, scarcely a day passed that one did not see some cairn or wooden cross marking the last resting-place of some drowned pilgrim to the land of gold.

Joaquin Miller, when on his way to Klondyke before he reached the Chilkoot Pass, scouted the idea of there being any serious difficulty on the road:—

The formidable and fearful Chilkoot Pass or glaciers of so many slippery miles in the clouds of frost and snow has dwindled to twenty-four miles of reasonably rough mountain trail by the old route to the head-waters of the river, where we take to the boats, rafts, and canoes, and make our way by water down to the Klondyke mines. What is most important, we find they have opened a new route on, or, rather, around this pass; that it is only from thirty to forty miles by this

new route to the canoes and boats; and what is more important than all, this route is possible for horses.

This new route of which Joaquin speaks passes through the White Pass, which is 1,000 feet lower than the Chilkoot and is lumbered the entire length. It starts from Skaquay Bay, 85 miles from Juneau, from whence it is proposed to make a railway 350 miles long, striking the Yukon River 100 miles below Lake Lindemann. The Grand Cañon and the White Horse Rapids will be turned by a road and rail postage. The trail over this new pass was to have been completed so as to be serviceable for horses and mules last July, but in August the new route through which most of the traffic was to pass into Klondyke was still closed, with little prospect of being opened this year. By the Chilkoot Pass it took Mr. and Mrs. Boyce just three months to travel from Juneau to Forty Miles. They travelled ten, or twelve, or fifteen miles a day, the dogs would not stand more.

The sea journey along the fjords of the coast is very fine. Joaquin Miller, whose "Songs of the Sierras" showed that he had the poet's eye for the secret of the Hills, was enraptured by the splendour of the scenery through which the mining party steamed from Seattle to Juneau:—

We are steaming up a mighty gorge, a vast, still river, wide and dolorous, deep, as one might imagine the river of death. Not a sound, not a sign of anything at all save the croak and shifting of our own ship, or now and then a splash of a young salmon breaking the glassy surface of the great river. It is simply a great view, the greatest of tide views, it seems, from Seattle up to this point in the heart of South Alaska—a thousand Hudson views, with peaks and palisades set and encircled with everlasting snow.

All the day that is behind us the snow peaks and black forests of Prince of Wales Island lifted like the Sierras between us and the Pacific, a continuous and unbroken chain. To the right snow and clouds lighted up the bleak steeps and peaks, and blazed as the sun battled for supremacy as in some majestic dream—awful, fearful as not of earth. One needs to coin new words, words that are brighter, bigger, keener, than common words to describe even a single day in Alaska.

Even now, long past 10 p.m., the tired and vanquished sun reaches a sword of silver through the black fires to the west,

THE SITUATION OF KLONDYKE.

ON THE WAY TO KLONDYKE.

The Summit of the Chilkoot Pass.

and at last lies silently along the still waters at our feet in sign of reluctant surrender.

It is after they land at Juneau that the trouble begins. Mr. Ladue, founder of Dawson City, thus describes the trip:—

Leaving Juneau, you go to Dyea by way of Lime Canal, and from there to Lake Lindermann thirty miles on foot, or portage, as we call it. The lake gives you a ride of five or six miles, and then follows another long journey overland to the headwaters of Lake Bennett, which is twenty-eight miles long. On foot you go again for several miles, and then the caribou crossing of the river furnishes transportation for four miles to Tagish Lake, where another twenty-one mile boat ride may be had.

This is followed by a weary stretch of mountainous country, and then Marsh or Mud Lake is reached. You get another boat ride of twenty-four miles, and then go down the creek for twenty-seven miles to Miles Canyon and to White Horse Rapids.

This is one of the most dangerous places on the entire route, and should be avoided by all strangers. The stream is full of sunken rocks, and runs with the speed of a mill race. Passing White Horse Rapids, the journey is down the river for thirty miles to Lake Labarge, where thirty-one miles of navigable water is found. Another short portage and Lous River is reached, where you have a two hundred mile journey, which brings you to Fort Selkirk. At this point Pelly and Lous Rivers come together, forming the Yukon. From that point on is practically smooth sailing.

From which it will be seen that a long and dolorous way intervenes between the miner and El Dorado, even after he has set foot on the shores of the Promised Land.

The load which each miner carries with him varies according to means and capacity. Joaquin Miller, who may be regarded as an expert capable of reducing his impedimenta to an irreducible minimum, carried with him the following kit:—

I have twenty pounds of bacon, twelve pounds of hard tack, half a pound of tea. I have a heavy pair of blankets, the heaviest; socks, underclothing, boots, a rubber blanket, a macintosh, a pound of assorted nails, one hundred feet of small rope, a sail and an axe. My pack is forty pounds all told. I have a pocket-knife and an iron

cup, a thermometer, and about 100 dols.

I hope to build a raft, carry my own pack over all the places, and travel hastily on ahead and alone. You see, I have spent years alone in the mountains, and have been in almost all the "stampedes" for the last forty years, and know what I am about.

If that be the minimum equipment for a forced march, here is what may be regarded as adequate provision for a well-to-do miner for twelve months in Klondyke. It is an interesting table of the needs of the civilised human when encamped on the rim of the Arctic circle. The total cost of the outfit only comes to £44:—

**PROVISIONS.**—75 pounds granulated sugar, 1 dozen packages beef extract, 10 pounds evaporated onions, 50 pounds evaporated potatoes, 50 pounds evaporated peaches, 10 pounds evaporated currants, 25 pounds salt, 25 pounds rolled oats, 50 pounds cornmeal, 200 pounds breakfast bacon, 50 pounds rice, 1 pound Cayenne pepper, 1 pound black pepper, 1 case condensed milk 10 sacks flour, 1 bottle vinegar, 15 pounds dried beef, 1 case baking powder, 1 pound mustard, 1 box candles, 1 can matches, 20 bars of soap, Crackers, Castile soap, 1 dozen small cheeses, 25 pounds spaghetti, 15 pounds coffee, 3 pounds tea, 100 pounds beans, 25 pounds of pitted plums. Total cost of provisions at Seattle, £21.

**CLOTHING.**—Three suits underwear, one undershirt, one Yukon blanket, one summer blanket, one dozen pairs socks, two pairs mittens, one cap, one bag, two overshirts, one jumper, one pair gum boot socks, two pairs rubber boots, two pairs leather shoes, hobnailed. Total, £15 6s. 4d.

**TOOLS AND COOKING UTENSILS.**—Forty pounds wire nails, five pounds pitch (for caulking boat), one whip saw, one caulking chisel, two pounds tallow (for caulking boat), two wedges, one handsaw, 250 ft.  $\frac{3}{8}$ -inch manilla rope, one compass, one knife and sheath, one pack strap, one brace, one shovel, one pick and handle, two buckets, one coffee-pot, hooks and lines, one stove, one piece sheet iron, one revolver, belt and cartridges, one gold pan. Total, £8 5s.

Besides these supplies, each traveller has a case of medicine that cost 38s.

To get to Klondyke with supplies for a year it is estimated the miner should have a capital of from £200 to £250. Not an ounce of bread or bacon could last August be purchased at any of the trading posts on the road to Klondyke. Yet thousands pressed on without provisions into the lone north land. If many do not perish of starvation it will be a marvel. There is no game to be had. A few hundred natives maintain a difficult existence in thousands of square miles of desolation so extreme that a missionary and his wife reported that they could not live together during the eight months' winter, for the presence of two fresh mouths to fill in any settlement would entail famine.

## VI.—HOW THEY LIVE IN KLONDYKE.

The best account I have seen as to the actual conditions of life in Klondyke was contained in a letter written by a young miner of the name of Connelly to his parents in Nebraska. It is dated "Dawson City, Yukon River, April 4th, 1897," and it is so natural and simple I quote it in its entirety:—

Dear Mother and Father,—At last I write you a few lines to let you know where I am—in the "Land of the Midnight Sun." I left Juneau, Alaska, last Winter, and was 100 days coming to this place with five dogs and 1,000 pounds of grub.

This is the best place in the world. Wages are 15 dols. per day. I have a few thousand dollars, and would send them to you, but there is no way of doing so.

The man who takes this letter will carry it in his pocket 1,000 miles, to Juneau, Alaska. He starts to-night for the outer world.

Mother, gold in this place is no good—grub is the thing. Bacon sells for 2 dols. per pound, and flour 60 dols. per sack. I will come home in two years with money to keep us all the rest of our lives, if I have my health.

There were four in our party when we left Alaska. One died and we brought him 700 miles on a sled. We work dogs here as you work horses and cattle in Nebraska.

This is a wonderful country. The Winters are cold—60 to 80 degrees below zero. We have three short Summer months to work in. From June to the last part of September. There is no night the most of the Summer, but in the Winter we have scarcely any sun. On Christmas Day we only have about three hours of sunshine.

I have bought a claim for 9,000 dols., paid 2,000 dols. down, 7,000 dols. to be paid at bedrock. This is Winter digging;

ON THE WAY TO KLONDYKE.

the ground is frozen forty feet deep. We drift as we do in coal mines, put a fire in the base and let it thaw, then shovel it out in Summer. We wash it out in sluice boxes.

This creek is the richest in the world. Two men shovelled out 18,000 dols. in two hours. The place was struck last August by an Indian. The worst thing about this place is there is nothing to eat. We have nothing at all but bacon and flour. There is considerable scurvy here, one-third of the men being affected with it. A man cannot live in this place a year for less than 1,000 dols. There is a steamboat that usually comes up once a year, but it has not been here for two years. At present there are about 700 men in the Yukon country. Quite a number of these will depart from here with big stakes as soon as the boat comes.

I gave a man 2 dols. to take this letter to Juneau, and he will post it there. It will be this time next year before I will know what stake I will have to go home on. Three years is enough time to stay here. It will make a young man old to live on the grub we do for that length of time. Although we have plenty of gold here, it can only buy bacon and flour.

I would like to hear from all the folks at home, and when I come you will think a Count of Monte Cristo has struck the town.

At this time of the year there is no night at all—sunshine for eight straight days. It is well named the "Land of the Midnight Sun."

Father, keep up a little longer and we will be all right—that is, if gold can make us so. You would laugh to see me now, as my hair is as long as "Wild Bill's." This is the only place in the world where a man can make money, but it takes a strong man to do it. I think I could eat a barrel of fruit. A man came here this spring with a lot of eggs and sold them for 75 cents apiece. If mother were here with her hens she could make a fortune. Well, I will bring this letter to a close. Hoping to hear from you soon. I am your loving son,

TIM CONNELLY.

There is the reality of things as they are. We also have a woman's account of life at the camp in the interview with Mrs. Boyce, the bride who spent her honeymoon in Klondyke. I quote the salient passages from her narrative for the sake of the woman's view of things which it affords:—

What advice would I give to a woman about going to Alaska, she said to-day, why, to stay away, of course. It's no place for a woman, I mean for a woman alone; one who goes to make a living or a fortune. It's much better for a man though, if he has a wife along.

The men are not much at cooking up there, and that is the reason they suffer with stomach troubles, and, as some say they did, with scurvy. After a man has worked hard all day in the diggings he doesn't feel much like cooking a nice meal when he goes to his cabin cold, tired and hungry, and finds no fire in the stove and all the food frozen.

I took an outfit of clothes made especially for the trip. My outfit cost about 250 dols. It included three suits of everything right straight through. I had very heavy woollen underwear and knitted woollen stockings. My skirts were made short, only a little below the knee. I had a heavy fur coat of martin, a fur cap, fur gloves and the heaviest shawl I could get. Strange as it may seem, furs cost less and are better here than in Alaska.

A fur robe is necessary. The fur gloves can be had up there better than here, however, and cost about 3 dols. Moccasins are worn instead of shoes through the winter, and moccasins when it is thawing and wet. They are both to be had there at from 1 dol. to 4 dols. or 5 dols. a pair. The moccasins are made of fur seal, "with the furry side inside and the inside out."

The moccasins—that's the native name for them—are the mud moccasins. The soles are made water-proof with seal oil. If a woman keeps her feet warm her health is pretty safe, and for that reason, in addition to the woollen stockings and moccasins, I wore also flannel insoles. In all the time I was in Alaska I never suffered from frost-bite—didn't even get my fingers nipped or my nose—and I wore no veil all the time I was there. The supplies for Mr. Boyce and myself included his clothes, my small furs, our stove and all our food; cost about 800 dols. and weighed about two thousand pounds. We did not confine ourselves to a bean and bacon diet. We had plenty of canned meats, hams, bacon, dried fruits, and vegetables and all sorts of canned things besides.

It took us three months to travel from Juneau to Forty Mile. At night we pitched our tents, made a bed of boughs, put blankets on, rolled ourselves in blankets, covered ourselves with the fur robes, and slept well. We had four pairs of heavy blankets, and I took two small pillows along.

Our bedding was always packed in an oil-skin cover, and so kept dry all the way. We got to Forty Mile in June, and went to the Klondyke in October. I stayed at the post, now Dawson City, while the boys went on to build a cabin. It took us two days to walk the nineteen miles to the diggings. There was about an inch of water on the ice, and I slipped and slid in every direction going over.

When I got there the house had no door, windows, or floor, and I had to stand around outside until a hole was cut for me to get in through. We had a two-room house, and after it was fixed up it was very comfortable for Klondyke. The boys had a carpet and curtain sent over for me. We had all the camp-made furniture we needed, and with a bed of long, little sheet-iron affairs, with two holes on top and a drum to bake in. The

wood is so full of pitch—it's the meanest, knottiest, scrubbiest wood I ever saw—that the fire burns up and goes out if you turn your back on it for a minute. The water we used was all snow or ice, and had to be thawed. If any one wanted a drink, a chunk of ice had to be thawed and cooled again.

When we wanted a bath we melted ice, heated the water, got the pan in that we used for washing the gold, and did our bathing in that. I was not sick once during all the time I was there, except slight indispositions, and I'm twenty-five pounds heavier now than when I went up, and feel better than ever.

Eight months of the year it is dark up there, with only about four hours' light each day. There is a grey twilight, and the men work through that, but we often had to light the lamps at half-past one or two in the afternoon. We had oil lamps, but the majority use candles.

In the winter the Yukon is one of the healthiest places for any one going there with sound health, but when the summer comes it is unhealthy. It is damp, the water is bad, it gets very hot, and the mosquitos are awful.

Coming away from the mines we made the distance between

them and Dawson in one night, but the trail is so bad that, notwithstanding I wore a skirt only knee length, I was covered with mud to the waist. Dawson may have been a quiet city once, but when I came through it it was in such a rowdy state that it was impossible for me to go to my meals, and I had to have them sent to me. Men and women—there were about fifty women there—were carousing continually. The people who followed on the heels of the good steady-going, hard-working miners are among the worst up there.

A VIEW OF KLONDYKE.

Would I go to the Yukon again? Never. I am glad I had the experience I really did. It was worth the roughing, but once is enough.

The mean temperature of Klondyke for the four seasons is as follows: Spring, 14-22; Summer, 53-67; Autumn, 17-37; Winter, 30-80 below zero.

## VII.—HOW THE GOLD IS WON.

The manner in which mining is carried on in Klondyke is thus described by Dr. W. H. Dall, one of the Curators of the National Museum at Washington:—

The yellow metal is not found in paying quantity in the main river, but in the small streams which cut through the mountains on either side. These practically wash out the gold. The mud and mineral matter is carried into the main river, while the gold is left on the rough bottoms of these side streams. In most cases the gold lies at the bottom of thick gravel deposits. The gold is covered by frozen gravel in the winter. During the summer, until the snow is all melted, the surface is covered by muddy torrents. When the snow is all melted and the springs begin to freeze, the streams dry up. At the approach of winter, in order to get at the

gold, the miners find it necessary to dig into the gravel formation.

Formerly they stripped the gravel off until they came to the gold. Now they sink a shaft to the bottom of the gravel and tunnel along underneath in the gold-bearing layer. The way in which this is done is interesting, as it has to be carried on in cold weather, when everything is frozen.

The miners build fires over the area where they wish to work, and keep these lighted over that territory for the space of twenty-four hours. Then, at the expiration of this period, the gravel will be melted and softened to a depth of perhaps six inches. This is then taken off, and other fires built until the gold-bearing layer is reached. When the shaft is down that far fires are built at the bottom, against the sides of the layer, and tunnels made in this manner.

Blasting would do no good, on account of the hard nature of the material, and would blow out just as out of a gun. The matter taken out containing the gold is piled up until spring, when the torrents come down, and is panned and cradled by these. It is certainly very hard labour.

Mr. W. Ogilvie, Dominion Land Surveyor, after describing the ordinary process of washing for gold by the pan, the rocker, and the use of mercury, says:—

A great many of the miners spend their time in the summer prospecting, and in the winter resort to a method lately adopted and which is called "burning." They make fires on the surface, thus thawing the ground until the bed rock is reached, then drift and tunnel. The pay dirt is brought to the surface and heaped in a pile until spring, when water can be obtained. The sluice boxes are then set up and the dirt is washed out, thus enabling the miner to work advantageously and profitably the year around. This method has been found very satisfactory in places where the pay streak is at any great depth from the surface. In this way the complaint is overcome which has been so commonly advanced by the miners and others, that in the Yukon several months in the year are lost in idleness. Winter usually sets in very soon after the middle of September and continues until the beginning of June, and is decidedly cold. The mercury frequently falls to 60 degrees

below zero; but in the interior there is so little humidity in the atmosphere that the cold is more easily endured than on the coast. In the absence of thermometers, miners, it is said, leave their mercury out all night. When they find it frozen in the morning they conclude that it is too cold to work, and stay at home.

Another miner says:—

The bed rocks are three feet apart. In the lower bed the gold is as black as a black cat, and in the upper bed the gold is as bright as any you ever saw.

No more miners are going to Klondyke this year, and before long we shall hear many sad and terrible tales of the hardships which have been endured by those who have got in and who cannot get out.

The Canadian Government appears to have taken a wise and liberal view of its duties. There has been no attempt to play the part of dog in the manger, nor even to apply to the miners from the United States the same rule as to alien labour as is enforced against Canadians in the Union. There was at one time some talk of levying a royalty of ten or fifteen per cent., but this has been dropped. It remains to be seen whether the proposal to reserve for the Government alternate strips of the auriferous territory can be carried out. The probability is that it will fail. The Canadian authorities in the Klondyke can hardly assert the rights of the State, at least until they are in a better position to fulfil its obligations. The problem is an interesting one. Miners in places as far away as the Klondyke will probably display an ignorant impatience of taxation whenever it is levied in excess of the necessities of meeting the cost of local administration. This would be manifested with equal decision whether the seat of the taxing power were Ottawa, Washington, or St. Petersburg. It is only at Johannesburg that a prosperous mining community allows itself to be fleeced without mercy to fill the coffers of a hostile and alien Government.

WHAT PROFITETH IT?

# LEADING ARTICLES IN THE REVIEWS.

## "THE BEST HOPE OF HUMANITY."

THE ANGLO-AMERICAN ALLIANCE. BY CAPTAIN MAHAN.

In a very thoughtful but somewhat mystical paper in *Harper* for September entitled "A Twentieth Century Outlook," Captain Mahan utters a yearning plea for an alliance with Great Britain. He says:—

When we [the Americans] begin really to look abroad, and to busy ourselves with our duties to the world at large in our generation—and not before—we shall stretch out our hands to Great Britain, realising that in unity of heart among the English-speaking races lies the best hope of humanity in the doubtful days ahead.

### THE DOMINANT IMPULSES OF EUROPE AND ASIA.

Captain Mahan's essay is chiefly an examination of the tendencies of the times, and an estimate of the way in which they are likely to influence the twentieth century. The first thing he notes is—

The general outward impulse of all the civilised nations of the first order of greatness—except our own.

This outward impulse of the European nations, resumed on a large scale after nearly a century of intermission, is not a mere sudden appearance, sporadic, and unrelated to the past. The signs of its coming, though unnoted, were visible soon after the century reached its half-way stage, as was also its great correlative, equally unappreciated then, though obvious enough now, the stirring of the nations of Oriental civilisation.

Eastern and Western civilisations have existed apart, each a world of itself; but they are approaching not only in geographical propinquity, a recognised source of danger, but, what is more important, in common ideas of material advantage, without a corresponding sympathy in spiritual ideas. It is not merely that the two are in different stages of development from a common source, as are Russia and Great Britain. They are running as yet on wholly different lines, springing from conceptions radically different. To bring them into correspondence in that, the most important realm of ideas, there is needed on the one side—or on the other—not growth, but conversion. However far it has wandered, and however short of its pattern it has come, the civilisation of modern Europe grew up under the shadow of the Cross, and what is best in it still breathes the spirit of the Crucified. It is to be feared that Eastern thinkers consider it rather an advantage than a detriment that they are appropriating the material progress of Europe unfettered by Christian traditions, as agnostic countries. But, for the present at least, agnosticism with Christian ages behind it is a very different thing from agnosticism which has never known Christianity.

### WHAT WILL BE THE ULTIMATE RESULT?

If Expanding Europe meets Awakening Asia, what will happen?

What, then, will be the actual conditions when these civilisations of diverse origin, and radically distinct—because the evolution of racial characteristics radically different—confront each other without the interposition of any neutral belt, by the intervention of which the contrasts, being more remote, are less apparent, and within which distinctions shade one into the other?

It appears to me that in the ebb and flow of human affairs, under those mysterious impulses, the origin of which is sought by some in a personal Providence, by some in laws not yet fully understood, we stand at the opening of a period when the question is to be settled decisively, though the issue may be long delayed, whether Eastern or Western civilisation is to dominate throughout the earth and to control its future. The great task now before the world of civilised Christianity, its

great mission, which it must fulfil or perish, is to receive into its own bosom and raise to its own ideals those ancient and different civilisations by which it is surrounded and outnumbered—the civilisations at the head of which stand China, India, and Japan. This, to cite the most striking of the many forms in which it is presented to us, is surely the mission which Great Britain, sword ever at hand, has been discharging towards India; but that stands not alone.

### WHERE WILL THE AMERICANS STAND?

Captain Mahan thinks that the United States is not alive to its duty:—

We, under the specious plea of peace and plenty—fulness of bread—hug an ideal of isolation, and refuse to recognise the solidarity of interest with which the world of European civilisation must not only look forward to, but go out to meet, the future that, whether near or remote, seems to await it. If our own civilisation is becoming material only, a thing limited in hope and love to this world, I know not what we have to offer to save ourselves or others; but in either event, whether to go down finally under a flood of outside invasion, or whether to succeed, by our own living faith, in converting to our ideal civilisation those who shall thus press upon us—in either event we need time, and time can be gained only by organised material force.

### THE BRITISH ALLIANCE ESSENTIAL TO A NOBLE MISSION.

Captain Mahan appeals to his countrymen to rouse themselves to a nobler mission, and to recognise that the corollary of their Monroe doctrine is the assumption of the sovereignty or at least the suzerainty of all Central and Southern America. He says:—

Where we exclude others, we accept for ourselves the responsibility for that which is due to the general family of our civilisation; and the Caribbean Sea, with its isthmus, is the nexus where will meet the cords binding the East to the West, the Atlantic to the Pacific.

In short, as the internal jealousies of Europe, and the purely democratic institution of the *levée en masse*—the general enforcement of military training—have prepared the way for great national armies, whose mission seems yet obscure, so the gradual broadening and tightening hold upon the sentiment of American democracy of that conviction loosely characterised as the Monroe doctrine finds its logical, inevitable outcome in a great sea power, the correlative, in connection with that of Great Britain, of those armies which continue to flourish under the most popular institutions, despite the wails of economists and the lamentations of those who wish peace without paying the one price which alone has ever ensured peace—readiness for war.

### A PLEA FOR RACE PATRIOTISM.

Captain Mahan regretfully admits that England is in advance of the United States in this matter:—

There is an undeniable disposition on the part of the British people and of British statesmen to cultivate the good-will of the United States, and to draw closer the relations between the two countries. For the disposition underlying such a tendency Mr. Balfour has used an expression—"race patriotism," a phrase which finds its first approximation, doubtless, in the English-speaking family, but which may well extend its embrace, in a time yet distant, to all those who have drawn their present civilisation from the same remote source. The phrase is so pregnant of solution for the problems of the future, as conceived by the writer, that he hopes to see it obtain the currency due to the value of the idea which it formulates. That this disposition on the part of Great Britain towards her colonies and towards the United States shows sound policy as well as sentiment may be readily granted; but why should sound policy, the seeking of one's own advantage, if by open and honest means, be imputed as a crime?

In democracies, however, policy cannot long dispute the sceptre with sentiment. That there is lukewarm response in the United States is due to that narrow conception which grew up with the middle of the century, whose analogue in Great Britain is the Little England party, and which in our own country would turn all eyes inward, and see no duty save to ourselves. How shall two walk together except they be agreed? How shall there be true sympathy between a nation whose political activities are world-wide and one that eats out its heart in merely internal political strife?

And then follows the passage with which I began this article, which I repeat once more, for it is impossible more accurately to express the broad, general principle which has, from the first number to the last, dominated the REVIEW OF REVIEWS. "When we begin really to look abroad, and to busy ourselves with our duties to the world at large in our generation—and not before—we shall stretch out our hands to Great Britain, realising that in unity of heart among the English-speaking races lies the best hope of humanity in the doubtful days ahead."

#### WHY SHOULD NOT THE LOST TRIBES RETURN?

The effect produced by the Jubilee celebrations may be inferred from some editorial comments in the *Canadian Magazine* on "The New Empire." Says the writer:—"On both sides there has been a drawing together which has resulted in the real creation of the Empire." He goes on:—

The new Empire will be based on this new general sentiment which has so suddenly been produced, but this sentiment must rest on material welfare and financial advantage. If this great combination of English-speaking nations can be made a financial and material success, there is no reason why the lost tribes should not return. The United States would find, perhaps, that their well-being, moral, intellectual and material, would be best promoted by a reunion of the Anglo-Saxon races. Such a union would be productive not only of great benefit to all concerned, but of the best interests of civilisation, progress and development. Such a union would mean that Christianity and Liberty would rule the world.

This is a valuable indication of the new spirit which the recent rejoicings have infused into the Colonies. Once it was Canada that stood, as it were, hesitating and gravitating towards the greater political mass to the South, and the United States fairly counted on their larger destiny. Now Canada feels herself the member of the larger whole, and speculates on the prospect of absorbing the Republic into the Empire. How the Republic will relish the change of outlook remains to be seen.

THE first early Christian house which has been brought to light by the spade of the archæologist is sketched by Mr. Baring-Gould in the September *Good Words*. Pagan interiors have been plentifully disclosed, but the house of the martyrs John and Paul, on the Coelian Hill, is the first of its kind to be discovered. The two martyrs were chamberlains of Constantia, and were put to death by Julian the Apostate in 362. The basilica erected over their tomb fell to ruin, but was restored by Nicholas Breakspear as a stately church. Only recently has there been unearthed under this church the old house of the martyrs. The ornamentation of the principal room is probably, but not distinctively, pagan. The decoration of the second room is clearly Christian. "There is the Tree of Life, with two goats running to it; a man reading a volume; another with a long scroll, standing between two pilasters, one supporting a vase; and a woman in the attitude of prayer, with arms extended to form a cross." A broken wine-jar has also been found, bearing the labarum between the Alpha and Omega.

#### AMERICAN TRIBUTES TO THE BRITISH EMPIRE.

By GENERAL GRANT, CAPTAIN MAHAN, AND OTHERS.

IN the *North American Review* for August there is a fresh instalment of General Grant's letters to a friend, which are much more interesting than the first batch. General Grant, writing in 1878, tells his friend that the great desire of his life was to spend his days on the Pacific Slope. He says nothing ever fell over him like a wet blanket so much as his promotion to the lieutenant-generalcy. As junior major-general in the regular army he thought his chances good for being placed in command of the Pacific Slope when the war closed. As lieutenant-general all hope of that kind vanished. This is a notable instance of how often it is that Providence in working out a great destiny has ruthlessly trampled under foot the cherished ideals of the man who is destined to be the instrument of His purpose. General Grant's disappointment was indispensable in order to make him Commander-in-Chief of the American army and President of the United States.

#### GENERAL GRANT.

Apart from this personal reminiscence, the most interesting letter is the one which he wrote from Singapore in 1879. It is notable as a frank confession of the mistaken impression under which, like many Americans, he had laboured as to the real nature of English rule in Asia. General Grant says:—

Since my last letter to you, I have seen much of the world new to me, and but little visited by our countrymen. The reality is different from my anticipations as to climate, characteristics of the natives, the governments that have been forced upon them, etc., etc. My idea had been rather that English rule in this part of the globe was purely selfish, all for the benefit of "Old England" and pampered sons sent here to execute laws enacted at home, and nothing for the benefit of the governed. I will not say that I was all wrong, but I do say that Englishmen are wise enough to know that the more prosperous they can make the subject the greater consumer he will become, and the greater will be the commerce and trade between the home government and the colony, and greater the contentment of the governed. This quarter is governed on this theory, and, as far as my opportunities have given me the power to judge, by a most discreet, able, and well-chosen set of officials. My opinion is that if the English should withdraw from India and the East, they would scarcely get off the soil before the work of rapine and murder and wars between native chiefs would begin. The retrograde to absolute barbarism would be more rapid than progress toward civilisation is possible; it would be almost instantaneous.

This passage may be commended respectfully to various American journalists and writers; among others, to that good man, Mr. Walker, of the *Cosmopolitan*, who seems to have gone curiously wrong on the subject of British rule in India.

#### PROFESSOR HOPKINS.

Professor Hopkins writing in the *Forum* on "The Political Aspects of the Plague in Bombay," bears strong testimony to the humane, sympathetic manner in which the Anglo-Indians deal with the natives. Professor Hopkins says that the native complaint of Anglo-Indian lack of sympathy is much exaggerated:—

So far as sentiment is concerned, the complaint is justified, though to make it so often betrays a lack of manliness which may explain the other lack. The Englishman is not in sympathy with the Indian; but, so far as kind acts go there was never a conquering race in the world which treated its conquered subjects so generously and so thoughtfully. It was the Municipality's own officers that offended most against the delicacy of the Hindus and Mahomedans in the matter of personal inspection. The Municipality as a body did not even suggest those alleviations of distress which, on taking control

of the city, Lord Sandhurst immediately introduced. Not to the Corporation, with its two-thirds majority of natives, but to the "unsympathetic" Englishman were due the women inspectors, physicians, and nurses, so requisite to allay the discomposure of those native women who by the laws of their society and religion are not permitted to be seen by other men than their husbands.

#### SENATOR HOAR.

Senator George F. Hoar, who writes in the *Forum* on "Statesmanship in England and in the United States," is another American who bears emphatic testimony to the method by which we govern our Asiatic subjects. Senator Hoar says:—

England, doubtless, governs well. She obtained her great Indian empire by unjustifiable means; but she rules it better and better from generation to generation. There are no better examples of a great governing race than the men she has sent out to India during the last fifty years,—the Lawrences, the Stephens, and their companions. "The sahibs don't like us," said an Indian philosopher; "but they are absolutely just, and they do not fear the face of man." While England has trained this race of gentlemen to govern well her three hundred and fifty millions of subjects, the United States have not governed Alaska nor their two hundred and fifty thousand Indian dependents even decently.

#### THE BRITISH SOLDIER IN INDIA.

In this connection, by way of proving that our American friends do not do us more than justice in their tributes to the humanity of the British in India, I quote one passage from Major-General Tweedie's paper on "The British Soldier as Plague Commissioner" in *Blackwood* for September. His testimony bears upon the crucial point whether the women of the East have reason to complain of the violence of our men. Major-General Tweedie says:—

Forty years ago our soldiers assaulted, captured, and partly pillaged cities like Lucknow and Delhi, without, so far as I ever heard, the commission of a single outrage on women. A little later, it befell an active subaltern to administer the civil affairs and direct the police of a large cantonment; and he cannot, in writing these lines, recall to mind an instance in which the family life of the people was trespassed on by a British soldier. In Christian Abyssinia, where the women are unveiled and unsecluded, the same eye-witness thinks he may say with safety, no offence of the kind indicated was ever reported. Under the Residency flag in Central India nothing occurred to break the unblemished record. With the army in Afghanistan the case was in nowise different. From Peshawar to Kabul our soldiers' tents were freely entered by both married and unmarried women with milk or fruit for sale.

#### CAPTAIN MAHAN.

I will close this string of quotations by the following extract from Captain Mahan's "Twentieth Century Outlook" in *Harper* for September:—

Despite internal jealousies and friction on the continent of Europe, perhaps even because of them, the solidarity of the European family therein contained is shown in this great common movement, the ultimate beneficence of which is beyond all doubt, as evidenced by the British domination in India and Egypt, and to which the habit of arms not only contributes, but is essential. India and Egypt are at present the two most conspicuous, though they are not the sole, illustrations of benefits innumerable and lasting which rest upon the power of the sword in the hands of enlightenment and justice. It is possible, of course, to confuse this conclusion, to obscure the real issue, by dwelling upon details of wrongs at times inflicted, of blunders often made. Any episode in the struggling progress of humanity may be thus perplexed; but, looking at the broad result, it is indisputable that the vast gains to humanity made in the regions named not only once originated, but still rest, upon the exertion and continued maintenance of organised physical force.

#### "MAKING RIFLEMEN FROM MUD":

THE MIRACLE WROUGHT BY THE BRITISH SERGEANT,

MR. RUDYARD KIPLING's tribute to the sergeant-instructors attached to the Egyptian army, whose merits are said to be "inadequately acknowledged," appears in the September *McClure's*. It is entitled "Pharaoh and the Sergeant." It begins:—

Said England unto Pharaoh, "I must make a man of you

That will stand upon his feet and play the game;

That will Maxim his oppressor as a Christian ought to do."

And she sent old Pharaoh Sergeant Whitsname.

It was not a Duke nor Earl nor yet a Viscount—

It was not a big brass General that came;

But a man in khaki kit who could handle men a bit,

With his bedding labelled Sergeant Whitsname.

Reminiscences of the ancient Pharaoh add a grim flavour to the fun, as when England reminds the Egyptian monarch, "you've had miracles before," but the sergeant "can show you something more"—"he's a charm for making riflemen from mud." With this introduction England left Pharaoh and the sergeant "in the desert making friends." Then came the "years that no one talked of," with "times of horrid doubt," while the sergeant "combed old Pharaoh out." England, meanwhile, "didn't look to know or care":—

That is England's awful way o' doing business;

She would serve her God or Gordon just the same,

owing to her inveterate trick of thinking that her Empire is "the Strand and Holborn Hill." When the testing struggle came, there was a "most astonished foe" at Firkah, for "the sergeant he had hardened Pharaoh's heart." Broken three thousand years before by the plagues of Egypt, he had mended "it in ten, and Pharaoh done the best he ever done." All this the sergeant achieved "on the cheap and on the quiet," and "he's not allowed to forward any claim":—

Though he drilled a black man white, though he made a mummy fight,

He will still continue Sergeant Whitsname.

"But the everlasting miracle's the same."

This is one of the raciest things Mr. Kipling has ever done, and will probably console the heart of the neglected instructor almost as much as a royal decoration.

#### A Gigantic Open Sewer.

*Lippincott's* for September contains a paper by Mr. John L. Wright on "The Chicago Drainage Channel," which he describes as "the greatest feat of sanitary engineering in the world." The channel is nothing less than an artificial river, 160 feet wide, cut from Lake Michigan to the Desplaines, a distance of 28 miles. It is intended to carry off the sewage of Chicago by this route, and the rivers Desplaines and Illinois, into the Mississippi. The sewage amounts to 50,000 cubic feet per minute. This is to be swept along by a volume of Lake water averaging 300,000 cubic feet per minute. There is a fall of 82 feet from the surface of Lake Michigan to the surface of the Illinois river at Ottawa, 52 miles below the southern end of the canal. This fall means not merely an effective scour, but industrial driving power to the extent of some 80,000 horse-power. The total amount of drift and rock displaced is put at over 40,000,000 cubic yards, and the entire cost at 31,000,000 dols. It is hoped that this will lead to the Government constructing a ship canal from the Illinois River, which will open up a clear waterway for the largest ships from the Mississippi to the Lakes via Chicago.

## GOVERNMENT IN ENGLAND AND THE UNITED STATES.

BY AN AMERICAN SENATOR.

SENATOR GEORGE F. HOAR contributes to the *Forum* for August one of the most instructive and suggestive articles upon the difference between the working of the English and American systems of government that I have come across for some time. The article is entitled "Statesmanship in England and in the United States," and the subject is old and hackneyed, but Senator Hoar treats it with novelty and originality. He says:—

The working of the American Constitution is distinguished from that of Great Britain by three influences,—periodicity, locality, and confederacy.

Of these three differentiating peculiarities, Senator Hoar gives the greatest importance to the second. He says:—

The influence of locality is much greater than even obedience to the Constitution demands. I am inclined to think that the operation of this single principle has more to do in distinguishing the public life of America from that of Great Britain than all our written Constitutions, State or national, would have without it.

## LOCAL VETO ON STATESMANSHIP.

In the United States no man can be elected for any district in which he does not reside. The same rule prevails in France, with the result that, if any man is locally unpopular, he is ostracised until he can regain popularity with his neighbours. Such a rule as this, if applied to the United Kingdom, would leave Sir William Harcourt and Mr. Morley out of Parliament, and would have led to the disappearance of Mr. Gladstone from public life long ago. Senator Hoar says:—

This necessity for considering locality in the selection of persons for high national offices embarrasses the American people at every step. No man, with rare exception, can have any considerable opportunity for public service, although he may be in accord with an overwhelming majority of his countrymen, unless he also happens to be in accord with the locality in which he dwells. This gives a power to local prejudices in this country from which England is almost wholly free.

One result of this is that the career of public men in the United States is surprisingly brief:—

There is not a man in this country to-day who is secure of an opportunity for official service extending more than six years ahead, except a judge. There are probably not ten men out of the Senate of the United States who have a reasonable expectation of a term even as long.

## STATESMEN IN A HURRY.

The result of this operates disastrously in many ways. Senator Hoar says:—

Now this insecurity and brevity in the term of public service make the American statesman impatient and in a hurry to accomplish his public purposes. If he be ambitious, he must hasten to make his mark. If he have at heart some great measure for the public good, he must accomplish it while he has the power. He must make hay while the sun shines. He must work while it is day; for the night cometh wherein no man can work. This hurry is in strange contrast with the quiet and deliberate security of the Englishman. It puts us at a great disadvantage in legislation and administration. This disadvantage is especially manifest in our diplomacy.

This want of security in public office, this hurry to make a mark, make the American statesman ambitious to effect some reform, or find and create some issue that does not arise naturally of itself. This condition of things tempts able men, who have a natural and honourable ambition for political office, constantly to watch and yield to the varying moods of

special constituencies. In this way men become great political followers, but not great political leaders. This diminishes the permanent power of political parties; but it tends to deprive men of the civic courage which makes them the guides and lights of their age, and likewise deprives such leaders of the power to accomplish their purposes.

## THE MUNICIPAL TRAINING SCHOOL.

On the other hand, Senator Hoar thinks that the United States have the advantage over the United Kingdom in providing greater facilities for training men for public service. He says:—

Our State governments and municipal institutions have a great value in training men for national service, to which nothing in England corresponds. We have here what England lacks—the training for larger service of the town meeting, the city council, and the exercise of State legislative and administrative offices. We have, too, the interest in public affairs which belongs to a Republic, where every man feels a responsibility and expects to understand what is going on.

From this it would seem that Senator Hoar does not adequately appreciate the immense service which our municipal institutions have rendered to the State in training men for public service. Our County Councils and Parish Councils are but things of yesterday, but our municipal institutions are older than Parliament itself.

## PRECEDENT VERSUS PAROCHMENT.

As to the sense of responsibility which every citizen feels for the good governance of the State, Senator Hoar will hardly maintain that so far as the educated classes go, this is developed to a greater extent in the United States than in the United Kingdom. His observations upon English newspapers and English regard for precedent are interesting. He says:—

I think the conductors of English newspapers stand by their countrymen better than ours. English people would not tolerate in their own press the stream of scurrility and falsehood which is constantly poured out on our country by some American journalists.

Our restraint under a written Constitution, and under a Supreme Court which can declare any State or national legislation unconstitutional, is hardly greater practically than the restraint upon the Englishman of his regard for precedent.

The Senator does not point out what is nevertheless obvious enough, viz., that even if the restraint from regard to precedent operates as effectively as the restraints of a written constitution in the Supreme Court, there is one great advantage which our system possesses over that of the United States. We can set precedent at naught whenever we choose to do so, but it is practically impossible to alter the written constitution of the United States.

GENERAL BOOTH contributes to the *September Quiver* a plain and straightforward account of the origin and growth of the Salvation Army. He lays great stress on the fact that the Army was not made, but grew. He also expresses great wonderment that the churches in England have thought so little of the duty of evangelising the Continent. If there are English Home Missions, why should there not be European Home Missions? "In these days of continual intercourse between continent and continent," he says, "no Christian nation can afford to regard the condition of another with indifference. The irreligion of Chicago and St. Louis must be fought in Hamburg and Munich." He asks, "If the poor little Salvation Army has been able in only fifteen years to establish on the Continent 576 mission stations under the care of 2,245 officers, what might not have been done in the same time by the united forces of Christendom?"

**"CIVILITIES" OF AMERICAN DIPLOMACY.****HOW TO DEAL WITH THEM.**

MR. MAURICE Low, the Washington correspondent of the *National Review*, speaks very plainly and wisely about the deplorable tone which American diplomacy has adopted towards Great Britain, culminating in the painful despatch signed by Secretary Sherman. The marked friendliness of his attitude to the United States gives to Mr. Low's words the more weight. He says:—

What should be done to make the American people, and especially the State Department and those persons entrusted with the conduct of public affairs, understand that Great Britain cannot be hectorated and bullied and insulted simply because there is a cousinship stretching across the Atlantic? The answer is very simple. The State Department must be made to understand that England demands the same courtesy from America that she does from Germany, or France, or Russia, or any other great Power. There need be no fear of war; there need be no scare; securities in Lombard Street and Wall Street will not tumble if the remedy I suggest is employed. It is simply this: When the next time an American Secretary of State sends an "instruction" couched as was that of last May regarding the Seal Question, the British Secretary of State for Foreign Affairs should simply acknowledge its receipt and let the matter rest there. In the course of a month or two the American Ambassador will diplomatically suggest to the Secretary that his chief will be glad to receive an answer to his communication. It would then be possible for the British Secretary to intimate that he was not in the habit of receiving communications written in such an undiplomatic strain, and that it might take some time before he could arrive at the point of reading a despatch which appeared to have been so hastily and inconsiderately written. I believe the hint would be sufficient.

Mr. Low further points out that "it is always regarded as a sign of weakness" when Great Britain immediately complies with a request couched in such "sturdy Americanism," and quotes the *Washington Post* to show how Lord Salisbury's speedy consent to Mr. Sherman's truculent demand for a conference made "Mr. Sherman's note a success," and so justified it. "It is a crowning proof," said the American journal, "that mere diplomatic palaver is wasted on Great Britain." Mr. Low's advice is:—

In all her dealings with the United States, Great Britain should display dignity, firmness, and exact justice, but she should insist upon the same treatment from America; she should, as she has so frequently done, show how friendly her feelings are for the junior member of the great Anglo-Saxon family, and how willing she is to assist her whenever assistance may be necessary. And the United States does not scruple to ask for help when she requires it. During the Venezuelan complication, when the relations between Great Britain and the United States were decidedly strained, the Washington Government did not hesitate to ask the British Foreign Office to protect Americans who were implicated in the raid; and the Navy Department finding itself without docks at this time makes use of facilities to be found at Halifax, and which the British Government extends as a mark of friendliness, and shows every other courtesy to the visitor. Perhaps it is because we are too accommodating, because we place our docks, as well as our officials, at the convenience of the American Government that our motives are misconstrued and amity is interpreted for weakness.

THE *Investors' Review* for September somewhat reluctantly admits an upward tendency in the money market, due possibly to "the world's hunger," but not likely to last long. Attention is also called to the significant fact that "a purely London bank of first class importance has not been established for a quarter of a century at least," and that banking becomes more and more of a monopoly.

**MODERN BRITISH IMPERIALISM.****WHO WAS ITS FATHER?**

It is a happy sign of the practical unanimity with which the nation has repudiated the Little Englander that both political parties are quarrelling for the credit of being the chief champions of the New Imperialism. Lord Rosebery's refusal to consider Lord Beaconsfield as the author of the change in public opinion has evoked many replies. One of these—by Mr. de Thierry ("Colonial")—appears in the *New Review* for September.

**RESPECTIVE WORTH OF CROWN AND CABINET.**

The writer begins with an eloquent and even noble tribute to the Queen and to her Statesmanship. "The Crown is a quantity in European affairs as certain as the British Cabinet is uncertain." To her, and not to them, foreign Powers and our own Colonies have learned to look for the voice of the real nation. A pregnant saying of Franklin on the eve of the American revolt is quoted: "The Sovereignty of the Crown I understand. The Sovereignty of the British Legislature out of Britain I do not understand." The writer thinks it quite probable that England will not emerge from the latter half of this century with the glory she has been imputing to herself, but will rather be remembered as

the England of Mr. Gladstone, Earl Granville, Sir William Harcourt, and Mr. Chamberlain: the England, that is, which returned a Minister to power who had broken the most sacred pledges given to British and native subjects in the Transvaal, lowered the national prestige in every corner of the globe, and betrayed to death the most chivalrous soldier of the Nineteenth Century.

The Colonies will win the fame of having kept alive and rekindled the flame of loyalty and imperialism.

**"THAT TERRIBLE EARL GRANVILLE."**

The partizan purpose having now become manifest, the writer proceeds to denounce the dismemberment craze dominant in the sixties (which misled both parties, he admits), but not declared in earnest "until the appearance of that terrible Earl Granville." Colonial discontent was at its acutest just during the sixties and the seventies, while the Liberals were in power. When Canadian Independence was openly advocated, and when Mr. Galt, one of its leading advocates, was offered a knighthood by Earl Granville, he only accepted it after receiving assurances—so he said—that on the question of Independence "he stood on the same ground as the Ministers of the Crown in England." In 1869 he and his friends were assured by friends in England that "the Gladstone Cabinet could be depended upon to carry out the policy of Independence." Mr. de Thierry proceeds: "Four times has the surface of the sea of Colonial loyalty been disturbed by a ripple of treason, and every ripple has been caused by a puff of Liberal wind."

The letter of Disraeli from which Lord Rosebery quoted is, Mr. de Thierry eagerly points out, dated 1852. He observed the signs of the times, and two decades later—in 1872—"made his great speech at the Crystal Palace, and modern Imperialism was born." Then began his career as Empire-builder. Mr. de Thierry closes by pointing to the support which the Colonies gave to Lord Beaconsfield's policy.

## THE KAISER'S FOREIGN POLICY.

ONE of the most notable political articles in the September magazines is the unsigned paper on the Emperor William's foreign politics, which appears in the *Fortnightly Review*. The writer, whoever he may be, has his facts at his fingers' ends, wields a vigorous pen, and leaves the reader in no doubt as to what he is driving at. According to him, the Emperor William has made a lamentable mess of the foreign politics of Germany ever since he took them in hand. He says:—

The results of the Emperor William's activity in the domain of foreign politics since his dismissal of Prince Bismarck are:—

1. Germany has lost her position as the leading Power in Europe.
2. Russia has taken her place.
3. France has become the ally of Russia.
4. The Triple Alliance has almost ceased to exist.
5. England has been alienated from Germany; and
6. The bond between Russia and Germany has been snapped and not renewed.

We have lately been told that out of this confusion a new European system is to be constructed by the genius of the German Emperor. The idea is that the five Continental Powers are to be united in a coalition against Great Britain, who is to be bled or dismembered for the benefit of all. Only a very sanguine person will dismiss this story as too absurd to be true. One thing, however, seems clear. If this extravagant scheme is not realised, the only alternative for Germany will be Isolation.

## THE AUSTRO-RUSSIAN UNDERSTANDING.

There is a good deal of interesting matter in the paper. The writer, like the *Quarterly Reviewer*, whose article I quoted last month, attaches great importance to the understanding which has been arrived at between Austria and Russia. He says:—

This agreement binds its signatories, in the first place, to take joint action for the preservation of the peace of the Balkans; it then pledges them to take measures to assure the *status quo* in the East by pressing on the Porte the thorough reorganisation of the administration and finances of the Ottoman Empire; and, finally, it provides for the contingency of a break up of Turkey by defining the spheres of influence of the two contracting parties. There can be no doubt that this agreement is one of the most important international compacts concluded in our time.

## KAISER VERSUS KANZLER.

He furnishes a very apt commentary upon Emperor William's recent speechifying at St. Petersburg by quotation from one of the most famous speeches which Prince Bismarck ever delivered. Addressing the Tsar, the Emperor William is reported to have said:—

I can with full confidence lay this vow anew in the hands of your majesty—and I know that in regard to it my whole people stands behind me—that in the great work of preserving the peace of the nations I stand by your majesty's side with my whole strength, and I will give your majesty my strongest support against any one who may attempt to disturb or break the peace.

The Reviewer then quotes very appositely the following passage from a speech delivered by Prince Bismarck in 1878:—

I don't picture myself a peace-mediator playing the part of an arbitrator and saying, "It must be so, or so, and behind me stands the whole might of Germany"; but a more modest one, something like that of an honest broker, who really wants to transact business. . . . I flatter myself we can just as well play the mediator between England and Russia as between Russia and Austria. . . . I don't think we ought to set up as the schoolmaster or policeman of Europe.

## BISMARCK'S EXPECTATIONS.

It would be difficult more succinctly to emphasise the contrast between the old Chancellor and the young Emperor. It is only the latest illustration of the way in which the Kaiser set himself to work to reverse the policy of Prince Bismarck:—

The late Tsar Alexander III. paid a visit to Berlin shortly after the accession of William II., and had a long conversation with Prince Bismarck. In a published account of this audience the Prince has related that, after he had explained at length his political views, the Tsar suddenly said to him: "Yes, I agree with you, and I place the utmost confidence in you; but are you quite sure that you will remain in office?" The statesman stared at the Emperor for a moment in blank amazement, and then answered: "Certainly, Majesty; I am absolutely sure that while I live I shall remain Minister." Five months later he was abruptly dismissed from office. The anticipation of the Tsar that the retirement of Prince Bismarck would bring his whole policy to the ground like a house of cards was swiftly realised.

In the Reviewer's account of the recent German policy we are told that the fall of Bismarck alienated the Tsar, who did not understand or appreciate the refusal of the Kaiser and Count Caprivi to renew the neutrality treaty which Prince Bismarck had secretly concluded with Russia. The Tsar began to draw near to France. The German Emperor made corresponding advances to England:—

The German Emperor visited England, and, at Hatfield, empowered his Minister of Foreign Affairs, Baron Marschall von Bieberstein, to sign, with Lord Salisbury, a protocol affirming the identity of the interests of Great Britain and the Triple Alliance.

## THE ANTI-ENGLISH POLICY.

Unfortunately, however, the Emperor was prevailed upon by domestic and other reasons to abandon the policy of leaning on England, and in October, 1894, when Count Caprivi resigned, a complete change of policy took place:—

The new Chancellor, Prince Hohenlohe, openly sought inspiration and guidance at Friedrichsruhe, and no secret was made of the fact that the *Neue Kurs* was dead. Relations with England became cooler day by day. A whisper which had reached Berlin early in 1894 of Mr. Rhodes's scheme of a contingently preferential tariff for English goods in Rhodesia, then under the consideration of the Colonial Office, probably determined the German Foreign Office to make the Cape the battlefield of its new antipathy. The German Emperor's famous telegram to President Kruger after the battle of Krugersdorp, which came as a thunderclap to the British public, was really the continuation of a policy which had been in active operation since Count Caprivi's fall.

The net result of all this chopping and changing has been that Germany has lost the leadership of Europe, which was promptly seized by Russia, nor is there any likelihood of Germany regaining her forfeited prominence.

I NOTICE elsewhere three of the best articles in the *United Service Magazine*. Hugh Martin gives a very sympathetic and favourable report of the condition of the Greek army after its defeat in the late campaign. Mr. H. W. Wilson undertakes the somewhat forlorn hope of proving that war is not the abominable thing which it is represented to be by the Peace Society, while Captain Holland translates an article by an old Continental soldier, entitled "War with Armies of Millions," which pleads very strongly in favour of the reduction of armaments. Mr. P. C. Standing describes the Siamese army, and Mr. T. C. Down writes concerning the salient features of the Bisley Meeting of 1897.

## CAREER OF THE "KAISER'S MAN."

FROM COMMUNIST TO FINANCE MINISTER.

DR. VON MIQUEL is the subject of a very vivid and valuable sketch by Miss Edith Sellers in the *Nineteenth Century* for September. Quoting Cardinal Newman's remark that "to be perfect is to have changed often," the writer infers that Dr. Miquel must be getting near to perfection:—

In the course of his life he has undergone more transformations than any other latter-day statesman. He has been in turn revolutionary, conservative, and reactionary; intransigent and opportunist; an ardent Republican and an Imperialist; a demagogue of demagogues and a Whig. Once upon a time he was a staunch Socialist—nay, even a Communist; then he was a reformer, an advocate of Free Trade; now the Junker Agrarians are beginning to hope that they may yet find in him a saviour. . . . In his young days he . . . was an Atheist . . . to-day he is a member of an evangelical synod. . . . Yet even those who hate him most allow that he is no waverer, but a strong man, the strongest man, perhaps, with one exception, in the whole German Empire.

## REVOLUTIONARY CONSPIRATOR.

Born in Hanover in 1828 of an old Huguenot family, he was a student at Heidelberg when the revolutions of 1848 broke out. He joined the rebellion in Baden, where he met "all that was maddest and wildest, most generous and brave in Europe." He showed something of his power even then: for the Grand Duke's government, when restored, specially insisted on his banishment. Thence he went to Paris, consorted with the "dangerous class," and joined the Communist league.

## OFFICIAL PROSECUTOR.

From becoming a "professional conspirator" he was saved by a violent attack of the cholera in 1850, which flung him into a death-like trance for several days. A protracted convalescence, backed up by poverty and ambition, led him to reconsider his position. He must achieve his Utopias by less impatient means. So he became in 1851 Reichsanwalt or official prosecutor in Göttingen. He showed here by his municipal zeal, promise of that civic statesmanship which was afterwards so distinguished.

## CONSTITUTIONAL AGITATOR.

In 1854 he made friends with Herr von Bennigsen, and carried on a vigorous campaign against the unconstitutional efforts of the Hanoverian Government. His criticism of the Hanoverian Finance Act of 1857 first revealed in him the born financier. Even so far back as 1856 he was an energetic champion of the movement towards German unity, and did much to found the National League—at a time when the very idea was scouted by Bismarck as a fad. He warmly approved of the opposition which the Prussian Parliament offered to Bismarck, and was deeply dismayed to find his ideal ends triumphing by the brute force of the Prussian legions in the war of 1866. Nevertheless he hotly opposed Hanover casting in her lot with Austria—though in vain.

## NATIONAL LIBERAL LEADER.

In 1867 he entered the Prussian Landtag and the North German Reichstag, and, with Bennigsen, founded and led the National Liberal Party. From 1867 to 1875 that party was all powerful. He was its brain, as Bennigsen was its tongue. He was, next to Bismarck, the strongest man in Germany. The successes of the Franco-German war made him less of an antagonist and more of an ally to the Iron Chancellor.

## MUNICIPAL STATESMAN.

In 1870 his poverty led him into his one great mistake. He lent his name to the promotion of companies which turned out in the commercial depression to be very questionable concerns. When the crash came he was at the height of his power, and on the verge of appointment as Minister. Personally innocent, he had been mixed up with parties not innocent, and, with a public apology, he retired into private life. The people of Osnabrück, whose burgermeister he had been, straightway elected him to the same office. His conduct in the municipal chair was such as to lead Frankfurt to invite him to its chief magistracy. Accepting the office in 1880, he soon made Frankfurt "the model city of Germany." In 1889 the Kaiser, on a visit to the old imperial capital, was so impressed with his admirable management of municipal affairs as to exclaim, "Sie sind mein Mann" (you're my man!).

## FINANCE MINISTER.

Next year Bismarck fell, Miquel was summoned to Berlin, and became Minister of Finance. His career in that office has been brilliant. He passed a progressive income tax. He abolished the exemption from taxation enjoyed by certain princes and nobles. He transformed the chronic Prussian deficits into huge surpluses. On the reactionary Zedlitz Education Bill being pushed forward by the Kaiser and all his colleagues he was prepared to resign his portfolio, but the Kaiser yielded to the storm of popular resentment, withdrew the Bill and kept his Finance Minister. The Berlin press have shown him special favour. Dr. Von Miquel is too wise to accept the Chancellorship, preferring to retain the more powerful post of confidential adviser to the Kaiser. He remains, with perhaps one exception, the most powerful man in Germany, and his influence is growing.

## HIS POLICY.

His ascendancy is said to open a new era. Conflicts between Crown and Reichstag will be avoided. The iron hand will be cased in a velvet glove. Opposing elements will be conciliated:—

One thing is certain: Dr. Miquel is as bent as the Emperor himself on Germany's becoming a World-Power, with rich colonies, and a strong navy wherewith to defend them. . . . But he is keenly alive to the fact that colonies cannot be founded, or war-ships built, without money; and that money can be obtained only from the Reichstag. The first thing to be done, therefore, he holds, is to "capture" the Reichstag: at any cost an end must be put to the present strained relations between the Crown and the representatives of the Empire.

Dr. Von Miquel, therefore, is a man on whom the greatest naval and colonising Power in the world must keep a sharp eye.

THE frontispiece of the *Pall Mall Magazine* for September is a fair reproduction of Denneulier's "Home Again." A. J. Goodman's "Rosalind" gives this woman of Shakespeare an expression somewhat too saucy. The magazine boom in locomotives, for which we have, it may be supposed, to thank the holidays, is continued by Mr. Angus Sinclair's paper on American express locomotives, which is illustrated by photographs of many of the massive monsters. General Sir Hugh Gough tells his thrilling memories of the Abyssinian expedition. The sport of elephant catching in India is described by Surgeon-General Sir B. Simpson and Colonel C. Larking. Mr. Basil Worsfold sketches Capetown; and the story of Cawdor Castle is told by the Hon. Hugh Campbell.

## CASSANDRA IN RHODESIA.

## IS THERE ANY GOLD IN CHARTERLAND?

MR. J. F. V. BLAKE contributes to the *National Review* for August, an article called "Golden Rhodesia—A Revelation." There is no doubt as to the sensational nature of Mr. Blake's statements, and whether true or false, they will attract attention, if only because of their uncompromising thoroughness. He declares that Charterland is absolutely worthless. He says:—

The aggregate subscribed capital of the Matabele Land Companies is somewhere about sixteen millions. The English people, to the best of my belief, will never get a penny of that money back.

He maintains that he has not arrived at this conclusion without very careful personal examination. He says:—

After six solid months of personal examination, talking to miners and consulting with here and there a friend whom I felt I could trust, the conviction grew in my mind that there was not and could not be a paying mine in the whole belt, and I never pegged a single claim myself. The whole gold country, in fact, is exactly like a big plum-pudding with the plums pulled out, and only the holes left. Here and there the remains of a plum are found sticking at the bottom, but that is all.

The English people seem to be totally ignorant of the nature of that country—of facts that are patent to the roughest observer at the first glance. They are ignorant of the fact that the gold is all pocket gold, and will not pay for mining; that the land is practically desert, and, owing to lack of water, can never be anything else.

In five years from now Rhodesia will be abandoned by the whites. It may remain under a British protectorate as the connecting link between the colony, the big line of lakes, and the Nile Valley, but it will be abandoned as far as colonising and settling are concerned. It must be, nothing can galvanise any life into it. For the question is, after all, what has the country got, what is there? and no amount of railways and prospectuses and booming arrangements can keep a country going for long that has nothing of its own. Whatever the intermediate howling may be, they will have to come down to this in the long run. What can this country produce? Now I know, barring utterly unlooked for discoveries, I think I may say I know positively, that it cannot produce gold; and I think I know that it cannot produce any crops to speak of, for, allowing something for irrigation, the water supply is so limited, and the dry season so long, that this could only be applied successfully in a very few and very limited areas. With these cancelled, there is nothing else to fall back on. I give the country five years to be found out.

Finally, as I have made some serious charges and have every wish to fire my shot in the open, I should like to say of myself, that I am an American Citizen, of the State of Texas, born in 1856, that I graduated at the Military Academy, West Point, and was assigned to the Sixth Regiment of Cavalry; that I was an officer for nine years in the U.S. Army, and have a number of friends, men of honour, whose good opinion I would not risk by an untrue or slanderous publication.

## "A LAND OF OPPORTUNITIES."

PROFESSOR WALLACE writes in the August number of the *Engineering Magazine* of South Africa as the "land of opportunities." He points out that the rinderpest, with all its terrible results, has at least done good in driving the natives to the mining centres in such numbers as to reduce the wage given, and to enforce labour on natives who would otherwise have been content to live on their cattle and their wives. He is impressed with the qualities of the Bantu negroid. He says:—

One of the most conspicuous advantages which Great Britain has gained in successfully "picking the eyes" of the

African continent by selecting the richest and most healthy areas for the development of an energetic population is the immense reserve added to her fighting power. She has become the mistress of a race of warriors, capable of rivalling the world-wide fame of the hill tribes of Northern India in their love of warlike adventure and their skill in modern warfare.

He does not hesitate to prophesy:—

South Africa will one day be a great empire; but, although the skeleton has been outlined, it will take considerable time before the flesh can be built up. Progress will have many difficulties to contend with, climatic,—alike affecting crops and live stock,—racial and political. The blacks will not be difficult to govern when they fully realise the justice and the firmness of British authority. One serious feature in the future of the South African native is hidden in mystery, which only time can dispel,—viz., the result of the influences of the evils which usually accompany European civilisation when it is first meted out to inferior races. For example, the curse of strong, spirituous liquors, to which natives too easily fall victims, and the introduction of syphilis, which has played such havoc among the native population in India, and has got so thoroughly rooted in Africa, that in a well-governed State like Basutoland, of which reliable statistics are available, it appears at the top of the list as the most prevalent of all the diseases under medical treatment.

## "THE ROOT OF THE DIFFICULTY."

This is the judgment of the Edinburgh professor:—

The Boers form one of the most excellent sections of her Majesty's subjects—solid, sober, substantial, frugal and sagacious, though some may be dogged and obstinate in their isolation and from want of education in the world and its way. In bigotry and narrow-mindedness, and in other well-marked characteristics, many of the less progressive of the class strongly resemble the old Scottish Presbyterians of a hundred years ago, and, being of the same race, there is no reason why time and education should not do for the South African Boer community what they have done for Scotchmen. The root of the difficulty does not lie so much between the Boers and British as in the introduction between them of an alien Hollander-Dutch element as educated and accomplished mischief-makers, and the acknowledged corruption of the Government, due largely to their and the German Jew ascendancy which prevails in the secret council of the so-called republic of the Transvaal. It may be accepted with confidence that Britain means to retain, despite all opposition, the paramount power in South Africa, and to this end she has already strengthened the permanent garrison of Cape Town.

THE *Humanitarian* for September contains an interesting account by Mrs. Sarah Tooley of the Women's Pioneer Club, founded by the late Mrs. Massingberd, and now reorganised by Mrs. Wynford Philipps as the Grosvenor Crescent Club and Women's Institute. At the club "the page-boys are all to be little girls," who are called pages. A pit-brow lassie will act as hall-porter. Mr. Pickersgill, M.P., presses for the appointment of a council of fifteen to act towards the whole prison system as the Visiting Committee acts in the case of the separate gaol, and nominates for membership the Chairman of the Prison Commissioners, Mr. Tallack, Rev. W. D. Morrison, and Sir Algernon West. Campbell Terriass describes the life of the women of Egypt, and reports that the general rule for a man in Egypt is to have but one wife, with perhaps a concubine and a slave or two. Among the fellaheen plurality of wives is commoner, as a new wife is as good as a new workman, and only ranks midway between a man and a beast of burden. The Bishop of Bloemfontein discourses of the difficulties arising from polygamy in South Africa. Hypnotism is pronounced harmless alike to body and mind by Dr. J. Milne Bramwell.

## CRUELITIES ON THE CONGO.

## THE EVIDENCE OF MR. GLAVE.

THE *Century* for September publishes more extracts from the diary of Mr. Glave, the American traveller, who was killed fighting in Nyassaland against the slave traders. Mr. Glave is not by any means a fanatic of the school of the Aborigines Protection Society. This adds to the importance of his evidence as to what he saw in Congoland of the treatment of the natives by the Belgium administrators:—

## THE CHAIN-GANG.

January 24th. Reached Riba-Riba; found Lieutenant Rue, a non-commissioned officer in the Belgian army, and a fine fellow; his companion, Van Ril, is absent on business to arrange a quarrel between chiefs. . . . Rue has built excellent dwellings; he produces stores of rubber a month, and one thousand pounds of ivory. There is good discipline in the station. The chain-gang is always a disgusting sight to me in the stations on the Zone Arabe, as those confined are generally old women reduced to skeletons by want of liberty, hard treatment by the negro sentries, and hunger. The policy of the Arabs is being rather too closely followed, and the natives are treated with the utmost severity. Five women who had deserted were in chains at Riba-Riba; all were cut very badly, having been most severely chicotted, or flogged. Lemery does not flog much, and uses only the bastinado for women. Women ought not to be flogged; this is the one thing to find fault with.

## HANGINGS.

The native villages are attacked if they won't work in some way for the good of the land. Some are required to cut wood for station purposes; others to search for rubber; others for ivory; some to serve as soldiers for six or seven years. This is good, for when once broken in, the natives continue to work. It is no crime, but a kindness, to make them work. By the system of forced labour they gain cloth, etc., and by a little hard work can soon become rich. The State also makes a profit, increasing its finances so as to enable it to continue the occupation of the land, which means the saving of the natives from the slavers. For what it has done for the natives the Congo Free State has a perfect right to get some profit out of the land. The measures adopted are severe, but the native cannot be satisfactorily handled by coaxing; he must be governed by force. Hangings are now quite frequent on the State stations in the Zone Arabe; the administration is quite different from the treatment of the natives on the Congo. At Kabambaré there is a tree upon which a lot of people have been hanged—natives, Wangwana, and soldiers. At Kasongo I saw no construction for this purpose. At Nyangwé and Riba-Riba there is a wooden frame which has often served the purpose.

## SLAIN FOR RUBBER.

Here at Risari's there is one of those ugly constructions for hangings. It is said that three natives were hanged by Rue because they would not work salt for the Congo Free State. The natives have not a very gay time of it. Before the whites came the Wangwana and Arabs were their masters; but now the Congo Free State authorities favour the Wangwana clement far more than the natives, and the Wangwana and the Arabs have accorded to them the authority of bygone days, with tremendous power, which is most unmercifully employed. When a village does not consent to make rubber, the mwana of that particular district is empowered to fight the offending village, and to kill and take prisoners, which is quite general.

## FLOGGINGS.

The chicotte of raw hippo hide, especially a new one, trimmed like a cockscrow, with edges like knife-blades, and as hard as wood, is a terrible weapon, and a few blows bring blood; not more than twenty-five blows should be given unless the offence is very serious. Though we persuaded ourselves that the African's skin is very tough, it needs an extraordinary constitution to withstand the terrible punishment of

one hundred blows; generally the victim is in a state of insensibility after twenty-five or thirty blows. At the first blow he yells abominably; then quiets down, and is a mere groaning, quivering body till the operation is over, when the culprit stumbles away, often with gashes which will endure a lifetime. It is bad enough, the flogging of men, but far worse this punishment inflicted on women and children. Small boys of ten or twelve, with excitable, hot-tempered masters, are often most harshly treated. At Kasongo there is a great deal of cruelty displayed. I saw two boys very badly cut. At Nyangwé and Riba-Riba boys are punished by beating on the hands. I conscientiously believe that a man who receives one hundred blows is often nearly killed, and has his spirit broken for life.

## SKULLS AS FLOWER-BORDERS.

The State soldiers are constantly stealing, and sometimes the natives are so persecuted that they resent this by killing and eating their tormenters. Recently the State post on the Lomami lost two men killed and eaten by the natives. Arabs were sent to punish the natives; many women and children were taken, and twenty-one heads were brought to the falls, and have been used by Captain Rom as a decoration round a flower-bed in front of his house!

Mr. Harvey heard from Clarke, who is at Lake Matumba, that the State soldiers have been in the vicinity of his station recently, fighting and taking prisoners; and he himself has seen several men with bunches of hands signifying their individual kill. These, I presume, they must produce to prove their success! Among the hands were those of men and women, and also those of little children.

## THE ROOT OF THE EVIL.

The Congo Free State has gradually developed its administration until to-day it has post-offices, law-courts, its own coin, police, *force publique*, transport, and communications by land and water. All is in a satisfactory condition except the miserable system of the *libérés*. I myself believe that the natives should be forced to serve the State as soldiers for a certain number of years, but a little consideration should be shown; if a man is married, for instance, his wife ought to accompany him. The wretched rubber business should be stopped; this would remove the great evil. It is the enforced commerce which breeds all the trouble.

## THE LASSO AND HOW TO USE IT.

IN *Badminton* for September Mr. Cunningham Grahame writes a bright breezy article describing the lasso and the way in which it is used in South and Central America. He says:—

The ordinary length of an Argentine lazo is about sixty-six feet, though exceptionally tall and powerful men sometimes use lazos of eighty and even ninety feet in length. A skilful man on foot will catch a horse in a corral at the distance of ten or twelve yards, throwing at the neck. At ten yards he will secure the two fore feet, or a fore and a hind foot, both hind feet, or catching the animal round the neck, will, by imparting a vibratory motion to the rope, place a half-hitch round the nose, thus forming what is called a "medio bozal," or half-balter. A strong colt of five years old will drag three or four men round a corral, if they try to stop him by sheer strength, and the lazo be not tightened high on the neck, near the ears; but a boy of sixteen, used to the work, by watching his opportunity, will easily stop the same animal. The lazo on horseback can be used with far greater effect than on foot. From sixteen to eighteen yards is a fair distance at which to catch an animal when going at full speed. The faster the horse is going, the more easily is the rope thrown; and of course the danger increases in the same ratio. The method of casting on horseback is precisely similar to that used on foot. When the lazo has been thrown on horseback, and the animal caught round the neck or horns, the difficulty and danger begin. Should the "quarry" be a wild horse or mare, care has to be taken not to let it cross either in front or behind of the mounted horse. Some horses become so dexterous that the rider can slip off, and approaching the bull, hamstringing it or kill it.

## LIFE AND LAW AT KLONDYKE.

## EXPERIENCES OF A PIONEER.

*McClure's* for September contains a very interesting series of "personal observations" made by Joe Ladue, "the pioneer of Alaska and founder of Dawson" city, and "recorded by J. Lincoln Steffens." Mr. Ladue is a native of Plattsburg, in the Adirondacks, and his American citizenship adds the more weight to his remarks on Canadian administration. He is described as a "sad-eyed man with a tale of years," "the weariest looking man I ever saw." Twenty-five years ago, when only twenty years of age, he went out gold-hunting, and after untold privations he has come on the Eldorado of the Far North-West, and has "struck it rich." At the time of Mr. Steffens' visit he passed a bagful of nuggets round for an admiring circle of friends to see. But he is going back next spring. He has certain enterprises there to attend to, although he has now, as he laconically answered, "enough." He believes that the region has a great future before it, short but extending beyond our lifetime. "The country is rich," he says, "richer than any one has ever said, and the finds you have heard about are only the beginnings, just the surface pickings." The quartz has not yet been tapped, and must contain untold treasure for the capitalist.

## "A YEAR'S SUPPLY OF GRUB."

Like everybody else, he fears the miners this winter will suffer from starvation. He recommends that any intending miner should take with him "a year's supply of grub, which can be bought as cheaply in Juneau as anywhere"; and this is what Mr. Ladue thinks is enough for one year:—

A year's supply of grub, which can be bought as cheaply in Juneau as anywhere, I think, is: 100 sacks of flour, 150 pounds of sugar, 100 pounds of bacon, thirty pounds of coffee, ten pounds of tea, 100 pounds of beans, fifty pounds of oatmeal, 100 pounds of mixed fruits, twenty-five pounds of salt, about ten dollars' worth of spices and knick-knacks, and some quinine to break up colds. The total cost of this outfit is about 200 dols., but no man should start with less than 500 dols., and twice that is ten times as good.

The easiest way to Klondyke is by boat to the mouth of the Yukon, and thence by boat 1,700 miles up stream. The transportation companies will sell you provisions, but will not let anybody take his own supplies; wherefore Mr. Ladue prefers the more independent route over Chilkoot Pass from Juneau.

## "THEY WILL DIVIDE UP."

At Klondyke he knows there are not sufficient stores to go round this winter.

All would suffer in consequence.

"Not the men who have taken enough," I protested.

"Yes, they all will. . . . They will divide up, as they always do, but that will simply spread the trouble and make things worse."

Mining communities have evidently a much more highly developed social morality than is to be found in our settled civilisation.

## MOST OF THE MINERS "GOOD FELLOWS."

It is very interesting to observe the kind of spell with which British respect for law and order impresses the most lawless immigrants:—

"You don't need a gun," he answered. "There's no game to speak of."

"But you surely take a revolver."

"No use; it only adds weight to the pack."

"What do you have, then—knives?"

"Yes, you must have knives and forks and spoons, of course."

Mr. Ladue gave an interesting glimpse of the order maintained by the miners of the Yukon in their lawless communities, but he was unable to explain it. Most of the men were good fellows, he said. Were there no thieves? Not one. No cut-throats? None. Gamblers?

"Plenty. Everybody gambles, especially in the long winter nights."

"Don't they cheat?"

"No."

"Why not?"

"The saloon-keepers won't have it."

"How can they prevent it? Are there no professional gamblers in the camps?"

"Yes, but they put up a straight game. And there are men, too, who have been pretty bad before; I have heard that some of them were ex-convicts and fellows who had run away to escape prison and hanging. But none of them try anything on in there."

Most of the time when the men cannot work is spent in gambling. The saloons are kept up in style, with mirrors, decorations, and fine, polished, hardwood bars. No cheating is allowed, and none is tried. The saloon-keepers won't have it in their places. Nobody goes armed, for it is no use. Some of the men are the kind that would take naturally to shooting, but they don't try it on the Yukon. . . .

Life on the Klondyke is pretty quiet. Most of the men there are hard workers; but the climate, with the long winter nights, forces us to be idle a great deal, and miners are miners, of course.

## LITTLE GOVERNMENT, BUT GOOD.

"There is very little government," he said.

The point is, however, that such government as there is, is good. I like the Canadian officers, the Canadian laws, and the Canucks themselves. The police are strict and efficient. The captain was a fine man, but he had more than he could do this last season, when the rush for the Klondyke came. . . . The captain of the police had only a few men without horses to detail around over the claims, and, besides his regular duties, he had to act as registrar of claims and settle disputes that were brought to him. And there were a good many of these. The need of civil officers is very great, especially of a surveyor.

This is how the miner is enabled to "read his title clear" to the patch of auriferous soil which he wishes to claim:—

Claims have to be staked out, of course, according to the Canadian laws, which I think are clear and fair. The only fault I find with them is that they recognise no agreements that are not in writing. . . . All you have to do is to find gold, to which you must swear, then mark off about five hundred feet along the bed of the creek where no one has laid a claim, and stick up your stakes with your name on them, one at each corner of your land. Across the ends you blaze the trees. This done, you go to the registrar of claims, pay fifteen dollars, and, after a while, the surveyor will come along and make it exact.

Mr. Ladue believes thoroughly in the country; but he has his doubts about the character of some of the men who are rushing in now.

*Temple Bar* for September is strong in biography. Mr. Harold Armitage's sketch of Greuze, "Painter of Children," is written in so picturesque a style as to suggest to the casual reader that it is fiction and not history. Adam Sedgwick, Cambridge Professor of Geology, and Marquis Henry Costa, ancestor of the marquis recently received into the French Academy, are the other lives glanced at. Amusing glimpses are given into Sir Walter Scott's letter-bag; and the strange antipathy of a certain sect of Russian peasants to the Tsar as Antichrist is narrated by Mr. G. L. Cotel.

## THE SEA-GATES OF OUR COMMERCE.

"THE Growth of Our Seaports" is the title of a paper crammed to bursting with valuable statistics which Mr. Joseph Ackland contributes to the *Nineteenth Century* for September. He recalls the time when Hastings was premier port of the realm! and then gives the order of importance (as shown by duties paid or other returns), century by century, of our leading seaports. In the year 1205 the list runs: London, Boston, Southampton, Lynn, Newcastle. In the siege of Calais in 1347, when ships and men were collected from the ports, Yarmouth supplied most men and Fowey most ships; then follow Dartmouth, London, Bristol, Plymouth, Winchelsea, Southampton, Sandwich, Lynn, Hull, Newcastle, etc. In 1702 the tonnage lists put London first, then Bristol, Newcastle, Yarmouth, Liverpool (fifth!), Whitby, Hull, Exeter, Scarborough. In 1800 London, Liverpool, Newcastle, Sunderland, Hull, Whitehaven, Whitby, Greenock, Yarmouth, Bristol. In 1893 London, Liverpool, Cardiff, Hull, Newcastle, Southampton, Glasgow, Middlesborough, North Shields, Sunderland, Leith.

## THE EBB AND FLOW OF PORTS.

The most noteworthy feature of the lists is the fact that notwithstanding the outcries about trade being driven away from the Thames and thousands being unemployed in the East End, London gains upon her enormous total of imports at a faster rate than the average gain of the whole country, and is abreast of it with exports. Of the first twelve ports in 1872, there are only three of which this can be said. Liverpool, Hull, Newcastle and Sunderland, all show signs of comparative decadence. Tidal harbours with bars may stimulate energy, but nature is inexorable. North and South Shields are drawing away the trade of Newcastle. Middlesborough increases by leaps and bounds, while Hartlepool decays. Goole intercepts the trade of Hull. Harwich and Newhaven, in some sense outports of London, flourish on those through Continental rates of which home producers complain so bitterly. Cardiff, at the top of the list, under the fostering care of the Marquis of Bute, shows the power of capital to develop a true trade route; Barrow, at the bottom of the list, notwithstanding the efforts of the Duke of Devonshire, shows the impotence of capital to turn trade away from its natural channels. Southampton has since the date of these returns expanded and developed, under the tutelage of the London and South-Western Railway, in its rivalry of Liverpool. Plymouth, famous in Edward the Third's fighting days, and boasting the glories of Drake, has to be content with the lesser ambition of remaining the "How do you do?" and "Good-bye" port; but if unhappily a great naval war occurs, Plymouth will again be foremost in honour and in peril. Newport shares with Cardiff the great expansion of the Welsh coal trade. In Scotland, Glasgow extinguishes her outport, and further impoverishes Greenock, already staggering beneath Continental sugar bounties. On the east coast Leith maintains a bold front, notwithstanding the rapid advances of Alloa and Bo'ness. Kirkcaldy rushes ahead, while Dundee seems to be afflicted with a premature atrophy. In Ireland, Belfast advances, but Dublin and Cork tell the sad tale of the nation's decay.

## LONDON PRE-EMINENT, LIVERPOOL DECLINING.

Passing from tonnage to value, London fully maintains her predominance as the centre for imports, receiving more than a third of the entire value, while in addition probably much of what is entered at other south-eastern ports is for London account; but with exports London is losing ground, and chiefly with British and Irish produce. Liverpool shows an actual and serious loss of import trade, as compared with the average growth of the kingdom; a loss of 21½ per cent.; but in exports is slightly better than the average.

Looked at from the point of view of tonnage only, it appears that the south of England and Scotland are drawing the trade away from the north of England, both east and west. In value the eastern groups are gaining largely on imports, and the

western groups losing, dear labour and protective tariffs in America being beaten by cheap labour and export bounties in Europe; but with exports, the east of Scotland, and the Welsh ports in the south-western group, are the only satisfactory returns. London and the south-eastern group are losing export trade, although still retaining almost a third of the total for the kingdom. Of the imports, London and the south-eastern group receive nearly a half of the whole.

From these more strictly commercial figures, Mr. Ackland passes to statistics of area, rateable value, local indebtedness, licensed houses, death-rate and crime. He finds the chief causes of this unrivalled commercial expansion in monometallism and free trade.

## THE STAGNATION OF FRENCH COMMERCE.

PROBABLY never has the carrying trade of the world been to such an extent in the hands of British ship-owners. This fact is beginning to be recognised in France, as is shown by an article by M. Moirau in the second April number of the *Revue des Deux Mondes*. His tone is extremely pessimistic, and is evidently designed to arouse his countrymen to a sense of the extent to which they are being outstripped by other countries in the matter of shipbuilding. Ten years ago France's merchant service amounted to 770,000 tons, and that of England to slightly over six and a half millions. To-day France has 950,000 tons, while England has more than 10,000,000. Reckoning sailing-ships of at least fifty tons and steam-ships of over a hundred tons, we find that France has five hundred and thirty-two ships, while Great Britain has six thousand, and Germany has eight hundred and thirty. In short, France ranks below not only England, the United States and Germany, but also below Norway, Italy, Russia, and Sweden, and indeed is not much above Greece. Its inferiority is continuous. Thus, in 1895 France only built thirty-six thousand tons, while the United States produced eighty-five thousand, Germany a hundred and one thousand, and Great Britain nine hundred and ninety-five thousand; and these figures were not greatly altered in 1896. It is M. Moirau's object to inquire into the causes of this extraordinary inferiority in shipbuilding which characterises France. As he justly points out, France by her geographical situation is admirably adapted to be a great commercial centre. She has ports which are seldom or never frozen up, and yet she appears unable to compete with Rotterdam, Bremen, Hamburg, and the great North-East ports of England. He thinks that the main causes of France's inferiority are the political jealousies which have forbidden the fostering of one industry at the expense of others, and when money has been spent, it has been applied with a singular lack of intelligence. He gives many deplorable instances of the waste of public money in senseless attempts to create ports in unsuitable places. He writes, of course, as a convinced Protectionist, holding that the mercantile marine of a country is in a position exactly analogous to agriculture, and demands for its prosperity artificial assistance. The great decline in French shipbuilding between 1870 and 1880, led to the establishment of the system of premiums on construction. These premiums amounted, in the course of ten years, from 1881 to 1890, to a hundred and two millions of francs, or a little more than ten millions a year. In 1896 the amount required reached fourteen and a half millions of francs. All this financial sacrifice has, however, only had the effect of maintaining the French mercantile marine in a stationary condition. In spite of these liberal measures of protection, but a small proportion of the merchandise issuing from French ports is carried in French ships.

## COLOSSAL CAPITALIST CONSPIRACY.

## THE BIGGEST THING YET OUT IN AMERICAN "TRUSTS."

It almost takes one's breath away to read the forecast which Mr. Low, Washington Correspondent of the *National Review*, publishes in the September number. The commercial world, he tells us, is "full of rumours of the creation of new trusts so gigantic and so far-reaching in their scope that those trusts already in existence are mere pigmies compared to them." He goes on to disclose a scheme, as yet without parallel in the magnitude of its audacity:—

The report is in circulation that the Standard Oil Trust, the greatest of them all, has obtained, or is about to obtain, complete control of the lead, leather, tobacco, and whiskey interests, and to make the thing complete, the gasworks of some of the most important cities in the country are to be thrown into the new pool. The capitalization of this octopus will be in the neighbourhood of £200,000,000. It must be remembered that the Standard Oil Trust, or rather the half-dozen magnates who control that institution, already exercise a dominating influence in the business of the country in oil, iron ore, and sugar. They are said to be on the point of taking in the steel and coffee industries; they own much of the shipping of the great lakes; they are directly interested in several of the great trans-continental railroads, and can dictate terms in the matter of freight rates, and practically the entire transportation system of the Union. It is said they have to find investments every year for about £10,000,000 of surplus profits, and, of course, it is easy enough to understand that, with this tremendous amount of money at all times available to pick up the stock of corporations or to finance new enterprises, it is an easy matter for them to obtain control of whatever appears to afford profitable investment. Of course, every new enterprise absorbed by the Standard Oil magnates adds to the income to be invested the next year.

The followers of Karl Marx must be profoundly grateful to Messrs. Rockefeller and Co. for offering so edifying a confirmation of the great Socialist's forecasts. The rapidity with which the command of American capital is concentrating in a few hands is enough to make the soberest thinker pause and tremble. Mr. Low continues:—

It is difficult to see what the end will be and when this process of absorption will end. There are perhaps two solutions which may be looked forward to during the next quarter of a century. One is a universal trust with a few men controlling all the industrial activities of the United States, and with the bulk of the American people its employees. The other is a repetition of the French Revolution, but the revolution of 1925, if it comes, will be more terrible in its consequences and more destructive in its results than that of 1793, because to-day the people are more numerous, more determined and more intelligent, and their power to work good or evil has increased tenfold since the days of Robespierre and Danton.

The prospect of all the freeborn citizens of the United States becoming wage-slaves of a handful of multi-millionaires, whose sovereign will and good pleasure alone allow them house and livelihood, is ghastly enough in all conscience. It helps one to understand the nightmare dread with which some of the choicest Americans regard the advance of consolidated capital. Certain it is, no devil with horns and hoofs ever exercised the minds of ancient saints with more terror than "the plutocracy" inspires in the breasts of thoughtful patriots in the States. The grim spectre seems never absent from their thoughts day or night.

## READING FOR THE WINTER SEASON.

THE winter season is approaching, and people will have more time to devote to reading in the long winter evenings than they have had during the summer months. It may be well, therefore, to call our readers' attention to the Circulating Library which was started in connection with the REVIEW some two years ago. The object of the library was to enable villages and small towns, where no free library as yet existed, to obtain some of the best literature of the day at a very moderate cost. A list of books was carefully selected so as to comprise all branches of literature, both serious and entertaining. Some fifty books are sent out to any group of persons or institution subscribing to the library, packed in a strongly-made box. This box of books is charged quarterly or half-yearly as may suit the convenience of the centre. By this system it is possible for any institution or number of persons to obtain a constantly changing supply of literature at a very small cost. For thirty shillings a quarter about two hundred books per annum are supplied. Everything is done to simplify the task of the local centre. All the books are numbered, and plainly marked on the cover with a label identical with the colour of the box to which it belongs. Catalogues of the books are sent with each box, while a card for entering the names and addresses of the members of the Circles is also supplied. At present three series of boxes are issued. One contains from forty-five to fifty volumes—poetry, history, travels, fiction and illustrated magazines. These books have been carefully selected so as to cover as wide a field as possible, and at the same time contain a number of new and standard novels. A cheaper series of boxes is also supplied. The boxes contain more volumes, but they are of a simpler description. For those who do not wish to have any heavy reading, a special series of boxes has been compiled, consisting almost entirely of modern and standard fiction. As the library is intended primarily to encourage serious reading, these last boxes are only supplied to centres which are willing to pay a year's subscription in advance. Several people, while not requiring the books themselves, have undertaken to provide an institution in which they are interested with a constant supply of literature, which is very much appreciated by the inmates. Any one desiring further particulars should write to the REVIEW or REVIEWS, Circulating Library, Temple House, Temple Avenue, London, E.C.

Another interesting experiment in the circulation of literature is that which has been adopted for some years past by the Technical Education Committee of the Cambridge County Council. The area over which the County Council has jurisdiction comprises a great many villages. The Council, therefore, when it began its courses of instruction under the technical education scheme, determined to supplement this work by means of a circulating lending library. Almost all the books bear upon the subjects taught in the classes, and have been found to be an invaluable addition to the efforts of the instructors. The success of the scheme proves the need there was of some such method of bringing good books within the reach of the people. Other County Councils might follow suit with advantage.

## THE DUKE OF BEDFORD AS LANDLORD.

CRITICISED BY MR. GEORGE RUSSELL.

LARGE landowners have often been severely criticised in the public press, but the criticism has rarely come from members of their own family. Mr. George W. E. Russell, in the *Nineteenth Century* for September, supplies the world with this rare, if not wholly novel, treat. He puts his ducal kinsman in the pillory of good-humoured ridicule, and plies him with shafts of railleury none the less keen for being so scrupulously courteous. The witty candour with which this scion of a noble house discusses its origin, history and policy, will doubtless edify duly the democratic mind.

## THE FEW "LODGING HOUSES IN BLOOMSBURY."

Mr. Russell entitles his paper "Land and Lodging Houses (a Colloquy with the Duke of Bedford)." The title is taken from a remark by the late Duke upon the agricultural depression, "I too should be in a very tight place, only that I luckily own a few lodging houses in Bloomsbury." The article itself is a review of the present Duke's book recently published under the name of "The Story of a Great Agricultural Estate." Land alone is the theme of the Duke's jeremiad. Mr. Russell would fain "rouse the drooping spirits," of his "excellent kinsman" by reminding him of the "lodging-houses." He assumes "the book is actually written by the Duke,—not merely compiled by agents and stewards, led-captains and letter-writers, and then sent out into the world with the Duke of Bedford's name on the title page." The book "seems to have grown out of a speech delivered at a Unionist meeting,"—a speech scarcely relevant to the question of the Union, the writer jocularly remarks, "unless indeed we use the word 'Union' in its popular sense as a synonym for 'Work-house'—that bourne to which the Duke of Bedford's possessions seem to be hurrying him."

## THE BEDFORD ESTATES MOSTLY ILL-GOTTEN.

On the second chapter, which is chiefly historical, Mr. Russell observes:—

I confess that I cannot regard with unmixed complacency the method by which the founder of our family obtained his wealth. It may be true that it was necessary, in the interests of the community, to dissolve the religious houses, but the bestowal of their lands on the courtiers of Henry the Eighth was a transaction which even those who profit by it can scarcely praise: and, as Burke truly says, "The grants to the House of Russell were so enormous as not only to outrage economy, but even to stagger credibility. The Duke of Bedford is the leviathan among all the creatures of the Crown." . . . But though I cannot glory in the method by which my ancestors obtained their land, I can share the Duke's pride in the way in which they managed it.

## THE VILLAGES UNDER DUCAL DESPOTISM.

He refers with pride to the reclamation of the Bedford Level, and to the rebuilding of all cottage property on the estates: "But there is another side to the picture." He quotes Mr. Froude's account of the village Cheneys:—

*The inhabitants live under authority.* Absolutely true; and it is obvious that this authority receives a tremendous addition where the occupant of each of these excellent cottages is a weekly tenant. Health, comfort, decency there are—and they are no small boons—but liberty there is none. The occupant is liable to summary eviction, to be moved from one cottage to another, to have a partner quartered on him. He is forbidden to take in a lodger—nay, I have even heard that to have a grown-up son to stay for Christmas is an offence. He is harassed by incessant supervision and domiciliary visits; and these, though ordered by the landlord, are

vicariously performed. . . . The inquisitor's function should be exercised first hand. . . . I am protesting against a custom, which, for all I know, may exist on a hundred estates. . . . Given a landlord of strong prejudices, a staff of obsequious and unscrupulous officials, and a labouring population holding their houses by weekly tenure, and not much is left of our vaunted "freedom of election," whether for Parliament or school board, or parish council.

## THE DUKE OF DEFICITS.

The point of the Duke's book is to show that with the rise in taxes and rate and the fall in rents his Buckinghamshire and Bedfordshire estates are being run at a heavy annual loss—for the Thorney and Woburn estates a loss of more than £7,000 a year. The awful budget of 1894 fills him with consternation: he "sees his son paying £65,000 succession duty on an inheritance which is a source of annual deficit." Mr. Russell proceeds to administer consolation to "the downtrodden owner of Woburn and Thorney" by gently suggesting, "perhaps after all, Woburn and Thorney have not been so wisely administered as other estates: perhaps under more judicious handling, even land may be made to pay." He quotes testimony to this effect from a friend "whose acreage is, I think, rather larger than that of the Duke of Bedford."

## WHAT ABOUT THE LONDON ESTATES?

That is the first morsel of comfort. The second is "the lodging houses." The Duke manages to get along spite of his annual deficits on rural estates because— he is a great ground landlord in London. Roughly speaking, the Bedford estate reaches from the Strand to Euston Square. The whole neighbourhood, to use a vigorous phrase which I once heard from an old Radical, "stinks of Duke." Here, if anywhere, Mill's unearned increment is seen in all its glory and beauty: here, if ever, his dictum is made good, and the landlord "grows richer in his sleep."

Mr. Russell distinguishes, "Covent Garden and its purlieus are spoils of the church:" the Bloomsbury estate came by marriage:—

But, however they originated, their results have been the same. They have placed their owner beyond the reach of agricultural depression. Figuratively speaking, they are paved with gold. We have no means of estimating their value, but only to-day, as I write, I see the following morsel in a daily paper: "The ground rents, amounting to £2,500 a year, secured upon blocks B, C, and D, Bedford Court Mansions, Bedford Square, which were advertised for sale by auction, have been disposed of by Messrs. Dunn and Soman for £82,000.

Well done, the Lodging-houses! . . . If you are drawing the income of a foreign principality from "a few lodging-houses in Bloomsbury," you can easily afford to treat your tenants in the Fens in a fashion which would bring the merely rural landlord to ruin in a twelvemonth.

Mr. Russell asks for more statistics, and begs the Duke to "give a full and exact account of the value of his London estates when they first came into our ancestors' hands; of their gradual increase, of the amount spent on them, and of the income which at the present day they yield." In so doing he will, Mr. Russell thinks, have served great public ends, among others, provided some valuable suggestions for the taxation of ground-values.

Dr. J. B. PARON, of Nottingham, is the subject of an appreciative sketch by Mr. J. A. Hammerton in the *Sunday Magazine* for September. Rev. G. Robinson Lees describes "Home Life in the Holy City," and credits the men of Jerusalem with better treatment, though lower estimate, of their women than English women, at least in the poorer grades, enjoy.

## HOW MUNICIPAL PROBLEMS CAN BE SOLVED.

## THE EXAMPLE OF BERLIN.

PROFESSOR F. W. BLACKMAR contributes to the *Forum* for August an article on the Municipal Government of Berlin which is avowedly based upon the admirable work of Dr. Shaw. But some of the facts which he mentions it is well to be reminded of once more.

## MAKING MONEY OUT OF SEWAGE.

In Berlin, says Professor Blackmar, the sewage is a source of revenue:—

The city sewer system transports annually from 60,000,000 to 70,000,000 cubic metres of sewage for distribution over the broad acres lying seven to fifteen miles from the city. The area of the fields irrigated is more than 20,000 acres; or greater than the present area of the city, which is twenty-five miles. The total cost of the drainage system is about 25,000,000 dols.; and it is estimated that it will take 5,000,000 dols. more to complete it. Yet owing to the enormous yield of the irrigated land, it will soon return a revenue on first cost, and pay for the investment besides. As many as five crops of hay are cut in a single year; and several crops of vegetables are obtained each season.

The sewage fields are divided into three classes: first, the most fertile fields, which are let out to market-gardeners, who supply fruit and vegetables to the city; second, the less fertile fields, suitable for raising vegetables and greens, are partly rented to peasant farmers, and partly exploited by the city; third, the poorer lands used for grazing purposes and for hay. These are kept wholly under the management of the corporation, and are rapidly becoming more valuable through fertilization, cultivation, and general improvements.

## THE MONOPOLIES OF SERVICE.

Turning to the other municipal services, Professor Blackmar says:—

The city is supplied with light partly by public and partly by private enterprise. The first gas company was established in 1827. In 1847 the city began to build its own plant and to compete with the private company. The result of this competition was a reduction in the price of gas of 50 per cent. The growing city furnished abundant room for the prosperity of both systems, and they exist to-day in friendly rivalry. This is quite remarkable, as it has been held by some economic philosophers that a public institution cannot successfully compete with a private one. To private consumers, gas is one dollar per thousand cubic feet. In 1893 the city plant, after meeting all expenses, turned a net revenue of 1,250,000 dols. into the public treasury.

In 1893, the city granted a franchise to an electric-light company; and some of the principal streets, squares, and public buildings are now lighted by electricity. It is interesting to note, in this connection, with what care the city guards the rights of the people in granting franchises. In the first place, the company must pay into the city treasury 10 per cent. of the gross receipts. It must furnish two central avenues with light at a nominal cost. Its territory of operation is clearly defined; and it is compelled to put down main wires within a short time, specified in the contract. The city may extend its street-lighting at any time at nominal rates charged by the company. The books of the company are always open to the inspection of the public officials. The company is bound by strict rules relative to the tearing up of streets and the laying of wires, and is limited to certain fixed charges to customers, which cannot be changed without the consent of the city council. And finally, the city requires a deposit for security of 42,500 dols., and requires the company to keep a renewal fund equal to 20 per cent. of the invested capital. This fund is in the form of Berlin municipal bonds, and must be kept on deposit with the city magistrates. In addition to all this, the city reserves the right to purchase the entire plant at any time at a fair valuation, as provided in the contract.

Another interesting manner in which the city manages its

contracts is shown in the street-railway franchise. The city directs all new additions, and causes the company to pay a bonus for each separate franchise. The company must also pay annually into the city treasury a percentage on its gross income; this rate increases with the development of business. The minimum rate was fixed at 4 per cent.; but the company is now paying nearly 8, which yields an annual payment of more than 250,000 dols. The company is bound by strict regulations respecting the cleaning and repairing of the streets over which its tracks are laid. What is most remarkable is, that in 1911 the entire plant passes into the possession of the city free of expense. It seems almost incredible that companies can flourish under such restrictions; but they appear to do so. The manner in which the city manages franchises and contracts gives evidence of financial, legal, and business ability, which contrasts strikingly with the manner in which some of our American cities have in the past allowed companies to write their own franchises.

## MR. H. G. WELLS'S NEW STORIES.

MR. H. G. WELLS has at the present moment two characteristic stories running as serials in the English and American magazines. The first has appeared simultaneously in *Pearson's Magazine* and the *Cosmopolitan*. It is entitled "The War of the Worlds." Its idea is that the inhabitants of Mars so far perfected the means of communication across the interplanetary space as to be able to contemplate the conquest of our planet. The invaders arrived by huge cylinders, the first of which dropped near Woking. The Martians, although few in number, are armed with a panoply of science which enables them to overcome all opposition. As we at present can turn an electric searchlight in any direction upon a lurking enemy, they were able to turn a jet of molten fire, which shivered everything to atoms across which it fell. They were also able to launch cylinders which, when they burst, dispelled vast clouds of heavy, poisonous vapour which slew every living thing that breathed it. This vapour the Martians were able to disperse with jets of steam when it suited their own purpose to pass through the poisonous atmosphere. The story, which is served up in too small snippets, makes out that after a very feeble and ineffective attempt to smash the Martians with shell fire, only one of the invaders being temporarily crippled, a universal panic fell upon London, and the whole population stampeded northward from the deadly fumes of the Martian gas, and the terrible heat ray which they wielded at will.

The last instalment in the September *Pearson's* is devoted almost exclusively to a description of the stampede northward from London. The stampede, gigantic and terrible, without order and without a goal, 6,000,000 people unarmed and unprovisioned, driving headlong—it was the beginning of the massacre of mankind!

His other story is appearing in the *Idler*. The "War of the Worlds" deals with the possibilities of the remote future. In the *Idler* his stories of the Stone Age relate to what may have happened 50,000 years ago. Of the two, the Stone Age stories are much less gruesome reading. The scene is laid in what is now Surrey, at the time when the River Rhine ran through Southern England and the Channel had not yet been hewn to divide Britain and the Continent. It is a story of the days when England had among its inhabitants the hippopotamus, the lion, and the grizzly bear. Mr. Wells's vivid imagination finds ample scope for the description of the beginning of human society, and of some approach to civilised existence among these men of the Stone Age. His story suggests how the first stone axe was discovered, and the first wild horse tamed.

## IRELAND AS CHAMPION OF THE POOR.

THE Irish nation by reason of its poverty has rendered great service to the poor everywhere. Grievances of the poor in Great Britain and elsewhere might be overlooked, but presented as the wrongs of a whole nation they have secured a measure of redress first in Ireland, then in other lands. This truism of social and agrarian reform receives fresh illustration in the question of Irish taxation as expounded by Mr. Bernard Holland in a recent number of the *Economic Journal*. "The Irish grievance in matter of taxation is," he says, "one with that of the poorest classes throughout the United Kingdom. If the general system of taxation were so readjusted as to press less heavily upon the poorest, and more heavily upon the well-to-do classes, the Irish grievance would disappear, or be *pro tanto* diminished." The "financial relations" between Ireland and Great Britain are thus expanded—by Irish agitation be it remembered—into the "financial relations" between the poor and the rich.

Mr. Holland shows how the Government takes in taxes some £2 a year from the man whose annual income is under £30:—

Under our present system the whole burden of indirect taxation (except for a small proportion derived from wine, coffee, dried fruits, etc.) falls upon those who consume tea, tobacco, beer, and spirits. In a family living upon an income of 20s. a week or less the consumption of these articles is usually nearly as great as it is in a family living on 40s. or 50s. a week . . . Countless poor people in Ireland, and England too, never eat meat, save perhaps a little domestic bacon, except at high festivals, but smoke the pipe every day. To them meat is, practically, the luxury, tobacco the daily necessity of existence. We say sometimes that we tax luxuries, not necessities. We do not, as a matter of fact, tax most luxuries at all.

Mr. Holland runs full tilt against a favourite fetish of Liberal and middle-class fiscal policy. Simplification, and reduction of the number of taxes means, he contends, increased inequality in the incidence of taxation, and puts the heaviest burden on the poor:—

The skilled artisan and lower middle class families, living on incomes of from £80 to £160 a year, have conquered for themselves a most favoured position in the matter of imperial taxation. They do not, like the class above them, contribute to direct imperial taxation, they contribute little more through taxed commodities than do the class below them.

Hence he concludes:—

We must, if equitable distribution of burdens is indeed our object, retrace, for some distance, the road followed during these last fifty years, and forego some of our beautiful fiscal simplicity. We must recognise that our statesmen of the last fifty years have been a little less wise, and their predecessors a little less foolish, in fiscal matters than we have hitherto imagined.

## THE NEW IRISH POLICY.

LORD MONTEAGLE, writing in the *Nineteenth Century* recently, greatly approves of the new departure announced by Mr. Arthur Balfour. He discusses it from various points of view, its advantages, its disadvantages, and probable consequences. He says:—

Apart from the broad outline sketched—(1) relief of the tenants from half the county cess or rate now paid entirely by them; (2) relief of the landlords from the half poor rate now paid by them on lands let to tenants; and (3) a democratic reform both of county and poor law administration on English lines—the most notable, though not perhaps the most obvious, feature of the scheme will be its social effect. The really crucial question not only or even chiefly for the land-

lords themselves, but in the interests of all classes in local matters, is, Will they have any chance of election under the new system? Will it be possible for them, as in England and Scotland, to gain that influence in local affairs to which their education, capacity, and attention to business would entitle them? If so, the measure will be really "healing," and we shall at last secure that inestimable blessing of joint action of all classes in Local Government.

He does not think that a Local Government Bill will be a substitute for the Agricultural Bill, but he can see that it will have many good results. Among others he thinks—

A gradual transfer will probably take place, from the Poor Law to the County authority, of various sanitary and other functions which have been piled on the Boards of Guardians as the only representative bodies available, but for the discharge of which they are often quite unfitted. Setting these aside, future changes will be chiefly in Poor Law administration.

The *National Review* heartily approves of Mr. Balfour's new departure, for the following six reasons:—

(1) The Unionist pledge with regard to local government is to be redeemed on Unionist lines. (2) The glaring grievance under the Rating Act is redressed. (3) Ireland's claim to compensation as a sufferer by the British fiscal system is recognised. (4) A substantial solatium is awarded to a cruelly despoiled class—the landlords. (5) The Imperial liability is strictly limited. (6) Mr. Healy, Mr. Redmond, and Colonel Saunderson are equally gratified.

## THE DEPOPULATION OF IRELAND.

THE following figures bring into clear relief the extent to which the population of Ireland has gone down in the Queen's reign. They are taken from an article which Mr. J. Holt Schooling contributed to the *Pall Mall Magazine*:—

|   | In<br>1831. | In<br>1891. | In<br>1831. | In<br>1891. |
|---|-------------|-------------|-------------|-------------|
|   | Millions.   | Millions.   |             |             |
| Ireland's population . . . . .          | 7·8         | 4·7         | 100         | 60          |
| Scotland's . . . . .                    | 2·4         | 4·0         | 100         | 167         |
| England and Wales' population . . . . . | 14·2        | 29·4        | 100         | 207         |
| Total . . . . .                         | 24·4        | 38·1        | 100         | 156         |

For every 100 persons in Ireland in the year 1831 there were in 1891 only 60: the corresponding results for the other two parts of the United Kingdom being, Scotland, 100 persons in 1831, 167 in 1891; England and Wales, 100 persons in 1831, 207 persons in 1891. Here I may say that, if the average yearly rate of decrease of the Irish population which has operated during 1831–1891 is to continue in future years, the Irish population will proceed to extinction as follows:—

| In the year    | The Irish population will be<br>(persons) |
|----------------|---|
| 2076 . . . . . | 1,000,000                                 |
| 2352 . . . . . | 100,000                                   |
| 2627 . . . . . | 10,000                                    |
| 2903 . . . . . | 1,000                                     |
| 3178 . . . . . | 100                                       |
| 3454 . . . . . | 10  |
| 3730 . . . . . | 1   |

So that in the year A.D. 3730, 1833 years from now, the Irish population will consist of one person only—a result that may possibly facilitate the final settlement of the interesting and perennial Irish Question, for this unit might be made Secretary for Ireland and then left to administer "justice" to himself in the way that might please him most.

THE *Idler* for September is a good number. Mr. Hilliard Atteridge humorously describes his experiences on camel-back in the Soudan, and Mr. Archibald Forbes continues his life of Napoleon III. The two pictures calling for mention are a good reproduction of A. Asti's "The Dreamer," and J. Barnard Davis' "Remorse."

## HOW TO GET BACK TO THE LAND.

## THE LATEST SCHEME OF THE SALVATION ARMY.

MR. BOOTH TUCKER, Commander of the Salvation Army in the United States, contributes to the *Forum* for August an interesting article on "The Farm Colonies of the Salvation Army," in which he explains the latest developments of the social scheme as they have worked it out in the United States. On the other side of the Atlantic they have one farm colony, which is one of seventy-eight institutions which accommodate 2,656 persons. His scheme, however, is chiefly devoted to an exposition of the plans by which they believe it to be possible to get the unemployed back to the land. The practical scheme explained by Mr. Booth Tucker appears to have materialised at San Francisco, where a Committee of influential citizens has been appointed to co-operate with the Salvation Army in planting the people on the land. The following extracts give the gist of the article:—

During my recent visit to San Francisco I was invited to address the Chamber of Commerce upon the question; the President himself taking the chair. As a result it was resolved that a committee of fifteen leading citizens be appointed to co-operate with the Salvation Army in our plans. Briefly, the scheme was as follows: A sum of not less than 25,000 dols. was to be raised for preliminary expenses, either by donations or as a loan on favourable terms. A tract of two or three thousand acres of land was to be bonded, and divided into small allotments of not more than five to ten acres. Cottages were to be erected, the land fenced and partly prepared, and, according to the discretion of the management, poultry and other stock supplied. Upon these allotments carefully selected Colonists were to be settled, and a weekly rent charged which would be sufficient to pay off capital and interest by easy instalments. For instance, supposing the value of a five-acre lot to be

|                                      |       |
|--------------------------------------|-------|
|                                      | dols. |
| Land, at 40 dols. per acre . . . . . | 200   |
| Cottage . . . . .                    | 150   |
| Improvements and Stock . . . . .     | 150   |
| Total . . . . .                      | 500   |

a weekly rental of 1 dol. would amount to 10 per cent. on the above. Of this, say 5 per cent. would be for interest, and 5 per cent. for repayments of capital, with liberty to pay off the balance at any earlier time, or by larger instalments. In this way the 25,000 dols. would enable fifty families to be settled on 250 acres, divided up into five-acre blocks, the value of the land being estimated at 40 dols. an acre. If, however, the land were not paid for in advance, but only on the instalment principle, about 80 families could be settled on 400 acres. Allowing an average of four persons to each family, more than 300 souls could thus be provided for. The 25,000 dols. thus invested would be drawing an annual income of 2,500 dols., of which 1,250 dols. would be paid as interest, if the money had been borrowed; while the balance would either pay off the capital or be reinvested. If the entire sum were raised in donations, the 10 per cent. income would serve to settle additional families; while the original sum would be turned over several times.

It may be asked, how should we insure the payment of the weekly rent? The answer is: Partly by the employment of the Colonists on the settlement at a fixed scale of wages, and partly by placing the Colony in such proximity to the large ranches, which abound in California, that the members of the family could be able to earn perhaps more than sufficient for this purpose. In other cases Colonists would be selected who had some temporary employment in the city, possibly of an uncertain character. That large class who, living perpetually on the borders of the maelstrom of destitution, carry on a precarious and painful existence would be encouraged in this way to supplement their scanty income and to prepare for the

evil day of commercial panic. The wife and children would live upon the farm, where the husband would spend his weekends and his holidays, till at last he would be able to snip the last cord that tied him to the town. Large numbers of the semi-destitute artisan classes would be willing thus to try their wings and feel their feet who otherwise would not dare to launch out upon this new mode of existence.

At least I may promise that, so far as land, climate, water, and Colonists are concerned, no difficulty whatever need be anticipated. The one essential that is at present lacking, owing to the existing distrust in all forms of agricultural enterprise, is *capital*. That this will ultimately flow in sufficient quantities in the required direction I think there can be no reasonable doubt, especially if a network of village banks, based on the Raiffeisen system, be introduced, thus affording both the credit and the security which, in the case of small agricultural holdings, would be absent in the ordinary city bank.

What I would suggest is: First—that a central national council of influential gentlemen, similar to the one recently constituted in San Francisco, but with a national scope, be appointed, to co-operate with the Salvation Army in its schemes. Second—that in communication with this council there be sub-committees formed in each State, county, or city, where suitable openings may exist. Third—that leading philanthropists, capitalists, and landowners should be invited to co-operate with these central or branch councils. Further, I would propose that a definite plan of campaign be inaugurated, secretaries and treasurers appointed, funds raised, and a systematic effort made to grapple with our great pauper problem upon the principles above laid down, and on a scale worthy of the vast needs of the suffering poor.

## HOW THE FRENCH RATEPAYER IS TAXED.

In the *Revue de Paris* a financial economist attempts to prove that the French system of taxation is the best in the world. Although the Frenchman does not pay his taxes in the same fashion as does the British householder, he has quite as many complaints to make against the powers that be, and any attempt to increase either direct or indirect taxation meets with a storm of opposition. In spite of the fact that France is a Republican country, there is as yet nothing in the shape of progressive taxation—that is to say, the rich man does not pay a larger sum on his property than does his poor neighbour. All attempts to establish an income tax have always been defeated, and a progressive system of taxation can only be brought in force on a basis of direct taxation. A considerable number of the taxes now paid by each French citizen date from the year 1789; but this fact does not seem to give any consolation to the Republicans obliged to pay them. In 1848 an experiment was tried, by which every one, rich and poor, should pay about fivepence a head, but this Utopian scheme of raising a State income soon fell through.

As an actual fact, the average French householder pays far more in the way of indirect taxation than he does to the tax collector; but in the one case he is, as it were, unconsciously taxed, and in the other he is obliged to hand over the actual money. Accordingly, his rates appear to him a far more unpleasant matter than the percentage which he really pays on almost everything he eats and drinks. There is scarcely an article in the French household which has not been taxed at some period of its making. This is why all ordinary articles of consumption are so extremely dear abroad; and the British housewife who goes to France to economise is anything but pleased when she finds that she has to pay, in almost every case, at least fifty per cent. more than she would do at home.

### THE UNION LABEL; OR, HOW TO BOYCOTT THE SWEATSHOP.

MISS M. E. J. KELLEY, in the *North American Review* for July, describes a device for circumventing the sweatshop, which is better known in the United States than in the United Kingdom. This device is the adoption of the union label or stamp, which is affixed to all the goods that are manufactured in workshops where trade union rules prevail. Persons who are interested in the cause of labour refuse to buy goods lacking the union label, and thus the sweater finds himself subjected to a perfectly legal boycott, while more trade drifts to the workshops where union rules prevail. The union label, it seems, was first invented in the seventies on the Pacific coast, when the cigar-makers were threatened with an invasion of Chinese rivals:—

To distinguish the cigars made by the white workmen from those made by the Chinese the local cigarmakers' union issued a label, a strip of blue paper bearing the union seal, which was pasted around the cigar box after the fashion of the revenue stamp. The label was welcomed by the manufacturer, because with the public state of mind on the Chinese question its use meant increased sales of his wares. On the whole, the device of the California cigarmakers was so successful that it was adopted by the International Cigarmakers' Union at its next convention, and its use has extended gradually until now "blue label" cigars are common all over the country. The Cigarmakers' Union issues on an average about 20,000,000 blue labels annually. These labels are given on demand to any manufacturer who complies with the rules of the union as to wages and hours of labour. Besides indicating that the goods were made by members of a trade union receiving fair wages, the union label is usually considered a guarantee that the article on which it appears was made in a factory complying with the factory laws, and not in a sweatshop or tenement.

#### PROTECTION AGAINST IMITATION.

The question at once arose whether it would not be possible for the sweater to affix spurious labels on his goods. Miss Kelley replies that due provision is made against such a practice by legislation. She says:—

Labels have been adopted by more than twenty national trade-unions, and they represent all stages of development. Nearly every State in the Union where goods are made by organised workmen, or where such goods are sold, has passed special laws protecting union labels from counterfeits and imitations. In some States the labels are registered and protected under the laws regulating trade-marks. In 1895 twenty-five States had laws protecting union labels, and as the number of States having such laws is constantly increasing, it is likely many others have been added to the list since. The protection given by the label laws is very great. In many States the union may invoke both civil and criminal law to punish offenders. The employer unable to get the right to use the label from the union, and yielding to the temptation to use a counterfeit or imitation, is liable to a year's imprisonment or a fine of \$200, or both. This is the maximum punishment. It is less in some States, and in practice the limit will probably never be imposed on an offender. The goods bearing the counterfeit label may be seized and destroyed. The union also has grounds for a civil suit for damages.

#### THE SIGNIFICANCE OF THE LABEL.

It is easy to see the great significance of such legislation. A legal adviser of the unions says:—

The label laws mean that the law recognises the right of property on the part of the labour organisations in their label or trade-mark, and thus the right to hold property. They also mean that the wage-worker has been conceded the right to own and register a mark to be used on goods, which in a legal sense he does not own, but into which the labour of himself and of his fellows combined in unions enters as a

predominating factor. These laws, by inference, thus establish the equity right of labour in the product owned by the employer.

As to the practical working of the system, Miss Kelley admits that as yet the full benefit of the union label has not been recognised by the community at large:—

The union label appears more frequently on goods used by working people than on those in demand among the well-to-do. The reason for this is simple. The demand for articles bearing the union label originated with members of trade-unions acting in their capacity as consumers, and so far very few outside the working class have taken any interest in the union label. In fact until recently it was practically unknown outside the trade-unions.

Even if union labels were to be insisted upon universally, Miss Kelley is under no delusion as to the fact that the labour question would still remain unsolved:—

On the whole, it cannot be said that the union label is an ideal solution of vexing labour problems, or that it is likely to be final or permanent. It does, however, offer a means of utilising the altruistic sense of a community to right some of the wrongs from which the producer suffers. It offers itself as an infinitely superior substitute for the strike and the boycott. It brings employer and workman together on a footing of common interest.

### WE ARE ALL SOCIOCRATS TO-DAY.

#### BUT, WHAT IS A SOCIOCRAT?

SIR WILLIAM HARCOURT's famous declaration that "we are all socialists to-day" needs to be amended. We are not socialists, but sociocrats, and what a sociocrat is Mr. Lester F. Ward thus explains in a recent number of the *American Journal of Sociology*:—

This general social art, the scientific control of the social forces by the collective mind of society for its advantage, in strict homology with the practical arts of the industrial world, is what I have hitherto given the name *Sociocracy*. It has sometimes been confounded with *socialism*, and I cannot perhaps better conclude this series of papers than by briefly pointing out wherein, so far as I understand what socialism is, this differs from it, and also from the prevailing competitive régime or individualism. This can only be done at this stage by a few antithetical propositions whose elaboration is for the present postponed:

1. Individualism has created artificial inequalities.
2. Socialism seeks to create artificial equalities.
3. Sociocracy recognises natural inequalities and aims to abolish artificial inequalities.
4. Individualism confers benefits on those only who have the ability to obtain them, by superior power, cunning, intelligence, or the accident of position.
5. Socialism would confer the same benefits on all alike, and aims to secure equality of fruition.
6. Sociocracy would confer benefits in strict proportion to merit, but insists upon *equality of opportunity* as the only means of determining the degree of merit.

A cycle is thus completed. Sociocracy is a return to nature from which society has departed.

The tragic interest which the wreck of the *Aden* has aroused will doubtless win many readers for Mr. E. N. Bennett's "Two Months in Socotra" in the September *Longman's*. His closing plea for a lighthouse on the reefs of Ras Momi is the more significant in that it was written before the *Aden* disaster was announced. He speaks highly of the inland beauties and hilly health of the island, and wonders why it has not been made a coaling and provision station or a sanatorium. British control, he regrets to say, is at present merely nominal; no British representative lives on the island, and the Sultan is most discourteous to British visitors.

## THE WORKING WOMAN'S BUREAU.

## SIR WALTER BESANT'S SCHEME.

Mrs. TOOLEY describes, in the *Woman at Home* for September, Sir Walter Besant's new scheme for the helping of working women. He has had this scheme in his mind for years, the mother-idea of which is that of starting an association which should guide and assist women in the various branches of professional work into which they are now coming so rapidly forward, and in which they are often extremely ill paid. It is not intended for factory girls and servants, but rather for women journalists and such like. Sir Walter is much impressed with the fact that women journalists are cutting the prices by flooding the market with journalistic work. The tendency is to pull prices for men's work down to that of women. Sir Walter was told when in America it was almost impossible for a journalist to make a decent living, work as hard as he might. He thinks that this is true, and to prevent a similar depreciation in this country he proposes to form a women's labour bureau, to prevent women from working either in literature, journalism, or in any other profession under the standard price. Mrs. Tooley asked him:—

"And what are your plans for organising the Women's Labour Bureau?"

"There would be a head office in London and branch societies throughout the country, and we should require a very able secretary with the gift of organisation, and I may add," continued Sir Walter, "that I consider that women have superior administrative gifts to men; they know how to organise. We should have honorary secretaries in the villages and smaller towns, but in big cities like Liverpool, Manchester, and Birmingham, where the work would be very heavy, we should require paid secretaries, who would devote the whole of their time to the work. All branches would be in communication with the head office, where a complete registry would be kept of women seeking employment in the various professions. Anyone requiring a secretary, governess, journalist, and so forth would apply to the head office, and we should send them exactly the person to suit their requirements, and make it our business to see that proper remuneration was given. Our society would itself be a guarantee as to character and ability of anyone entered on its books. Women wanting appointments would in like manner apply to us, and we should introduce them to employers."

"The scheme sounds very delightful, Sir Walter, and could not fail to be of immense help to professional women; but how do you propose to make it pay?"

"There need be no difficulty about that," was Sir Walter's cheery rejoinder; "we should need a paper as an organ for the association, and naturally each member would take it in. In large centres like London and Manchester we should probably dispose of ten thousand copies per week, so you see at once that the paper would alone give us a substantial revenue. I have also an idea that each member of the association should pay a small yearly subscription—say half-a-crown, which would be cheaper for those benefiting by our introductions than agents' fees. Then we should certainly have a colonial edition of the paper, and probably a continental one too, as we wish the scheme to be as far reaching as possible, and it would be part of our work to introduce English ladies to appointments in the colonies and abroad."

"Do you intend to appeal to the public for subscriptions to assist in the founding of the Women's Labour Bureau?"

"No, I should not like to have it regarded from a charitable or philanthropic standpoint; it should be self-supporting, like the Authors' Society; my idea is simply to form an association for guarding the work of women on exactly the same principles as in the Authors' Society we protect the interests of members engaged in literary and journalistic pursuits. A part of my scheme is to provide technical instruction for women. Another important point is that we should have our own firm of solici-

tors to advise the members gratis on legal matters, such as wrongful dismissal, obtaining money owing from insolvent debtors, in the same way in which the Authors' Society assists its members. Here is an example. A paper lately gone bankrupt is in debt to members of the society to the extent of hundreds of pounds. Our solicitors will recover as much of this as is possible, and what they obtain will be handed to those entitled to it *without any deduction for legal expenses*. If they had not been members of our society, they must have lost their money or have consulted a private solicitor, and expended the greater portion of the money which he succeeded in obtaining in fees. Upon this principle we mean to work in the Women's Bureau."

It has been arranged, said Mrs. Tooley, that Sir Walter Besant's scheme, which has been adopted as a branch of the National Union of Women Workers, will be practically worked through the Women's Institute, which is to be founded by Mrs. Wynford Phillips at Grosvenor Crescent. When the Women's Labour Bureau is sufficiently advanced, Sir Walter hopes to see in connection with it a club for women, made as home-like as it is possible for it to be made, where they will have recreation rooms, evenings for social gatherings, and reference libraries. "Everything is bad," said Sir Walter Besant, "in an economic sense which tends to prevent marriage, it being the great safeguard of our national life."

## Southward Drift of the Russian People.

In the *Geographical Journal* for August, P. Kropotkin calls attention to a singular shifting of the population of Russia. He says:—

The centre of gravity of the population of European Russia has been shifted within the last fifty years southwards, towards the shores of the Black Sea. A hundred, and even fifty, years ago the chief bulk of the population of European Russia was in Central Russia, round Moscow; there being at the same time another centre of dense and numerous population round, or rather south-west of, Kieff. Now the main centre of dense population has been shifted southwards; and, while in Central Russia the population has been increasing more slowly than on the average in European Russia, in the southern parts of the territory the population was doubled and nearly trebled. Russia may be said to move southwards to the Black Sea. In South Russia, especially since a prodigious development of agricultural home-made machinery took place, and since culture on a large scale was introduced in the fertile "black earth" prairies, we find the densest agricultural population. There we find also the greatest number of populous towns, all of recent growth. If we take the towns having more than 75,000 inhabitants, we find that, with the exception of St. Petersburg and Riga, they are all situated to the south of Moscow, and that quite a number of large towns, which were quite insignificant spots fifty years ago, have grown up, either in the south of Kieff, nearer to the Black Sea, or in the south-east on the lower Volga.

*Windsor* for September has in it much bright and varied reading. Mr. Robert Machray's "History of the Bicycle" asks for separate mention. Miss M. A. Dickens gives a pleasing sketch of Miss Braddon at home, and incidentally states that with all her literary labour she has done her duty as wife and mother. Charlotte O'Connor Eccles enforces the need and use of self-conceit, and strongly urges parents not to repress so inestimable a gift. Birmingham and its jewellery, Brummagem and genuine, are described by Mr. J. F. Fraser in an instructive paper. The successful mimic—the "new entertainer of society"—whom Archibald Cromwell depicts, is none other than a daughter of the Rev. Brooke Herford, of Hampstead, of Unitarian and School Board fame.

### "THE TYPICAL AMERICAN WOMAN."

#### THE MOTIVE POWER OF THE DIVORCE MARKET!

WHEN the old Monsignor who introduced me to the officials at the Vatican heard that I was in favour of Woman's Rights, he shrugged his shoulders. "Ah!" he exclaimed, "that is because you think women are good. You do not know women. We do! We know that they are bad." The dear old ecclesiastic is gathered to his fathers, but if he had lived to read Gertrude Atherton's paper in the *Contemporary Review* for September, on Divorce in the United States, he would feel that he was right. For if Mrs. Atherton be right, there is no doubt that the old Roman dignitary was not far wrong. A dreary picture indeed is that which this American woman gives of American women, and one that is all the more dismal because she appears to be almost unconscious of the repulsiveness of her description.

#### "DETERMINED TO BE HAPPY AT ALL COSTS."

American women, she says, "are determined at all costs to be happy, and to make not one effort, but as many as circumstances may desire." That is to say, if they find Husband No. 1 does not suit their notions, they will discard him and try No. 2, No. 3, or as many as circumstances may desire. And the odd thing is that Mrs. Atherton, with that curious conceit occasionally to be observed in American women, imagines that this is due to their moral and mental superiority to the men.

#### HENCE DIVORCE AD LIB!

To-day divorce is the rule. And the motive-power of the divorce market is woman. Divorce is rampant in the United States. It is steadily on the increase. It has for two generations been part of the stock-in-trade of the comic newspapers, running neck-and-neck with the cowboy joke and the tramp joke. It is estimated that 80 per cent. of the actions are brought by women. The actions are almost invariably based on the following grounds: infidelity, cruelty, intemperance, failure to provide, desertion.

A San Francisco weekly newspaper recently, with no thought of humour, congratulated its readers that as against the two thousand odd marriages of the preceding year, there had only been six hundred and forty-one divorces.

It may be asserted broadly that there is no prejudice against divorce among the upper classes dwelling in the large cities of the United States, provided no scandal has preceded the suit.

#### THE GENESIS OF THE CREATURE.

The number of self-supporting women in the United States is computed to be in the neighbourhood of 4,000,000. Naturally, there is little of the Amelia Sedley about these women. They may preserve their femininity, their love of home and family, their hope of husband and children; but the man who says to them "You must" has an uncomfortable hour; and he who attempts to enforce his mandate is, sooner or later, sent to try his luck elsewhere. This vast army of brain-working women—recruited, for the most part, from the carefully educated middle class—are thinkers. A large proportion of the women of the upper class are clever and alert. Both classes are manifestly dissatisfied with their men.

#### WHEREIN AMERICAN MEN ARE FAILURES.

The women have outstripped the men spiritually and mentally. The men of the United States possess some of the finest perturbations of the human race, but they are failures where women are concerned. Their own interests are so restricted that they are unable to interest for any length of time the most versatile and mentally restless women on three continents. They have never taken the time to cultivate the soul with which their women, steeped in the literature of older worlds, informs the ideal man; necessarily they fall flat when the glamour of passion has departed.

#### THE SPOILED CHILDREN OF AN ELECTRICAL AGE.

The divorce revolution has been brought about and is maintained by women. The typical woman of the United States

to-day is a mental anarchist. The reasons for this are several. She is a composite of all the races of earth, if not in blood, in points of view. She is a product of experimental democracy, and, like her country, blindly but fiercely striving for an ideal. She has been thrown largely on her own resources; unlike the women of the old world, she has done her own thinking. She lives in an electrical atmosphere. She is a spoiled child. She finds herself a component part of a life that is ever changing, and changes with it. She has come to regard herself as by far the most important element in that life. She is a child of the hour, of the minute; she does not strike roots. Her independence has begot an abnormal amount of individuality. Is it a matter for wonder that, finding the man she has married unsatisfactory, she tosses him aside and begins life anew?

What an odious creature is Mrs. Atherton's "typical woman" of the United States! the heir of the worst vices of the men whom she is told she has outstripped.

### THE "MORNING STAR" OF WOMAN'S DAWN.

Miss JESSIE M. KING's paper in the September *Good Words*, "At the International Women's Congress," is a valuable series of portraits of the leading figures at the Berlin meetings last autumn. She gives graphic sketches of Frau Minna Cauer, Frau Marie Stritt, of Dresden, Dottress Maria Montessori, from Italy, the Finnish Baroness Alexandra Gripenberg, the American barrister, Mrs. Belva Lockwood, and Mrs. O. Chant, whose eloquence carried away even those who did not understand English. This is Miss King's cameo of the principal woman:—

The credit of the idea of an international gathering belongs to Frau Lina Morgenstern, an extremely able woman, distinguished as a social pioneer. . . . Frau Morgenstern well deserves her name. She is indeed the "Morning Star" of the movement, the Luther of a later Reformation. She is now sixty-six years of age, having been born at Breslau in 1830. She is a blonde Jewess. . . . Few women have a record of work as varied as hers. She is a philanthropist, social reformer, authoress, poetess, editor, and adviser-in-general to all who seek her aid. Her altruistic activities began early. . . . For instance, when she was a girl of eighteen, she started a scheme for supplying books and clothing to poor school children, and it is still in operation in her native place. She married young, and came to Berlin, and for the past forty years she has been associated with every leading movement in the city. She started the first seminary for ladies, in which science, hygiene, and mathematics were taught; the earliest attempt at introducing girls to the higher education. She helped to establish Kindergarten in Berlin. She was the author of a scheme to teach Kindergarten to nursery-maids, an idea which seems to point to the modern development of the lady nurse. She originated a system of rewards and pensions for servants who remain long in service, for the servant question is as much a burning one in Germany as with ourselves. She founded the Volk's Küchen, or People's Kitchens, where the poorest of the Berlin working-classes are fed at the lowest possible figure; and she wears the Iron Cross, granted her for her services in the war of 1870-71, she having, with a staff of devoted ladies, splendidly organised the commissariat department on the lines which her Volk's Küchen had taught her. She was a friend of the late Empress Augusta, and wrote her biography, and she wears the Augusta medal, and has other jewels which she received from that empress, who, herself a child of Weimar, a pupil of Goethe, could appreciate the work which her subject-woman was doing for her sisters. In 1874 Frau Morgenstern started the *Hausfrauen Zeitung*, a journal for housewives, dealing with all that women ought to know, which she still edits. Perhaps her best known work is the "Famous Women of the Nineteenth Century." Last year she brought out her "Recollections of the War in 1870." Frau Lina Morgenstern, then, was the leading spirit of the Congress; small, alert, vigorous, in spite of being so "little-bookit," as they say in Scotland, an effective speaker, with a genius for affairs.

## RELIGIOUS TOLERANCE IN THE UNITED STATES.

BY DR. LYMAN ABBOTT.

In the *Forum* for August Dr. Lyman Abbott writes an article on the "Growth of Religious Tolerance" in the United States. It is a phenomenon that is unmistakable. Dr. Abbott illustrates it by several curious instances. He says:—

In the last century a stonemason belonging to the Presbyterian Church of Scotland was tried and, I believe, excommunicated for helping to build an Episcopal church. The charge against him was based upon precepts in the Old Testament prohibiting the erection of altars to pagan deities in the high places of Israel. It is not more than a hundred years since, in this country, Alexander Campbell, the founder of the denomination popularly called, from his name, "Campbellites," having been caught in a furious storm in Pennsylvania, was refused shelter by a devout Presbyterian woman because he was a Baptist. Her conscience compelled her to resist the hospitable inclinations of her womanly heart; for did not St. John say: "If there come any unto you, and bring not this doctrine, receive him not into your house, neither bid him God speed"? A prominent Methodist clergyman of this country told me recently an analogous experience occurring only thirty-nine years ago. He was asked by the deacon of a Congregational church to deliver an address in the church on a Sunday afternoon—not at the hour of regular service—on the subject of temperance. The minister objected, because the young man was an Arminian. "I agree with him on the subject of temperance," said he, "and if the meeting is held in the hall I shall go to hear him; but if we can invite an Arminian to speak in our pulpit on temperance on Sunday afternoon, what is to prevent our inviting him to preach in our pulpit on Sunday morning? And if he should preach his Arminianism, what would become of the doctrines of our holy religion"? The lecture was delivered in the town hall instead of in the church; and the Calvinistic minister went to the town hall to hear what he would not allow uttered in his pulpit.

## WHAT HAS KILLED BIGOTRY?

Nothing of the kind is possible now. How is it that this fierce intolerance of old times has disappeared? Dr. Lyman Abbott says:—

First, the public interest has been transferred from theological to ethical problems—that is, from problems in the philosophy of religion to problems in practical conduct. Second, we have grown more catholic, that is, more large-minded; have come, or are coming, to see the difference between truths and the truth, and to perceive that none of us possess the truth, and that our neighbour possesses some fragment of truth which we ourselves have failed to possess. In other words, we are coming to recognise the fact that each one of us knows but in part and prophesies in part, and that only by putting these various parts together can any one secure the whole.

If, in a company of twenty divines of to-day, a theological discussion be started, the theme will be connected with the adjustment of evolutionary theories to traditional theology: one portion of the disputants will stand by traditional theology, surrendering reluctantly, if at all, the traditional positions; the other portion will frankly throw over the old traditionalism and will be found reconstructing their ethical philosophy, their theological system, and their Biblical criticism on an evolutionary foundation. Arminians and Calvinists, Episcopalians and Independents, Baptists and Pedo-Baptists, will be found in each section. In other words, while the old dogmatic lines remain to divide the denominations, the real lines, which divide men in their vital theological sympathies, are wholly undenominational.

## THE INFLUENCE OF THE PUBLIC SCHOOL.

One other element in our national life has also contributed largely—possibly more largely than all other causes combined—to make the age theologically tolerant; namely, our public-school system. It is impossible for us to estimate what has

been and is the effect of this system in teaching the American people that character and life are more than dogma, and that no church has a monopoly of that religion which promotes virtue. When a Roman Catholic boy has been captain of a High School nine or eleven, and has depended for school victories, which were much dearer to him than prizes or scholarships, upon the fidelity to duty of a Protestant companion, it is impossible for him to believe that his Protestant playfellow is doomed to eternal torment because he has not been confirmed in the Catholic communion; and it is equally impossible for the Protestant to regard his captain as a child of the Scarlet Woman and a citizen of the modern Babylon. These boys, in learning to respect each other, learn to respect each other's religion,—or at least to realise that the defects in each other's creeds are not such defects as are fatal to honourable character. They come to see that there is some truth in all creeds, and some virtue in all communions.

## How an Editor Ended the Hull Strike.

In the September *Idler* Mr. Percy Cross Standing recounts the "secret settlement" of the great Dock Strike at Hull in 1893. The story has not, it appears, been made public before. It is a fresh illustration of the way the editor becomes the unsuspected mediator and reconciler in many of our social struggles. The journalist in question was Mr. Lewis, editor of the *Hull Daily Mail*. After the strike had lasted six weeks, without any prospect of peaceable termination, the dockers starving, and Hull in possession of the military, Mr. Lewis felt it was time to initiate peace. He first approached the proprietor of his paper, Mr. Grottrian, who was also one of the most prominent and influential members of the Shipping Federation. Would he meet Tom Mann in private interview? On receiving an affirmative answer Mr. Lewis sought out Tom Mann at his Temperance Hotel, and prevailed on him to meet Mr. Grottrian.

Within ten minutes after the opening of the conversation in the Editor's room Mr. Mann was at the *Mail* office. For quietness' sake, he was taken up into a secluded room at the top of the building. Only three persons were present, Mr. F. B. Grottrian, Mr. Tom Mann, and the Editor of the *Mail*. Mr. Grottrian briefly explained his views to Mr. Mann. The labour leader, in his turn, was succinct and conciliatory. . . . Mr. Grottrian was not long in suggesting the terms of a resolution to which both sides might be parties. Mr. Mann, after consideration, did not disapprove them.

The interview was adjourned till next day, when Ben Tillett could attend, Mr. Mann meanwhile paving the way to peace by the conciliatory tone of his speech to the dockers.

The second interview took place in the reporters' room of the *Daily Mail*:—

In the street below might be heard the champing of bits and clatter of accoutrements, as the dragoons prepared for possible developments; while afar off, from the direction of Dock-side, came a distant murmur proclaiming that the baffled strikers were concocting some fresh desperate plan for mending matters in their own way.

Tillett finally agreed to the proposed terms, which were drafted in "tenderest" tone.

An evening paper announced "the strike practically at an end:" but so far the negotiations had been purely informal and unauthorised. The local labour leaders were up in arms, not having been consulted. Mann and Tillett had the difficult job of winning them over: and Mr. Grottrian had similarly to induce the Shipping Federation to adopt his views. Eventually the unofficial terms were officially approved on both sides. So the civil war ended, and anybody and everybody got the credit except the silent unobtrusive editor who played peacemaker.

## RELIGION IN THE UNITED STATES.

M. DE COUBERTIN, in a recent number of the *Nouvelle Revue*, writes a curious survey of religion in the United States. Two great events stand out in the pages of that history: the Puritan foundation of 1620, and the Assembly at Chicago in 1893. In America the spheres of religion and the State are constitutionally distinct. The Government professes to ignore the existence of religion, and yet prayer is an invariable accompaniment of all manifestations of the national life. No foundation stone is laid, no important meeting is held without an appeal for the Divine assistance; Congress has its chaplain; the State Assemblies request many ministers of different creeds to preside at the openings of their sittings every year; in the President's message he summons the people to unite in a common thanksgiving towards the Sovereign Ruler of the world; in the public schools the Bible is read to children and commented upon; the rules of the army and navy contain provision for the regular celebration of Divine worship; and, what is still more significant, the laws relating to property are in favour of benefactions for religious objects. M. Coubertin justly observes that there is one article in the American Constitution which is understood, and which does not appear in the text, but which is in full vigour, namely, "the Christian religion is the religion of the State." What is this Christian religion? It has undergone an evolution between the years 1620 and 1893. The men of the seventeenth century held a somewhat rigid and intolerant creed. The civilisation of Asia and of Europe was odious to them, and their idea of moral regeneration was based upon a stern austerity. It is a different picture in 1893. There is a great assembly of religions; a cardinal of the Roman Church presides. Around him are represented the various Protestant sects, the priests of Buddha, dignitaries of Islam, deputations from the most distant and the most ancient monasteries and temples in the world. We see that what is lost to dogma is gained to sentiment. On the shore of Lake Michigan meets indeed a council, but it is a council without anathema and without excommunication. M. Coubertin goes on to deal with the curious religious phenomena of America, such as "the revivals." The Americans are essentially more sentimental than any other nation in the world, and this singular religious hypnotism to which they seem to abandon themselves in these revivals is the marvel of all visitors to America.

Mormonism appears to retain largely its hold upon its adherents. Brigham Young displayed an almost Satanic ingenuity in his teaching of polygamy, for the result has been that the younger generation of Mormons are prevented by public opinion from entering other religious bodies, where they are regarded as illegitimate, and the result is that the Mormon community is more stable and holds together better than any other religious body except, possibly, the Church of Rome. M. de Coubertin has a very high opinion of American charity, which is usually anonymous and extremely self-denying.

Perhaps the most ordinary feature of American religious life is the practice of exchanging pulpits. This practice, which is little known in England, has an extraordinary influence on sermons in America. Thus if a Baptist minister accepts an invitation to preach in a Presbyterian chapel, or if a Congregationalist minister is preaching to Lutherans, it is not with the intention of being disagreeable and of wounding the convictions of his hearers; on the contrary, the preacher seeks, as the Parliament of Religions did at Chicago, for points of agreement and not of difference.

## IS TAINE AMONG THE PROPHETS?

THE *Quarterly Review* for July publishes an article upon Henri Taine. It is bright and sympathetic, but leaves the suspicion as if it had been written throughout for the purpose of heightening the effect of the proclamation that this Voltairean materialist was compelled to render the most emphatic testimony to the essential importance of the Christian religion. The article opens with the following paragraph:—

Henri Taine, philosopher, critic, artist in words, and historian, was the Saint Simon of the French Revolution. He has destroyed a legend; torn their tinsel costume from its demigods and stage-heroes; pulled their machinery to pieces; thrown a flood of light upon the grotesque, unclean, and commonplace figures who ruled France during its hour of weakness; and shown to all the world that astounding phantom called Jacobinism, no longer as a portent which no man could account for, but in its habit as it lived,—a thing of shreds and patches, embodying one false idea, the incarnation of Rousseau in seven or eight thousand criminals, to whom power was given to change times and seasons, and to attempt the creation of a fresh universe.

Then after an elaborate description of the materialistic philosophy which is embodied in his earlier works, he concludes by describing how M. Taine in his "History of the Origins of the French Revolution" was compelled to do homage to the Christian faith:—

"It is Christ Himself who has separated the two jurisdictions, the union of which made man a slave." Conscience and honour, motives unknown to antiquity, create the martyr, the gentleman, the Christian lady, the home which is sacred and inviolable.

To M. Taine the conclusion of the whole matter seems to have shaped itself in the following passage:—"We can now," he says, "reckon the value of what Christianity has brought into modern society; how much modesty, sweetness, and kindness; what it there maintains of honesty, good faith, and justice. Neither the reason of philosophers, nor the culture of artists and men of letters, nor yet even the sentiment of honour, feudal, military, and chivalrous,—not any Code, or Administration, or Government, can, in this its function, avail if it be wanting. There is nothing except Christianity which can hold us back on our native incline, or prevent the gradual slipping downward by which, incessantly and with all its weight, our race goes back into the depths; and to-day the ancient Gospel is still the best auxiliary that social instinct can call to its aid."

In the ranks of Positivism, taking that word largely, no men have acquired a more brilliant reputation than M. Taine, M. Littré, and John Stuart Mill. Alike they were learned, sincere, candid, and self-respecting,—students to whom truth was a sacred thing, and obedience to its declarations the first of duties. M. Littré, a childlike soul, when he was instructed, though late, in the Catechism, became a Christian. John Stuart Mill has left it on record that the example and teaching of Jesus were, in his eyes, the test of a perfect moral standard. M. Taine, beginning with the crudest of mechanical philosophies, and always incapable of the vision of faith, writes as we have seen. Ethical beauty, social efficacy, tender and strong humanity,—an ideal which invites and is eternally victorious; the revelation of a personality now, after so many hundreds of years, the hope of the world; these things our Positive friends acknowledge in the ancient Gospel; and their confession is surely a homage to the truth. Science talks of experiment and induction; was there ever an induction so manifest as this? The Revolution, which prided itself on being science incarnate, disintegrates and cannot breathe a breath of life into its clay-cold images; it is Sparta going down to ruin by theory and on principle. The Christian Society survives and is justified, not only of her children, but in the maturest teaching of those who were, by every instinct and prepossession, her born enemies. M. Taine will endure as long as the French have need of this demonstration.

## A FRENCH VIEW OF THE SCOTCH UNIVERSITIES.

In the first August number of the *Revue des Deux Mondes*, M. Bonet-Maury deals with the Scotch Universities in a very interesting article suggested by the reception of the Scotch delegates at the Sorbonne in April, 1896. That occasion marks an epoch in the history of the relations between France and Scotland, and it is rendered even more interesting by the fact that the French Universities are gradually freeing themselves from the centralisation imposed upon them by Napoleon, and are gradually gaining greater powers of self-government.

## FRANCE AND SCOTLAND.

The friendship between France and Scotland is an ancient one. We are reminded in this article that Louis XII. exempted all Scotchmen residing in his kingdom from the obligation of taking out letters of naturalisation, and granted them *en masse* the right of making wills, of succeeding to property, and of holding benefices as if they were Frenchmen. So it passed into a proverb, which appears in Shakespeare's "Henry V." :—

"If that you will France win,  
Then with Scotland first begin."

Scotch students crowded to the Universities of Bordeaux, of Poitiers, and of Paris. In Paris, Mary Queen of Scots and Cardinal Beaton had endowed a college, which offered a comfortable lodging and several bursaries. At the end of the sixteenth century the Scottish students seem to have been as industrious and as much addicted to plain living and high thinking as their descendants are to-day. This tradition became so well established that it was not interrupted by the events which threw Scotland on the side of Protestantism, and caused a Scotch king to ascend the throne of England. France gave an asylum to a crowd of Catholic refugees from Scotland, and the ties between the two countries were fairly strengthened by the French Protestants, who founded colleges and academies in which Scotch professors taught history, theology and medicine. It became the fashion to have Scotch blood in one's veins in France, and the progress of philosophy in France exhibited strong traces of the influence of the Scotchmen, Reid, Dugald Stewart, and Adam Smith.

## THE ORIGIN OF SCOTCH UNIVERSITIES.

This article explains very clearly the causes which led to the foundation of the Scotch Universities—St. Andrew's, Glasgow, and Aberdeen in the fifteenth century, and Edinburgh in the sixteenth, the three former arising from the Papacy, while the youngest of the four, Edinburgh, is the daughter of the Protestant Reformation. Of course, the real origin of them all must be traced to the Renaissance, the effects of which are strongly felt in Scotland. We find the Parliament of Scotland at the end of the fifteenth century ordaining that barons and freeholders should send their eldest sons to school to learn Latin, and afterwards to follow the course of the University for three years, under a penalty of £20. Other local causes contributed not only to their establishment but to their prosperity. The Scotch nobility were poor, or at any rate too poor to maintain their sons at Continental Universities. We have already alluded to the bursaries at the Scotch College in Paris, but they were not very numerous, and were more or less reserved for future ecclesiastics. The young Scotch nobles might have been sent to Oxford or Cambridge, but at that time the English were not loved in Scotland. The Scotch Universities therefore profited equally by the straitened means and the patriotism of the Scotch

nobility. The organisation of these early Universities was formed on the model of Paris. Down to the sixteenth century they retained the ecclesiastical impress which they had received from the Holy See, from which, however, national spirit not less than religious changes combined to free them. It is only fair to admit that the influence of the Papacy in organising and solidifying the Universities of Europe was of the greatest value. It furnished a kind of unity of intellectual culture among nations, and by providing for a certain similarity of studies it facilitated a frequent change of masters and pupils, which led to a great broadening of ideas.

## THEIR RECENT HISTORY.

The origin of the University of Edinburgh was, as we have already indicated, unconnected with the Roman Church, except that it was to some extent a protest against that Church, and arose from the general desire to set the seal of University culture upon the new spirit, the three older Universities being suspect, by reason of their long association with Roman Catholic methods and traditions. The difficulties were great, and at first only a charter for an academy could be obtained, but now the effect of modern legislation has been to give all the four Universities a similar organisation and a common aim. In spite of all their vicissitudes, these Scotch Universities have managed to retain that condition of independence to which the French Universities are only now attaining gradually and with difficulty. It is interesting to note that the division of the students into "nations" for the purpose of the Rectorial elections at Aberdeen and Glasgow was borrowed from Paris, where it was really necessary owing to the presence of so many foreigners. It is not necessary to follow M. Bonet-Maury through the statistical details which he has accumulated with such praiseworthy industry, but it may be mentioned to his credit that he has succeeded in understanding, what must have been extremely difficult for a Frenchman, the precise connection between the Established Church of Scotland and the Scotch Universities. He also does justice to the work of the Commission formed in accordance with the Act of 1889 in rendering the curricula and conditions of examination as flexible as possible. M. Bonet-Maury notes with special interest the *rapprochement* between the Scotch and the French Universities, as shown in the reception of the French University delegates at Edinburgh and St. Andrew's only last July, and he anticipates a steady extension of this cosmopolitan movement so as to include the English, Prussian, Scandinavian and South American Universities. He argues forcibly in favour of liberating the French Universities from the traditional tutelage of the State, and he pays a flattering tribute to the enterprise, powers of observation and moral discipline of the young Scotchmen, whom he regards as most desirable companions for the French youth. The unfortunate thing is that French gentlemen do not, as a matter of fact, send their sons to the French Universities, and it will probably be the work of years to induce them to do so.

THERE is a great deal of entertaining and instructive matter in the September *Leisure Hour*. Bedford is the town which Mr. W. J. Gordon sketches in his usual fascinating style. Mr. Edward Porritt gives a vivid account of the Canadian House of Commons at work, with a somewhat commiserating glance to end with at the slighted Senate. Mr. Flinders Petrie describes the year's harvest of antiquities from Egypt. Dr. Dallinger is the subject of a sketch by Mr. Henry Walker.

## GOOD STORIES FROM DR. MAX MÜLLER.

THE RIGHT HON. MAX MÜLLER's reminiscences of the Royalties he has met form perhaps the most interesting feature of the September *Cosmopolis*. The paper is full of pleasant gossip, principally about the Hohenzollerns. A few incidents may be repeated.

## AN ASTONISHED POLICE OFFICER.

When he was at Berlin reading in the library and trying to bring out his "Rig Veda" in Germany, Alexander von Humboldt used his influence with King Frederick William IV. to help in the publication, and eventually Max Müller was invited to dine with the king. On the day appointed a young lieutenant of police called, and after many silly questions informed Mr. Müller peremptorily that he must leave Berlin in twenty-four hours:—

I produced my passport, perfectly *en règle*; I explained that I wanted but another week to finish my work. It was all of no avail, I was told that I must leave in twenty-four hours. I then collected my thoughts, and said very quietly to the young lieutenant, "Please to tell the police authorities that I shall, of course, obey orders, and leave Berlin at once, but that I must request them to inform His Majesty the King that I shall not be able to dine with him to-night at Potsdam." The poor young man thought I was laughing at him, but when he saw that I was in earnest he looked thunderstruck, bowed, and went away.

## HOW TO SAFEGUARD CABINET SECRETS.

Recalling the foolish fear of Prince Albert influencing the Queen, the writer adduces one analogous case:—

When Lord John Russell was proposed as Secretary for Foreign Affairs, several members of the Cabinet objected, fearing Lady Russell's influence, and pointing out the danger of Cabinet secrets oozing out through her indiscretion. Lord Palmerston listened for a long time, and then turned to his colleagues and said, "Well, I see one remedy only—one of us must always sleep with them." When he saw blank consternation on the faces of his colleagues, "Well, well," he said, "we shall take it by turns."

## A QUEEN'S GUEST IN AN AWFUL FLIGHT.

As guest of the Queen, the professor went through an experience frequent in nightmares, but rarely occurring in the waking life, still more rarely in a royal palace:—

I was to dine at Windsor, and when I arrived my portmanteau was lost. I telegraphed and telegraphed, and at last the portmanteau was found at Oxford station, but there was no train to arrive at Windsor before 8.30. Prince Leopold, who was staying at Windsor, and to whom I went in my distress, took the matter in a most serious spirit. I thought I might send an excuse to say that I had had an accident and could not appear at table; but he said, "No, that is impossible. If the Queen asks you to dinner, you must dine." He then sent all round the Castle to fit me out. Everybody seemed to have contributed some article of clothing—coat, waistcoat, tie, shorts, shoes, and buckles. I looked a perfect guy, and I declared that I could not possibly appear before the Queen in that attire. I was actually penning a note when the 8.30 train arrived, and with it my luggage, which I tore open, dressed in a few minutes, and appeared at dinner as if nothing had happened. Fortunately the Queen, who had been paying a visit, came in very late.

## THE SAGE ON HIS SOVEREIGN.

In conclusion, the venerable sage refers to the Jubilee as "the greatest triumph that has ever been granted to royalty, which has ever been celebrated by royalty":—

Has ever there been an empire like the British, not excluding the Babylonian, the Persian, the Macedonian, or the Roman Empires? . . . And England is not only the greatest, it is also the freest, country in the world. . . . Constitutional government under a Royal protector will henceforth be

recognised as the most perfect form of government which human ingenuity has been able to devise, after many centuries of patient and impatient search.

## SOME PRAYERS OF SOLDIERS.

THE REV. E. J. HARDY, M.A., Army Chaplain, has in the *United Service Magazine* for September an interesting paper on "Praying Soldiers," from which I am glad to quote the following extracts:—

The German soldier is supplied with a small devotional book in which are prayers for the different circumstances in which the exigencies of the Service may place him. No such provision has been made for our soldiers, and, as a consequence, some rather curious prayers have been offered up by them.

Bishop Leslie, "the fighting bishop," before a battle in Ireland prayed, "O God, for our unworthiness we are not fit to claim Thy help; but if we are bad our enemies are worse, and if Thou seest not meet to help us, we pray Thee help them not, but stand thou neuter this day, and leave it to the arm of flesh."

Compare with this the supplication which an officer offered before one of the battles for Hungarian independence in 1849: "I will not ask Thee, Lord, to help us, and I know Thou wilt not help the Austrians; but if Thou wilt sit on yonder hill, Thou shalt not be ashamed of Thy children."

Very different was the prayer which Sir Jacob Astley offered up before the battle of Edge Hill: "Thou knowest, O Lord, that I shall be very busy this day, and if I forget Thee, forget not Thou me."

The following little prayer, we are told, was frequently used by Moltke, "Lord, teach us to think that we must die, that we may be wise."

In the Seven Years' War, the Prussian troops under Frederick the Great, on the morning of the battle of Leuthen, December 5th, 1757, sang this verse of Heerman's hymn, "O God, Thou Faithful God":—

"And grant me, Lord, to do,  
With ready heart and willing,  
Whate'er Thou shalt command,  
My calling here fulfilling;  
And do it when I ought,  
With all my strength, and bless  
The work I thus have wrought,  
For Thou must give success."

An officer of the king asked if he wished the soldiers to be silenced. "No," replied Frederick; "with such men God will surely give me to-day the victory." He was not disappointed; the Prussians fought bravely, and in three hours the greatly-outnumbering forces of the Austrians were defeated, when the king is said to have exclaimed, "My God, what a power religion is!"

A soldier who was mortally wounded in the battle of Tel-el-Keber was heard in the field hospital praying in the words of the hymn:—

"Jesu, lover of my soul,  
Let me to Thy bosom fly."

A comrade who knew that he had been careless about these things asked him where he had learned the words. The wounded lad replied: "They used to sing them at the parade service at Portsmouth."

On one occasion an aide-de-camp blundered in upon Washington while he knelt in prayer. The father of his country rose and rebuked the young man by throwing the scabbard of his sword at his head. If a man in Washington's position was interrupted in his prayers, and found the interruption troublesome, what must it be to a private soldier to pray in a barrack-room full of noisy jeering companions? To do so requires as much courage as gaining a Victoria Cross, but it is sometimes done.

Could anything be more truly Christian than this action of another praying soldier, which the writer had from a chaplain, who learned it from one of our bishops? At a soldier who was kneeling beside his cot praying some one threw a very dirty boot. When the man had finished he got up, polished the boot, and, bringing it to the owner who had thrown it, said, "If you will give me the other I will clean it too."

## THE LIFE-STORY OF EDISON.

MRS. SARAH TOOLEY in the *Temple Magazine* for September has a very excellent sketch of Edison, the electrical wizard of our day. Edison's family have been in America since 1787, when they crossed over from Amsterdam and settled in the States. When Edison was a boy he started to read through the whole of the books in the Detroit Free Library, and had worked industriously through fifteen feet of closely packed volumes before he was persuaded to desist. He started in business when he was fourteen by selling newspapers, and from that time until he was twenty-two he was always making a little money, spending it again, and trusting to his wits to save him from poverty. His deafness dates from one day when he upset a phosphorus bottle in the laboratory which he had constructed in a railway car in which he was allowed to travel as a news-vendor. He nearly set the train on fire, an offence which the conductor punished by dropping him and his apparatus at the first stopping place, and boxing his ears so severely as to make him partially deaf for the rest of his life. He was extremely studious, a desperately hard worker, and spent every spare coin he had on books—one of his most cherished acquisitions being a set of fifty volumes of the *North American Review*. One of his earliest inventions was an electric battery for destroying cockroaches. Before he was twenty-two the study of Faraday's works led him to declare to his companion, "Adams, I have so much to do and life is so short, that I am going to hustle." He then invented an electrical apparatus to enable legislative assemblies to vote, and found it met with no acceptance because it precluded all filibustering practices. "Ever after that," said Mr. Edison, "I made it the rule of my life to investigate minutely the necessity of any particular invention before I attempted to reduce it to practice."

## THE MEASUREMENT OF ODOURS AND SOUNDS.

While prosecuting trains of thought he was liable to become so absent-minded as to be oblivious to all that was passing. On one occasion he was summoned to pay his taxes by a certain hour, on penalty of a fine of an extra 12½ per cent. He took his place in the string of taxpayers at the City Hall, but he soon lost himself in studying the quadruplex system of telegraphy, and when his turn came to confront the official he forgot what he had come for. "Look sharp!" said the tax-gatherer. "What is your name?" "I don't know," replied Edison. Whereupon he was waved on one side as an imbecile, nor did he remember his name or what he came for until the allotted period had elapsed, and he had to pay his 12½ per cent. extra.

Every one knows about the phonograph, but Mrs. Tooley mentions some of his inventions which are not so familiar to the public:—

The tasimeter is constructed to measure degrees of heat and moisture, and so sensitive is it that it can register the heat from the human body standing eight feet away. The odorscope and the microphone, for measuring odours and sounds, are modifications of the tasimeter. The megaphone—another invention belonging to this period—is an instrument by which remote sounds are brought near. His kinetophonograph combines photographic apparatus along with the ordinary phonograph, and by this dual arrangement impressions are given back to the eye as well as to the ear; and the inventor believes that in the future not only will the sound of the voices of great artistes be reproduced, but their forms and gestures will be given also, thus forming a perfect realistic picture of a musical or dramatic performance.

## HOW THE PHONOGRAPH WAS DISCOVERED.

His account of the way in which he discovered the principle of the phonograph is very interesting:—

"I was singing," says Mr. Edison, "to the mouthpiece of a telephone, when the vibrations of the voice sent the fine steel point into my finger. That set me to thinking. If I could record the actions of the point and send the point over the same surface afterward, I saw no reason why the thing would not talk. I tried the experiment first on a strip of telegraph paper, and found that the point made an alphabet. I shouted the words 'Halloo! halloo!' into the mouthpiece, ran the paper back over the steel point, and heard a faint 'Halloo! halloo!' in return. I determined to make a machine that would work accurately, and gave my assistants instructions, telling them what I had discovered. They laughed at me. That's the whole story. The phonograph is the result of the pricking of a finger."

The keynote of Mr. Edison's success, says Mrs. Tooley, is to be found in his favourite motto, "I have my own ideas, and I take my stand upon them." He is a demon to work, thinking nothing of labouring twenty hours at a stretch; on some occasions even this long day is exceeded:—

"Now, you fellows, I've locked the door, and you'll have to stay here until this job is completed," was the startling information to which he occasionally treated his employees. And stay they did, on one occasion for sixty hours at a stretch without sleep and with scarcely any food, until a hitch in some of the machinery had been discovered and rectified; but, needless to say, the master stayed too.

## SUPPLANTING THE STEAM ENGINE.

When asked to explain how he could keep slaving on wearisomely at his inventions, he replied, "I like it. I don't know any other reason. You know, some people like to collect stamps." The two latest objects which are absorbing his attention are thus described by Mrs. Tooley:—

The last phase of Mr. Edison's scientific investigations is to be found in his experiments for the application of electricity to locomotion. How to obtain that force direct from the oxygen and carbon without the heating process which involves the steam-engine as a factor in making electricity, is the problem upon which Mr. Edison has been for some years at work. He confidently expects that the discovery will come by which electricity can be obtained by a simple chemical process which will render it sufficiently cheap for practical purposes and will make it the great power in the mechanical work of the world. Then, when the steam-engine with its cumbersome weight of fuel has been supplanted by a small and compact electrical motor, transit by rail and ocean will approximate to flying. There is no reason, Mr. Edison thinks, why in the future we may not be travelling by electricity at the rate of one hundred and fifty miles an hour.

Mr. Edison's latest experiments have been in connection with the Röntgen rays, and, in addition to being able to photograph the bones through the flesh, it is rumoured that the great wizard of electrical science has discovered a chemical so susceptible to the Röntgen rays that it will be possible to construct an instrument that will show by means of the X rays the internal organs and tissues of the body, as well as the bones, thus enormously increasing the powers of diagnosis possessed by surgeons in cases both of wounds and of the processes of disease.

On the whole the article is one of the best that has yet appeared in the English press about the wizard of Menlo Park.

PERHAPS the most important article in the Midsummer number of the *Canadian Magazine* is the paper on the Royal Canadian Academy, founded by the Princess Louise, and said to possess already promise of a great future.

## AN INTERVIEW WITH MR. DISRAELI.

SIR GAVAN DUFFY AND VIVIAN GREY.

SIR CHARLES GAVAN DUFFY is contributing a delightful series of papers to the *Contemporary Review* on the subject of his reminiscences of his brief experience of the House of Commons. In the September instalment he gives the following extract from his diary of 1855, describing his interview with Mr. Disraeli at his house in Park Lane:—

He received me in his library, a convenient room in an upper floor well-lined with books. He spoke immediately of my intention of leaving the House of Commons. I was too impatient, he said. Human life might be likened to a wheel; it was constantly turning round, and what was at the bottom to-day would be at the top some other day. The wheel, I said, was worked by a strong pulley hauled by the party Whigs, and Irish Nationalists never came to the top.

LORD PALMERSTON.

I told him I was chiefly anxious to see him because a memorial was about to be presented to Lord Palmerston requesting that Smith O'Brien might be allowed to return to Ireland. I trusted he was not unfavourable to that design? Not at all, he said; the time has come when Mr. O'Brien might properly be allowed to reside wherever he thought fit. I inquired if I was at liberty to mention this opinion. Certainly, he said; if the Government blotted out all penalties, he should not criticise their conduct unfavourably. I said I wished we were asking the favour from him rather than Lord Palmerston, who had no sympathy with a generous career, who apparently did not understand nationality, and, with all his airy gaiety, was at bottom a dry, hard Whig, who cared for nothing in politics but a majority. My countrymen, Mr. Disraeli observed, smilingly, were not of my opinion; they constantly supported the gay old man. Yes, I said; and that disposition made the House of Commons intolerable to me.

A STORY OF SMITH O'BRIEN.

I said he knew from experience that O'Brien was a gentleman and a man of honour, but he probably scarcely understood how chivalrous, and even heroic, his nature was. There was a story current about him in Ireland which every one believed because it was so natural and probable. He had a duel with the brother of O'Gorman Mahon, and when the men were placed and the signal about to be given, O'Brien cried, "Stop! No signal, I pray." His opponent's second stepped forward and said, with a serious countenance, "This is very irregular, sir. Pray, what do you want to say?" "I want," replied O'Brien, "to call your attention to the fact that the gentleman opposite me has let the cap fall off his pistol."

DISRAELI'S EARLY NOVELS.

Taking up a volume of Disraeli's early novels which lay on the table, I said I would take the liberty of saying something which was permissible because I was probably seeing him for the last time. I differed widely from public opinion which preferred "Coningsby" to all his books; a few of the early novels were, in my opinion, far better. They had the inspiration and enthusiasm of youth. "The Wondrous Tale of Alroy," as it used to be called, was the most entrancing romance since "Ivanhoe." "Contarini Fleming" could not be compared with any other English book, because it was *sui generis* an insight into the desires and the dreams of a youth of genius, and "Ixion in Heaven" was of the genre of "Candida," and worthy to be set on the same shelf. His early novels, he said, had been judged hardly, and perhaps they deserved no better. He would have withdrawn the one which excited most clamour if it had been possible.

VIVIAN GREY AND HIS AUTHOR.

Yes, I said; and nothing he had ever done or designed surprised me more than his willingness to sacrifice "Vivian Grey" to Mrs. Grundy. That story painted, no doubt, an audacious and unscrupulous adventurer, but all his plans failed in consequence. He was not a prosperous, but an unprosperous hero, and the moral of the book plainly was that

unscrupulous projects tumble down about the projector's head. The *advocatus diaboli* might insist, indeed, that the accomplished young neophyte of diplomacy was made altogether too fascinating, and I could not deny that objection, for the first time I read "Vivian Grey" was like the first time I drank champagne; I was intoxicated with an altogether new and mysterious enjoyment. As I spoke this last sentence, which was literally true, and spoken to a man whom I never expected to see again, I noted a flush rise from Disraeli's cheeks to his forehead till it glowed with sudden light. The man, *blase* with applause in many shapes, was moved by my manifest enjoyment of what pleased himself most, for, under the mask of abstruse political profundity, which could be shifted like a domino, he was always at heart a man of letters, and the only one among his contemporaries. Other statesmen published books; he was a dreamer and a creator whose truest life was in the region of imagination.

THE IRISH AND THE TORY PARTY.

Before leaving, I asked him if he would permit me to speak my mind upon Irish politics without asking or expecting any response. He smiled assent. I told him that Irishmen were not opposed to Conservatism in the abstract—the Conservatism of Tory cavaliers and gentlemen—but they had a deadly and implacable hatred of the black bilious bigotry which so often coloured it in Ireland, where it was the Toryism of Covenanters and Cromwellians. It was not impossible to reconcile Ireland to the Empire if they obtained a local Parliament, and if religious equality became a fact instead of an audacious pretext. I spoke much on this text, to which he listened without uttering a syllable, and then shook me cordially by the hand, and accompanied me to the landing.

## THE QUEEN AND HER WARDROBE WOMAN.

AN UNRECORDED JUBILEE INCIDENT.

MRS. SARAH A. TOOLEY contributes to the *Lady's Realm* for September a charming article on "Royalty on the Dee-side," which is full of pleasant gossip about the good relations between the Queen and her humble neighbours:—

"The Queen has had a gay shock the morn," said a Crathie woman to me, as she overtook me on the roadside and passed the customary greeting. I looked at her in surprise, and, with the consciousness that I had not seen a newspaper for several days, eagerly inquired what was the matter.

"Have you no' heard," was the reply, "about Mistress McDonald?—she's awa', and the Queen will be greetin' for she was awfu' fond of her"; and she pointed across the fields to the little white house where the Queen's favourite wardrobe woman had, after forty years of faithful service, returned home to die. It was the simple faith of this peasant woman that, at Royal Windsor, in the midst of her Jubilee triumphs, the Queen was sitting greetin' over Mistress McDonald being awa', which seemed such a touching tribute to the Queen's sympathetic heart. Doubtless the woman's surmise was correct in fact, for all day long the little village post-office was kept in a state of commotion, by the incessant ringing of the telegraph bell, which notified that the Queen was sending message upon message of inquiry, and receiving the full details of the death of her devoted servant. Mrs. McDonald was a native of Dee-side, and entered the Queen's service as a housemaid at Balmoral, eventually becoming chief wardrobe woman. She was intimately about the person of the Queen, and always slept immediately outside Her Majesty's room. In May last she was compelled to leave the service of the mistress she loved so well, and it was touching to hear of the unsuccessful efforts which she made to conceal her disease—which was cancer—in order that she might accompany the Queen to her Jubilee celebration—she thought, poor faithful old soul, that the Queen would never get through it without her. It was a touching visit which Her Majesty paid to the dying woman ere she left for London, and she gave instructions that a letter and a telegram were to be sent each day to keep her informed of Mrs. McDonald's condition.

## THE FAITH OF AN AGNOSTIC POET.

BY MR. WILLIAM WATSON.

MR. RUDYARD KIPLING's poem on the Jubilee, with its thrilling refrain, "Lest we forget, lest we forget," has roused Mr. William Watson, whose spirit is too sore within him on account of English policy in the East to acquiesce in glorification in any shape or form, so in the *Fortnightly Review* for September he contributes a notable poem entitled "The Unknown God," from which it is only permissible to quote two stanzas. Mr. Watson devotes nearly half of his poem to an emphatic repudiation of the Lord God of the Old Testament. With Jehovah he will have nothing to do. The Lord God of Israel is to him a mere barbaric God of Hosts, of whom the sombre people dreamt they knew, and whom they pitted against the gods of the Canaanites, who had much the same origin as himself. He predicts that faith in Jehovah will follow belief in Odin and Zeus. He is but "man's buoyant shadow hailed divine, begotten, not the begetter of men, but a thing man in his violent youth begot." Then, having thus repudiated Jehovah, Mr. Watson proceeds to define the God of his idolatry, and the following two stanzas are interesting from many points of view:—

The God I know of, I shall ne'er  
Know, though he dwells exceeding nigh.  
*Raise thou the stone and find me there,*  
*Cleave thou the wood and there am I.*  
Yea, in my flesh his spirit doth flow,  
Too near, too far, for me to know.

Whate'er my deeds, I am not sure  
That I can pleasure him, or vex:  
I that must use a speech so poor  
It narrows the Supreme with sex.  
Notes he the good or ill in man?  
To hope he cares is all I can.

I regret that the limitations placed upon extract render it impossible for me to quote the other verses, which are necessary in order to do justice to the poet's exposition of his religious faith. He tells us that he hopes with fear, trusting that the Supreme would be at least as just as any of the men whom he has created, although he admits that appearances are at present against Him. He then proceeds to repudiate all faith in the doctrine that the flutter of a trembling prayer can move the Man that is the Whole. Replying directly to Kipling, he asserts that fortune has oftenest come to England, not when we remembered God, but when we have forgotten Him, a dark saying which stands in need of commentary. At present it stands as one of the poet's dark sayings upon the harp, nor do the concluding stanzas throw much light upon the poet's meaning.

To this exposition of an Agnostic poet's faith in an unknown deity, it is interesting to add Mr. R. R. Bowker's fine sonnet in the *Century* for September upon Ruskin:—

Painter in words, on whose resplendent page,  
Caught from the palette of the seven-hued bow,  
The colours of our English Turner glow,—  
Silver of silent stars, and storm's red rage,  
The spray of mountain streams, rocks gray with age,  
Gold of Athena, white of Alpine snow,  
Cool green of forests, blue of lakes below,  
And sunset-crimsoned skies,—O seer and sage,  
Crowned with wild olive, fine of sense and sight,  
In thy prophetic voice, through work, trade, strife,  
The stones cry out, "By truth the nations live,  
And by injustice die. Be thy weights right,  
Thy measures true. These be the lamps that give  
The way of beauty and the path of life."

## DEAN FARRAR AND HIS FRIENDS.

In the *Temple Magazine* for September, Dean Farrar gossips pleasantly concerning some distinguished friends of his who find a place in his gallery of "Men I have Known." The first is Lord Beaconsfield, and the others are the two Lord Lyttons. It seems that it was Lord Beaconsfield who, after offering Dean Farrar the Vicarage of Halifax, which he refused, pressed upon him the Canonry of Westminster and the Rectory of St. Margaret's. Dean Farrar refused the first and accepted the second:—

Dean Wellesley told me afterwards that if I had asked his advice he would have recommended me to decline; and that, in that case, it was certain a higher office would have speedily been placed at my disposal. I do not, however, in the least regret this, though I was assured on the highest authority that the only reason which deterred Lord Beaconsfield from promoting me later on was the outburst of denunciation which followed the publishing of my sermons on "Eternal Hope."

Lord Beaconsfield came to hear him preach at the Abbey, and was good enough to express approval of what he heard. The Dean called upon him once at Downing Street, and coached him for a speech at a distribution of prizes to working men, at the close of an exhibition of articles made by themselves. When he left, Lord Beaconsfield, the Prime Minister, rose, took him by the arm, and walked with him across the reception-room, and as he handed him over to Lord Rowton, he said very genially, "Dr. Farrar, I have always felt a sincere regard for you." Of Lord Lytton, the father, Dean Farrar speaks very pleasantly, and tells several anecdotes, and reproduces in *facsimile* many specimens of his autographs. He tells the following story of Borderland experience:—

He was much interested in spiritualism, and told me one curious experience of his own. When he was first made a Minister by Lord Derby, he accepted the offer; but the morning after his acceptance he received a letter from a total stranger, saying that, as a Conservative Ministry had come in, he doubtless expected an invitation to a place in the Cabinet, but that in this expectation he was mistaken. The writer professed to know, in some occult way, that Sir Edward (as he then was) would not at that time become a member of the Ministry, but might become so at some later period. Lord Lytton put the letter aside, thinking, "In this case, at any rate, the astrologer or spiritualist is hopelessly wrong." Yet the statement of the letter proved to be true. He found in a few days that if he offered himself for re-election for the town of Hertford, on accepting a post in the Cabinet, it was extremely doubtful whether he would be elected or not. He knew that a defeat under such circumstances would be a blow to the new Administration, and he wrote to Lord Derby offering to forego for this reason the post which he had accepted. His generous suggestion was gratefully received, and it was not till afterwards that he became Secretary for the Colonies.

Of the late Lord Lytton, Viceroy of India, the Dean speaks very cordially. He says:—

The Earl of Lytton was often cruelly misrepresented and misunderstood. I should like to give my humble testimony that, knowing him intimately for many years, having spent long hours in his society, having received from him many letters, having conversed with him on all conceivable topics, literary and religious, and having heard him in public as well as in private, he left on my mind the conviction that he was a man of brilliant ability, of generous instincts, of kindest nature, and one whose sincere desire it was to do his duty faithfully and strenuously in the world.

BELIEVERS in modern predictive power will find ample confirmation of their faith in the account which W. T. Larned contributes to *Lippincott's* for September, of the wonderful history of "the Rocky Mountain prophets," as he calls the Mormons.

## TEN YEARS OF ENGLISH LITERATURE.

BY MR. EDMUND GOSSE.

UNDER this title Mr. Gosse contributes to the *North American Review* for August an interesting sketch of the change that has come over English literature in the last ten years. The decade has first of all been a period of the removal of landmarks. These landmarks consisted chiefly in the commanding authority of several notable men of letters:—

At no previous moment in our literary history were there so many of these wonderful old men, these half-supernatural soothsayers, as in 1888.

Of these, Tennyson, Browning, Newman, Jowett, Tyndall, Huxley, Kinglake, Froude, Arnold, Morris, Pater, Freeman, Church, and Lightfoot have been removed in this fatal ten years:—

The unique feature of this last decade of literary history in England has been that it has not merely removed, in unusual and sinister proximity, the heads of the oldest generation, but that it has taken with them those who should have survived to illuminate the blank they leave.

## DEATH AND POETRY

Gladstone, Ruskin and Spencer alone remain. The result has been distinctly beneficial, so far as poetry is concerned:—

The deaths of Arnold, of Browning, of Christina Rossetti, and still more of Tennyson, had an instant and almost entirely beneficial influence on poetry. The removal of these superlative rivals, against whom few beginners could without confusion be pitted, has given us opportunity to do justice to a large number of developing talents. It is quite certain that the variety, delicacy, and fervour of its young versemen have done more to redeem the decade from the charge of poverty of spirit than any other products of the pen, and the spiritual quality which interpenetrates some of their best work offers the most encouraging phenomenon of recent intellectual life in England.

## THE TYRANNY OF THE NOVEL,

The second literary characteristic of the decade has been an abnormal and disproportionate development. English fiction for the last ten years has been better than German or French, in Mr. Gosse's opinion, but he declares that the excessive popularity of the novel has drawn into the field of letters many writers who ought to have been doing different work in other fields:—

On all sides we may see, and we ought not to see without acute alarm, the finer talents being drawn from the arduous exercises to which nature intended to devote them to the facile fields of fiction.

Mr. Gosse even hazards the bold speculation that if Buckle, Newman and Ruskin had been in their prime in the last decade, they would have resigned themselves to the inevitable, and tried to present their views and convictions in the form of tales. The explanation of this exceptional predominance of the novelists, Mr. Gosse accounts for by an ingenious theory based upon the growth of commerce and athleticism, which he holds is highly unfavourable to art and to letters.

## —AND OF THE ATHLETIC IDEAL.

The excessive devotion to sport has incapacitated Englishmen for serious reading. He says:—

What with its polo and its golf, its shooting and its fishing, and all its other enchanting physical exercises, the ruling class in England is much too tired and too happy when evening comes to devote its thought to any serious branch of study or to pursue any difficult train of thought.

After a long spin on the bicycle a sedative is what is

wanted, not a stimulant; rest for the brain, not the stress of mental gymnastics:—

I do not think that Englishmen of the more moderate way of thinking realise the violent degree to which the athletic ideal has pushed all others to the wall within the last few years. Matthew Arnold warned us that we had a barbarian class amongst us. If he had lived till to-day he might judge that we have practically no other.

## GOSSIP ABOUT CROMWELL'S COURT AND ITS GAIETIES.

MR. C. H. FIRTH contributes to *Cornhill* for August an interesting and vivacious account of the Court of the Protector. That he had a Court at all gave great offence to the Republican party and to the strict Puritans. Mrs. Hutchinson declared "his Court was full of sin and vanity," a judgment which Mr. Firth is not disposed to accept. Of the many palaces placed at Cromwell's disposal, he practically restricted himself to Whitehall and Hampton Court, the latter as a summer or country residence. The goods of the late king supplied him with the wherewithal to furnish his royal abodes. There is something odd in finding that "the hangings in Cromwell's own bedchamber represented the story of Vulcan, Mars and Venus." Some zealous Puritans were shocked at the nude statues in Hampton Court Gardens being allowed to remain. The allowance for Cromwell's household was £100,000 a year. The Protector's wife was said to be a severe and thrifty housekeeper, with a lynx eye on the expenditure, and with a devotion to accounts not generally supposed to mark the sex. The day's arrangements went like clockwork. There was much profusion of hospitality, but Cromwell's own diet was "spare and not curious." His ordinary drink was a very small ale costing 7s. 6d. a barrel. In State ceremonials the honour of the nation required elaborate display and strict etiquette. But, says Whitelocke, "laying aside his greatness, he would be exceeding familiar with us, and, by way of diversion, would make verses with us, and every one must try his fancy. He commonly called for tobacco pipes and a candle, and would now and then take tobacco himself." Hunting and hawking were among his recreations, and he was very fond of music, "and entertained the most skilful in that science in his pay and family." Far from being the grim hater of art and jollity that the popular mind supposes him to have been, he would have music all through his public dinners, and reinstated in Christ Church the gifted Mr. Quin (whom Puritan visitors had ejected) out of gratitude for his fine singing. And at the wedding of his daughter Frances "they had forty-eight violins and much mirth with frolics, besides mixt dancing (a thing heretofore accounted profane) till five" in the morning. Mrs. Hutchinson calls Cromwell's daughters, excepting Mrs. Fleetwood, "insolent fools." The story goes that Mrs. Claypole, at a wedding feast where most of the grandees of the Court were present, on being asked where the wives of the Majors-General were, answered, "I'll warrant you they are washing their dishes at home as they used to do." This remark being reported to the ladies in question, made them excessively wroth, and they used all their powers with their husbands to prevent Cromwell assuming the crown, that Mrs. Claypole might never become a princess. So "das ewig weiblich," with its petty spitefulness, interfered with the great Protector's schemes and England's future. The extravagance of Cromwell's sons created much resentment. Altogether, Mr. Firth's paper gives the modern reader many shrewd glimpses into the valet view of the establishment of our greatest ruler.

### MAN AS MAKER IN HIS GARDEN.

How rapidly evolution may proceed when guided by human selection in place of merely natural selection appears in a paper by George E. Walsh in *Lippincott's* for September, on "The Trend in Horticulture." So far, "three thousand years of study and experiment have merely brought a handful of species of plants into successful cultivation, while the vast majority hold their secret for future generations to solve." They are in the stages of the wild sour grape or the wild acid thorn-apple.

#### HOW NEW GRASSES ARE EVOLVED.

But "every year some new wild plants are found to repay the cost of cultivating them, and the world is made richer in the possession of a food, flower, or textile material that caters to our happiness." Here are some interesting facts in plant-evolution under the will of man:—

In the improvement of wild grasses alone in the past half-century, agriculture has been made possible upon millions of acres of land that were totally neglected before. Originally there were no "tame" grasses, and nearly all that we cultivate to-day to feed our stock are less than one hundred and thirty years of age.

The season of apples has been extended from four or five months to ten or eleven months, in our temperate zones, by the improvement of late and early varieties.

#### ELIMINATING THORNS AND PRICKLES.

One of the most noticeable trends of the science of fruit-culture is toward the elimination of undesirable organs. The thorns of some of the Citrus fruit-trees, and the prickles of such small berry-bushes as the gooseberry, blackberry, and raspberry, are protuberances that have outlived their usefulness and are highly unpleasant. They not only puncture the ripening fruits, but they often make harvesting exceedingly inconvenient. Gardeners have long wished to do away with these thorns and prickles, but it is only comparatively recently that systematic efforts have been made to eliminate them.

The thorns are conspicuous organs of our cultivated plants that have ceased to be of any value, for their original purpose of protecting the plants from animals has no force to-day in the gardens and fields. They should have been exterminated long ago. Through the careful selection of plants that happen to be thornless, stocks are obtained for a new race of thornless plants. Others are noted for the few thorns that grow on them, and by judicious selection of seeds and grafts from these the same work is continued. Already gardeners have cultivated raspberry and blackberry canes that are entirely thornless, and by grafting improved varieties on these the desired end will soon be reached. The wild orange-trees have many more thorns on them than the budded stock, and the wild Florida lemons are thickly studded with thorns, while the grafted La France have none. The high-priced King orange, one of the best mandarins raised in Cochin-China, is extremely thorny, but in Florida the thorns have been gradually diminished by selecting buds from branches with the smallest number on them.

#### GETTING RID OF SEEDS IN FRUIT.

The innocent inquiry of many a child, "Why can't fruit be grown without seeds?" is exercising the attention of skilled gardeners:—

The seeds of oranges, grapes, apples, pears, and similar fruits are no longer absolutely necessary for the production of plants and trees. Nature slowly and grudgingly relinquishes her right to mature seeds—the secret that she has guarded so carefully for perpetuating many of her choicest species. Before horticulture was reduced to a science, most plants depended upon the seeds for their existence, but in these modern days, when budded and grafted stock give more satisfaction than seedlings, they are superfluous to a degree. We might not be able to get along without any seeds, for seedling stock must

continue to be raised so long as fruit-trees are in demand; but, as all choice stock is budded or grafted, the seeds of our leading varieties of oranges, lemons, grapes, and apples could be easily dispensed with. . . . For years now, more or less, systematic efforts have been made to get rid of seeds in certain fruits. Several varieties of apples and pears have been propagated that are almost seedless. . . . California and Florida growers are now trying to produce seedless oranges on all their grafted trees.

#### SEEDLESS GRAPES.

California gardeners, realising the immense value of their grape and raisin crop, are diligently trying to obtain seedless grapes as well, and toward this end the best intelligence of the State is directed. The object in view is to obtain seedless grapes without sacrificing the size and quality of the fruits for which California has become noted. There are varieties of seedless grapes or currants which may have been produced long ago by careful culture and selection, or which may have been the result of another of nature's strange freaks. The most conspicuous of these seedless grapes are those raised in south-eastern Europe, and sold in this country as Sultana raisins and the seedless "currants" of Corinth. The latter are practically grapes of a very small kind, but when dried they are sold as currants. In California both of these seedless fruits have been established, and efforts have been made to increase their size and quality in their new home. . . . Gardeners have succeeded so well in this respect that the core and seeds of the modern cultivated varieties of blackberries are less than one-third as prominent as in the wild sorts. Currants and gooseberries have been doubled and tripled in size, while the seeds have been reduced and the skins made tender and less objectionable. Our future small berries may grow upon bushes without thorns, and the fruits will be large, luscious, and attractive, without cores or seeds of any kind.

How many ages will elapse, one wonders, before similar methods, with of course important differences, can be applied to the direction not merely of vegetal and animal but also of human growth?

### The Story of the Bicycle.

MR. ROBERT MACHRAY gives a short history of cycling in the September *Windsor*. Certain combinations of two wheels in tandem fashion, known as Hobbyhorse and Dandyhorse, were, it seems, immensely popular in the beginning of the century, and in these we may perhaps trace the parents of the bicycle. The bicycle itself was born about 1836 in a machine made by Kirkpatrick Macmillan, a Scotsman, and developed a few years later by Gavin Dalzell. Its front wheel was 30 inches, its back wheel—the driving wheel—40 inches, and it could be propelled and steered without the feet touching the ground. Then came the "boneshaker," the earliest model of which appeared at the Paris Exhibition of 1855. By 1876 iron had replaced wood in its construction, the front wheel grew to 48 inches and sometimes 60 inches, the back wheel sank to 24 inches, and rubber tyres came in. By these changes the "boneshaker" evolved into the "ordinary." In 1885 came the first rear-driving "safety," which has eclipsed its predecessors. Mr. J. K. Starley, of Coventry, who made the "safety," began his cycle experiments in 1872, but the cycle of to-day is in structure practically the same as his invention of 1885. In 1888, Mr. Dunlop, veterinary surgeon of Belfast, invented the pneumatic tyre, which at once took the palm for speed and comfort. In that year and the next ladies' bicycles came in, precursor of a vast and little expected revolution in the habits of the sex. The official road records at present are 221 miles in 12 hours, done by Mr. G. Hunt, and 402 miles in 24 hours, done by Mr. M. A. Holbein. On the path Mr. J. Platt-Betts has done the fastest mile—in 1 min. 40 secs. Mr. J. W. Stocks, in Whit-week, rode 32½ miles in one hour.

## THE INFLUENCE OF LIGHT UPON LIVING ORGANISMS.

IN *Tilskueren* for July there is an interesting article under the above heading by Herr S. Bang, describing and explaining the effects, good and ill, of the different light-rays, and recounting the numerous experiments that have been made with these in the treatment of disease. Of the different rainbow-colours of a light-ray as seen through a prism, the warmest, when tested by a thermometer placed upon the spectrum, is, as we all know, the red; the next in heating effect being the orange, and so on, the colours decreasing in heat towards the violet end of the spectrum.

### WHAT IS LIGHT?

But the case is reversed when the chemical influences of the light-rays are in question—the influences we know of in everyday life from their power, for instance, of bleaching various “ungenuine” stuffs. This chemical influence we are enabled to paint by means of photographic sensitive “silver paper,” which becomes black when brought in contact with it. If this paper be placed in the spectrum we find it affected most by the violet and blue portions, while the influence of the colour-rays grows less and less towards the red end. The red rays are, therefore, more particularly heat-rays, the violet more particularly chemical rays. Besides the visible colour-rays, the spectrum, we know, contains a number of other rays, invisible, yet no less active. A good way beyond the red end of the spectrum the thermometer will continue to register a heat influence; and these so-called ultra-red heat-rays have a wider range than the visible red ones. And in a corresponding manner, we find outside the violet end of the visible spectrum of colours, a goodly number of the chemically influential rays, called the ultra-violet. Light may therefore be said to consist of heat-rays—the red and ultra-red—and of chemical rays—the blue, violet and ultra-violet. Between these lie the yellow and green which constitute the strongest portion of the spectrum in its effect upon the human eye. Viewing the matter more closely, however, we find that these red and yellow-green colours have their chemical influences too, though these will only act with any strength at all upon specially sensitive materials. And it is precisely in the living organisms that these sensitive materials are to be found.

### LET THERE BE LIGHT.

Plants in general favour the red light. It is the red and yellow lights which have the power of assimilating the carbonic acid and of transforming it into nourishing matter, and the green of the plant itself has the gift of absorbing these red and yellow rays, while in greater or lesser measure it wards off the others. That, indeed, is the rôle assigned to the green of the leaf or plant. The blue and violet colour-rays are antagonistic to its growth. Amongst the lower growths the sponge occupies a peculiar position in relation to the light. It is devoid of this leaf-green, and, accordingly, shuns the light rather than seeks it. With bacteria the case is the same. The majority of these and of all organisms hurtful to humanity are light-hating things, thriving best the less they have of it. Nothing can be more natural, therefore, than the theory that light should be employed for their destruction, and the experiments of latter years have proved the theory to be well founded. Nature herself adopts this course largely, and of the opposing elements she marshals against the bacteria, which has so marvellous a power of forcing itself into existence and

increasing, sunshine surely takes the premier place. The Italian proverb, “Where the sun is shut out the doctor comes in,” is true enough. Yet, though the sun will certainly destroy bacteria when directly brought to bear upon them, yet it cannot penetrate deeply where coloured materials are concerned.

### THE EFFECT OF THE CHEMICAL RAYS.

The colours most antagonistic to bacteria have been found to be blue and violet, as with the higher plants. There can also be no doubt that light has a powerful influence upon animals, though our knowledge regarding such influence has been until latter years most incomplete. The influence of light upon the skin was, naturally enough, the first question considered and subjected to experimental tests. It was at first supposed that “sunburn,” for instance, was caused by the heat of the sun, as may be inferred from its name, and especially from the medical term, *eczema caloricum*. Later on, it was proved that it is the chemical, and not the heat-rays of the sun—light rather than heat, in short—which produce this effect; for cases of “sunburn” may be found amongst North Pole explorers and glacier tourists. In these cases the chemical influence of the light is proportionately strong, for not only does the sun shine directly upon one, but, in a stronger degree still, its rays are reflected from the wide wastes of snow and ice, and hence it will be found that such travellers have their “sunburn” chiefly under the chin. Glass-blowers and fire-tenders, besides, though subjected to so much heat, show no such effect, and burns by heat and by light differ also very widely in the process. In the case of heat, the smarting and the reddening occur at once, and when the burning is past the skin resumes its former whiteness, while in the other case the smart and reddening occur only after several hours, and when the red has vanished we find the skin darker than formerly. Unna reasoned from this that the violet rays of light being the injurious ones, it was possible to protect the skin from heat-eczema, or rather light-eczema, by shutting out these rays, and he recommended therefore that tourists in glacier regions should wear yellow veils, which absorb the violet. It is significant, too, that nature adopts the same method. If we examine the colouring matter thrown off upon our skins after exposure to strong light, we shall find it to consist of fine, yellow-brown grains, which have the same effect as the yellow veils.

### A NEW CURE FOR SMALL-POX.

Since it is possible for light to affect the skin unfavourably, one reason, naturally, that it may advantageously be excluded in the treatment of certain diseases. It was this idea which led Finsen, some three or four years ago, to treat small-pox by the exclusion of daylight. A score of years ago three English doctors, Black, Barlow and Waters, had used darkness in their treatment of small-pox with favourable results. But these men, we are told, had tried the experiment without having any reasonable grounds to give, and as a consequence no one believed in it. Finsen, however, tried it as a logical result of scientific experiments. Finding that it was the blue-violet rays that were injurious, and utter darkness being unpleasant to his patients and a hindrance to himself, he decided to treat his patients by red light—that is, with windows and curtains red, this colour having no ill effect upon the skin. In “Finsen’s red room” it is, therefore, not the red light that is beneficial to the patient, but simply the exclusion of the blue, violet and ultra-violet rays. This method has been tried in several places in Denmark and

elsewhere, and of seventy patients only one has died, while the cured are free from the scars that otherwise accompany the disease. An experiment was tried with one man who, almost cured and with but some few pustules left upon his hand, was allowed to go out into the daylight. The pustules filled with matter and, bursting, left their marks behind, while the rest, treated in the red room, had left no trace. In the Middle Ages, small-pox patients, it is worthy of note, were kept in red-papered and red-curtained rooms, while in China and Japan they even go so far as to give the patient red dolls to play with.

#### THE LIGHT CURE.

Finsen was the first to adopt the light-cure in a scientific manner. By the aid of burning-glasses he could obtain from daylight or electric light a light sufficiently strong in chemical rays, but the heat-rays were, of course, correspondingly intense and unendurable, besides being of no use for his purpose whatever. It was necessary, then, to exclude the latter. This, he had found, could be accomplished by letting the light pass through a sheet of water. His apparatus is accordingly so constructed that between the burning-glasses which hold the light there is a sheet of water which absorbs the greater portion of the ultra-red heat-rays, while the red ones are absorbed by the light passing through a thin glass bath filled with a blue-coloured fluid which permits the passing of the blue ultra-violet rays only. Having found, too, by experiment, that the blood is a serious obstruction in the treatment of disease by colour-rays, he made a presser by means of which the blood was expelled from the parts to be treated, when the light was found to act with ease. This is an important point, for it proves that the light-treatment can only be employed with any hope of success upon such parts of the body as will permit of the expulsion of the blood. The skin, therefore, stands the best chance of benefit, and Finsen has now constructed an apparatus which, without causing any unpleasant heat, destroys bacteria in from half a minute to a minute. Each patient is subjected to two hours' treatment daily. There is no pain attached, but the apparatus being weak the cure is necessarily slow. In the treatment of *lupus*—one of the worst and most obstinate of skin diseases—the results, we are told, have been most encouraging.

#### The Lot of Political Exiles in Siberia.

I would earnestly recommend to the attention of Dr. Spence Watson and the Friends of Russian Freedom in this country, the very valuable article on "The Political Prisoners in Siberia," which Mr. J. T. Sampson contributes to *Blackwood* for September. Mr. Sampson has spent much time with the Nihilists and other exiles, and seems to have enjoyed no small measure of their confidence. He says:—

Regarding the political question as a whole, and judging simply from personal experiences, one came to the following conclusions: (1) The present condition of the political exiles is not as bad as many would have us commonly believe. In coming to this conclusion their present bearing was largely taken into consideration. (2) The past of the Terrorist party is not looked back on by its members with the pride that one would have imagined and expected from them. Many are willing and frank enough to speak of the foolishness of their younger days, and there is a marked eagerness to disclaim all connection with dynamite. (3) It is an undoubted fact that many of them have made a better thing of the remnants of their lives in Siberia than they ever dreamt of making of the whole at home.

#### WHERE AND WHY PEOPLE MOST GO MAD.

MR. J. HOLT SCHOOLING contributed to *Pearson's Magazine* one of his quaint diagrammatic papers, entitled "Which is the maddest part of the Kingdom?" It is satisfactory—to South Britons at all events—to find that the predominant partner suffers less from madness than the Celtic fringe. England and Wales have fewer lunatics in proportion to the population than Scotland and Ireland have. Who knows but this fact may yet figure as an argument against Home Rule?

In every 10,000 of the English and Welsh population, 31·4 people are lunatics.

In every 10,000 of the Scotch population, 33·6 people are lunatics.

In every 10,000 of the Irish population, 40·3 people are lunatics.

In every 10,000 of the British population, 32·7 people are lunatics.

Mr. Schooling goes on to classify the English counties, in groups, and in order of lunacy:—

I.—40 or more lunatics per 10,000 of the population Hereford, Middlesex, Gloucester.

II.—35 to 39·9: Wiltshire, Oxfordshire, Dorsetshire.

III.—30 to 34·9: Norfolk, Hampshire, Hertfordshire, Bedfordshire, Buckinghamshire, Devonshire, Warwickshire, Cambridgeshire, Sussex.

IV.—25 to 29·9: Leicestershire, Suffolk, Shropshire, Huntingdonshire, Worcestershire, Nottinghamshire, Kent, Somerset, Berkshire, Monmouthshire, Cornwall, Northamptonshire, Lancashire, Essex, Cheshire, Northumberland.

V.—20·0 to 24·9: Lincolnshire, Cumberland, Westmoreland, Staffordshire, Surrey, Rutland, Derbyshire, Yorkshire.

VI.—Under 20: Durham.

Thus Hereford is the maddest, and Durham is the sanest, county in England. Middlesex is next to the maddest, and Yorkshire to the sanest. A further total is that in the 18 northern counties lunatics average only 25 per 10,000, while in the 22 southern counties they average 36 per 10,000.

Eight leading causes of insanity are given thus:—

| Cause of Insanity.                  | No. per Hundred Lunatics. |
|-------------------------------------|---------------------------|
| I. Drink . . . . .                  | 31·6                      |
| II. Domestic troubles . . . . .     | 15·1                      |
| III. Mental anxiety . . . . .       | 13·4                      |
| IV. Old age . . . . .               | 13·2                      |
| V. Adverse circumstances . . . . .  | 13·0                      |
| VI. Accident . . . . .              | 6·5                       |
| VII. Religious excitement . . . . . | 4·0                       |
| VIII. Love affairs . . . . .        | 3·2                       |

100·0

*Good Words* for September is a remarkably good number. Miss Jessie M. King's paper on the leaders of the International Women's Congress, and Mr. Baring-Gould's sketch of the first early Christian interior discovered in ancient Rome, claim separate notice. Dr. George Smith tells the story of Dr. John Vanderkemp, the first medical missionary to Africa, a man whose career was a tissue of changes. First a successful officer in the Dutch dragoons, then a highly-popular M.D. of Edinburgh, then transformed into a convert to Evangelical religion by his narrow escape from the watery grave which swept away his wife and child, then a L.M.S. missionary to the Kaffirs and Hottentots, among whom he laboured for twelve years, and married a Hottentot for his second wife. He was the pioneer of Moffat and Livingstone, and would fain have opened Madagascar also to the Gospel.

## HOW PEOPLE THINK.

## RECENT DISCOVERIES IN BRAIN STRUCTURE.

PRINCE KROPOTKIN, in the *Nineteenth Century* for July, has a very interesting and lucid description of the recent discoveries that have been made in brain structure, which enables us to understand better the mechanism of thought. The nerve system consists of millions of microscopic nerve units, which are called neurons. Each of these nerve-cells contains within it a thread of grey nerve-fibre enclosed in a thin sheath of yellow greasy protective matter. At the other end of the nerve-cell there is a kind of microscopic moss, or short side branches of protoplasm, which are called dendrons. These naked moss-like dendrons feel, and convey what they feel towards the cell, while the sheath nerve fibre conveys the nerve current from the cells to the muscles, tissues, or other nerve-cells.

## HOW PAIN IS FELT.

Suppose the skin of the right hand is irritated by, let us say, a burn. The end-ramifications of some nerve-fibre, which exist in every portion of the skin, at once transmit the irritation inwards, to a ganglion cell, located near the spinal cord. From it a nerve-impulse is sent along another nerve-fibre, which enters, let us say, the spinal cord, and there envelops with its end-branches the dendrons of some neuron. The central nerve-system has thus been rendered aware of the irritation of the skin, and in some way or another it will respond to it. The nerve-current, after having reached the cell of that spinal cord neuron, immediately issues from it along a nerve-fibre; and if that fibre runs towards a striated muscle of, let us say, the other hand, our left hand may touch or scratch the burned spot without our "I" being aware of that action: it is a simple reflex action. But the nerve-fibre of that same cell may divide into two main branches, and while one of them runs to the muscle of the left hand, the other branch runs up the spinal cord and reaches (either directly or through an intermediate neuron) one of the big pyramidal cells of the grey cortex of the brain. The ramifications of this branch envelop the dendrons of the brain cell and transmit the impulse to it. Then our "I" becomes conscious of the sensation in the right hand, and we may—quite consciously this time—examine the burn. However, the pyramidal cell in the grey cortex is connected, through its dendrons and fibres, with many other cells of the brain, and all these cells are also started into activity. But the big pyramidal cells, in some way unknown, are the recipients and keepers of formerly received impressions; and as they are stimulated, associations of previously impressed images—that is, thoughts—are generated. A familiar association between a burn and oil may thus be awakened, and we put some oil on the burn. At the same time the nerve-impulse was also transmitted to that row of ganglia (the so-called vaso-motor system) which is connected with the heart, the intestines, and all other inner organs, as also with the blood-vessels, the glands, and the roots of the hair. And if the burn was severe, and very painful, the activity of the heart may react it, as also the blood-vessels: we may turn pale, shed tears, and so on.

## HOW IDEAS ARE FORMED.

Thousands of nerve-impulses, or nerve-waves, the electrical effects of which have been measured, flow continually from the fibres and the cells of our neurons. Now, when a nerve-cell has been at work for some time, the nucleus shrinks, large vacuoles appear in its protoplasm, and unless rest and sleep are afforded, the cell is worked out and becomes incapable of recuperation.

Now, the interesting part of Prince Kropotkin's paper consists in the suggestions which it makes that the association of ideas is caused by the ramifications of neighbouring nerve-fibre coming into contact with each other. Although these millions of nerve-fibres lie very near to each other, there is an imperceptible gap between

each, but when these nerve-cells are agitated or excited, they stretch to each other. A Spanish scientist, who has given the subject much study, maintains that each of these nerve-cells is embodied in an insulating material which he calls neuroglia cells. When the brain is at rest, this neuroglia insulator prevents nerve currents passing from one cell to another, and no communication is passed between the various nerve-cells until the neuroglia insulating material is contracted, thereby rendering it possible for the fibres of the nerve-cells to touch each other.

Our voluntary and our involuntary movements, the associations of ideas, the aberrant ideas which sometimes cross the brain, and the words which escape involuntarily would be due, under this hypothesis, to the contractions of neuroglia cells. The obsession of some reminiscences which we cannot get rid of would result from a tetanoid contraction of the neuroglia cells. The temporary exaltation of thought at certain moments, and the difficulty of expression at other moments, could be easily explained under the same hypothesis, while the idea of the identity of one impression with the previous impression might be due to the fact that the two have contracted the same or similarly situated neuroglia cells. Ideas of analogy, of difference, and so on, could be explained in the same way, while various mental diseases would be the result of the paralysis of certain neuroglia cells.

## THE BRAIN AT REST.

During sleep the connections between the nerve-cells are broken, and dreams are believed to be due to their accidental connection in sleep. When we wake up, it takes some time before the nerve-cells of the brain re-establish their connection with those of the spinal cord:—

Coffee and tea, which are known to stimulate the amoeboid movements of protoplasm, therefore aid in establishing such new connections and stimulate thought. While, on the other side, a strong irritation of the peripheric nerves—a sharp sound, or a sudden flash of bright light, or a strong pain in the skin—paralyses the thin ramifications of many neurons, and their connections are broken. Nay, hypnotical sleep, as well as various forms of local paralysis and hysteria, become easy to explain, once it is proved that contacts between neurons can be established, or broken, by outward and inward stimuli.

These are theories; but Prince Kropotkin says:—

The pathways of the nerve impulses have been traced, the despairingly complicated network is disentangled. And, at the same time, a quite new insight into the mechanism of mental activity has been won—so promising that there is no exaggeration in saying that we stand on the threshold of quite new conceptions of the physiological aspects of psychical life.

THE *New Century Review* grows more readable. Mr. Edward H. Parker has a good paper in the September number on "The Religion of the Chinese," which he seems to think is somewhat to seek. The priests are harmless, and in the vicinity of Peking their calling is universally despised:—

The fact is that, whatever may have been the conflicting influences of Buddhism, Taoism, and Confucianism at different periods of Chinese history, the residue of religious sentiment which has survived is nothing more than the ancient Shamanism of the Tartars, coupled with the strong ancestral feeling so peculiar to the Chinese, and here and there tinged with Buddhistic conceits.

Dyke Rhode criticises adversely the changes which have come over the *Times* since Delane's death. Mr. C. B. Roylance-Kent defines the policy of the New Tories by the two phrases, "freedom from State interference," and "Colonial expansion," or, as he would like to say, *imperium et libertas*. Surgeon-Colonel Welsh writes concerning the health of our troops in India to urge that those who aim at making the British forces out there an army of Galahads have "a long row to hoe."

## NAPOLEON AFTER WATERLOO.

FROM UNPUBLISHED ESSAYS.

*Macmillan's Magazine* for September devotes the first place to printing some hitherto unpublished letters of no little historical interest. They are introduced in the following paragraph:—

The following letters were written, to his wife at Plymouth, by Captain H. le F. Senhouse (afterwards Sir Humphrey Senhouse, K.C.H., C.B.), Flag-Captain to Rear-Admiral Sir Henry Hotham, K.C.B., commanding the British Fleet off the coast of France in 1815. They are now published for the first time by the courtesy of Sir Humphrey's daughter, Miss Rose Senhouse.

Captain Sir Henry Humphrey Senhouse had excellent opportunities of seeing Napoleon after his surrender. Here is the description of the way in which the fallen emperor impressed the English captain:—

His person I was very desirous of seeing, and I felt disappointed. His figure is very bad; he is short with a large head, his hands and legs small, and his body so corpulent as to project very considerably. His coat, made very plain as you see it in most prints, from being very short in the back gives his figure a more ridiculous appearance. His profile is good and is exactly what his busts and portraits represent; but his full face is bad. His eyes are a light blue, with a light yellow tinge on the iris, heavy, and totally contrary to what I expected; his teeth are bad; but the expression of his countenance is versatile, and expressive beyond measure of the quick and varying passions of the mind. His face at one instant bears the stamp of great good humour, and immediately changes to a dark, penetrating, thoughtful scowl which denotes the character of the thought that excites it. He speaks quick, and runs from one subject to another with great rapidity. His knowledge appears very extensive and very various, and he surprised me much by his remembrance of men of every character in England. He spoke much of America, and asked many questions concerning Spanish and British America, and also of the United States. After an interview of nearly an hour, during which the ladies and attendants were all kept in the front-cabin, dinner was announced to his Majesty. He plays the Emperor in everything, and he has taken possession of the after-cabin entirely, and of the table as well as of the general arrangement of the cabin.

Very shortly after his arrival on the coast he came to see Captain Senhouse. He came on board and received the officers in the cabin:—

He had many little remarks to make during the presentation, and the moment it was concluded he requested to see the ship. I was fully prepared for this, and had everything in good order for him. The admiral attended when I showed him round, and Napoleon asked a thousand questions and made numerous observations which served to show how very well versed he was in everything relative to the naval service. He was particularly struck with the *bonne mine* of the ship's company, and continually repeated his opinion of the order the ship appeared in by his expression *beaucoup d'ordre* and *bien soigné*. His manners resemble the king's very much, by the quantity of small talk he has and the knowledge he has of the private affairs of many. He expressed himself very sensible of the superiority of the British navy at present, but considered that the French navy was increasing rapidly in good discipline and in number of vessels. He went through the whole of the ship, even to the store-rooms, wings, cockpit, but seemed to move with painful sensations as if he were afflicted with gout.

Captain Senhouse was struck by one characteristic trait of Napoleon's character, his utter contempt for women:—

We were summoned to the breakfast, and the Emperor was

perfectly the Emperor, I assure you. He eats heartily but talks very little at meals, very soon retires, and it is astonishing to see the respect and attention paid him by those who were about him. I could not avoid remarking his sovereign contempt for females. They had no part of his attention; they did not even presume to intrude themselves into the same apartment with His Majesty, and when going away I asked whether the ladies would precede him, or get into the boat afterwards, he answered very coolly that "the ladies might come after in another boat;" and so they did, attended by only one officer, General L'Allemande, who would not have remained had I not given him a hint.

## SPANISH SOCIALISTS.

SEÑOR PABLO IGLESIAS contributes to *La España Moderna* an article summarising the position of the Socialist party in Spain, of which he is the leader. He successfully combats the assertion that Socialism will never make headway in that country. Only superficial observers could entertain such a notion, he says; the chief cause of Socialism, the concentration of capital, exists in certain parts of Spain, and other conditions are also present; hence it is gaining ground—slowly, perhaps, but surely.

The Socialist party was called into existence by a few earnest men in 1878; but it remained an obscure body, giving practically no signs of life, until 1886, in the beginning of which year the weekly organ *El Socialista* was started, and a tour undertaken in Barcelona for the purpose of arousing the working classes. The programme adopted was essentially the same as that of the Socialists in other countries, with whom the Spanish Socialists have always worked in harmony.

In 1888 they were strong enough to hold a congress in Barcelona, at which it was decided to form local branches wherever possible. At that time they were able to form sixteen branches. Three other congresses have been held since that date, the number of branches continually increasing. At the present time the number is fifty.

The Socialists have made it a rule to keep absolutely apart from all other parties or groups, and any member found guilty of voting for *bourgeois* candidates, or otherwise failing in his duty, is immediately excluded from the ranks of the Socialists. They have run their own candidates for Parliament, and although hitherto unsuccessful, the total number of votes steadily increases, and there is reason to hope that they will succeed ere long. In 1891 they obtained 5,000 votes only; in 1893, there was an increase to 7,000; while last year that number was doubled (14,000). In the municipal elections they have been more fortunate. In 1891, owing to the fact that the *bourgeois* underestimated the strength of the new party and did not trouble to vote in their full strength the Socialists secured four seats; these they lost at the next election, although they obtained more votes, because their opponents were alive to the position. In 1895 they won four seats: two in Bilbao, one in Mataro, and the fourth in El Ferrol.

The Spanish Socialist party is composed almost entirely of mechanics, but Señor Iglesias is confident that other classes of the community will join them in time. The party does all it can to improve the lot of the labouring classes, and to support them in their just demands. "The members of our party have never induced workmen to strike; they have even prevented a strike on more than one occasion; but when a strike occurs, they at once assist the strikers to the extent of their power."

## HOW TO IMPROVE THE VOLUNTEERS.

In the *United Service Magazine* for September, the first place is given to an article by a soldier who maintains that the Volunteers, as they exist at present, are hopelessly inefficient, chiefly owing to the lack of adequate and trained officers. He says:—

I have had exceptional opportunities for studying the capabilities of Volunteers, and from what I have seen of them in their own halls, in camps, and at manoeuvres, I am convinced that a three weeks' or month's training under capable officers would give us eighty per cent. of their number fit to take the field. A partially trained private, with a fair knowledge of the use of his rifle, and the elements of squad drill, is in my opinion capable of being made into a useful soldier—provided of course, as is the case with the average Volunteer, that he is not a fool, but a fairly educated man—in twenty-eight days' hard work morning and afternoon.

## THE LACK OF OFFICERS.

Unfortunately, officers cannot be improvised as rapidly, hence—

we require two standards for our Volunteer Force—an efficient standard for the officers, a partially efficient standard for the men. If the standard of the first is but as that of the second, then neither can ever rise to the first; and, unless this is possible, the whole Volunteer Force is the cruellest misrepresentation ever foisted on a nation. The weakest link in the whole system is "the Officer," because I consider him inefficient and incapable at present of leading British soldiers with any reasonable chance of success against the soldiers of another nation. That the Volunteer officer is capable of being trained into a really efficient officer, I will be the first to admit. A weeding out is required and a system of training is required. For the last ten years various and repeated efforts have been made to recruit for the commissioned ranks of the Volunteers among "the gentlemen of England," and all have failed. "They none of them go sufficiently to the root of the question," so I was informed by a well-known Volunteer Colonel; "none of them impress on the nation the duty of our leisured classes in the defence of home and country, and nothing but a calamitous war will ever bring this truth home to those it most vitally concerns."

## HOW, THEN, CAN THE DIFFICULTY BE OVERCOME?

The writer thinks that the way out lies ready to hand in the enforcement of the ballot for the militia. If our young country gentlemen were given the alternative of qualifying themselves as officers in the Volunteers, or spending a month under canvas with their own plough-boys, they would promptly choose to join the Volunteers. In this way he thinks a sufficient number of educated men could be obtained:—

Previous to joining, all officers might be required to do a year's training with regular troops. For each step in rank they might be required to pass an examination, not by a board at regimental headquarters, which under the existing régime is often a sad farce, but by a test supplied by the "School of Instruction," which should have branches at Edinburgh, York, Aldershot, and the Curragh, somewhat on the same lines as the Schools of Military Instruction in Canada. I would further suggest that special selections, say six per annum, be made from officers of the Volunteers, not above the rank of lieutenant, for direct commissions as lieutenants in the Regular Army; for there are many brilliant officers in the force who have discovered too late in life that their natural bent is that of soldiering, and who, I have no hesitation in saying, would be an acquisition to any army.

A GRAPHIC sketch of Mission Schools in India is given by the Rev. Dr. Merk in the September *Sunday at Home*, which those who wish to understand the educational outlook of that immense dependency would do well to read.

## HOW HE BECAME WAR-ARTIST.

MR. FREDERIC VILLIERS is the subject of an illustrated interview by Roy Compton in the September *Idler*, which has in it many good things. The war-artist told how coolly, not to say contentedly, the Prince of Greece takes his defeats. To Reuter's "special" the Prince actually remarked, "You know, Mr. Gwynne, that Napoleon always found the most difficult feat was to carry out a successful retreat in the face of the enemy. I have carried out three!"

From a chat with the great Skobelev Mr. Villiers reports a little interchange of ideas on the motives of war among the chief nations:—

I pointed out to him that his soldiers were imbued with almost as much fanaticism for the Orthodox Church and their great White Czar as the fanatic Turk who had shown such heroic spirit during the war.

"Yes," Skobelev remarked, "I think you're right, and you"—turning to a French guest—"have something that inspires your troops?"

"C'est la gloire," replied the Frenchman.

Skobelev smiled, and, turning to me, said—

"You English, I don't believe you have any religion to fight for."

"Oh, yes, I think so," I replied, "perhaps the most seductive of all—'British interests.'"

Allowing for the smartness of the rejoinder, one is tempted to ask whether Tommy Atkins is aware of any enthusiasm for British interests, or whether it is simply cold duty which impels him?

How his life-work found him, Mr. Villiers tells quite simply:—

From about the age of ten years pictures had an attraction for me, and also tales of bloodshed and daring deeds. I was educated in the North of France, came home at seventeen, decided to become an artist, worked hard until I was admitted into the Royal Academy Schools. . . . My start on *The Graphic* came most unexpectedly. One afternoon I was sauntering down Holborn when I noticed a little crowd reading the poster of an evening paper which set forth that Prince Milan of Serbia had declared war against Turkey. It occurred to me on the moment to write to the Editor of *The Graphic*. I did not even wait to get home, but, going into the British Museum, sat down and wrote a letter offering my services as war artist in the coming campaign. I shall not easily forget the delightful state of suspense I was in from that moment, or what my feelings were when morning brought me a wire from Mr. Thomas—"See me at my private address." As soon as I entered his study he at once asked me: "Can you speak French or German?"

"French fairly well," I replied.

"That will do. When can you go?"

"At once."

"Then please leave by to-night's mail."

And that very night I was travelling by the Continental Express to my first taste of war, armed with two letters of introduction, one to the English Ambassador in Vienna and one to Archibald Forbes, the War Correspondent.

The most interesting fight he has witnessed was Plevna; and the most disagreeable scene, the massacre of the Chinese by the Japanese at Port Arthur.

In the *University Magazine* Mr. John Robertson strongly objects to Mr. John Morley setting up Calvin, as one who succeeded by moral force, in opposition to the Prince of Machiavelli with his tactics of physical force. In the course of a vigorous attack on the reformer he tries to show that it was Calvin's unscrupulousness in the use of physical force which secured his success.

## GREATER JAPAN.

THE latest offshoot of the numerous publications which may be said to have been raised from the seed scattered over the world by the publication of the first number of the REVIEW OF REVIEWS is to be found in Japan. Unlike most of the other magazines which adopted not only the idea but the title of the REVIEW OF REVIEWS, our new Japanese contemporary has taken the title *Greater Japan*. It is an interesting publication, and one that does credit to the enterprise and editorial capacity of its editor and proprietor, Mr. Kumpei Matsumoto, whose

JULIUS KUMPEI MATSUMOTO.

Editor of *The Greater Japan*.

portrait I am privileged to publish herewith. Mr. Matsumoto has been spending a few months visiting Europe, and during his stay in London did me the honour of calling upon me, and explaining his ideas and aspirations. The accompanying portrait is reproduced from the photograph sent to me from Paris, inscribed "To my Venerable Friend, Mr. W. T. Stead," from which it may be inferred that Mr. Matsumoto is comparatively a young man. His journal, the *Greater Japan*, like all Japanese periodicals, begins on the last page, and is copiously illustrated. There is a frontispiece, a Chronique—an article corresponding to "The Progress of the World"; then come selections from the caricatures of Asia, Europe, and America, from which I hope to be able to quote in future issues of this REVIEW. We have then long articles by the editor, followed by a survey of the political and periodical literature of the world. Mr. Matsumoto is a Japanese of energy and intelligence, and I am glad to have been able to make arrangements with him which

will enable me month by month to lay before the Western world the ideas of the most progressive and enterprising section of the Japanese people.

## THE ITALIAN MAGAZINES.

THE well-known Italian critic, D. Ciampoli, contributes to the *Nuova Antologia* (August 1st) an exceedingly interesting sketch of Nekrasov, the melancholy and democratic Russian poet, whose early sufferings and lifelong ill-health gave a peculiar pathos to his writings. Madame Jessie White Mario, continuing her review of the Italian penal system and prison life, refers to an opinion apparently entertained by certain Italian social reformers—that the diminution in English criminal statistics is due to the excellent effect of our prison discipline. This the authoress emphatically denies, pointing out that whatever real diminution in crime there may be must be attributed to philanthropic endeavour, to the spread of education, and to improved social conditions generally, but not in any degree to the supposed deterrent effect of our prison system. The African policy of the Italian Government is still being actively canvassed, and Sigr. L. Capucci protests energetically against the withdrawal of the Italian troops from the Highlands of Erythrea, declaring that Massowah and the sea-coast are useless by themselves for colonising purposes, and can only be held at great disadvantage.

Mr. F. C. Montague, of Oriel College, Oxford, has contributed to *La Riforma Sociale* an exceedingly sympathetic and well-informed article on the life and work of Arnold Toynbee. It is a pity no mention is made of Toynbee Hall, at once the most practical and the most characteristic outcome of Toynbee's teaching.

The *Rivista di Artiglieria e Genio* contains an immense amount of practical information for soldiers. The chief article in the August number deals exhaustively with the respective merits of various kinds of military stores and ovens for cooking purposes. It is fully illustrated, and is from the pen of Captain Trainello.

THE chief pictorial article in the August *Engineering Magazine* is that by Thomas Tonge on the mineral resources of Arizona. He gives a tempting account of a vast region crammed with valuable ores and waiting only capital to turn its hidden treasures to the world's service. In the same issue H. H. Supplee writes hopefully of the future of acetylene as a high and safe illuminant, but says its production must be more economical before it can seriously compete with other illuminants already in the field.

"COSTUME and Character" is the title of a clever paper by Mr. Arnold Forster in *Cassell's Family Magazine* for September. He shows us first a picture of the old Sir Francis Drake, and then presents the face of Drake above the uniform of Captain Charles Beresford. He makes up for this transformation by showing *naumachos Beresfordos* attired as an ancient Greek admiral. Napoleon appears in his traditional guise, and then in the dress of a modern Italian squire. Charles the First is shown as Vandyke has him, and then as a cyclist essaying a dangerous hill. Mr. Balfour is presented as Gainsborough painted Sir Harbord Harbord. Mr. Gladstone could only expect transformation into a Homeric hero. Mr. McKinley stands forth in the costume and style of George Washington. A coin appears bearing the image of the great amalgamator with the legend "Div. C. J. Imp. Afric." These cleverly manipulated photographs form an excellent illustration of the enormous effect exercised by clothes on our imagination of men.

# THE REVIEWS REVIEWED.

## THE FORTNIGHTLY REVIEW.

THE *Fortnightly Review* for September contains a poem by Mr. William Watson, and an article on the German Emperor's foreign policy, which are noticed at some length elsewhere. The rest of the Review contains many good articles, some of which need only be mentioned. Among the latter are Sir W. Martin Conway's account of "Durer's Visit to the Netherlands," Augustin Filon's description of the Theatre Libre, which forms the third of his interesting papers on the modern French drama. Mrs. E. March Philipps has a paper on the "Peasants of Romagna," which gives some curious facts as to the extent to which taxation presses on the peasants. On the peasant's expenditure of £22 for necessities of life, the government extract 38s. in taxes.

## GIBRALTAR AS A WINTER RESORT.

Mr. J. Lowry Whittle writes an article under this head, which will create considerable comment on the part of the military who regard Gibraltar primarily, secondly, and, altogether, as an imperial stronghold. Mr. Whittle maintains that Gibraltar could be utilised as a health resort in winter without interfering in any way with the security of its garrison. It has already been much used as a place of call by American tourists, and it would only need a new hotel to be equally thronged by English visitors:—

The Algeiras Railway Company have completed arrangements with the Sud Express which secure communication between London and Gibraltar in fifty-six hours. The traveller who prefers going by train can leave London on Monday morning and will be able to dine in Gibraltar on Wednesday evening. The result ought to be to render this lovely region the Riviera of the south. The capitalists who would establish extensive hotels at Algeiras and San Roque would secure such co-operation in the neighbourhood as to enable them gradually to make good roads.

## THE INEXACTNESS OF THE ENGLISH LANGUAGE.

Professor J. P. Postgate, in his paper on "The Science of Meaning," lays great stress upon the difficulty of understanding exactly what is meant when English words are used which often signify very different things to different people:—

The looseness and ambiguity of English expression is well known both to men of letters and statesmen. That great and statesmanlike writer, the late Sir John Seeley, once observed to me in conversation that this was so great as to make it a most difficult matter to draft a treaty in English. For my own part, I must confess that as a vehicle of clear expression I prefer Latin, in spite of its inherent inferiority, to my native tongue, and I shall be only too happy if to-day I have not given another illustration of the striking words of R. L. Stevenson: "Do you understand me? God knows, I should think it highly improbable."

## THE UNITED STATES AND KLONDYKE.

Dr. M. S. Wade writes a well-informed paper concerning the Klondyke Gold-field, illustrating the same with a map and uttering a strong, twice-repeated, note of warning against any slackness in asserting our rights to the Klondyke territory. Dr. Wade says:—

No doubt John Bull will take care he loses no territory to the arrogant Uncle Sam, who would willingly grab the whole country north of the 49th parallel did the opportunity but present itself, for the American recognises the value of British Columbia much more fully than does the less enterprising and more easy-going Britisher. It is to be hoped that Great

Britain will not forget that the sons of America are hopelessly selfish and must be met with marked firmness in all negotiations. They regard courtesy as an evidence of pusillanimity.

## THE PRESENT POSITION OF SOCIALISTS IN FRANCE.

Mr. Paul Lafargue tells the story of the growth of Socialism for the last twenty years in the French Republic. He says that it has spread fast and far, and that the Pope's Encyclical about Labour was one of the causes which contributed to its success. The priests were encouraged to advocate Christian Socialism, and to take part in discussions at Socialist meetings. In these discussions, says M. Lafargue, they were—

compelled to admit that, after eighteen centuries of the Gospel, Christianity had culminated in a capitalist society, which they themselves admitted was intolerable for the workers. The Christian socialists arrived at a result so opposite to that which they were aiming at, that the bishops and archbishops had to stay this crusade, and to forbid the priests to attend these discussions. But by the time they retired from the contest the mischief was done.

Socialists are taking part in the local elections, and in many cases are securing the return of their representatives on municipal and other councils. Mr. Lafargue says:—

Socialists are even now showing their true value in the municipal councils, are enlisting the sympathies of the workers and of the small shopkeepers, and are even winning the respect of those capitalists who are not absolutely blinded by their own interests. The confidence that the Socialist mayors and councillors have inspired in the men they direct will play a great part in the elections of May, 1898. In the small commune it often happens that the vote of the mayor, or even of one councillor, carries in its train the votes of the majority of the electorate. In my opinion the elections of 1898 will be a victory for Socialism, and will prepare its final triumph.

## AGRICULTURAL DEPRESSION AND ITS REMEDIES.

Mr. Channing, not content with having published a most voluminous report of his own in the Blue Book on the Agricultural Depression, repeats in a more condensed form his conclusions in an article in the *Fortnightly Review*. He says:—

It is plain that, though the money returns of farming have fallen from 25 to 40 or 50 per cent., the two heaviest items of outgoings for labour and for feeding stuffs and manures have not fallen but increased. Where can a balance be got from except from the rent? The evils which this inquiry has exposed should be met by drastic reforms—an essential item of which must be the extension of agricultural arbitration to the question of rent.

One point that the comment has brought out is the fact that we spend very little on agricultural education. He says:—

Germany expends £132,000, France £170,000, the United States £343,000, beside £145,000 towards experimental stations, while no less than sixty-one Agricultural Colleges get £222,000 from the State Governments. In this country the Board of Agriculture, the Science and Art and Education Departments among them only provide a pitiful £18,000, in addition to the £60,000 of drink money, spent in desultory fashion by the County Council, without unity of aim or method.

## WHAT IS THE TRUE FORMULA FOR PROGRESS?

Mr. Mallock in a paper which takes as its text a passage in Mr. Kidd's book, as to the arrival of democracy, points out that democracy has not arrived in Mr. Kidd's sense,

either in political or economical life, and he writes this paper for the purpose of indicating—how the power of the many really is strictly limited in those spheres in which contemporary thought assumes that it either is, or is on the way to become, absolute; and then to illustrate its nature more clearly, by pointing to its operation in spheres in which it actually is and always must be paramount, but in which even the most ardent democrats do not appear consciously to recognise that it is in operation at all. And the sole points at issue are these:—What are the controlling and governmental functions or public actions that can be performed by the co-operation of those faculties in which all men are approximately equal? And what is the extent to which, by the co-operation of those equal faculties, average men can control the action of exceptional men, the exercise of whose exceptional faculties is required by all alike?

His practical conclusion is thus stated:—

The true formula for Progress is not the supreme rule of the Democracy, but the adjustment of its power to the complicated limitations imposed on its capacities for ruling by the limited capacities of the average man.

#### CRICKET SIXTY YEARS AGO.

Mr. Gale is one of the few veterans who can remember intelligently and write pleasantly concerning the way which our fathers played cricket in 1837. Mr. Gale says:—

There was not a hundredth part of the public cricket that there is now, and many players followed their trade or calling and were content with a very reasonable *honorarium*, as cricket was an occasional holiday, and not a business. Averages, championships, and records were unknown. In 1837 there were no pads, and batsmen had nothing to defend their wickets with but a bat four and a quarter inches wide; the bowling was fair, and the arm in round-arm bowling had, as Felix said, to move like the horizontal spoke of a wheel, and below the shoulder. Many matches were played on open downs, where excellent wickets could be got.

Notwithstanding all these drawbacks Mr. Gale says that—

I have no hesitation in saying that all the brilliant forward play, the driving and cutting, which is so well developed by the best men of to-day—and much of it was shown at the Oval in the Notts match—is just what the best men taught half a century ago. The present generation have lost the “leg-hit” almost entirely, and have substituted another form of play for it which is safer and more fruitful.

#### BOOKS FOR THE PEACE SOCIETY.

Ouida, in an article on “Georges Darien,” describes two books written by this author, which ought certainly be republished in this country, if by no one else, by the Peace Society. “Biribi” is the title of one of those books which give the terrible miseries of the soldiers’ life of the Franco-African army. Ouida says:—

“Biribi” is one of those rare utterances rising from the sealed pits, in which uncaressed and unpitied lives are beaten into senseless pulp of bruised and bleeding flesh. The army, says Darien, is the social cancer; is the octopus of which the tentacles drain the blood of the nations; the hundred arms and feelers which the people should sever with blows of their hatchets if they desire themselves to live. Fear is the keystone of the ark of the temple of Janus. The army is a laundry where they throw the conscience of men into a tub of soap-suds, and where the characters of men are wrung and twisted like wet linen, and are placed, shapeless, under the wooden-beater of a brutalising discipline. It is only by means of fear that the military system has been able to establish itself. It is only by such fear that it maintains its position.

Ouida’s extracts give a very powerful, gruesome picture of the wretchedness of the soldier’s lot in countries where

conscription prevails, and she warns us that, as Lord Salisbury has signed for conscription in this country—therefore the English people should read “Biribi;” they who derive their military ideas from the boisterous Jingoism of Rudyard Kipling, from the statistics of Secretaries of State, and from the pageantry of the troops on a Jubilee festival.

#### THE CONTEMPORARY REVIEW.

THE *Contemporary Review* for September is up to date, varied, and readable. I notice elsewhere Sir C. Gavan Duffy’s *Reminiscences* and Mrs. Atherton’s “Divorce in the United States.”

#### THE REVOLT OF SOUTH GERMANY.

According to Germanicus, South Germany can stand Prussian Junkerdom no longer:—

The Emperor’s “new course,” his personal policy, his marked predilection for the feudal Junkers, for the nobleman in contradistinction to the commoner, has made such a state of affairs possible in Germany, and caused the whole of South Germany, as well as every liberal citizen in the empire, to be “agin the Government,” and to hate the very name of Prussian. The gradual growth of discontent and hatred of the Prussians in South Germany has assumed greater proportions year after year, until it has become a very dangerous factor in German politics, as the most competent judges of the situation in the Fatherland now openly acknowledge. Next general election in Germany will produce quite unexpected results, unexpected by the Prussian Junkers and the Emperor’s *entourage*; the united, almost unanimous, opposition of an angry and indignant people against the authority of the Government—these are the warning words of the former magistrate in Wiesbaden, whom the Prussian Minister of Education only a few weeks ago appointed to the chair of political economy at the University of Berlin.

#### THE VIRTUOUS HELLENES.

According to Mr. H. W. Nevins, who writes an account of the Thirty Days’ Campaign in Epirus, the Greeks possessed all the virtues excepting those essential to success in the field. He says:—

I suppose no such temperate army has ever been seen on earth, unless it was Cromwell’s Saints. I never saw a soldier drunk, and a woman could walk alone from end to end of the camps without hearing a word of insult. The whole army took a vow to live chaste as long as the war lasted, and the vow was rigorously kept. The heavy losses in one regiment, it is true, were attributed by the others to carelessness on this point. The regiment was recruited from the Ionian islanders, and perhaps they are rather a slack and self-indulgent lot. But then they are musicians. Besides, before condemning them for immorality on the strength of their losses, we must remember that they were considerably more often exposed to fire than the rest.

#### OUR TRADE WITH GERMANY AND BELGIUM.

Mr. Statistician Mulhall, after examining the figures, thus sums up the facts as to our trade with the two countries whose commercial treaties we have just denounced:—

(1) Under the existing treaty German trade with the British Empire has thriven so remarkably that the increase in the last ten years (1885 to 1895) has been 52 per cent., the trade of the British Empire with all countries having risen only 14 per cent. (2) Germany consumes 50 per cent. more of British and Colonial products than the British Empire consumes of German. If Germans were to mark as “British products” what we send them, the relation with what we call “Made in Germany” would be as three to two. (3) Our trade with Germany is greater (including Colonial) than with any other country of Europe, and forms 22 per cent. of our dealings with Europe. (4) As regards Belgium we do most of her carrying-trade, and possess, moreover, so large a proportion of

her commerce, that she is, in a mercantile sense, almost a colony of ours. (5) The aggregate amount of trade between the British Empire on the one hand and Germany and Belgium on the other, rose from £87,200,000 in 1885 to £119,000,000 in 1895, an increase of 37 per cent., whereas the trade of the world rose only 16 per cent. in that interval. (6) Any stipulations in the new treaties with a view to check or hinder the currents of trade between Germany or Belgium and the United Kingdom and British Colonies would strike at the vital interests of the British people.

#### THE MOSQUITOES OF KLONDYKE.

Mr. Harry de Windt, who is under the delusion that the White Horse pass from Skaganoy has been opened to Klondyke, gives a gloomy account of the miseries of life in the Arctic goldfields:—

Alaska life is made miserable by dense swarms of mosquitoes that harass and torment the traveller night and day, until positive illness sometimes ensues. A Yukon mosquito will torture a dog to death in a few hours, and will drive bear and deer into the water. Valuable claims near Circle City have been deserted owing to their persistent onslaughts. Hunger is another evil without a remedy. Alaska produces absolutely nothing of an edible nature, and as the settlements are hundreds of miles apart, and are generally in a state of semi-starvation, the daily fare is often barely sufficient to keep body and soul together.

#### A CRITICISM OF MR. MORLEY.

Mr. Norman Hapgood, writing of Mr. Morley, finds his distinctive characteristic in what he calls his moralism:—

To gain a position of influence in politics, and to assure himself a place in criticism, without the aid of instinct for action, charm of style, personal magnetism, wit, or eloquence, he has certainly kept his gifts employed at a higher rate of interest than is earned by most men of as few talents. His somewhat limited field has been cultivated with a thoroughness that brought a larger crop than many a richer and broader area.

#### THE OLD METHODISTS AND THE NEW.

The Rector of Beechamwell writes enthusiastically of the Methodists, saints and martyrs of the last century. The old Methodists were heroes; of their descendants the Rector says:—

The Wesleyan preacher of to-day is altogether unlike his ancestors. The most dapper of divines when young; the most solid and cautious of men when he has got over the smoothness and beaming gentility of his younger days; he is as unlike as any man can be the men I have been attempting to describe. The spirit has evaporated, and partly from their rigid following of an old pattern, and partly from the equalising of income and acknowledged position amongst them (I hope some so-called "Church reformers" will observe this) the dull flatness and even mediocrity of the Methodist ministry has become complete. Since the first generation of their race, they have been without great names. It is the most denominational of all denominations; while in his private capacity a Methodist, as a rule, will go beyond a Scotchman in his efforts to make the best of the main chance.

#### THE SALVATION OF THE ENGLISH COUNTY.

Mr. W. Jenks traces the preservation of the English county to the overthrow of the authority of the king's sheriff, which began after Stephen's reign:—

The year 1170 is the turning-point. With that, the decline and fall of the sheriff begin. His judicial functions are transferred to the king's itinerant justices, officials of the Exchequer rob him of his financial powers, the decay of the old military system deprives him of his military importance, in matters of police the new local justices of the fourteenth century supersede him. The county was saved in England by a policy which combined specialisation of functions with local

unity. The changes just described destroyed the county ruler, but left the county itself intact. The latest example of the process, the Act of 1888, has had an exactly similar result. Quarter sessions are not what they were, but the district over which they ruled still preserves its unity. No one pretends that the English county system is free from defects, even from grave defects. But its history is creditable. For long centuries it has solved the difficult problem of reconciling local autonomy with central efficiency. It has stood between bureaucracy and disruption, and saved England from the dangers of both.

#### SINKING SILVER.

Mr. W. R. Lawson, one of the few intelligible writers on financial questions, ridicules the idea that any relief can be given by us or the Indian Government to the silver men:—

To tie India up with any Western monetary system, above all with such a currency chaos as the Americans are still floundering in, would be to strangle her natural development. It would be a wanton wrong, not only to India but to all the financially allied countries of the Far East. We in Europe are slow to learn that the Far East is a world by itself, which has grown and will continue to grow in its own way. It knows silver simply as silver; our sophistical ratios, our free coinage and legal tender ingenuities are a foreign language to it. European interference with its economic habits is for the most part useless or mischievous, and the worst turn we could do it in its present unsettled transition state would be to hand over the control of its money, involving the practical control of its foreign trade, to a ring of American silver kings. Behind all the beautiful theories and the fine spun logic of bimetalism, the real motive power is the silver producer. It is for him that all the leagues and conferences and associations have been unconsciously working.

#### SECTS ESTABLISHED AND OTHERWISE.

Mr. Howard Evans demolishes the absurd fallacy (due to Whitaker) as to the existence of hundreds of sects in England. Practically there are not more than twenty. Of these ten Evangelical Protestant denominations provide 7,600,000 sittings, while the Established Church only seats 6,778,000. The clergy of the Establishment of all sorts number 20,495. Mr. Evans gives the following figures as to the numbers of the Free Churches:—

|  | Pastors. | Local Preachers. |
|--|----------|------------------|
| Baptists . . . . .                     | 1,718 .  | 4,385            |
| Congregationalists . . . . .           | 2,441 .  | 5,665            |
| Presbyterians . . . . .                | 301 .    | —                |
| Wesleyans . . . . .                    | 1,774 .  | 17,065           |
| Primitive Methodists . . . . .         | 965 .    | 399              |
| Calvinistic Methodists . . . . .       | 502 .    | 16,742           |
| United Methodist Free Church . . . . . | 318 .    | 3,066            |
| Methodist New Connexion . . . . .      | 185 .    | 1,133            |
| Bible Christians . . . . .             | 165 .    | 1,492            |
| Total . . . . .                        | 8,369 .  | 49,947           |

#### THE LOGIA AND THE GOSPELS.

Mr. J. Rendel Harris says:—

The critical importance of this attempt to restore the opening of a primitive collection of *Logia* is very great. On the one hand, it gives us the suggestion of an earlier Gospel or Gospels than any of our existing volumes. On the other hand, it prevents our quoting Clement or Polycarp as attesting the antiquity of the Canonical Gospels. And this means a possible lowering of our idea of the antiquity of the extant Synoptists. We conclude, moreover, from a study of the variants in the recovered *Logia*, that there is reason to believe not only in the existence of much pre-canonical evangelic matter, but also (we refer especially to the reading, "a city built on a hill," in the seventh *Logion*, whose origin Reisch divined so acutely) in the influence that the extra-evangelic documents have had on the transmission of the text of the canonical Gospels.

## THE NINETEENTH CENTURY.

THE most notable articles this month are Mr. George Russell's good-natured railery of the Duke of Bedford as model landlord, Miss Sellers' sketch of Dr. Von Miquel, "The Kaiser's Own Man," and Mr. Joseph Ackland's survey of the growth of our seaports. These claim separate notice.

## MR. HARRISON ON INTERNATIONAL MORALS.

Keeping up the discussion on might *versus* right which Mr. Morley's Machiavelli has pushed to the fore again, Mr. Frederic Harrison makes a trenchant attack on Mr. Fred. Greenwood's contention that the relations between States are governed not by law of any kind save the old right of the strongest, and practically resolve themselves into the lawlessness of war. Mr. Harrison points out that there is such a thing as international law, and that even war is not a relapse into primordial anarchy, but is subject to laws and ethics of its own, of a very definite kind:—

The attempt to distinguish between morality towards foreigners and morality towards our fellow-countrymen is pure moonshine. The specific acts may differ; but the moral standard is the same in kind. To talk about the State as an Almighty Power is mere fetishism. The State is only an aggregate of Parishes, as the Parish is an aggregate of families. And Humanity is an aggregate of States. It is needless to go over the old proof that morality is, *on the whole*, the conduct most conducive to well-being amongst men—that, *on the whole*, honesty is the best policy. . . . Honesty is the best policy for States as for citizens. The true way to "save the State" is to raise its reputation for good faith, justice, and peaceableness, to make it strong in defence but not dangerous in attack. Switzerland is one of the smallest and poorest States in Europe; and yet it is of all others the most absolutely impregnable.

## NATIVE FEELING IN INDIA.

The Moulvie Rafiuddin Ahmad gives the lie direct to all rumours of Mahometan disaffection. He says:—

Let me at once declare that the Indian Moslems continue to have unabated confidence in the British rule, and that their feelings of loyalty to the Empress of India remain unaltered. They share a kind of legitimate pride with their English fellow citizens in the greatness and prosperity of that empire. They are in a minority in India, and they feel convinced that their best interests lie in the maintenance of the British rule. It has lately been asserted that the Sultan's emissaries are trying to sow disaffection among the Moslems in India. There is not a word of truth in it.

Mr. George Adams admits grave discontent among the landowning classes in India owing to foreclosure of mortgages, and suggests as a remedy that the State should administer the estates of all embarrassed landlords and return the same to them cleared of all encumbrances, but with legislative prohibition of renewed encumbrances.

## HOW LONG OUGHT WE TO LIVE? 70 YEARS, OR 120?

There are two papers on old age. One is by Mr. James Payn, who declares that "the best part of old age is its sense of proportion, which enables us to estimate misfortunes, or what seem to be such, at their true value." He calls special attention to a terror of advancing years which can surely not be generally known—the way old men are bombarded by theological correspondents eager to save them from a lurid hereafter. Lady Glenesk presents interesting facts indicative of the increasing duration of human life, which she kindly summarises:—

That, according to the best authorities of the last century, the extreme limit of life might be one hundred and twenty-five years under extraordinary and almost abnormal circum-

stances. That the anticipation of life is roughly five times the time that the organs of the body—not counting the brain, which develops later—require to attain their full and absolute maturity. That rarely, if ever, is that full duration achieved, owing to disease, food, heredity, bad habits, wear and tear, and many other causes which shorten life. The slower the development the longer may be the duration of life. That those circumstances which conduce to longevity are undoubtedly late development, frugal habits, moderation, exemption from vicissitudes of climate and extreme of heat or cold, from mental worry and agitation, temperance in eating and drinking, with a fair amount of brain work when the brain is ready to undertake it.

She remarks on the prominence given to the Psalmist's "three score years and ten," and the neglect shown to Gen. vi. 3, "His days shall be an hundred and twenty years."

## FORTY THOUSAND FRANCS FOR A KISS.

The Count de Calonne, writing on the French aristocracy, explains that there is no one aristocracy as in England; rather, "there are as many aristocracies as there are parties which come successively to power." Only one-tenth are families that go back to pre-revolution times. *Apocryphos* of charity bazaars, which are a favourite aristocratic pastime, the Count tells the following story:—

It is said that a very pretty woman, with whom a certain personage was smitten, offered him some small articles, the prices of which were, for him, fabulous. "No," said he; "your stall contains but one thing that tempts me, and you would not care to sell it." "Say what it is, at all events," replied the lady, "and tell me the price you are willing to pay." "Twenty thousand francs for a kiss." "Double the figure and you shall have it," the lady answered, presenting her cheek and holding out her hand. The gentleman, of course, had to comply.

## OTHER ARTICLES.

Mr. W. H. Mallock, enamoured as usual of his distinction between Labour and Ability, takes occasion from the lock-out in the engineering trade, to argue that the ability which Labour leaders show in organising trades unions and strikes does not involve the Ability which can organise labour for productive purposes. Labour can be restive, can jib, or shy, or "buckjump": only Ability can ride or drive. Lord Brassey in his account of the Jubilee celebration in Victoria, the colony of which he is governor, suggests an admirable use to which our Colonial governors could be put. They might be made a sort of Imperial newspaper correspondent, to send home to the British people vivid narratives of great Colonial functions. We have here a description of the demonstrations, reports of leading speeches, and opinions of the Victorian press,—the whole in the style of the journalist who is bent on making his picture complete; yet with the authority of governor and colony behind him. Mr. Leonard Courtney reviews Canning's policy over the Eastern Question, the complete failure of which he does not wholly regret. Mrs. Walter Creyke suggests cycling in figures and mazes and round a maypole, with other fancy devices, as an excellent pastime for girls, now that the first simple cycling craze is over. Lady Archibald Campbell recounts instances of Highland second-sight, and the Marchioness of Londonderry wails over the Conservative Compensation Bill as henceforth "no employer of labour will continue to find work for any except able-bodied, strong men in the prime of life, and, if possible, without dependents."

CASES for Binding any Volume of the REVIEW OF REVIEWS may be obtained on application. Price 1s. 3d., by post 1s. 6d.

## THE NATIONAL REVIEW.

THE most important article in the September number will probably be felt to be Mr. Maurice Low's monthly survey of American affairs, of which two separate notices are given elsewhere.

## THE ONE THING NEEDFUL IN AGRICULTURE.

The gospel of Bimetallism is very faithfully preached. The Supplementary Report of the Royal Commission on Agriculture, embodying bimetallist suggestions, is extensively quoted and enforced in the monthly chronicle; and is further made the text of the first article, one by Mr. W. E. Bear, with the challenge-title "Shall Agriculture Perish?" Mr. Bear is very indignant with the Commission as a body for not investigating further the grounds of the "fall in prices," which is the proximate cause of agricultural depression, and for declining to propose any remedies, as though agriculture were to be calmly allowed to decay. Foreign competition is no sufficient explanation. The demonetisation of silver was, of course, the deeper reason. Mr. Bear joyfully contrasts Lord Farrer's denial of the appreciation of gold with Sir Robert Giffen's emphatic affirmation of such an appreciation during the last twenty-five years and the consequent contraction of gold. The immediate practical upshot of the discussion is the duty of Great Britain accepting the invitation of the United States to an international monetary conference.

## INDIAN LOYALTY.

Mr. H. M. Birdwood, C.S.I., late Member of the Governor's Council in Bombay, extols the merits of the British civilian in India, who, he thinks, does not advertise himself sufficiently. He deeply deplores the persistent and malicious misrepresentation of British policy in the native press, and appeals to the leaders of native society to promote a more just and healthy public opinion among the natives. At the same time he is convinced that the bulk of the people, having tasted oppression before they came under the British sway, are too sensible of the blessings they enjoy to be misled by seditious prints. "The Indians who are estranged from us . . . are absolutely insignificant in numbers and influence as compared with the millions who are satisfied with it."

## THE HIGH MORAL VALUE OF FETISHISM.

Miss Mary Kingsley contends that African law cannot be understood without knowledge of African religion. She quotes Spinoza's great words concerning the identity of the power in Nature and in man with God, and declares that, putting spirits for God, you have in Spinoza's definition the religion of the African. From her accounts religion seems to be much more of a practical reality in the life of the black than of the white man. "The thing that holds the society together and acts as the great deterrent to crime against the society" is "Fetish religion." The presence of the market-god ensures perfect honesty in trading, and a charm will amply protect goods otherwise totally unguarded. The Fetish spirits are practically the policemen of African society. No confidence can be put in the mere word of an African spoken out of oath; but you may stake your life on the truth of what is spoken under oath, even by "the wildest bush cannibal in all West Africa." In this connection it is interesting to observe that the Colonial chronicle for the month explains Mr. Chamberlain's exoneration of Mr. Rhodes—which it deploras—and the Government's extraordinary tolerance towards him by, in effect, declaring Colonial premiers and ex-premiers to be exempt from prosecution by the Imperial Government.

## A FATHER'S PARTING ADVICE TO HIS SON.

"The worship of athletics" pursued at the expense of lessons is lamented by Mr. A. H. Gilkes, headmaster of Dulwich College. The current rage for cricket could scarcely be better shown than by the following story:—

I was lately dining in the company of a gentleman—a parent—who after dinner said to me, with some feeling in his tone, that he had that day taken his son for the first time to —, naming a great school, and that he had taken the opportunity given him by the parting to give his boy the best advice in his power. I said that the occasion was well chosen, for that when a boy was going into a strange and somewhat perilous life he needed guidance; and moreover that then his heart was soft and open, and thus he would receive and remember what was said. The father agreed with me, and said that the advice which he had given his boy was to take up bowling rather than batting as likely really to be of more service to him.

Mr. Leslie Stephen writes *Johnsoniana* apropos of Dr. Birkbeck Hill's edition of Johnson's *Miscellanies*.

## CORNHILL.

THERE is a great deal of excellent reading in the August number, but only one article—that on Cromwell's Court—calls for special notice elsewhere. The bad news from the Indian frontier makes one turn with something like feverish interest to the personal narrative of the Sepoy revolt at Delhi in May, 1857, by Col. E. Vibart. It is a vivid and not easily forgotten picture of how the dread mutiny first showed itself. Sir Edward Strachey gives a very beautiful sketch of his cousin, Charles Buller, of Cornish descent, born in Calcutta, loved pupil of Carlyle, member if not creator of the party in Parliament of the philosophical Radicals, and secretary to Lord Durham on his famous embassy to insurrectionary Canada. The writer claims for Buller the solution of the Canadian problem. Lord Durham merely appended his signature. With the exception of health, "Charles Buller had all the qualifications, inherent and acquired, for making a great English statesman." Mr. W. M. Acworth writes the anniversary study on the great engineer, Brunel, who it appears was the son of an English mother, but his father was a French *émigré*, who escaped to America from the Revolution, and after holding a government appointment as engineer in New York, settled down in this country. Mr. Frank T. Bullen, one of the brightest of the new writers, reviews the history of Antarctic exploration, which, he concludes, possesses only a scientific interest. But he thinks that the sperm whale fishery might be rehabilitated in the South Seas between fifty and sixty degrees, where there are whales in vast numbers and of the largest size. Mr. J. P. Grund tells the story of the last days of duelling in the British Isles.

**The Wedding Ring Circular.**—Over two hundred ladies and gentlemen are now corresponding with each other by means of the MSS. Journals of the various Circles and anonymous epistles forwarded to and from headquarters. An annual subscription of ten shillings has been agreed upon (1) to cover expenses of postage and clerical work, and (2) as a guarantee of good faith on the part of the members. A list of the members is now printed, and will be forwarded to any reader who will send a stamped addressed envelope for the purpose to The Conductor, Mowbray House, Norfolk Street, Strand, W.C.

## THE NORTH AMERICAN REVIEW.

*The North American Review* is a good average number. I notice elsewhere the first two articles.

## AMERICA AND THE PACIFIC.

The late Mr. Ide, late Chief Justice of Samoa, contributes a very solid article upon the interests of the United States in Samoa. It is as full of facts as a brief, and it is indeed the brief for the party which, in opposition to President Cleveland, strongly insists upon the protection and, if need be, the extension of American interests in Samoa. America has already obtained a coaling station in the Pago Pago Harbour, and has certain well-defined treaty rights in common with Great Britain and Germany. Mr. Ide says:—

The real questions are, having secured the autonomy and neutrality of Samoa by the only available means, shall we now permit the islands to be appropriated by a European power? Having in an honourable way acquired valuable rights in one of the best harbours in the Pacific, shall we fling them from us? Having deliberately and with full knowledge entered into an international compact which forever made secure to us rights, and the only remaining possible ones, in the centre of a vast commerce, shall we voluntarily release our grasp?

## THE PRAIRIE STATES OF AMERICA.

Mr. Mulhall, continuing his examination of the statistics illustrating the growth of the United States, deals with the Prairie States, of which there are twelve: namely, Ohio, Illinois, Indiana, Missouri, Michigan, Wisconsin, Iowa, Minnesota, Kansas, Nebraska, and the Dakotas. Mr. Mulhall says:—

Compared with the Union at large, the Prairie States stand for 36 per cent. of population, 47 per cent. of agriculture, 34 per cent. of manufactures, 31 per cent. of mining, and 39 per cent. of wealth; so that they may be said to constitute all round 35 per cent. of the Great Republic. In many respects they surpass in importance five or six European empires and kingdoms rolled into one; and yet men still living can remember when their population did not exceed that of the island of Sardinia.

## THE NAVAL BATTLE OF THE FUTURE.

Admiral Colomb, in the article entitled "The Progress of British Warships' Design," maintains that the Chinese admiral was defeated by the Japanese because the Chinese navy was constructed under the influence of the tactical idea of a French admiral, who wrote in 1855. His idea was that ironclads should fight, not broadside on, but lying side by side with each other so as to concentrate the fire of their guns at bow and stern. The idea of broadside fire was more or less abandoned until we had the supreme embodiment of the new notion in the *Inflexible*, where broadside firing was sacrificed in order to develop fuller fire in the line of keel. Now the Chinese navy was built under the influence of this conception:—

Every one heartily condemns the Chinese tactics, but few understand how they were forced on Admiral Ting by the designs under his command. Still fewer understand that the plan of the battle and the losing side in it were determined in 1855. The battle of Yalu was the first experiment testing the *Inflexible* design; it was the first trial of the great action of line-ahead against line-abreast; the first practical condemnation of the idea that broadside fire could be economically sacrificed to right-ahead fire.

## THE VEXED QUESTION OF QUARANTINE.

The Health Officer of the Port of New York writes an article on quarantine methods, in which he embodies the results of his experience. He says:—

The treatment of a presumably infected ship and passengers together is as a rule impracticable, inconsistent, and not sustained by experience, and an infected ship and its passengers should, if possible, part company immediately upon the arrival in port, that each may be treated as the occasion demands. It would seem that with the practical application of the scientific knowledge of germ life we now possess, and with the absolute certainty of the destruction of these micro-organisms by proper disinfection, the quarantine work of the future will receive the respect and hearty co-operation of the public.

## AN EXPORT BOUNTY FOR AMERICAN WHEAT.

Mr. A. R. Smith discusses the proposal which seems to have a good deal of fascination for the American farmers. It is proposed that the United States Government should adopt the Bounty System so as to enable the American farmers to compete in the markets of the world at an advantage with such cheap labour countries as India. It is held that £10,000,000 sterling per annum voted as a bounty to agricultural exports would enable the farmers to get £45,000,000 per annum increased prices for the value of their goods supplied to the home market. They point to the success of the Bounty System as applied to develop the sugar industry in Germany, and its advocates undoubtedly have the Protectionists in a very tight place, for they argue:—

1. Either the producers of our agricultural staples must be permitted to buy in the cheapest market, in which the price of their products is fixed; or, 2. The price of their products must be enhanced in the home market equally with the enhanced price which a duty on competing imports enables our manufacturers to obtain for their products in the home market.

Mr. Smith says that the cardinal basis of the demand for the export bounty on farm profits has always been its equality. It would equalise Protection, but they also take their stand upon the example of Great Britain in the old days:—

From 1688 until the beginning of the present century, Great Britain gave a bounty to exporters of grain, conditioned on its shipment in British vessels, the master and three-fourths of the mariners of which were required to be British subjects. Thus, for more than a hundred years, the producers of agricultural staples and the owners of vessels carrying the exports thereof, were simultaneously protected under the English Export Bounty Act.

## OTHER ARTICLES.

Professor Abram S. Isaac's paper, entitled "Has Judaism a Future?" is an eloquent exposition of the views of a Jew, who declares that Judaism's future will only dawn when the nations have reached the heights of perfect brotherhood. Mr. E. T. Hargrove discourses upon "Theosophy and Ethics." Mr. Hazeltine replies to Mr. Speaker Reed's exposition of the difficulties of legislation in the House of Representatives, and the Comptroller of the Currency points out how the menace of legislation interferes with business. If the country is to be free from the forces that threaten its political and financial integrity, the first and greatest reform to be entered upon should be the eliminating of unnecessary and unwise legislation. Mrs. Charlotte W. Porter, writing on "The Opportunity of Girls' Private Schools," maintains that the American method of allowing children to grow up without being taught obedience is visible in the growth of a spirit of license, decline of a sense of duty, avoidance of what is hard, and excessive devotion to pleasure. These things work out in turn in the lawlessness of political bosses, lynching mobs, and legislative assemblies, and in the slipshod work which everywhere confronts us.

## THE FORUM.

THE *Forum* for August announces that for and after the September number the price of single copies will be raised from twenty-five to thirty-five cents.

## THE WEAKNESS OF THE AMERICAN ARMY.

Major-General Howard, in a paper entitled "A Plea for the United States Army," points out that the army is far too small to justify the American Government in adopting an aggressive attitude towards its neighbours. Even in peace time the army is utterly inadequate to discharge its duties. Major-General Howard refers to Spain as a case in point. The American Jingoists argue that the United States has nothing to fear from a war with Spain, but Major-General Howard points out that Spain has at the present moment under arms 427,000 men, of whom 270,000 are in Cuba:—

In the event of a sudden war with Spain, to meet the land side, we have 28,238 regulars—officers and men. More than half of this army would be needed in the fortifications and posts now occupied. These, in time, would be replaced by volunteers; but the process would necessarily be slow.

His idea is that the American army should be raised to at least 50,000 men.

## CONCERNING THE AMERICAN SCHOLAR.

President C. F. Thwing, writing on the Sixtieth Anniversary of the delivery of Emerson's Address on the American scholar, discusses the question as to how far the Americans have justified the lofty aspirations of the New England philosopher. The answer is not reassuring to American pride. President Thwing says:—

What have American scholars done in these sixty years through the recreating for this generation of the materials of the past? The answer is not a ground for boastfulness. In the single field of classical philology, Germany has gone as far beyond us as we have gone beyond our forefathers. We are obliged to confess that the great scholars of the world are the scholars of Europe. When one calls over the names of great scholars of the last sixty years one does not find many American names.

American books on philosophy are usually well written; but in general they lack depth and comprehensiveness. The great men in logic of this period are either Englishmen or Germans; although one should perhaps mention the work of Charles Peirce. When one thinks of the great ethical scholars of our time, the names that first occur to one are those of Englishmen—Spencer, Green, Sidgwick, Stephen, and Martineau.

Let us confess then, says President Thwing, that the Germans far excel us in scholarship. Frank confession of this sort is a pre-requisite to making ourselves scholars.

## THE FUTURE OF THE RED MAN.

Simon Pokagon, the last chief of the Pottawattamie Pokagon band, writes eloquently and well as to the future of his race. He explains the difficulties under which it labours, specially mentioning the wicked work of the great devil-fish alcohol, which embraces and kisses, but to poison like the snake, without the warning rattle. The destiny of the Indian is to disappear by amalgamation with the white, and this, it is interesting to note, he considers will be much better for the white than for the red race. Half-breeds are an improvement on the pale-face, but the opposite for the Indian. Those who have a strain of Indian blood are much freer from nervous complaints than the pure-bred white. Pokagon concludes his article as follows:—

The index-finger of the past and present is pointing to the future, showing most conclusively that, by the middle of the next century, all Indian reservations and tribal relations will have passed away. Then our people will begin to scatter, and the result will be a general mixing up of the races. Through

intermarriage the blood of our people, like the waters that flow into the great ocean, will be forever lost in the dominant race, and generations yet unborn will read in history of the red men of the forest, and inquire, "Where are they?"

## THE CASE AGAINST THE ANNEXATION OF HAWAII.

Senator Stephen M. White, writing upon "The Proposed Annexation of the Sandwich Islands," sets forth very vigorously the objections to such a policy from the point of view of the Hawaiians:—

We must, so far as diplomacy goes, recognise those actually governing; but this does not mean that we can always properly accept title from a *de facto* ruler. We should go to the root of the claim. The moral side of the matter must not be ignored. I do not concede the integrity of the title offered. I am confident that the people whose rights are affected are antagonistic to the project. It is against our policy and interest to interfere in the affairs of remote islanders. The proposed acquisition is not necessary for our protection, nor important to our trade. Judicious treaty arrangements will secure all possible mercantile advantages. There is no danger of foreign interference in the presence of our avowed insistence upon Hawaiian autonomy; our rights in that regard being universally admitted.

## THE POLITICS AND THE PLAGUE AT BOMBAY.

Professor Washburn Hopkins, in the course of an extremely interesting article on "The Political Aspects of the Plague in Bombay," maintains that the contrast between the way in which the Imperial Government dealt with the plague, and the lethargy and incompetence displayed by the municipal council, two-thirds of which is composed of natives, is a very instructive lesson as to the art of government in the Indian Empire. The chief political importance, however, of the matter is to be found, he thinks, in the collapse of the opposition of the Sunni Mahomedans when they were confronted by the categorical imperative of the Government. The India of the mutiny has passed away. Outsiders, says the Professor, do not understand this:—

They are prone to believe that the natives are still in a state of sub-sedition, and that the slightest disturbance may result in a volcanic eruption of native forces. The history of the plague is an object-lesson in respect of all these points.

## The New England Magazine.

THE *New England Magazine* publishes another of its interesting articles about the birds of New England. The cuckoo of New England seems to bear a very remote resemblance to our familiar spring visitant. Mr. William Clarke contributes an article on "The Present Mood of England." He thinks that there is a deadness which can be felt like the Egyptian darkness of old. There is a dull stagnation, a predominance of vulgar aims, and a small unlovely cynicism which goes well with the devotion of the country to money-making and sport, the only two forms of activity really carried on with zest. The men in power to-day in England are the millionaires. Reaction lies heavy as frost and deep almost as life. There is not a breath stirring anywhere. The result of the South Africa Committee shows that England is wallowing in moral infamy. The domination of material interests ought to be held responsible for the present deadness and reaction in England. From which it would seem that Mr. William Clarke suffers from dyspepsia, and wrote his article when he had a very severe fit of the blues. The article entitled "Old Days and New in Northfield" describes Mr. Moody's home in Connecticut and the work that is carried on there. The other articles are "Old Quaker Days in Rhode Island," and an account of Oliver Holden, the composer of "Coronation."

## THE REVUE DE PARIS.

We have alluded elsewhere to M. Benoit's extraordinary article on the King of Siam in the second August number of the *Revue de Paris*. The principal feature of the first August number is a continuation of the correspondence between Ernest Renan and his friend M. Berthelot. This instalment covers the period from January 7th to September 16th, 1850. It must be admitted that M. Renan's letters, of which there are more than M. Berthelot's, are not of very great importance, but it is mildly interesting to see what this most acute mind thought of Italy, where he was travelling for most of the year 1850.

## M. RENAN ON THE RELIGION OF NAPLES.

In his impressions of Naples he puts in clear language what probably most visitors to that city feel but are unable to express. He says that, just as Rome enabled him to understand for the first time the majesty of a dominating religion which monopolised the spiritual life of a whole people, so Naples made him understand for the first time the absurdity and the horrible bad taste of a religion which has been degenerated by a degraded people. "God," he says, "is as unknown in Naples as among the savages of the Pacific Ocean, whose religious belief is reduced to a faith in genies. The Neapolitans have no God, they have only the Saints. And who are the Saints?" he asks—"not models of religion or morals, but miracle-workers, a kind of supernatural magicians by whose aid one gets out of any difficulty when one is ill or in some fix." There are Saints for robbers, and Renan says he has seen with his own eyes some "ex-votos" in which the donor, a robber, is represented as being delivered from the hands of the *gendarmes* by his patron Saint. He finds it difficult to express to his correspondent the profound disgust which he felt at this religion of Naples. "The churches are full," he says, "not of art or of idealism, but of gross sensuality, and this is not to be wondered at, for the people are radically destitute of moral sense."

## ON THE THREE ITALIES.

He does not include in his sweeping condemnation the whole of Italy. He distinguishes. There are, he says, three Italies—(1) the Italy of the north, which is ruled by the intellectual and rational element like the rest of Europe, and is full of political, practical, and scientific activity; (2) there is the Italy of the centre, in which the rational element and the sensual element are combined in such a proportion as to promote the growth of art and of religion, but rather to discourage science and philosophy; and lastly, the Italy of the south, of which Naples may be taken as a type. Renan was most pleased with his stay at the Abbey of Mont-Cassin. There he found a *naïve* openness to modern ideas. The librarian has a copy of Strauss's "Life of Jesus," and he hears on every side talk of Hegel, of Kant, of Georges Sand, and of Lamennais. It is rather curious to see that under date January 26th, 1850, Renan writing from Rome says that the Pope will never come back there. So much for political prophecy.

The letters are full of characteristic comments upon men and things. Renan calls Mazzini an Italian of pure blood, a Florentine of the fourteenth century, but a terrorist and a cut-throat.

## HERBERT SPENCER ON FRENCH.

The study of sociology in Herbert Spencer's sense seems to have at least one prophet in France, M. Bouglé, who contributes an article on it, in which he explains the

way in which he thinks the study of it ought to be spread. Certainly if we all followed his advice we should all be sociologists indeed, for he adjures us to study thoroughly and scientifically the place where we live and its inhabitants. It is an amusing and interesting article. He takes an imaginary town, which he calls St. Pol, and shows us by that example how to observe the life of a town in all its details, the military, the fashionable, the religious, and the musical life; in fact, every quality and characteristic of the inhabitants are serviceable in analysing the whole. In England this kind of thing generally results in a novel, except in those rare cases where it is done by a man of extraordinary ability such as Charles Booth.

## OTHER ARTICLES.

M. Parigot has a biographical article on Dumas *père*. It is an able summary of the chief events in the life of the great romancer, and it is written from the point of view of a sincere and yet not indiscriminating admirer.

The interest of the French in Madagascar appears to be increasing not a little. The writer who signs himself Grosclaude finishes his article on the Sakalava, that curious tribe who gave the French some trouble before the subjugation of Madagascar was complete. These rough notes of travel would have been better if they had been properly condensed and combined, instead of being left under their original place-headings. Few travellers can afford to publish the contents of their note-books without some sort of editing. It is satisfactory to learn that the country is now settling down, and that agriculture is lifting its head after the ruin and desolation entailed by the late war.

The second August number gives the place of honour to some interesting letters addressed by Alfred de Vigny, the famous author of "Cinq Mars," to Mlle. Camilla Maunoir, a kinswoman of his. Mlle. Maunoir, whose mother was an Englishwoman, wished to translate into English some of de Vigny's poems, and the correspondence, begun on that footing, continued with most of the ardour on the lady's side. She afterwards kept a girls' school at Geneva, an occupation for which her somewhat austere piety as well as her intellectual gifts well suited her. She died in 1889. De Vigny used to call her "my dear Puritan," and his letters to her exhibit very clearly that high feeling of duty and honour which characterised not only his works but also his private life. The present instalment of the letters covers the period from December 6, 1838, to May 23, 1848.

M. Larroulet has written a very readable article on the field of Waterloo, which is illustrated by an excellent map. He relates the very stirring story of the fight, and he recommends the tourist not to content himself with looking at the hills of Waterloo from the height of the Butte de Lion, but to pass on from Brussels to Mont-Saint-Jean, from Braine-l'Alleud to Papelotte, from Plancenoit to France.

The *Revue* concludes with an anonymous article entitled "A Possible Peril." This is, in brief, the old bogey of Islam. It is pointed out that the Turkish victories over Greece have greatly excited the Mahomedan world, and it is said that among Mahomedans everywhere the possibility of establishing a theocracy is being regularly canvassed. Certainly the anonymous writer's allusion to the millions of Mahomedans who live under the sway of the Queen reads like a curious prophecy in the light of later events on the Indian frontier.

## THE REVUE DES DEUX MONDES.

THE *Revue des Deux Mondes* for August is scarcely so good as usual, no doubt owing to the holidays. Still, there are two or three articles which deserve special praise, and among them is M. Bonet-Maury's on the Scotch Universities, which we have noticed elsewhere.

## RUSSIA TRANSFORMED.

M. Anatole Leroy-Beaulieu opens the first August number with a paper, very topical in the month of President Faure's visit to Russia, on the social transformations of the Russia of to-day. The organisation of the *mir*, the joint ownership of the soil by the inhabitants of a village, is well enough for a primitive and agricultural country. But the introduction of manufactures, the increase of towns, the employment of all the complicated machinery which the past century of invention has created—all this must radically alter the simple arrangements which suited a less complex social organisation. The Imperial Government, no doubt unconsciously, has done everything to create and to increase an artisan class to whom the land question is either of secondary or of no importance. Already there is being formed—the invariable accompaniment of an artisan class—a proletariat in every respect analogous to the proletariats of Western Europe. Russia is determined to become an industrial State, and the centralised character of the government is particularly favourable to an extraordinarily rapid economic development. Agriculture, the territorial nobility and the classes depending on them, are being steadily sacrificed to this all-devouring industrial ambition entertained by the small group of men in whose hands lie the destinies of the vast Russian empire. It follows irresistibly that the very foundations on which the social structure rests in Russia must undergo—nay, is even now undergoing—a complete transformation. The organisation of the *mir* has in the past preserved the great Slav empire from the encroachments of individualism and the competition of classes, but with industrialism inevitably enters the feeling of personality, the consciousness of self. We may perhaps see the Russian workman, released from the ties of agricultural communism, evolving for himself a corresponding form of industrial collectivism. But M. Leroy-Beaulieu rather hopes than expects that the emancipated peasant will retain as an artisan his naïve adoration for his God and his Tsar. The surveillance of a paternal government is useless, for the ferment of ideas and aspirations which has led to such momentous political changes in the West grows within the factory and the workshop, and is not imported from foreign countries. It is significant that M. Leroy-Beaulieu, a citizen of the French Republic, rests his hopes for Russia's safety on that strong despotism which he thinks may be found to fulfil, better than all elective governments or Parliamentary monarchies, the future mission of all governments—that of holding the balance even between the conflicting interests and struggles of classes.

## MISCELLANEA.

M. Barine finishes his gloomy study of alcoholism as exemplified in the person of Edgar Allan Poe, and judicially points out that the fact that Poe was paying for the errors of his ancestors did not absolve him from all responsibility, but on the contrary only increased his responsibility and rendered it the more clearly his duty to redeem himself from his terrible vice for the sake of posterity.

The second August number of the *Revue* has two historical articles of no great interest to English readers,

though it may be worth while to mention that M. Lamy traces the illogical position which the Church nowadays occupies in France back to the question of the taxation of Church property in the reign of Philippe le Bel, which was resisted by Pope Boniface VIII. It seems rather far-fetched, but as he works it out the theory seems plausible.

M. Paulhan's paper on the psychology of the pun is curious. From it one gathers that the inveterate punster is a poet gone wrong, or at any rate, that he has one quality generally possessed by poets—an ear for assonance. M. Paulhan gives us a good deal of interesting philology, and he succeeds in showing what a powerful influence this old human instinct or failing—call it what you will—for more or less accidental similarities of sound has had on the formation and the development of myths, legends, and even religions. It is probable that French people love puns even more than the English, with whom this form of wit has fallen into a not altogether deserved disrepute. But no nation appreciates another nation's puns, and it is therefore useless to quote any of M. Paulhan's examples.

Among other articles in the *Revue* may be mentioned one by M. Valbert, on the years which Prince Bismarck has spent in retirement, and a description by Count de Calonne of the practical way in which agriculture is taught in the French rural schools.

## THE ARENA.

THE *Arena* for August is as usual extremely solid and very strenuous. Mr. Robert N. Reeves' paper on "The Limitation of Wealth" maintains that the time is now ripe in America for legislation. A progressive income tax and a tax upon inheritances should be made the law of every State. There are two articles entitled "The Battle of the Money Metals," the first of which, by Mr. G. H. Lepper, is entitled "Bimetallism Simplified," and the second, by John Clark Ridpath, is called "Bimetallism Extinguished." Mr. Norman Robinson writing on "The Segregation and Permanent Isolation of Criminals," suggests that life criminals should be absolutely and permanently isolated in walled villages of simple and inexpensive cottages. These communities of criminals should have their own courts, their own lawyers, their own judges, their own system of penal law, and their own machinery for its enforcement. As far as possible they should be left to themselves in the hope that although crime might run riot at first, the instinct of self-preservation would at last assert itself. As the sexes are to occupy separate villages, they would soon die out, and that is about the best thing that can be said in favour of his scheme. Mr. B. O. Flower, writing in the magazine which he formerly edited, suggests that the best way to increase national wealth would be to issue national notes for the purpose of setting the unemployed to work in building an embankment for the Mississippi river, in irrigating the plains of the West, and in providing other work for the out-of-workers. Mr. Millard's open letter to Eastern capitalists warns them that their Western investments are not worth 53 cents in the dollar, and that they had better agree to free silver before worse things happen to them. The article entitled "A Noted American Preacher" is a sympathetic and highly complimentary account of the Rev. Minot J. Savage, a Unitarian, formerly of Boston, now of New York, who has had the courage to express his belief in spirit return. Dr. H. R. Waite's article on "The Civic Outlook in the United States" is a careful and useful survey of progress made in the direction of civic reform.

## WESTMINSTER REVIEW.

THE September number does not rise above the average level. Perhaps the most interest is roused by Mr John Herlihy's paper on the Government's Irish policy. The writer cannot regard that policy as a solution of the Irish problem. He lays great stress, however, on the growth of a common consciousness among all Irish parties, even the most opposed. The agitation on the financial relations not merely brought Catholic and Protestant, Home Ruler and Unionist, landlord and tenant into one compact array: it brought the Irish gentry and landowners to the front as the natural leaders of the Irish people. Their own interests as ratepayers will probably compel the classes to join representatives of the masses in the new bodies of local government: and the spirit which has made landowners and Orangemen declare themselves Irishmen first and Imperialists afterwards may be expected to grow stronger. Mr. Herlihy hopes that the Irish gentry will serve on the new councils, and learn there a trust in self-government, which may develop into a faith in Home Rule. But only as they move in that inevitable direction can they hope to regain and retain their proper social leadership. Writing on Irish Education, Mr. M. Dalton pleads for a better teaching of agriculture in the elementary schools, with gardens attached to every school for experimental instruction. He would go so far as to open half-a-dozen purely agricultural schools with farms attached. "Progressing by Going Back" is the title of a paper by Mr. R. Seymour Long, in which he seeks to show that many of our modern reforms are simply reversions to a more ancient order of English society. The parish meeting is the old township-moot; the district council, the hundred-moot; the county council, the shire-moot. Crown lands have become folk-lands once more. Dr. Leftwich has no longer any doubt that English will be the international language of the future. Foreign critics themselves recognise this. The only obstacle is our extraordinary spelling. Dr. Leftwich proposes to begin the needed reform by what he calls the Harporatic System. He would omit all silent letters except initials, which he would print in italics. He would indicate a long vowel by long mark above it (as in Latin prosody). He would retain *gh* only when pronounced. He commends his scheme to Japanese statesmen. The object-lesson of the Cuban war is, according to Mr. Leonard Williams, the "wickedness of the governors, ignorance of the governed." He regards the independence of Cuba as inevitable, and anticipates a kindred revolution in Spain, when popular education has done its work. Herbert W. A. Wilson contributes an impassioned rhapsody in praise of the trained hospital nurse, whom he starts by describing as "the supreme outcome of Christianity."

## Cosmopolis.

THE September *Cosmopolis* is distinguished by Dr. Max Müller's racy reminiscences of Royalties he has met, some of which are noticed elsewhere. Malwida von Meysenbug's (German) recollections of Joseph Mazzini, with many of his letters to her, shed a very pleasing light on the gentler aspects of the great revolutionary's character. Mr. John G. Robertson remarks on the preponderance of the drama over the novel in contemporary German literature. He does not know quite whether to attribute it to the health of the literature, or to the excellence of the German theatre, or to the lyrical facilities of the German tongue. Lou Andreas-Salome, on the other hand, observes of a still more unsophisti-

cated literature, that "in Russian fiction more science—the most subtle—more philosophy—the most profound—is present than in all the scientific works which every year are thrown on the market." Women are among the most prolific of contemporary novelists. Russia possesses, too, a series of good lyric poets, "as also her language is wonderfully suited to the lyric." Nevertheless, what poetry has appeared is a preparation and a promise rather than an achievement. Writing of the Polish poet, Adam Mickiewicz, M. Stanislas Rzewuski pronounces him "the equal of Goethe and Schiller, of Byron and Shelley, of Victor Hugo, Lamartine and Alfred de Vigny, of Ruskin, Nekrassof and d'Oehlenschläger." The mention of these papers, out of many, suffices to suggest the wide view which the *Cosmopolis* offers over ground not too familiar to the British public.

## The New Review.

THE chief article in the September number is Mr. de Thierry's protest against Liberals posing as the first Imperialists,—which is noticed elsewhere. Mr. C. B. Roylance-Kent gives a slight sketch of the literature of Anarchism. A "Novel Reader" emits a racy "Warning to Novelists," full of satire against the extravagant assumptions of certain of our most prominent artificers in fiction. Mr. James Long supplies much interesting if not exactly novel information about Danish co-operative butter-making, along with delightful glimpses of Danish village homes, but concludes his eulogy of Danish education, co-operation, and peasant proprietorship with the desponding remark, "We are unable to understand how, by the adoption of the same system and the acceptance of the same price, he [the British farmer] can secure for himself more than the wages of a labourer."

## The Progressive Review.

THE September number seems to suggest that the *Progressive Review* wishes to assume the rôle of censor *morum*. The editor begins with a solemn rebuke to the working classes for the way they seek to sponge on their parliamentary representatives. They are informed that they applaud but do not really desire payment of members; what their actions show is that they desire "payment of constituents." The run on the pocket of the M.P. for every village cricket club or local celebration has reached something like a climax in this year of Jubilee. Working men are warned that these clamorous demands mean in effect the selling of the seat to the highest bidder and the exclusion of poor men from Parliament. A nameless writer bewails the absence of a constructive Liberal policy, and exhorts "the New Liberalism" to state its ideas of progress. Mr. Ford Ashton, reviewing the work of the South Africa Committee, first denounces any suggestion of Mr. Chamberlain's complicity as an "unclean" attack on "the reputation of an innocent man," and then with fine consistency goes on to denounce this same innocent man for "inventing a new pinchbeck code of morals—manufactured, I suppose, in Birmingham—in order to shield his own delinquency in not insisting upon his (Mr. Rhodes') prosecution." A member of the Institute of Journalists urges that body to exercise discipline against several journalistic sins, such as puffing fraudulent companies for bribes, inserting disreputable advertisements, and paragraph advertisements inserted as news. The general strain of judicial rigour is somewhat relieved by E. Hughes' eulogy of a negro lyric poet, P. L. Dunbar.

## ILLUSTRATED MAGAZINES.

**The Century Magazine.**

MR. HARRY FURNISS, in the *Century* for September, publishes a paper called "Glimpses of Gladstone," with sketches from life by the author. Another article describes Browning's Summers in Brittany. The late Mr. Glave's article on Cruelty in the Congo State is noticed elsewhere. Mr. Pierre de Coubertin gives us his Notes—by a Parisian—on Royalists and Republicans. Miss E. R. Scidmore tells how she explored the ruins of Buddhist Temples. There is a fresh instalment of the papers dealing with Grant.

**Pearson's Magazine.**

*Pearson's Magazine* continues to maintain its popularity and keep up the standard of excellence with which it started. Of the current number, one of the features is an excellently illustrated paper entitled "An Elephant Round-Up," explaining the methods employed in capturing the huge creatures in Siam. One of the most out-of-the-way papers is an account of Mr. Henry Lee's extraordinary impersonations of notable men. He is a lightning-changing artist who, with the aid of four dressers, rushes through a series of personations in an evening with lightning rapidity. He is by turns the Pope, Mr. Gladstone, Ibsen, Lord Beaconsfield, Rudyard Kipling, the German Emperor, Prince Bismarck, Lord Tennyson, and Shakespeare. His wardrobe complete represents an investment of £500, and some of his make-ups have cost as much as £80. Mr. Sherard describes how arsenic is obtained. He says that the world's supply of arsenic comes almost all from the mines of Devonshire and Cornwall. It is satisfactory to know that the extraction of the deadly poison is very seldom fatal to those engaged in its industry. The article by Mr. R. Machray, entitled "Cable from Shore to Shore," explains all about the deep-sea cables.

**The Badminton Magazine.**

*Badminton* is seasonable, as usual. The editor writes on "Recent St. Legers"; the Hon. J. S. Montagu describes the driving of partridges on the northern fringe of the Solent. Near the sea, on the coast, the Hampshire partridges swarm. They live on the yellow ants on sand-tops. Mr. Cornish tells a story of the day which he spent with a Norfolk gunner, and the Rev. George Preston tells the story of a day which he spent on the Norfolk Broads. There is an interesting paper on "Amateur Cruising on the West Coast of Scotland," by Mr. W. M. Dixon. Mr. H. Lindsay describes the delights of markor-stalking in the Himalayas.

**The Woman at Home.**

THE *Woman at Home* contains an article upon "Sir Walter Besant at Home," the gist of which I have extracted in another column. Another paper describes Mrs. Alfred Harmsworth at home. It is a brightly-written description of the wife of one of the youngest and most successful of the editors of London. A "Parliamentary Hand" writes enthusiastically upon the Marquis of Lorne; while Sarah Grand, Mrs. Joseph Parker, Mrs. Haweis, Lady Laura Ridding, and Annie Swan discuss the momentous question as to whether it is ever justifiable to break off an engagement. It would be difficult to plunge deeper into the depths of imbecility than to gravely propound so idiotic a question. Surely we have difficulty enough in maintaining against very specious arguments the doctrine of the indissolubility of

marriage; but to pretend, even by a suggested question, that an engagement should be as indissoluble as marriage, is simply too absurd for comment.

**Harper's Magazine.**

*Harper's* is a good number. It opens with a charming paper by Mrs. Pennell entitled "Around London by Bicycle." The origin of the article was the fact that one year the Pennells were unable to escape from London long enough to make a foreign tour a possibility. So they mounted their cycles and rode round the outside ring of London. This paper tells their adventures, describes places that they visited, and it is illustrated. There is an interesting little natural history paper on the Milkweed (*Asclepias cornuta*) whose purple flowers are so lavishly and curiously provided with honey that large numbers of bees are annually destroyed by its excessive hospitality. Captain Mahan's paper I notice elsewhere. Mr. James Barnes writes an article on "The Beginnings of the American Navy," Mr. Henry James writes ever so many pages concerning Mr. Du Maurier, without framing a paragraph that could be quoted as a sample of the whole. Mr. J. H. Wagner describes life in Samoa in an illustrated paper entitled "The Lotus Land of the Pacific."

**McClure's.**

THE September number has several excellent outstanding features. Quoted elsewhere are Mr. Rudyard Kipling's brilliant tribute to the sergeant-instructors who transformed the army of the Khedive into first class fighting men, and Mr. Joe Ladue's account of life at Klondyke. Colonel G. E. Waring, commissioner of street cleaning in New York, tells in sober prose a story not unlike that Mr. Kipling puts in verse, when he recounts the revolution wrought by honesty and discipline in the army of street cleaners in the Empire City. Under Tammany New York was coated with slime in wet weather, choked with dust in dry weather, and blocked with snow in winter. The street cleaners, being appointed not as men, but as voters, did their electoral duties and little else besides. In 1894 the new dispensation was non-political, but civic and effective. Comfort and cleanliness have been introduced, the death-rate decreased, the sweepers have become "a splendid body of men," there is a prospect of a goodly part of the cost of street cleaning and snow removal being met by the profits of the picking yard, and of New York being the best swept city in the world. The historical portraits are of Henry Clay. It is a sign of the times that an illustrated magazine, put together for the general and not ecclesiastical public, introduces a paper by Mr. F. G. Kenyon, of the British Museum, on "When were our Gospels Written?" and recounts for the lay readers the rise and overthrow of Bauer's theories.

**Cassier's Marine Number.**

*Cassier's* for September is a "marine number," and quite a superb thing in its kind. It contains seventeen articles by experts (with portraits) and over three hundred illustrations, most of which are admirably produced. It has taken "two years of painstaking effort" to get it ready and out. Its purpose is to tell "how a modern steamship is designed, built and launched, and how it is fitted up with engines and boilers and the mass of auxiliary machinery required"—for peace or war. Warships and torpedo-boats come first, but steamboats for shallow streams, and the floating hotels of the American rivers, find a place along with the heavier sea-going craft of commerce.

MR. HALL CAINE AT GREEBA CASTLE.

# THE BOOK OF THE MONTH.

## "THE CHRISTIAN." BY HALL CAINE.

### I.—ALAS!

THIS won't do at all. Mr. Caine's "Christian" is a failure as a Christian, and not much of a success as a story. I am very sorry, but that is the fact. Yet there is plenty to praise in the book besides its excellent motive. There is much evidence, for instance, of painstaking industry. Mr. Hall Caine is a journalist-novelist, who, like M. Zola, has his *pièces justificatives*, his *dossiers* and his human documents. In this volume he has set himself to paint contemporary London as it is to-day. He has filled a huge canvas, and he has not failed in producing a vivid picture of the world as he sees it, and as it actually seethes and boils and bubbles like a Hell broth all around. It is like Frith's "Derby Day" mixed up with Martin's "Last Judgment." The author is equally at home in describing the humours of Epsom and the life of the Anglican monk. He introduces us as one who has the *entrée* into the Prime Minister's sanctum in Downing Street and the haunt of the baby farmer in Soho. We are shown the interior of the Corinthian Club, the drawing-room of Canon Wealthy, and the office of the theatrical agent.

Mr. Hall Caine is not merely a vivid and realistic painter of contemporary life and manners; he is a preacher of righteousness and of justice in matters which appear for the most part to concern most novelists but little. He asserts, not once or twice, but continuously with angry earnestness, the fact too often ignored, that the lot of woman in this world leaves much to be desired, and that of all the evil things in an evil world there is none more detestably evil than the way in which many men deem it right to treat the women whose confidence they can betray. He sees and asserts, regardless of the vast outcry of the obscene crew who batten and fatten on the moral wreckage of an impure and licentious stage and music hall, that the present condition of our popular amusements is a reproach to our Christianity and our civilisation.

Another notable and excellent feature in the book is the vehemence of its protest against the painful and terrible contrast between the lot of the rich and the poor, and its strident summons to the Churches to be more in earnest about making the love of the Father as revealed by the Son a living reality to the men and women of the nineteenth century. All that is good, and deserves the hearty recognition of all who care for the moral and social elevation of their fellow men.

But in "The Christian" we were taught to look for more than mere descriptive chapters of the seamy side of our civilisation—more than mere denunciation of the shortcomings of the Churches, and, in particular, of the Establishment—and we have not got it. It is an undigested mass of matter, put together with unmistakable pains and with the most excellent *motif*. But it is not a gospel, and a gospel it was that Mr. Hall Caine encouraged us to expect at his hands.

### II.—MR. CAINE'S CHRISTIAN.

In "The Christian" Mr. Hall Caine endeavours to set forth the faith that is in him as to the factor by which the salvation of the world is to be achieved. This element is worked out in the life and character of the

hero of "The Christian," who is a clergyman of the Church of England named the Rev. John Storm. Storm is highly connected, a relative of the Prime Minister, and the heir to an earldom; but as the result of much meditation and many observations at home and abroad, he decided to abandon everything and devote himself to the Christian ministry. His first experience as a curate in the Church of England was unhappy. He found himself associated with a wealthy Canon in the West End, who was a tuft-hunter, toady, and Mammon worshipper to his finger-tips. After a brief experience, during which he horrified a fashionable West End congregation by preaching against mercenary marriages, he departs to make a trial of life in an Anglican Brotherhood in the heart of the city of London. Mr. Hall Caine has no love for the monastic orders, and although his sketch of the interior life of the Brotherhood is not altogether without sympathy, he takes very good care that the monastic Brotherhood does not get the best of the argument. After a time, John Storm emerges convinced that his mission does not lie in monkery. The chief cause bringing about this conviction on his part is the fact that he is passionately in love, and has been from the first, with the heroine of this tale, one Glory Quayle, a young lady from the Isle of Man, in the portrayal of whose character Mr. Caine has exerted himself to the uttermost. She is certainly a charming heroine, full of fun and animal spirits, and of a somewhat unregulated ambition, who is always getting into frightful scrapes. Her chief characteristic is a marvellous capacity for keeping up her spirits and keeping her friends at home in the happy delusion that she is flourishing exceedingly and making her way triumphantly in London, at a time when she is at her wits' end how to keep the wolf from the door. There is a fine spirit of defiance of conventionality about Glory Quayle. She has considerable dramatic aptitude, the spirits of a hoyden with the kindly good heart of an affectionate girl.

Up to the point of Storm's abandonment of the monastic order there was a possibility that the story might work itself out and justify the expectation based upon the opening flourish of trumpets. Alas! this is pre-eminently not a case in which the old tag, *Finis coronat opus*, can be said to apply. On the contrary, Mr. Hall Caine seems to take a malicious pleasure in hurling all his characters down into headlong ruin. John Storm, Mr. Caine's Christian, on leaving the Brotherhood, sinks his money in equipping a Mission Church, with all its appurtenances, in the Devil's Acre of Soho. He goes about habited like Brother Ignatius, and labours for the improvement of the lot of the working girls of London in a fashion as praiseworthy as it is practical. But the god of his idolatry is always Miss Glory. Glory, the heroine, having abandoned nursing, is now achieving a great success on the music-hall stage. From this career Storm succeeds in banishing Glory for a while, but the passion for the clapping of hands in the theatre and the craving for the excitement of the career of an artiste prove too strong; Glory returns to the temptations and triumphs of Babylon. Her admirer—the Home Secretary's under-secretary, capably sketched—buys Storm's church over his head to convert it into a theatre, where Gloria is to play Ibsen. After a time Storm meets Glory, whom he

*Photographed specially for "Notables of Britain" by the Stereoscopic Co.]*

Hall Caine.

=

had tried in vain to tear from his heart, and notwithstanding all difficulties, they declare their mutual love and promise to marry. Then ensues a period during which Glory halts for a time between the attractions of her love for Storm and her love for the stage and its excitement. She decides at last that she could not stand London as a clergyman's wife in the slums, and so she begs him to find another field elsewhere.

It is at this point that Mr. Caine's Christian tumbles all to pieces and drivels down to sheer insanity; for no sooner does Storm receive the letter from Glory saying that she cannot live in London, than he is seized with the idea of going off to the leper settlement in the Sandwich Islands as successor to Father Damien. It ministered to his love of sensation; it seemed providential. But what about Glory? Oh, it would be the very thing for Glory! He would take her with him, only, although they would marry, they would live strictly as brother and sister, without any love-making whatever! When this astonishing freak was unfolded to Glory, that young woman very naturally did not see things in the light of her crazy adorer. She was not of the stuff of which martyrs are made, and certainly could not volunteer to be the married maiden martyr of Molokai. That Storm should have ever imagined that such a fantastic scheme could have secured her support is too much. From that page the Christian is self-branded as a man with an unhinged mind, a diseased brain, and he rushes to the doom prepared for him by his unkind creator with feverish, frantic speed.

He drives London crazy by preaching that an avenging God will overwhelm the Modern Babylon with the doom of ancient Sodom, the date of which catastrophe the masses fixed for Derby Day. Derby Day comes. Glory, who has had six months' brilliant success on the stage, goes to the Downs by road with her admirer, the Home Secretary's private secretary. Storm goes there also, to sound in the ears of the multitude the warning of impending doom. The Home Secretary's secretary's horse wins the Derby, and its owner, after drinking champagne galore, kisses Glory, who also has swallowed enough champagne to upset anybody, and then they all go off to the Corinthian Club. After a prolonged orgie, Glory goes home, where she finds Storm waiting for her with intent to kill. Mr. Caine's Christian is now a homicidal lunatic self-confessed, who imagines he is sent of God to deliver her soul from hell by slaying her body. Glory, excited with the Derby spree, flushed with champagne, and maddened with terror, decides that, instead of allowing her body to perish under the maniac's knife, she will use it to ruin her soul, in order that she might purchase her life at the cost of her honour. After this crowning horror, there is nothing left for the ruined, de-pairing man but to wander about aimlessly until he is arrested on a warrant for causing the panic-terror of Derby Day, in which one man lost his life. He was released on bail, only to find all doors closed against him, and to speedily get his poor cracked head broken in grim earnest. Then as he lay a-dying, Glory marries him by special license on his deathbed, and the story ends. That is Mr. Hall Caine's Christian!

### III.—WHAT GOSPEL IS HERE?

Mr. Hall Caine's book, because it is Mr. Hall Caine's book, was anticipated with pleasure. Mr. Hall Caine is an earnest and a zealous novelist who has achieved in comparative early years an almost unrivalled success. In this book, "The Christian," he has put the best work of his life. His maturest convictions are here

embodied, and he has spared no pains to make this book the crown and climax of his career. Here we have the Gospel according to Hall Caine; a gospel preached with vehemence, and pressed upon our acceptance by all the persuasive skill and strenuous earnestness of its author. It is good to have a gospel from anybody. Good news is always welcome. And it is well that so successful a novelist should have recognised so frankly the supreme obligation which lies upon all of us to preach with such vigour and strenuousness as we are capable of, the gospel in which we believe. Hence every one was disposed to give "The Christian" a cordial and energetic welcome. Even if we had differed widely from its essential doctrines, we should still have been delighted to welcome to the front rank of those who contend for honour and for truth so vigorous and uncompromising a champion. But alas! what a disappointment! Those high hopes kindled by the prospectus of the book as we read it in serial form in the *Windsor Magazine*, and not unworthily sustained in the opening chapters, are cruelly dashed to the ground in the concluding part. Here we have no gospel! Here we have no Christ! Instead of gospel, instead of Christ, we have a verythrenody of despair, and the melancholy and hideous spectacle of a mind unhinged by the combined but conflicting forces of love and religion. Gospel indeed! where is there any gospel here? There is Hell enough, but we seek in vain for a glimpse of Heaven. It was not this surely which we were led to expect when Mr. Hall Caine essayed to give to the world his picture of The Christian of the Nineteenth Century! Even if Mr. Caine had no word of hope and faith and cheery confidence with which to face the future, he might at least have spared us the cruel outrage alike upon the purity of his heroine and the character of his hero that he has inflicted upon us in the scene in which she saves The Christian from the guilt of murder by compelling him to succumb to her charms. Mr. Heinemann limits the liberty of quotation to four thousand words. I shall therefore confine my extract solely to this, the most powerful, although the most-to-be-regretted scene in the book. Glory has just returned from the Derby late at night to find Storm waiting in her room to slay her:—

After a moment there was the sound of a key in the lock of the door below; the rustle of a woman's dress coming up the stairs, an odour of perfume in the air, an atmosphere of freshness and health, and then the door of the room, which had been ajar, was swung open, and there on the threshold, with her languid and tired but graceful movements, was she herself, Glory. Then his head turned giddy, and he could neither hear nor see.

Throwing off her outer things, she walked across the room and sat down on the sofa near to where he stood.

He had moved to avoid contact with her, but now, standing by the mantelpiece looking into her face, he could not help recognising in the fashionable woman at his feet the features of the girl once so dear to him, the brilliant eyes, the long lashes, the twitching of the eyelids, and the restless movement of the mouth. Then the wave of tenderness came sweeping over him again and he felt as if the ground were slipping beneath his feet.

"Will you say your prayers to-night, Glory?" he said.

"Why not?" she answered, trying to laugh.

"Then why not say them now, my child?"

"But why?"

He had made her tremble all over; but she got up, walked straight across to him, looked intently into his face for a moment, and then said, "What is the matter? Why are you so pale? You are not well, John!"

"No; I am not well either," he answered.

"John, John, what does it all mean? What are you thinking of? Why have you come here to-night?"

"To save your soul, my child. It is in great, great peril."

At first she took this for the common, everyday language of the devotee, but another look into his face banished that interpretation, and her fear rose to terror. Nevertheless she talked lightly, hardly knowing what she said. "Am I, then, so very wicked? Surely heaven doesn't want me yet, John. Some day, I trust . . . I hope—"

"To-night, to-night, *now!*"

Then her cheeks turned pale and her lips became white and bloodless. She had returned to the sofa, and half rose from it, then sat back, stretching out one hand as if to ward off a blow, but still keeping her eyes riveted on his face. Once she looked round to the door and tried to cry out, but her voice would not answer her.

This speechless fright lasted only for a moment. Then she was herself again, and looked fearlessly up at him. She had the full use of her intellect, and her quick instinct went to the root of things. "This is the madness of jealousy," she thought. "There is only one way to deal with it. If I cry out—if I show that I am afraid—if I irritate him, it will soon be over." She told herself in a moment that she must try gentleness, tenderness, reason, affection, love.

Trembling from head to foot, she stepped up to him again, and began softly and sweetly, trying to explain herself. "John, dear John, if you see me with certain people and in certain places, you must not think from that—"

But he broke in upon her with a torrent of words. "I can't think of it at all, Glory. When I look ahead, I see nothing but shame, and misery, and degradation for you in the future. That man is destroying you, body and soul. He is leading you on to the devil, and hell, and damnation, and I cannot stand by and see it done."

"Believe me, John, you are mistaken—quite mistaken."

But with a look of sombre fury, he cried, "Can you deny it?"

"I can protect and care for myself, John."

"With that man's words in your ears still, can you deny it?"

Suddenly she remembered Drake's last whisper as she got into the hansom, and she covered her face with her hands.

"You can't! It is the truth!"

She was crying behind her hands, and in spite of the fury into which he had lashed himself a great pity took hold of him. He felt as if everything were slipping away from him, and he was trying to stand on an avalanche. But he told himself that he would not waver, that he would hold to his purpose, that he would stand firm as a rock. Heaving a deep sigh he walked to and fro across the room.

"O Glory, Glory! Can't you understand what it is to me to be the messenger of God's judgment?"

She gasped for breath, and what had been a vague surmise became a certainty—thinking he was God's avenger, yet with nothing but a poor spasm of jealousy in his heart, he had come with a fearful purpose to perform.

"I did what I could in other ways, and it was all in vain. Time after time I tried to save you from these dangers, but you would not listen. I was ready for any change, any sacrifice. Once I would have given up all the world for you, Glory—you know that quite well—friends, kinsmen, country, everything, even my work and my duty, and, but for the grace of God, God Himself!"

But his tenderness broke again into a headlong torrent of reproach. "You failed me, didn't you? At the last moment too—the very last! Not content with the suicide of your own soul, you must attempt to murder the soul of another. Do you know what that is? That is the unpardonable sin! You are crying, aren't you? Why are you crying? But even while he said this something told him that all he was waiting for was that her beautiful eyes should be raised and their splendid light flash upon him again.

"But that is all over now! It was a blunder, and the breach between us is irreparable. I am better as I am, far, far better. Without friends, or kin, or country, consecrated for life, cut off from the world, separate, alone!"

She knew that her moment had come, and that she must vanquish this man, and turn him from his purpose whatever it was, by the only weapon a woman could use—his love of her. "I do not deny that you have a right to be angry with me," she said, "but don't think that I have not given up something too. At the time you speak of, when I chose this life and refused to go with you to the South Seas, I sacrificed a good deal—I sacrificed love. Do you think I didn't realise what that meant? That whatever the pleasure and delight my art might bring me, and the flattery, and the fame, and the applause, there were joys I was never to know—the happiness that every poor woman may feel, though she isn't clever at all, and the world knows nothing about her—the happiness of being a wife and a mother, and of holding her place in life, however humble she is and simple and unknown, and of linking the generations each to each. And though the world has been so good to me, do you think I have ever ceased to regret that? Do you think I don't remember it sometimes when the house rises at me, or when I am coming home, or perhaps when I awake in the middle of the night? And notwithstanding all this success with which the world has crowned me, do you think I don't hunger sometimes for what success can never buy—the love of a good man who would love me with all his soul and his strength and everything that is his?"

Out of a dry and husky throat John Storm answered, "I would rather die a thousand, thousand deaths than touch a hair of your head, Glory . . . But God's will is His will!" he added quivering and trembling. The compulsion of a great passion was drawing him, but he struggled hard against it. "And then this success—you cling to it nevertheless!" he cried with a forced laugh.

"Yes, I cling to it," she said, wiping away the tears that had begun to fall. "I cannot give it up—I cannot, I cannot!"

"Then what is the worth of your repentance?"

"It is not repentance; it is what you said it was in this room long ago . . . We are of different natures, John, that is the real trouble between us, now and always has been. But, whether we like it or not, our lives are wrapped up together for all that. We can't do without each other. God makes men and women like that sometimes."

There was a piteous smile on his face. "I never doubted your feeling for me, Glory—no, not even when you hurt me most."

"And if God made us so—"

"I shall never forgive myself, Glory, though heaven itself forgives me!"

"If God makes us love each other in spite of every barrier that divides us—"

"I shall never know another happy hour in this life, Glory, never!"

"Then why should we struggle? It is our fate, and we cannot conquer it. You can't give up your life, John, and I can't give up mine, but our hearts are one."

Her voice sang like music in his ears, and something in his aching heart was saying, "What are the laws we make for ourselves compared to the laws God makes for us?" Suddenly he felt something warm. It was Glory's breath on his hand. A fragrance like incense seemed to envelop him. He gasped as if suffocating, and sat down on the sofa.

"You are wrong, dear, if you think I care for the man you speak of. He has been very good to me, and helped me in my career, but he is nothing to me—nothing whatever . . . But we are such old friends, John! It seems impossible to remember a time when we were not old chums, you and I! Sometimes I dream of those dear old days in the 'lil oilan'. Aw, they were terrible—just terrible! Do you remember the boat—the *Gloria*—do you remember her?"

He clenched his hands as though to hold on to his purpose, but it was slipping through his fingers like sand.

"What times they were! Coming round the castle of a summer evening when the bay and the sky were like two sheets of silvered glass looking into each other, and you and I singing 'John Peel'." (In a quivering voice she sang a bar or two.) "'D'ye ken John Peel with his coat so gay? D'ye ken John Peel? . . . Do you remember it, John?"

She was sobbing and laughing by turns. It was her old self, and the cruel years seemed to roll back. But still he struggled. "What is the love of the body to the love of the soul?" he told himself.

"You wore flannels then, and I was in a white jersey—like this, see," and she snatched up from the mantelpiece the photograph he had been looking at. "I got up my first act in imitation of it, and sometimes in the middle of a scene—such a jolly scene too—my mind goes back to that sweet old time, and I burst out crying."

He pushed the photograph away. "Why do you remind me of those days?" he said. "Is it only to make me realise the change in you?" But even at that moment the wonderful eyes pierced him through and through.

"Am I so much changed, John? Am I? No, no, dear! It is only my hair done differently. See, see!" and with trembling fingers she tore her hair from its knot. It fell in clusters over her shoulders and about her face. He wanted to lay his hand on it, and he turned to her and then turned away, fighting with himself as with an enemy.

"Or is it this old rag of lace that is so unlike my jersey? There—there!" she cried, tearing the lace from her neck, and throwing it on the floor and trampling upon it. "Look at me now, John—look at me! Am I not the same as ever? Why don't you look?"

She was fighting for her life. He started to his feet and came to her with his teeth set and his pupils fixed. "This is only the devil tempting me. Say your prayers, child!"

He grasped her left hand with his right. His grip almost overtaxed her strength and she fell faint. In an explosion of emotion the insane frenzy for destroying had come upon him again. He longed to give his feelings physical expression.

"Say them, say them!" he cried. "God sent me to kill you, Glory."

A sensation of terror and of triumph came over her at once. She half closed her eyes and threw her other arm around his neck. "No, but to love me! . . . Kiss me, John!"

Then a cry came from him like that of a man flinging himself over a precipice. He threw his arms about her, and her disordered hair fell over his face.

Here the chapter abruptly closes. The next opens thus:—

"I thought it was God's voice—it was the devil's!"

John Storm was creeping like a thief through the streets of London in the dark hours before the dawn.

It seemed as if eyes looked down on him from the dark sky and pierced him through and through. His whole life had been an imposture from the first—his quarrel with his father, his taking Orders, his entering the monastery and his leaving it, his crusade in Soho, his intention of following Father Damien, his predictions at Westminster—all, all had been false and the expression of a lie! He was himself a sham, a mockery, a whitened sepulchre, and had grossly sinned against the light and against God.

But the spiritual disillusion had come at last, and it had

GREBER CASTLE, AS SEEN FROM DOUGLAS.

revealed him to himself at an awful depth of self-deception. Thinking in his pride and arrogance he was the Divine messenger, the avenger, the man of God, he had set out to shed blood like any wretched criminal, any jealous murderer who was driven along by devilish passion. How the devil had played with him too! With him, who was dedicated by the most solemn and sacred vows! And he had been as stubble before the wind—as chaff that the storm carrieth away!

With such feelings of poignant anguish he plodded through the echoing streets.

Glory's awakening is described in still another chapter:—

When Glory awoke on the morning after the Derby and thought of John, she felt no remorse. A sea of bewildering difficulty lay somewhere ahead, but she would not look at it. He loved her, she loved him, and nothing else mattered. If rules and vows stood between them, so much the worse for such enemies of love.

She was conscious that a subtle change had come over her. She was not herself any longer, but somebody else as well; not a woman merely, but in some sort a man; not Glory only, but also John Storm. Oh, delicious mystery! Oh, joy of joys! His arms seemed to be about her waist still, and his breath to linger about her neck. With a certain tremor, a certain thrill, she reached for a handglass, and looked at herself to learn if there was any difference in her face that the rest of the world would see. Yes, her eyes had another lustre, a deeper light, but she lay back in the cool bed with a smile and a long-drawn sigh. What matter whatever happened? Gone were the six cruel months in which she had awakened every morning with a pain at her breast. She was happy, happy, happy!

The morning sun was streaming across the room when Liza came in with the tea.

"Did ye see the Farver last night, Miss Gloria?"

"Oh, yes; that was all right, Liza. Have you mentioned to anybody that Father Storm was here last night?"

"Why, no, miss; there ain't nobody stirrin' yet, and besides—"

"Then don't mention it to a soul. Will you do me that great, great kindness?"

"Don't ye know I will, mum?" said Liza, with a twinkle of the eye and a wag of the head.

Mr. Caine does not, it is true, obtrude the fatal significance of his heroine's purchase of her safety by her virtue, but it is unmistakable enough, and it entirely robs the closing scene of all its pathos. In marrying the dying man, Glory, it will be said, was acting with no lofty motive of self-abnegation. She seems merely to be securing, by a very violent *tour de force*, the right to call her unborn child by its father's name. Such an anticlimax is bad—very bad; so bad that I wish I had not to speak about it at all. But the author will, I hope, understand that it is not in any unkindness to him, but rather the reverse, that I reluctantly express the regret and disappointment which his book has occasioned me.

#### IV.—AND WHAT A CHRIST!

Many of those who never ask "What think ye of Christ?" are asking "What do you think of 'The Christian'?" Opinion is divided, as might be expected. There are many who are strong for banning, and others equally strong for blessing. "The Christian" is not a book to be read as a sedative. It is rather a stimulant, perhaps even an irritant. No one can read it without feeling that Mr. Hall Caine has worked up his subjects carefully and elaborately, and has written this book with the earnest conviction and earnest hope that it may do some good. Therein even his worst enemies will agree. His motive is irreproachable. His ideal is one of the highest that

has ever lured a novelist to attempt a task beyond his powers. But however much we may admire and sympathise with Mr. Hall Caine's motive and object, justice forbids me to say that his Christian can for a moment be accepted as anything other than a caricature of the Christ. I should be sorry if Mr. Hall Caine considers this a hard saying, and nothing could be further from my mind than that the novelist has consciously caricatured his hero; but without losing ourselves in detail, what is the net impression of the book as a whole? Is it, or is it not, in its spirit or its essence a reproduction in nineteenth century fiction of the spirit of the Gospel of the first century? Does it, or does it not, leave on the mind of the reader the same impression, or anything approaching to the same impression, that was undoubtedly produced on the minds of the men of the first century by the Story of the Gospel? Mr. Hall Caine himself would be the first to admit that it does no such thing, and for this reason, that the supreme note that differentiated the Gospel from all other Gospels, and which caused it to be hailed as the Evangel of suffering Humanity, was precisely the one quality totally absent from Mr. Hall Caine's story. The note of the Gospel was Hope; the note of "The Christian" is Despair.

The odds against the Carpenter of Nazareth were certainly quite as heavy as those against John Storm, nephew of the Prime Minister, who attempted to realise in the nineteenth century his conception of the Christian life. Whether in Galilee or in Judea, Jesus had at least as rough a time as Father Storm endured in that wilderness of sin in which Father Storm's lot was cast. The end of the Galilean was at least as tragic as that of Hall Caine's hero; yet the story of that life of sorrow and temptation closed, or crowned, by the murder of the Christ who came to save the world, was no message of despair, but rather was the first clear clarion cry of a divine hope which thrilled the hearts and fired the souls of men. It is the lack of this element which strikes the reader most painfully in the book. Much, almost everything, may be pardoned those who attempt to portray in the habit and speech of modern men the Divine figure of the wandering Semite, who one thousand nine hundred years ago made Calvary the religious centre of the Western world; but one thing is quite unpardonable, and that is to give us a Christ whose message is one of despair, and whose story tends to paralyse rather than energeise the aspirations of the soul.

This, it would seem, Mr. Hall Caine has quite unintentionally done. He has portrayed us in "The Christian" a man who has much in him of outward resemblance to the Christ, but who is deficient in the one vital element which made crucifixion itself appear but as a canonisation or coronation. The life of Father Storm is spent, I do not say aimlessly, but it is foamed away like a rushing breaker upon a rocky shore. It is spent, and when you close the book, what is there to show for it? What aspiration has it strengthened? What hope kindled? In what way has any human soul been stimulated to higher endeavour or to a nobler life?

Now surely this is to fail in the very first condition of success. It is more allowable to paint a Moses without meekness, a Job without patience, a Cæsar without courage, or a Howard without sympathy, than it is to create a Christ the impact of whose life on the heart of man tends to discouragement or to bewilderment, and to dismay. I doubt if there be any reader among all the hundreds of thousands who after reading Mr. Hall Caine's book feels his soul stir within him to follow the example of John Storm. And there again we touch upon another great fundamental defect in this presentation of Christ. John Storm, although he does many admirable and Christlike things, is singularly devoid of the element of attractiveness. It is quite marvellous that a man who is made to do so many things after the pattern of his great exemplar, should nevertheless, as a whole, fail so singularly in exciting even a personal human interest in his career.

Glory, the heroine, and practically the only other character in his novel, is a different character altogether. She may be, as Dr. Nicol declares, "hopelessly vulgar," but she is undoubtedly a living creature, although singularly free from those more tragic passions which with any one of her temperament would in real life have exposed her to much more fiery ordeals than those from which she emerges with such gay complacency. The necessity of having a hero and heroine has played hopeless havoc with its author's original conception. We are told at the beginning that it was to be a novel on Christian Socialism, but as the story proceeds we have less and less of Socialism, and more and more of a struggle of an earnest, pious, weak, and unhinged man with an overpowering passion for a beautiful girl. That is a motive to which no objection can be taken, had it not ended with such a shock. It has been, and will be, the motive of thousands of novels as long as novels continue to be written; but what does jar upon the mind of the reader is to come constantly upon the longings of the lover as the dominating motive of a life which we were taught to expect was to represent the nineteenth century embodiment of the Divine Ideal which has enshrined itself in the heart of the human race, if only as the supreme and sovereign legend of tenderness and pity.

#### V.—A PLEA IN ARREST OF JUDGMENT.

I ventured mildly to hint to an exceedingly enthusiastic admirer of "The Christian" some faint inkling of my regret. He waxed profoundly indignant at what he described as my utter misconception of the aim and purpose of the gifted author. I do not propose to reproduce here the flood of reproachful remonstrance which my criticism let loose upon me; but it can easily be imagined by those who know how intensely my friend admires the

genius and motive of Mr. Hall Caine. I must, however, in justice to the novelist, print a somewhat free rendering of the remarks by which my friend endeavoured to set me right as to what he considered to be the true inwardness of "The Christian." For instance, he begins:—

Now as to John Storm. Of course, Nordau would say Mr. Caine's hero suffers from suppressed hysteria turning on sex instincts. And he would be partly right—largely right. "The Christian" is first of all a story of disappointed love—the tragic war of love and temperament. You reply perhaps that that takes from Storm's value as an apostle. Of course it does, and do you imagine for a moment that Mr. Caine did not mean it to do so? It was of no use to present a faultless, strong, irresistible apostle, a Christ. That Mr. Caine evidently knew well wouldn't be worth a straw to humanity. We had Him once in the Divine figure—a being outside human infirmities. What the world wants now is a man such as Mr. Caine has pictured for us, beset by the weaknesses of men and yet struggling to realise the Christ ideal.

A fanatic? Yes, of course a fanatic. *Only* a fanatic would dare attempt to realise the Christianity of the first century in the civilisation of the nineteenth. It failed in the first century, where the Apostles soon ceased to have "all things in common." And it was doomed to failure in the nineteenth. It is impossible.

But "The Christian" is not a pessimistic book for all that. Storm's evangel may be impossible of realisation in its literalness, but that sublime banner is never raised without doing the world good. It brings humanity back to the touchstone of the true Gospel. It shows the awful gap between the ideal and the thing that is. It doesn't remove mountains, but it clears the air over them as by a thunderstorm.

Now can this interpreter have rightly explained Mr. Hall Caine's conception? I am loath to admit such a thing. Rather is it probable that Mr. Hall Caine himself, if the iron law of inviolable silence which he has imposed on his lips were to be relaxed, would denounce this friendly exposition as both illogical and shocking. For what does it amount to? It implies that Jesus of Nazareth was too good to save the world, and that in order to deliver the race from the bondage of sin and its miseries we must have a man who was not only tempted in all points even as we are, but who is most emphatically not without sin. This conception of a sinful Messiah is somewhat novel to say the least. I fear that I am somewhat too old-fashioned to be able to conceive that a man who has neither saintliness nor sanity is likely to succeed where the Man of Sorrows so far has achieved but very partial success.

Mr. Hall Caine, I am sure, would not accuse me of having any prejudice against persons who are moderately mad, or who are fanatics within the limits of sanity and the Ten Commandments; but a homicidal maniac, whose murderous delirium can only be quenched by a breach of the Seventh Commandment, is just a trifle too strong even for the most robust digestion.

# SOME NOTABLE BOOKS OF THE MONTH.

## NATIONAL DEFENCE.

### AN APPEAL TO PUBLIC OPINION.

KING DEMOS has gathered all power into his hands; but although he rules supreme he is not by any means always conscious of the responsibility which is entailed by the possession of power. It is, therefore, necessary for those who know the facts to insist that he shall fully understand the situation, and to endeavour by all means in their power to arouse the somewhat sluggish monarch. Much has been done to educate him as to the necessity of a supremely strong navy if his dominions are to be rendered secure from the attacks of more despotic Powers. But much yet remains to be done. The question of national defence is one which directly appeals to every citizen, and it is of vital importance that he should have a clear conception of what we have to defend and how best we can defend it. Major-General Maurice's book on "National Defence" (2s. 6d.) in Messrs. Macmillan's excellent English Citizen Series is a valuable addition to the text-books of King Demos.

### THE TRUE FORMULA OF NATIONAL DEFENCE.

General Maurice has thoroughly grasped the idea that we are not as other nations, and that therefore our system of defence must be based on altogether different lines to those which prevail on the Continent. In his book he lays down clearly and with emphasis the elementary principles which must guide us, as a nation, in our national defence. General Maurice has a good record on this subject, and has carefully studied the subject for fourteen years. He was also one of the first military men who recognised, and recognised ungrudgingly, that our first duty was to build and maintain a supreme navy. General Maurice in season and out of season appealed persistently on behalf of the navy. Now that the nation has approved of the opinions which were ignored a few years ago, General Maurice is afraid that our second line of defence is liable to be neglected. That the army only occupies a secondary position he fully and frankly admits. But in order to render the navy more effective it is of vital necessity that the army should be as efficient as it is possible to make it. The true formula of our national defence is, as Sir M. Grant Duff once said, "a supreme Navy, an adequate Army, and an incomparable Diplomacy."

### WHO IS RESPONSIBLE?

Who is responsible for our national defence? General Maurice labours under no illusions on this point. In England it is not the Ministry but the people themselves who are responsible. He says:—

What I want to insist on is that, as the first great primal factor in dealing with this question of National Defence, we must face the fact that the talk about "Ministerial Responsibility"—in so far as that is to be understood to mean that members of a British Cabinet as a whole will undertake or dream of undertaking what they know to be necessary for the defence of the Empire, except in so far as the public at large has been roused to realise what that is—is sheer unmitigated gaseous froth—mere noise portending nothing. A British Cabinet cannot, by the very nature of our party system, do this or anything like this.

This being so, it is absolutely essential that the body

which has the power should also realise its responsibility:—

It is all important that those in whose hands all power ultimately lies should realise that power and responsibility cannot be divorced. Can there be any doubt that the electorate, which has claimed to become the ultimate ruler of the Empire, will simply ruin it and will make itself and all free institutions the laughing-stock of history, if it does not face the responsibility which it has thus assumed? Moreover there are three things, not two, which by the inexorable laws of the universe are inevitably linked where a healthy and safe condition of things is to exist. Those three are—power, responsibility and knowledge.

### THE PENALTY OF IGNORANCE.

The ignorance and apathy of the public has deplorable results. Unless the British public can see that the money voted for national defence produces some tangible and immediately apparent result it is not satisfied. The Chancellor of the Exchequer therefore vetoes all expenditure upon what may be vitally important departments because the British people does not realise their importance. The natural result is inefficiency, and as a corollary extravagance:—

The needed preparations which would cost a little money, are not made at a time when careful preliminary preparation would save lives, time, and money. Then, when it is too late, money is poured out like water. The reason is simple. To spend money when the British public does not see the need for it would give opportunity for the employment of hostile party tactics—to denunciations of extravagance. To refuse to spend money when the public is aroused and interested, when the newspaper correspondents and letters from the seat of war will describe the delay, the loss of life, and the sufferings of soldiers, would, from the same point of view, be equally dangerous. That is the cause—that of which this is only an illustration, is the one efficient cause of our weakness, of our waste, and of our lack of economical management.

General Maurice appeals to the people to say whether this is a state of affairs which is to be encouraged:—

In plain English you wish to be deceived, and therefore you are deceived. I appeal to any honest British man as to whether these things represent the conditions of elementary morality on which they believe as I do, that, rather than directly on "all-shattering guns," the greatness of nations depends.

### THE EMPIRE OF THE SEVEN SEAS.

General Maurice points out that comparisons between the British defensive forces and those of any Continental Power are altogether misleading. This is a fact which is very generally ignored, but which is really self-evident. The very point of view from which an Englishman and a foreigner look at the army and navy is radically different:—

Britain and America are the only two great countries in which, properly speaking, peace "reigns." Everywhere on the Continent, though peace is maintained, it is war that reigns. All the conditions of life are based on the assumption that the first business of a country is to be ready to defend itself, or rather to maintain its armed forces in the most efficient condition, whether for offence or defence.

On the Continent everything is subordinated to the army and its requirements. In England, on the contrary, we are rather ashamed of the army, and hide it from sight. Again the duties of the two forces are widely different. A Continental army is a monster which is unwieldy from its size, and which can afford to be so. It has only

a limited amount of frontier to defend, and the methods by which it can be attacked are few and well defined. The British Empire on the other hand is "here, there, and everywhere." Hence we need an exceedingly mobile force for our defence. As General Maurice truly points out, "the circumstance peculiar to us which determines all others is that for us not land, but sea, is the connecting link of the nation; is for the most important part of the nation their home, and is for all of us the great factor of our wealth, of our danger, of our advantages, of our security."

#### HOW WE CAN BE ATTACKED.

General Maurice enumerates the methods by which our Empire may be attacked, as follows:—

First of all, attacks upon our commerce by means of cruisers or fleets.

Secondly, an attempt to wrest from us the command of the sea, either permanently or temporarily.

Third, attacks upon open towns along our sea-board.

Fourth, attempted invasion either of this island or of Ireland by sea.

Fifth, aggressive movements of Russia, preparatory to attack upon India itself.

Sixth, the actual attempt of Russia to invade India.

Seventh, attempts upon our Colonies other than coaling stations.

Eighth, attempts upon our coaling stations in the form of a cruiser attack upon the coal without any attempt to seize the station itself.

Ninth, attack by a serious force upon a coaling station with a view to occupy it either permanently or during the period of the war.

Tenth, a mere predatory raid, such as that intended by Russia from Vladivostock, upon Australia.

Eleventh, filibustering raids from America upon Canada.

These are, however, obviously very incomplete.

#### RUNNING THE EMPIRE "ON THE CHEAP."

As can be seen at a glance, the first and vital necessity is a supreme navy. With such a navy it is possible to defend our world-wide empire; without it the Empire would fall a prey to any covetous Power. But if the navy is to be efficient it must be supported by an adequate army. The two services have to act hand in glove all the world over. It is the army which has to secure the safety of the coaling-stations, without which the navy would be largely useless. But this being the case it is sheer suicidal nonsense to declare that the Empire can be "run on the cheap." General Maurice says:—

All these possible forms of attack taken together, provided our fleet be supreme upon the seas, do not represent a danger as serious as that which menaces Germany or France; but they do represent a necessary dispersion of force, dispersion of design in the nature of the defence, a vast number of independent local authorities in proportion to the number of men employed, and a consequent costliness which cannot but appear to compare unfavourably, no matter what schemes be devised for it, with the larger, the simpler, the more concentrated efforts of foreign countries. I am anxious to emphasise this broad aspect of the case. I wish to do so for this reason: I am convinced that it is a pure and mere delusion, most costly, most mischievous in its effects, to attempt to persuade the British public that they can hold a world-wide empire, hold the commerce of the seas, do it at a *pro rata* proportion of their wealth, utterly insignificant as compared to that which any European Power expends on guarding their own little territory, and then allow themselves to be persuaded that all the time they are being bamboozled into a wasteful and useless expenditure.

#### THE OUTPOSTS OF THE EMPIRE.

General Maurice likens our Empire, when compared with that of any continental Power, to a number of little shops as contrasted to a huge store like Whiteley's. This

entails an immense amount of responsibility on the shopkeeper or local commander which is not necessary in a Continental army:—

Now we, relatively to France and Germany, are like the owners of a large number of small shops. The garrison of Metz, concentrated on one spot, consists of a number of men not much less than is spread over the whole of our different fortified coaling stations properly so called, and our smaller possessions abroad. The commandant of that garrison requires to be a carefully selected man of large military knowledge and capacity. But in close daily communication as he is with the Home Government, it is impossible that he should have to decide on his own motion questions as difficult as must continually come before the commanding officer of the troops at Hong Kong, or as may present themselves at any moment to the commandant of troops in Mauritius, at the Cape, at Halifax, Nova Scotia, or in most of our other stations. A mistake on the part of one of our local commanders, or of their staffs, may at any moment involve Britain in a war or costly expenditure. These places are so far like the small shop, that the small number of men that we have under the orders of the commander at the station, must have at their head a man of at least as large capacity, and supplied with as adequate a staff as the commandant at Metz, or else the failure of the small business as compared with the larger will be as conspicuous as it is in the case of the small shops. Yet in relation not to the number of troops, but to the property and interests involved in their right management, these places are not like little shops, but like very large ones indeed. They are small only because we are able to employ insignificant numbers to do the work, such as would by a foreign country be undertaken by very large military forces. We are able to do this because these stations are after all but the outposts of an empire, the great "territory" of which, if one may venture on a contradictory expression, alone adequate to convey the peculiar nature of our dominion, is the sea. It is our dominion over the sea which makes it possible for us, not without often incurring great risks, and not without occasional disasters, to employ on our expeditions beyond-sea, in our maintenance of our territories beyond the seas, forces the numerical inferiority of which habitually excites the astonishment, and it is hardly too much to say the reproach, for our folly, of all the great military powers.

#### THE NEED OF AN ADEQUATE ARMY.

General Maurice shows in a striking fashion that it would not be necessary for an enemy to destroy our fleet in order to strike at the vitals of the Empire. Once let him get command of the Channel and land an army on our shores, and the fleet, be it ever so powerful, would be useless if the army was not in a condition to oppose the advance. Once let the foreigner occupy London and he would be able to dictate what terms he pleased. If, however, his advance were opposed the fleet would have time to cut his communications, and the eventual result of the struggle would not be in doubt. General Maurice points out that Napoleon in Egypt was able to subdue the country although his fleet was annihilated. It was the British army that turned Napoleon out of Egypt, as the fleet alone could not bring immediate pressure to bear upon him.

If the land force at home were so inadequate that the commander of a hostile army could as completely subdue Britain as, despite the supremacy of our fleet, Napoleon in fact subdued Egypt, the fleet after its first failure to stop the invaders, would avail us nothing. If, on the other hand, the invaders were met by a firm and obstinate resistance, terrible as the losses which would be inflicted on Britain would be, the fate of the invaders would sooner or later be certain, unless the fleet had not only failed us in the hour of invasion, but had permanently lost its supremacy even within the narrow seas. While, therefore, no one can exaggerate the importance for the safety and maintenance of the power and the wealth of

Britain, of a navy which at all times shall be supreme, not only in the narrow seas, but elsewhere, it would be madness to ignore the necessity for an entirely independent system of home defence.

#### THE AMPHIBIOUS POWER OF BRITAIN.

General Maurice, in a very interesting chapter, shows how the "amphibious power" of Britain, as it has been called, can be used to the best advantage. Often the best method of defence is to strike a decisive offensive blow. Can we strike such a blow? General Maurice thinks we can, and do so so effectively that we would be the ultimate arbiters of the fate of Europe. The essence of modern strategy is not to *possess* so many million armed men, but to be able to place so many thousands at a given point at a given time:—

If the Power possessing the command of the sea has also large command of independent sea transport and a highly efficient mobile army which can be landed at any given point equipped for a campaign with great rapidity, it is clear that it may strike a blow at some definite point which may be of very great importance long before any adequate force can be assembled to oppose it.

These facts are so elementary but so frequently forgotten that it is necessary, as General Maurice says, to be "perpetually ramming, cramming and jamming Mr. Kinglake's admirable phrase 'the amphibious power of Britain,' in season and out of season, into the minds of our countrymen."

General Maurice takes the Black Sea as a case in point to illustrate this fact:—

The Black Sea, exclusive of the Sea of Azoff, has a coast line of at least 2,500 English miles. There is probably no part of that where it might not, under certain circumstances, be of importance to land a British army. The army opposed to a force in possession of the Black Sea would be liable to an attack at any point of that whole line wherever it was possible to effect a landing; and, when once the hostile cruisers had been driven into their ports, the general and admiral co-operating together in the Black Sea would be able to act with the certainty that the enemy could have no means of knowing where the blow was about to be delivered. Probably at no time would the uncertainty extend to the whole of the 2,500 miles; but when it is remembered that the whole of the common frontier of Germany and France is only about 200 miles in extent, the contrast is too sharp not to be intelligible.

#### ENGLAND'S INFLUENCE ON EUROPEAN NATIONS.

What we could do in the Black Sea we can do anywhere in Europe. It is so effective a power that if skillfully used it should enable us to move Continental armies at our will, although we could never dream of having an army of their numerical strength:—

The nature and influence which we are able to exert either against or on behalf of any of the European nations, is of such a kind that, taking into account the permanent and semi-permanent features of the ways we ought, by the use of a satisfactory diplomacy necessarily based on this knowledge of our strength, to be able to gain most easily such objects as we put before ourselves, by securing, if need be, the movement in our favour of armies other than our own—that in fact we can now, as in the past, translate naval, and still more amphibious, strength into the full equivalent of the armies of the continent, even although we do not attempt, and can never attempt, to rival them in numerical strength.

This is fully realised by Continental statesmen, and is as much the cause of their jealousy of "perfidious Albion" as our commercial supremacy:—

The assistance which we are able to offer to the central alliance in Europe is, when it is properly understood, of such vast importance and has so penetrated into the minds of German statesmen, and undoubtedly into the mind of the Emperor himself, that they cannot help believing that any

difficulty in securing, if we wish it, a guarantee of peace on the "Do ut des" principle must be due to the entire want of training of our own statesman in the higher strategy which is one of the essential conditions of the diplomatic knowledge of all European Ministries. . . . We have so much to offer that the danger is rather lest we should ask too little in return, lest we should be content to make mutual arrangements in Europe without taking Asia into account.

#### "AMPHIBIOUS" POWER V. TERRITORIAL POWER.

Whenever "the land and sea do intertwine" we may be supreme, if we are only able to realise our power. Taking the case of Greece and Turkey, General Maurice says:—

The forces that can determine any issues on the frontiers of Greece and Turkey are not the numbers that may be available in Germany, Austria, or Russia, but those that can be supplied with food and ammunition on the Thessalian frontier. So measured, the armed force of Britain is more than the equivalent of that of all the three Empires combined. The three Empires together are not able to place on that frontier a larger army than any one of them can. No one of them could feed and supply an army in that region with anything like the facility that Britain can. The combined effect of fleet and army are immeasurably more effective factors thrown into the cauldron of European politics than all the forces of all the three great military Powers.

#### THE QUESTION FOR KING DEMOS.

General Maurice makes several suggestions as to how our army may be made more effective without materially increasing its size. These it is unnecessary to deal with here. The important part of his book is its appeal to the British public to realise that power cannot be divorced from responsibility, and that it is the concern of every individual to see to it that that responsibility is not shirked. It is a great experiment which this nation is making, that of regulating the armed forces of a country by the popular will. It remains to be proved whether the experiment will be successful or not, but of its importance there can be no doubt. Each individual has "absolutely no interests whatsoever in possessing a body that will look pretty on parade; but he has the deadliest interest in possessing an army available at once to take the field under conditions which make it efficient for fighting purposes whether at home or abroad." The question for the British public to decide is "whether free Britain shall be able to have effective soldiers or whether that shall be a privilege reserved for the despotisms of Europe."

#### A French Romance.

"THE Chevalier D'Auriac," by S. Levett-Yeates (Longmans, 6s.), is a story of the times of Henry IV. of France. Mr. Levett-Yeates says he has only attempted to write a tale which will interest the reader and enable him to spend a pleasant hour or two in its perusal. He has certainly succeeded, for, whatever we may think of the probability of the incidents narrated, as a story it is decidedly interesting. The Chevalier D'Auriac is a young man belonging to the party of the Holy League, which, when the tale opens, is waging its last battles with Henry of Navarre. The Chevalier rescues a Madame de la Bidache from the hands of his own party, and falls in love with her. She is, however, the ward of the King, who has other plans for her future. We are introduced to the plots and intrigues of the Court, and Mr. Levett-Yeates draws freely on his imagination in order to supply the necessary amount of danger and adventure. Henry IV.'s character is not shown in the best light, but he is more or less in the background of the story, the author being content to describe the Court rather than the King.

## CRICKET.

By PRINCE RANJITSINHJI.

It is a notable fact that probably the best book on our national game should have been written by a native of our great Indian dependency. Prince Ranjitsinhji, or to call him by his popular name "Ranji," has not only distinguished himself upon the cricket-field, but he has written a book on the game which every lover of cricket should possess. "The Jubilee Book of Cricket" (W. Blackwood, 6s.) has already gone into a second edition, and doubtless will run through many more. The increased and absorbing interest taken in cricket by all classes of the community is one of the interesting facts of modern life. It may, therefore, be worth noting some of Ranjitsinhji's views on modern cricket.

## THE TWO ESSENTIALS OF SUCCESSFUL CRICKET.

Two things Prince Ranjitsinhji regards as essential to good cricket—a good night's rest, he says, and a perfect digestion are the chief foundations of success:—

If a player does not live carefully, he cannot hope to be consistently successful, however exceptional his keenness of sight, his suppleness of limb and his strength of wrist. Such natural gifts soon become neutralised by self-indulgence. A man must lead a regular life, especially in the matter of sleep, in order to play cricket satisfactorily. . . . An occasional departure from regular hours may not seriously interfere with your condition, but if you wish to play cricket really well, you must get into the habit of taking a due amount of rest, and be temperate in all things during the whole year.

He thinks it is very important that regular exercise should be taken during the winter months, and that fatiguing journeys should always be made the day before a match, for such a journey strains the eyes.

## FIELDING.

Ranjitsinhji in describing the game first deals with fielding. It is a department which he thinks is much neglected. It is just as necessary to the winning of a match as bowling or batting, but as it is not so showy it is disregarded. As a sort of mild protest "Ranji" gives it the place of honour in his book. Fielding is the only branch of the game, he says, in which, if one tries hard enough, one can be sure of success. But the fact remains that—

fielding in school, university, and county matches could be enormously improved by the expenditure of a little more trouble. And the trouble would be amply repaid. Even from the point of view of personal pleasure it is worth while to cultivate an interest in fielding, and to take pains to become good at it. What a man can do well, he likes doing. Batting and bowling occasionally cause a cricketer some disappointment. Fielding is a certainty. Once you make yourself a good field, once learn to take a pleasure in fielding for its own sake, and every match must provide you with plenty of enjoyment, whether or not you get runs or wickets. If people would only recognise the importance of fielding, the standard would soon be raised all round. The truth is, that fielding can be scamped to a certain point without retribution falling upon the sinner.

## BOWLING.

Without natural talent no one can become a good bowler, but by perseverance and energy one may become useful without being famous. Nothing is more noticeable, Ranjitsinhji points out, in first-class cricket of the present day than the difference in quality between professional and amateur bowling. The average professional is much superior to the average amateur bowler. This is due to the fact that the professional before he becomes a first-class cricketer has had a very severe apprentice-

ship of about seven years, whereas the amateur cultivates bowling for his own amusement only. Speaking of the mysterious influence some bowlers seem to possess over batsmen, "Ranji" says:—

There are bowlers who, for some reason or other, seem to fascinate the batsman, and make him do what they want in spite of himself. They appear to divine what is passing in his mind, and to make him carry out not his own programme but theirs. The batsman has to fight not only against the particular ball bowled, but against a mysterious unseen influence. There are "demon" bowlers in more senses than one. They are few and far between, but when they come they win matches by their own individual might. It is hopeless to try to reproduce on paper the superhuman power of the truly great bowler. One can appreciate, but not explain.

## BATTING.

Ranjitsinhji protests against style in batting being held to be more important than anything else. The true aim in batting is to make it effective. He says:—

There is a certain class of batsmen now-a-days who sacrifice effectiveness in order to attain what is called a pretty style. But a style which is not so effective as it might be can hardly claim to be either good or beautiful. Of course a good style is often beautiful—in fact, more often so than not. When a stroke is made with ease and grace, it usually means that the batsman has acquired a complete mastery of the art. But it is a great mistake to get into the habit of putting the bat where there is no ball, simply with a view to making strokes which are pretty. The fault is by no means an uncommon one. Such play would be excellent if it were not for the fact that the bowler bowls the ball not to suit the batsmen, but to get their wickets.

Ranjitsinhji is no believer in every batsman playing what may be considered the orthodox game. If he can make a difficult ball an easy one by running out to it, let him do so by all means:—

I do not think batsmen run out enough at slow bowling or at lob. For some undiscovered reason there is a floating idea that running out and rashness are synonymous. As a matter of fact to run out is often the safest thing one can do. It makes a difficult ball into an easy one, and often enables the batsman to make a forcing stroke along the ground instead of a risky high-drive. The man who plays cautiously is invariably regarded with reverence and favour by those who know. He is supposed to play the correct game. He often ties himself into extraordinary knots by playing what he considers a safe game, when the only safe course is to play a dashing game. There are some players who, not being quick on their feet, ought never to run out. I do not wish at all to suggest that wild hitting is advisable. Nothing is more absurd. But safe hitting is good cricket and good policy. Every one ought to find out whether or not he can play slow bowling with any success by running out; and if he can by all means let him run out, for it is the safest game to play.

Referring to the difficulty a young cricketer has in keeping his right leg firmly planted on the ground, Ranjitsinhji mentions the interesting fact that he had to have his right leg pegged down almost every time he practised during his first two years of serious cricket.

Besides dealing with the various departments of the game, there is a chapter on Captaincy and Umpiring. The ideal captain of a cricket team, he says, needs to be "something more than human." Public school and University cricket are described by W. J. Ford and T. Case, while county cricket is dealt with by various writers. "The Jubilee Book of Cricket" is profusely illustrated with photographs of all the best known players taken in the act of batting, bowling or fielding. These photographs add greatly to the value of the book.

## A PLEA FOR IGNORANCE.

## IS EDUCATION THE ROOT OF ALL EVIL

"Yes," replies Mr. Nicholas Christian in his book, "That Tree of Eden" (Hutchinson, 3s. 6d.). Mr. Christian is very dissatisfied with the condition of the world at the latter part of the nineteenth century. We have obviously not reached the millennium, and he seeks an explanation of this state of affairs. He finds one which is at any rate original. Hitherto we have considered universal education as both useful and necessary. According to Mr. Christian this is a great delusion. Education is the bane of modern life, and responsible for all our troubles. It is rapidly hurrying us to destruction.

## THE DISASTROUS RESULTS OF EDUCATION.

It is a pity Mr. Christian does not define what he means by education. He seems to regard it as merely a system of cramming in facts without any attempt to prepare the mind to receive them. To Mr. Christian's mind education is an invention of the evil one calculated to destroy whatever good there may be in mankind, and bring into prominence all that is bad. Take as an example the following passage:—

We urge on the fire, heat up new and terrible engines of education for furthering the process of collapse. It brings refinement no doubt, but it is the refinement of consumption, the grisly figure of moral death, which damps down the springs of all initiative, evil as well as good, and only those forms of wickedness remain popular which require no effort. The heath and the forest and the plain are deserted. The great-limbed, deep-lunged native of the hill-sides is raised to the contemplation of "higher things"—the whirl and false gaiety, and scurrility of town life. What will his descendants be? Starved weaklings, rickety-jointed and emasculated shallow-pates, to whom neither God nor man are objects of reverence, useless beings utterly spoilt for any useful purpose. The ignorant rustic is at least a man. The modern townsman is too often only a beast.

## IGNORANCE IS BLISS.

A truly terrible picture indeed! Mr. Christian professes to believe that the great mass of humanity is happy because it is ignorant. They are in the state of our first parents before the fall. Here is his ideal picture of humanity before it has succumbed to the wiles of the tempter in the shape of the schoolmaster:—

It is open to them to cultivate the only function of their nature of which they know, those relations with the divine ordering of things to which all men are by their birth entitled, *the only knowledge that befits their lot*. They are innocent of the significance of the acts they do, of the simple routine of their daily life. Yet they have laws they must not transgress—the moral laws—and if they are bereft of the pompous garmenting of trained reflection, they are not affected by their loss. They walk upright in the world and require justifying of no man.

But let them eat the apple of the knowledge of good and evil and they are doomed:—

Give them a taste of mortal things, and upon them descends to-day as ever, that curse of Adam. They will discover new wants, and no new powers to satisfy them. They will see their nakedness, their humble place in nature for the first time, their Eden will have vanished.

## THE DOOM OF A CULTURED PEOPLE.

A people to be great must be ignorant, is the conclusion at which Mr. Christian arrives. Education is more fatal than pestilence, and no nation can survive which is at all cultured:—

Under the strain of cultivation and culture in conditions far above any possible average that could be attained in the most

favoured Utopia, we see the higher system of one existing society continually dying out and being renewed from the great reservoir of unexhausted humanity below. Raise all the individuals in that unexhausted reservoir to a similar state of culture, and your race will collapse as if smitten with the pestilence. The truth is the average of humanity is not capable of bearing the strain which culture implies, without damage to its reserve store of vital energy. Highly cultivated people not introducing fresh blood from time to time, simply die out, after passing through a stage of more or less imbecile exhaustion.

## DISTRUST OF THE PEOPLE.

The explanation of this violent diatribe appears to be Mr. Christian's profound distrust of the people. To him a democracy is an abomination, a Cerberus which must ever be kept quiet by an unlimited supply of sops. An ignorant democracy is tolerable, but an educated one is too terrible to be conceived:—

The aristocratic structure is the form to which all vigorous and masculine societies tend—communism is the form into which feeble and degenerate communities seek to become resolved, but wake up to find themselves under the heel of a dictator. Privilege is the natural brake on social combinations as religion is, or ought to be, on moral combinations.

But that deadly engine of destruction, education, seems to be too much even for this divinely appointed aristocratic formation of society, for as Mr. Christian reminds us, "we must remember education is a strong drug, it keeps the patient quiet by taking away his vital strength."

## RELIGION v. EDUCATION.

How then must education be combated and overcome? Mr. Christian answers, by religion. What service he does religion by antagonising it to education he fails to point out. Religion, he says, is the fundamental healing and life-giving principle restoring moral health:—

All our efforts must be directed to recover religion—the real essence and spirit, not the absurd hypotheses or theories which antiquity has foisted on us as irrefragable truth. As taught to-day, religion is nine-tenths error, and of the remainder nine-tenths again is superfluity—the remaining hundredth is the true spirit of life, the rest is mere clay.

How is the hundredth part to be freed from the surrounding clay? Mr. Christian, who is delightfully free from any scruples as to the logic of his position, answers, by education! For he says:—

It were better to send out competent surveyors and construct new charts and make afresh with surer knowledge our position and relation to those unknown regions that lie ahead and on each side of us.

Mr. Christian embodies his dissertations in the form of a story, but it is of the most rudimentary character. Being in the enviable position of both judge and jury, this pessimistic prophet without any living faith has no difficulty in fulfilling his direful forebodings with most exemplary completeness.

## The Story of a Strike

MR. ROBERT BARR in "The Movable Many" (Methuen, 6s.) deals with modern life and conditions. He tells the story of two strikes with great vigour. His characters are well drawn, although sometimes they are almost caricatures. Mr. Sartwell, the manager of the works, is a grim and determined man whose one soft spot is his love for his daughter Edna. The first strike is conducted under the guidance of a Mr. Gibbons, who, although not an ideal leader, certainly keeps his men well in hand. Mr. Sartwell fights to win although he is greatly hampered by the two proprietors, who are well meaning

but timid men. Marston, the hero of the story, is one of the men of the works. He falls in love with Miss Sartwell and meets with her father's displeasure. Young Marston is filled with a desire to do something which will really help his fellow-workers. He opposes Gibbons, whom he sees is working for his own ends, and when the strike fails he succeeds him in the secretaryship of the Union. The second strike, under his leadership, is conducted in a very different way. The manager is brought to his knees and surrenders unconditionally. Marston is on the point of victory when the men, the mutable many, turn on their leader and rend him, and themselves surrender at discretion. The point of view Mr. Barr takes is well expressed in the following piece of advice of an old Yorkshire worker to Marston:—

"Ye ma' pull yerself oop, but ye can't lift them wi' ye. They've broken the hearts—aye, and the heads too—o' many a one that tried to better them. Ye think ye've only the masters and capital to fight. The masters won't hurt ye—it's the men ye're fighting for will down ye. Wait till yer head is an inch above the crowd, then ye'll catch it from the sticks of every rotten one of them that thinks he's got as much right as ye have to be in command. It isn't the money that helps the masters; it's because they've the sense to know a good man when they've got him. Don't be fooled by numbers, ma lad. What's the good o' them? One determined man who does not need to bother about his backing—who knows his principles will support him through thick and thin—will beat any mob."

#### Power Without Responsibility.

"Bijou," by Gyp (Hutchinson), translated by Alys Hallard, is a charmingly-written novel. It is full of light and sparkle, although the tale itself is a sad one. Bijou, or Denyse de Courtaix, is the child of well-born French parents who lives with her grandmother in her country mansion. She is an exquisite little creature, refined-looking, graceful and slender, who looks about fifteen or sixteen, but in reality is over twenty. From her perfect and dainty little person there seemed to emanate a wealth of child-like candour and innocence. Her charm, however, which was most subtle and penetrating, was distinctly that of a woman, and it was this contrast which made Bijou so fascinating, so unlike other girls. Such as she was she infatuated men, delighted women, and was adored by all. Light-hearted and thoughtful to a certain extent, she never fully realised the havoc she was playing with other people's lives. Every one fell in love with her almost unconsciously, and she liked everybody but loved no one. The results which followed this childlike use of so potent a power without a realisation of the consequences which must follow are well described by Gyp. Bijou finally marries an old man forty years her senior, leaving behind her the wrecked lives of most of her friends. Yet the exclamation of Farmer Lavenne on her wedding day is true—"She's as good as she's pretty—she is; and even more nor that!"

#### Bad Mrs. Hypocrite.

"RITA" has not chosen a very pleasant subject for her novel "Good Mrs. Hypocrite" (Hutchinson, 3s. 6d.). The story has as its central figure a woman who, judging herself one of the elect, deems herself justified in pursuing any course which will best suit her own interests. Catherine Macpherson is a Scotchwoman cursed with an exceedingly bad temper. Her appearance owed little to Nature and less to her own ideas of setting it off. While in Edinburgh she "got religion" and joined a sisterhood in London. She made the life of her friends a burden to them by continually talking texts at them. These she

seemed to regard as ammunition with which to repel attacks of all descriptions. After ten years spent in the sisterhood, Catherine Macpherson took charge of an invalid brother in his comfortable little house. The gradual revelation of the hypocrite's character is well told. It is not an inspiring story, but is somewhat relieved by the amusing feud which existed between Miss Macpherson and Tibbie Minch, a Scotch servant, who had been introduced when Catherine assumed control of the house. Tibbie proved a veritable thorn in the flesh to the self-indulgent hypocrite. The story ends in a catastrophe which involves all the characters, for although Catherine repents, it is too late to undo the mischief she has caused.

## SOME IMPRESSIONS OF THE BAYREUTH PLAYS.

WHEN, after endless struggles and worries, Wagner had completed his Festspielhaus at Bayreuth and successfully carried out the first performance of the "Nibelungen Ring" in 1876, almost every member of the audience was a patron and, *eo ipso*, a Wagnerian. The great public looked on with indifference and derision, prompted by petty jealousy, gross ignorance, and misunderstanding. We have learned a little. We acknowledge that Wagner has, besides a peculiar music, a likewise peculiar, perhaps rather unnecessary, desire to dignify the operatic stage, and to create a dramatic music. Wagnerians are becoming extinct. If we are still a little pro- (or anti-) Wagner—though we do not dream of styling any one pro- (or anti-) Beethoven—we remember the bitterness with which Wagner has been assailed, and that the hard struggle for existence renders us more and more prone to prefer the soothing ditty to what charms, but neither lulls nor amuses. The "Walküre" was given in Rome last winter. The manager had judiciously cut it down, and wound up with a ballet. The ballet was a success; the "Walküre," an old patron of the stage declared, may be very good, but it is not amusing.

This year's Festspiele comprised three cycles of the "Ring der Nibelungen," occupying each four evenings, with three performances of "Parsifal" intervening between the cycles, and one preceding and one concluding "Parsifal" evening. There were thus twenty performances; they began on July 19th, and the last took place on August 19th.

Out of the wild, mysterious, not rarely contradictory Northern myths and their feeble reminiscences, contaminated with a varnish of Christian civilisation in the Nibelungenlied, Wagner has boldly woven a harmonious texture. A gigantic undertaking, easy to criticise, yet clothed in dignified, often beautiful and poetical language, recalling the blank verse and Stabreime of the Edda, and accompanied by music, wild, majestic, sweet, grotesque, discordant almost, unintelligible sometimes to the layman, and possibly to the trained musician—wonderfully in harmony with thought, word, or action, and enlivened by that wealth of magic motives which electrify the listener and guide him through obscure passages. The English librettos unfortunately bear about as much resemblance to Wagner's verses as the average English version of a Latin anthem does to its original.

The leading idea is the curse attached to the gold ring which Alberich the Nibelung, the black alb (elf) forges out of the Rhine gold. Alberich obtains the gold by renouncing love. By craft Wotan, misled by Loge, robs him of it in order to redeem Freia, whom the giants demand for having built Walhalla. Siegfried the Wäl-sung, Wotan's descendant, the free hero, is to restore the ring to the Rhine daughters, uninspired, of his own will, and thus to avert the doom of the gods. But he gives it to Brünnhilde, whom he forgets after emptying Gutrune's cup (the Chriemhild of the Nibelungenlied), and takes

it from her again, when disguised as Gunther. Thus they all perish, the guilty gods and heroes, even Hagen, Alberich's son, and half-brother of Gunther and Gutrune, whom the Rhine daughters drag into the depths of the river. From Siegfried and Brünnhilde's pyre the Rhine daughters at last recover the ring. Gold it is in the Edda, too, which brings murder and crime into the world. Wagner's Freia corresponds to Idun, the guardian of the golden apples—one almost laments that Wagner has modified that most beautiful myth of the North.

The "Rheingold" began at 5 p.m.—the other performances at 4—and continued without break till 7.30—the others till about 10. It probably did not occur to anybody to look at his watch. Spell-bound one watched the Rhine daughters (von Artner of Hamburg, Heiser of Stuttgart, Geller-Wolter of Magdeburg) gracefully floating up and down, and listened to their singing. More critically one followed the negotiations between Wotan (Van Rooy, of Amsterdam), Fricka (Marie Brema, of London), Freia (Marion Weed, of Cologne), and the Giants (E. Wachter, of Dresden), and J. Elmlad (of Breslau), and Loge's (Heinrich Vogl, of Munich). Wotan either was a little too fond of posing with the spear at arm's end or did not trust his dignity in any other position. It was rumoured that Van Rooy actually made his first appearance on the stage on July 21st. A more difficult *début* could hardly be imagined; if the rumour be correct, nothing but praise can be bestowed on his performance; if not, a little criticism will not be unjust. Heinrich Vogl's Loge pleased many and strongly displeased a few. The ever unstable flickering Loge motive may suggest a mocking, frisking, almost dancing courtier of the customary stage Mephisto type. It is said that Wagner quite approved of this interpretation. But though crafty, glib, and fond of coarse jokes, Loge represents the fire element with its terrible power for good and evil: as elementary force he is related to the giants, the father of monsters, and one would like to see that part of his character likewise indicated. In clear enunciation and correct singing Vogl was unsurpassed. Alberich (Fr. Friedrichs, of Bremen), and Mime (Hans Breuer, of Breslau) were splendid throughout; in this respect also Mime's acting particularly was simply perfect. Giants are exceedingly rare, and have to be made up, and might have been done better. Fafner (Elmlad) was dressed in black skins, Fasold in white; their bare arms looked scraggy, and might have been covered. Fafner and Fasold both stamped awkwardly in time with their uncouth motive, and acted and sang with becoming heavy and rough vigour.

Interesting costume studies can be made in the Germanic Museum at Nürnberg, but we find nothing about the costumes of ancient goddesses, unfortunately. Freia at Bayreuth wore a pretty pink dress, draped in a fold about the middle of the skirt. Fricka appeared in a sort of gown, wearing white in front and dark blue at the back. We may assume that these were the fashions of the time. Frau Cosima—the name by which Wagner's widow is designated, even by the Bavarian policeman with the regulation black kid gloves, as obliging as any

A WILD FOREST VALLEY ON THE RHINE.

*By permission of H. Henschmann, jun., art publisher, Bayreuth.]*

THE SHORE BEFORE THE HALLS OF THE GIBICHUNGEN.

SCENERY IN THE GÖTTERDÄMMERUNG.

(From the designs of Professor Max Brückner, Coburg.)

English policeman, though always an old non-commissioned officer—would see to that, if the actresses themselves should be in doubt. Fricka had sufficient courage to resist the temptation of displaying a varied assortment of garments, whilst Wotan had an opportunity of shining in various degrees of splendour. Fricka's part is not grateful. Her goat-carriage was about as ridiculous as it generally is, and her imposing style of flourishing the whip therefore was somewhat wasted.

The love duet in the "Walküre" between Siegmund (H. Vogl) and Sieglind (Rosa Sucher, of Berlin, in plain white) did not attain that triumphant ring which the audience might have expected after the promising commencement of the scene, and the most poetical passage, when the moonlight bursts in through the suddenly opening door, was little marked. The indescribable beauty of the scene, in which Brünnhilde (Ellen Gulbranson, of Kristiania) announces to Siegfried his death, disarmed all criticism. Nor did the exceedingly difficult dialogues between Fricka and Wotan, when Wotan delivers the Walsung up to his fate, and between Wotan and Brünnhilde fail,—all honour to the artists. Wagner has there deviated from ancient usage; marriage between brother and sister was not condemned. The combat between Hunding (Wächter) and Siegfried, and Wotan's interference, pass with such rapidity that one may easily miss the climax. All the grander, no doubt, but how tantalising for one who happens not to look up that moment! The eight Walküren did splendidly; one would hardly believe that that volume of sound originated from so small a number of voices.
